Joshua Towles stared at his sister. "Yes, Joshua, /I know your sentiments. Woman's place is the home and that sort of thing," Eliza Bennett replied, "but Mother's done her fair share of staying. The fact remains that she's eating her heart out to see Charlie and her new grandson."

"If she'd just wait until spring, I could go with her."

"I said if she'd wait until autumn, I'd go, and she waited and here I am flat on my back—oh, yes, quite comfortable now, thank you! It isn't her duty to stay with me. But when spring comes, you'd have to go North or South or East or West on business and Mother would be disappointed again.

"Don't be foolish, Joshua. You can take Mother to Toronto and put her on the train. She goes straight through without change and Charlie meets her at Winnipeg. What's dangerous about that even for a woman of Mother's tender years?"

"Does Mother really want to go?" "Ask her and see her eyes shine."

"When does she want to go?" Joshua queried a little grimly.

"Just as soon as I could persuade you to consent. How soon can you take her?"

"I have to go out to Toronto next week and I can start her from there if she can be ready."

"Ready! Mother can be ready in twenty-four hours. You go tell her and get your reward."

Mrs. Aschah Towles, mother of Joshua and Eliza and Charles, was not a demonstrative woman and therefore Joshua was completely surprised when she threw both arms about his neck and sobbed on his shoulder.

"Why, Mother!" he soothed her, patting her back awkwardly.

"I haven't seen Charlie for six years and his boy is my only grandchild," she murmured as she mopped her eyes.

"All right, Mother, I'll call for you on Wednesday. We'll wire Charlie when you leave Toronto and he'll meet you at the other end. If by any chance there should be a slip, take a cab to the Dominion House. I'll write the manager to take special care of you."

"Humph! Don't you worry one mite about me once I'm on that train for Manitoba."

Joshua Towles did worry, being rather given to that futile occupation. His mother looked so tiny and frail among the hurrying crowd in the Toronto station, that before he started home, he wired his friend, manager of the Dominion House, to meet his mother's train. "Charlie might miss her in the crowd and it won't do any harm to have two of them on the lookout," he said to himself.

Meanwhile, Mrs. Aschah Towles sat in her Pullman seat and had it out with her conscience.

"It wasn't because you didn't want to worry Joshua, that you didn't tell him; it was because you knew he'd stop you," her conscience accused her.

"The ticket was bought and everything," she argued back, "and besides I wasn't going to be stopped, not this time." she added with a determined shake of her head. "I promised to wire as soon as I arrived but no telling when that will be," she smiled to herself a little grimly, "so perhaps I'd better begin a letter to Eliza. She's more understanding than Joshua."

But Mrs. Aschah found difficulty in explaining herself satisfactorily even to the more understanding Eliza.

"Charlie's letter came," she wrote, "while I was tying on my bonnet; and the ticket being bought and everything, I just didn't say anything to Joshua to worry him. But Charlie and Alice and little Godfrey have gone off camping and won't be back for a month. Joshua carefully explained that my ticket allows stopovers at any point. All I need to do is to tell the conductor if I feel ill and get off at the nearest town where there's a hospital with good doctor and nurse. I shan't feel ill but I thought maybe I'd stop off and see my Cousin Abner's widow; and Mary Ann Wilson's daughter lives just the other side of Barrie. I'd like to see if she's like her mother. Then ever since you and Joshua brought home those pictures of Muskoka, I've wanted to see that lovely country. So I just thought without worrying Joshua, I'd start out for Manitoba just the same.

"We've got a real nice friendly conductor and he says there's lots of things to see on the way out. You've got sense, Eliza, so I expect you to keep Joshua calm. I'll write you all along the way."

Eliza Bennett was far from calm herself as she read her mother's letter; then she lay back among her pillows chuckling to herself.

"Mother shall have her little fling. I guess a woman who raised Joshua and Charlie and me's entitled to it."

Two weeks later Joshua Towles burst into his sister's apartment.

"Eliza Bennett, do you know where Mother is? Be serious. Look at this." His hand trembled as he thrust under her eyes a telegram. "I've been telegraphing back and forth for two days. Mother did not arrive in Winnipeg. The manager of the Dominion House met her train: the conductor remembered a little old lady who left his train at some small station in Ontario. Charlie's camping and can't be reached. His stenographer remembers smiling a letter to Mother the day he left Winnipeg. She couldn't have received it."

"Oh, yes, she did! I'm afraid you've raised your mother to deceive you, Joshua. Mother's itinerary is marked by that pile of picture post cards. The postmarks may be interesting to you."

"Eliza Bennett, have you lost your mind? I want to know where Mother is, now."

"In Barrie, I believe, watching the excitement of Camp Borden." Then at the expression on her brother's face, Mrs. Bennett suddenly sobered.

"There, there, Joshua, don't look as haggard. I'll give you the history of Mother's wandering as far as I know it from her hurried letters. First of all, she stopped off to see Mary Ann Wilson's daughter on the other side of Barrie.

"She was going on next to see her Cousin Abner's widow but on the train she got acquainted with a young girl who was running away to meet her lover, 'a cowardly blackguard of a married man,' she quoted again from the card in her hand, 'filled her head full of fool notions about being a free spirit and obeying her natural instincts. "Natural instincts, your grandmother!" I told her. "You turn right round and go home and mind your ma instead of those instincts that aren't natural to any nice girl." We had to stay all night at the junction. Lucky Joshua made me take all that money. But I took her right straight home and I guess her ma was glad enough to see her back safe, not to be hard on her. She was glad to get home too, poor child. The scoundrel!

"I stayed to the wedding; she'd had a tiff with a nice neighbor boy and gone off in a huff. It was a real nice wedding. I wore the new silk dress you gave me."

"Cousin Abner's widow's eldest son was about to have a barn raising when Mother arrived there and she turned right in and baked all the pies. She was afraid she'd got her hand out but her crust was just as flaky as when she took the blue ribbon at the county fair.

"Besides the frustrated elopement, the hastened wedding and the barn raising, she's been to a funeral—oh, no relative, just a lonely little woman on the train, who was taking her husband back to the old home for burial! She turned a can of sausages and the angry adopted a pair of twins and at last she really landed for Winnipeg but her train was put on a siding next to a train load of troops; they were both delayed. They were all leaning out of their windows and Mother got acquainted with some of them.

"They were young things and they'd been in camp and it was hot. Some of them looked ill and all were homesick. Mother sewed buttons on for some of them. Just then sickness broke out in the camp and there weren't half enough nurses and no one to look after their mending so—Mother stayed."

"There's an express at two. I ought to have known better than to let Mother go off alone! I'll bring her straight home and you keep her here. Good-bye."

Eliza Bennett sank back on her pillows as Joshua rushed from the room.

"Joshua's a determined man but Mother set out to see Charlie and little Godfrey and I think she'll see them before she comes back."

In which surmise, Eliza Bennett proved her astuteness. Ten days later, Mrs. Bennett received a letter from her mother:

"Why in the world did you let Joshua start out on such a fool's chase? He broke his collar bone trying to ride a horse over the rough road to the post where I'm visiting now. This is no place for a man of Joshua's temperament and I'm sending him home with a trained nurse. I'm too busy to come with him. The excitement will soon be over and then I'll go on to Manitoba. Charlie and little Godfrey must be home by this time." Joshua had no business to go traipsing about the country that way. Do try to keep him at home."

Eliza Bennett lay back on her pillows and laughed the joyful laugh of an understanding daughter.

About the House

USE VEGETABLES AND SAVE WHEAT.

The patriotism of Madame Housewife is measured these days by the kind of meals she prepares for her family. The youngest child will take what is put before him, provided the food is well cooked. There is nothing in the menu that lends itself to more variety or constant use than do vegetables. Twice a day vegetables can be used in one form or another, if they are judiciously handled by the housewife.

Vegetables have different characteristics. For instance green vegetables are valuable mainly because they contain substances which purify the blood and assist digestion. Roots and tubers are heat and energy-giving foods. All vegetables supply bulk and all contain a considerable amount of water in which are the salts so valuable to health. We are still within the season when we need the properties of the roots and tubers. It will be some time before the fresh vegetables are on the market. Let us clean up the one kind before we begin to use the other.

The first and most immediate need is to release wheat for overseas. Every potato, carrot and onion that we eat is helping towards that end. Don't neglect to be in the vegetable-eating ranks.

One harried housewife moaned the other day: "I never want to see an onion again as long as I live. We are sick of them."

"How many ways have you tried to cook them?" she was asked. "Oh I always fry them." No wonder she was sick of them. Every vegetable can be cooked in a variety of ways and it is poor policy on the part of the housewife to tire her family with repetition. She may use the same vegetable nearly every day and by a frequent change in the manner of cooking or serving she may achieve constant variety.

How many families have boiled potatoes day in and day out? It is safe to guess that only about five per cent of the women in Canada cook potatoes habitually in more than two ways. One of the simplest and easiest of dishes to prepare is riced potatoes. If the housewife is boiling them, anyway, she might as well vary them by putting them through a potato ricer or coarse strainer. Then they will be flaky, light and delicious.

Here are some other recipes that might be used to advantage. There is nothing new or elaborate about them but so few people think of trying them out.

Potato Border.—Place a greased mould on platter. Build around it a wall of hot mashed potatoes, using nine potatoes, three and one-half inches high by one inch deep. Smooth and crease with case knife. Remove mould. Fill with creamed left-over meat or fish and reheat in oven before serving.

Escalloped Potatoes.—Wash, pare, soak and cut four potatoes in one-fourth inch slices. Put a layer in baking dish, sprinkle with salt and pepper dredge with cornmeal or flour and dot over with one-half tablespoon of butter substitute. Repeat. Add hot milk until it may be seen through top layer. Bake one and one-fourth hours or until potato is soft.

Potatoes a la Hollandaise.—Wash, pare, soak and cut potatoes in one-fourth inch slices. Cut in cubes. Cover three cups potato with white stock, cook until soft and drain. Cream four tablespoons butter substitute, add one tablespoon lemon juice, one-half teaspoon salt and a few grains of cayenne. Add the potatoes, cook three minutes and add one-half tablespoon finely chopped parsley.

Duchess Potatoes.—To two cups hot riced potatoes, add two tablespoons butter substitute, one-half teaspoon salt and yolks of two eggs slightly beaten. Shape in form of cone or any desired shape. Brush over with beaten egg diluted with one teaspoon water and brown in hot oven.

With the aid of vegetables it is quite possible to have an entire dinner in one dish—a dinner that is wholesome, nutritious and very palatable. How many people are familiar with fish chowder? Here is the recipe; it is enough for a family of five: 1½ pounds fish (use moderate-priced varieties such as cod, haddock or flat-fish); 6 potatoes, peeled and cut in small pieces, 1 onion sliced, 2 cups carrots cut in pieces, 3 cups milk, pepper, 1 tablespoon fat, 1½ tablespoons cornstarch. Cook vegetables until tender. Add fat, mix cornstarch with one-half cup of the cold milk and stir in the liquid in the pot to thicken. Add the rest of the milk and the fish which has been removed from the bone and cut in small pieces. Cook until the fish is tender, about 10 minutes. Serve hot.

System as a Housekeeping Aid.

For many years before becoming a farmer's wife, I was one of fifty teachers in a large school whose head teacher was a woman of remarkable executive ability. Methodical, orderly, statistical, she demanded that each teacher provide for her use and guidance a general outline of work for the term, a general program of work for each week, and a detailed program of the work for each day. These daily schedules must be elastic to allow of seizing unforeseen opportunities or for unexpected occurrences.

My first few weeks at housekeeping were a horrible tangle till I bethought me to apply to my housework the same method of preparing a program, so to speak, of the proposed or necessary activities of the day, and it has meant untold comfort, pleasure, and ease in the accomplishment of the day's duties. It requires thought, planning and judgment to make things dovetail to best advantage, and like the school program, it must have sufficient elasticity to admit of being altered more or less as occasion demands. An interruption, a fire slower than we had expected, a telephone visit may disarrange our well laid plans, but some way, if we have it written down in tabulated form it is a little easier than if we are anxiously thinking, "what was it I was planning to do next?" or to have to say, "Dear me, I intended to do so and so but I forgot."

I find a school slate hung on the wall with pencil hung beside it the easiest place on which to jot my daily program. Of course, the general plan of routine duties changes little from day to day, but I have found it well to have it "put down in writing," especially for the guidance of hired help somewhat as follows: After breakfast: 1, clear table; 2, put sitting-room in order; 3, do chamber work; 4, wash dishes; 5, prepare vegetables, etc.

The daily program must be more specific, indicating what must be done while something else is doing, for it is this fitting of duties into their proper niches which lightens and shortens labor and makes the difference between efficiency and slovenliness.

FOE STRIPS INVADED ITALY.

Cattle and Foodstuffs Taken; Women Often Slain.

An Italian motor driver named Frisi, who was captured by the Austrians during the great retreat last November and who just escaped from captivity, reported that all the cattle and foodstuffs in the invaded provinces have been systematically requisitioned by the military authorities, who for this purpose utilized the motor trucks captured from the Italians, says a despatch from Rome. Italian drivers were compelled to act as interpreters as well.

Frisi said that a squad of Bosnian soldiers took him to Vittorio Veneto, where they requisitioned everything of value besides foodstuffs. Two girls refused to give up a small pig and begged the Austrian soldiers to let them keep it. At their suggestion Frisi pleaded hard with the Austrians, who took the pig and silenced the two girls, who were loudly weeping, by shooting both dead at close range.

Similar cases of defenceless women and children murdered in cold blood for attempting to defend their property are frequent in every town and village.

Pull Your Weight.

The billows are heaving behind,
The breakers are foaming before;
We need all the strength we can find—
Each ounce you can put to the oar.
Are you doing the best that you can
To keep the old galley afloat?
Are you power or freight?
Are you pulling your weight—
Are you pulling your weight in the boat?

It isn't the task of the few—
The pick of the brave and the strong;
It's he and it's I and it's you
Must drive the good vessel along.
Will you save? Will you work? Will you fight?
Are you ready to take off your coat?
Are you serving the State?
Are you pulling your weight—
Are you pulling your weight in the boat?

To Prevent Fading.

The delicate shades of colored linen can be kept from fading by using plenty of pulverized borax in the water in which they are washed and rinsed.

Use a brush dipped in whiting to shine up your bookcase doors, mirrors and cut glass. Polish with newspaper.

IF there was just one WALKER HOUSE in town along my route,
Then "drumming" would be joyous,
And I wouldn't give a hoot
For all the inconvenience of
The trains that poke so slow,
If there was just one WALKER HOUSE
In every town I go.

I'd hustle like the dickens,
And take orders by the ton.
Say, trav'ling then would be
Just one big round of solid fun.
I wouldn't mind the rain or sleet,
Or mud, or frost or snow,
If there was just one WALKER HOUSE
In every town I go.

Food Control Corner

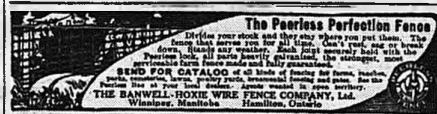
Enforcement of the Canada Food Board's regulations as to food conservation has been placed in the hands of the police machinery of the municipalities and of the different Provinces throughout the Dominion.

It is the duty and privilege of the provinces to enforce federal laws and the Orders of the Canada Food Board have the effect of federal law, being passed upon authority of Orders issued by the Privy Council and published in the Canada Gazette. It, therefore, becomes the duty of police officers throughout the Dominion to acquaint themselves with these regulations regarding our food supply and to see to it that they are obeyed. At this stage of the world's food situation, when 4,750,000 people in Europe have served to death as compared to 4,250,000 soldiers who have died as the direct result of battle, it is beyond cavil or dispute that these food regulations are absolutely necessary. Indeed many people in communication with friends in England or in France think our Canadian regulations mild in view of what people on the other side are undergoing. Patriotism as well as duty should inspire submission to these restrictions by the public and vigilant enforcement of them by the officers of the law.

In cases of convictions secured by the municipal police officers, it should be noted that where these convictions result in the imposition of fines, the money from these fines is to be paid to the municipal treasuries, and similarly in the cases where Provincial officers secure convictions. The Canada Food Board has circularized these Orders in official form throughout the police machinery of the various provinces, beginning with the Attorneys-General and continuing through the lists of Crown Attorneys and Crown Prosecutors. In some provinces the Chief Constables have also received copies of the various Orders affecting the public. As a result, throughout Canada of recent weeks, there has been a crop of convictions. In all cases the Magistrates have stood firmly behind the regulations and imposed the penalties as provided. These run from $100, to $1000 in fines or imprisonment up to three months or both. Restaurant keepers, who have served meat on prohibited days and hours, served sugar on the tables or wasted food, have been brought to task and the wide spread publicity this has entailed will do a great deal more to assure conservation of food in public eating places than anything else.

The Anti-Loafing Law, also bearing upon our war-time food production, has likewise been enforced. Magistrates have seized the opportunity of dealing with loafers, tramps and "sports" by putting them to work on the farms. "Non-essential" industries have been interpreted by some Magistrates into more or less definite groups and men who had no better excuse than employment in said questionable industries have been ordered to get into more useful occupations. In Winnipeg a great change has been observed in the streets since this law went into effect. The idlers and loafers have disappeared.

Great Britain is to allot ten pounds of sugar per head of the household to private fruit growers this season for preserving fruit.



The war garden is to be popular in London in 1918. Reports just received show that 6,014 gardens were started in one week.

Ingram's
Milkweed Cream

You are young but once but you can be youthful always if you care for your complexion properly. Daily use of Ingram's Milkweed Cream prevents blemishes, overcomes pimples and other eruptions. Since 1885 its distinctive therapeutic quality has been giving health to the skin and youthful color to the complexion. It keeps your skin toned up, soft and clean.

The refined way to banish oiliness and shininess of nose and forehead induced by perspiration, is to apply a light touch of Ingram's Velvola Souveraine Face Powder. It also conceals the minor blemishes. Included in the complete line of Ingram's toilet products at your druggist's is Ingram's Zodenta for the teeth.

CHASING U-BOATS AN EXCITING GAME

HIDE AND SEEK WITH THE ELUSIVE SUBMARINE.

Official Records of Perilous Adventures on the High Seas Issued By British Admiralty.

The destruction of a German submarine is never announced by the British Admiralty except upon the strongest possible evidence, which is often provided by the destroyers that are engaged in a long game of hide and seek with the elusive U-boats under conditions of varying excitement. The landsman may obtain some idea of this grim game from the details of official records of a few encounters as to the result of which there is no room for doubt.

A convoy of merchant vessels was being escorted by British and American destroyers. A submarine attempted to attack the convoy, but although it manoeuvred from one position to another the destroyers were too quick for it, and every time it attempted and came to the surface its presence was detected.

Dropped Depth Charge.

Finally an American destroyer sighted the periscope in a favorable position and headed for it, with the intention of ramming. A depth charge was dropped directly over the U-boat, which was still visible under water from the American ship. The result was an upheaval of black colored water, two broken pieces of a spar and some small pieces of wreckage. Nothing more of the enemy was seen.

Early one winter's day a destroyer sighted an enemy submarine on the surface and steered for it at full speed. So swiftly was the manoeuvre carried out that the German had no time to submerge. Within thirty seconds of sighting the destroyer had rammed the enemy, tearing a great rent in the hull of the U-boat. At the same time a bomb, "which," said the commanding officer, "exploded satisfactorily," was dropped. After this the destroyer wheeled back over the spot and dropped another bomb. Large quantities of oil rose to the surface, but no other sign of the enemy's presence could be detected, and when the position was located, the submarine was located, still lying on the spot where she had sunk.

Submarine Cut in Two.

A merchantman which had fallen behind the main body of the convoy to which she belonged was escorted back to her position by a destroyer. Just then another of the merchantman was torpedoed. Immediately the destroyer swung round and headed full tilt for the enemy's position. As she passed over the spot a severe shock was felt throughout the destroyer, and just afterward the German periscope was sighted by the destroyer's sister ship, which hastened to drop a bomb on the U-boat. A heavy explosion resulted, and the submarine came up right astern of her pursuers. Helm was put hard over and fire opened by both British ships, three hits being registered in quick succession. Escort No. 2 had now come round and being nearest the enemy, went straight for him and succeeded in cutting the submarine clean in half. Both halves appeared on the surface for a few seconds before plunging finally from view.

Terrific Explosion.

A destroyer hunting for submarines observed two periscopes about eight feet apart on her starboard bow. The destroyer managed to get within fifty yards before the U-boat submerged; then a depth charge was dropped over the submarine's course. After the explosion of the charge a second and much louder explosion was heard and felt by every one on board the destroyer, and a column of black-colored water was thrown to a height of about thirty feet. A ball of light oil then spread over the water, and in the next two hours had increased to a considerable extent.

Sighting the wake of a submarine, a destroyer dropped a depth charge and oil rose to the surface. Later a periscope appeared. Another depth charge was dropped and more oil was seen. When darkness fell a large and conspicuous patch of oil was observed and was still very clearly marked next morning. Another depth charge was dropped in the middle of the patch, whereupon more oil and bubbles rose and continued rising for the next two hours. Sweeping operations were then undertaken, and an obstruction was located on the bottom. More oil rose to the surface.

Rescued From Burning Ship.

A lieutenant in command of a destroyer discovered that a British liner had been torpedoed and set on fire. She was burning furiously and was out of control although her engines were still running. A continuous stream of oil fed the flames, which prevented any one entering the engine room. Her peak was not yet alight, and crouched up here were thirty Chinamen, the remainder of the crew.

To extinguish the fire was beyond the power of the destroyer's crew, but her captain determined to make an attempt to rescue the survivors in the peak, although it was obviously a difficult undertaking. He ran his vessel closer past the liner's stern, and as she passed rafts, lifeboats and lifebuoys were pitched overboard. This manoeuvre was carried out three times.

By new all the destroyer's boats had been lowered to pick up the men in the water, while all her available loose life-saving gear had been thrown overboard. However, there still remained nine men in the peak of the liner. The concluding part of the operation may be explained in the words of the destroyer's captain.

"I therefore determined it was necessary to place myself alongside the ship and take off the remainder of the crew. A speed of eight knots being maintained, this was done. We remained alongside locked to the steamer's windward bow for a period sufficient for all nine men to lower themselves on board this ship, which sustained slight superficial damage to guard rails and upper deck fittings. Ten minutes after we cleared the steamer she was burnt to the water line."

CANADIAN WHEAT CROP.

Estimates of Yield in Previous Years Have Been Below the Mark.

Early and premature opinion places the wheat crop of the Canadian prairies at 300,000,000 bushels. Planting has barely been finished. Essential data lacking, we may await reports with the reassuring knowledge that estimates of acreage are not over the mark. They never have been. Revision upward has been the rule both as to acreage and yield.

It has been shown time and again that close study of hidden subsoil conditions in the Spring wheat belt is scarcely of less importance than to record precipitation and atmospheric changes. There have been seasons of long superficial drought when yield in quantity and quality was beyond all expectation. Results have also been the reverse. Some day the agricultural colleges may unearth some important discoveries below the familiar content of moisture a few feet deep.

It will never be known just how many bushels of wheat were produced in Manitoba, Saskatchewan and Alberta in 1915. That crop was being hauled to market for nearly two years. Wheat specialists from Minneapolis, Chicago, Liverpool and Glasgow were unable to calculate yield even when the threshers were on the ground. Nor has there yet been satisfactory explanation of the marvelous multiplication and size of the wheat kernel, even on wild lands and in the dry areas of Southern Saskatchewan, and far up in the Peace river country.

It is doubtful if any single agency, either public or private, has in any season completely surveyed the entire growing area of the prairies. It stretches far out from railroad branch extensions. Motoring is difficult or impossible. Growth is so rapid that when an inspection of one district is completed, wheat has developed to a much more advanced stage elsewhere.

Neither the Canadian Government nor such private associations as the Northwest Grain Dealers' have shown disposition to overestimate results. In the present circumstances of momentous consequence it is well that reliance can be placed on these estimates as not likely to go beyond the fact. There has been at least foundation laid for a yield second in size only to the 1915 crop, when every process of nature co-operated in fecundity. Perhaps the last battle of the war may be a victory for the Canadian wheat crop. May it be so.

FORESTS OF NEWFOUNDLAND.

Extract From Report of the British Reconstruction Committee.

Newfoundland has considerable reserves of timber, which, though under a separate Government, form part of the same Imperial question. They illustrate incidentally how rapidly forests, which at first sight seem vast, may be absorbed. The Newfoundland woods cover 10,000 square miles, but more than a third has been taken over by a single company. The produce from this area, nearly equal to the whole woodlands of Great Britain, feeds the pulp and paper mills of the Anglo - Newfoundland Development Company and supplies the requirements of four British newspapers. Newfoundland has assisted the United Kingdom during the war with supplies of pitwood from the three-mile belt round the coast reserved by the Colonial Government for the use of the Colony and not ordinarily available for export except in the form of pulp. Labrador, which is a dependency of Newfoundland, is believed to have considerable resources in timber suitable for pulpwood and pitwood.

India, South Africa, Australia and New Zealand are already importers of soft woods, and no relief with regard to future supplies, but rather the contrary, may be expected from those quarters.

Between Girls.

Betty Wilds—Jack declared he'll go crazy if I don't marry him.

Her Friend—Ah! Then there's no hope for him either way.

Because late maturing varieties of corn are being used this year thorough cultivation before and after planting, to hasten growth, is more necessary than ever before.

WHERE THE CONFLICT RAGES

AN INTIMATE TOUR OF THE FIGHTING LINE.

Where British Soldiers Have Stood, Personally Conducted by a Man Who Knows It Well.

On the wall of the coffee-room at the Hotel du Faucon—The Falcon—at Bailleul, there used to hang, I remember, an old print of the Heights of Flanders, those modest hills rising from the flat plain which have figured so largely in the recent news from the Front, says a British officer. There they were—Le Montagne de Kemmel, le Mont des Cotes, le Mone Aigu (better known by its Flemish title of the Scherperberg—"the pointed hill"), le Mont Noir, le Mont Rouge. On the top of Mont des Cats the print showed a faithful representation of the Trappist Monastery which used to crown the crest, where, in 1915, a kindly brother regaled me with a glass of the monks' excellent home-made liquer.

Flat and Depressing.

After the dead flatness of the country between St. Omer and Bailleul, one comes upon these pleasant wooded heights with a sensation of relief. If you will look in Baedeker for Belgium and Holland you will find duly noted therein the Belvedere of Mount Kemmel from which a fine view of the surrounding country may be obtained (entrance fee ten centimes).

When I laboriously toiled to the top of Kemmel Hill one afternoon in 1915, a few crumbling bricks were all that remained of the Belvedere, or Aussichtstuine (observation tower), as the Germans would call it, to which the good burgesses of Bailleul, in happier times, used to repair on Sunday afternoons to enjoy the view and to drink their coffee at the estaminet at its foot. Kemmel stands out like a bastion in front of all the others, the Scherpenberg, le Mont Noir, and the rest. This border land lying along the Franco Belgian frontier is a country of contrasts. From Hazebrouck, which is a dull and ugly place, the roads running to Bailleul and Merville, respectively, traverse a flat and depressing region of brimming, willow fringed ditches, of wet, hedgeless meadows, the sparse houses and farms squalid and poverty stricken. The villages are made up of a heterogeneous collection of old, weather-stained houses and brand-new red-brick villas, which look exactly like the pictures on those children's boxes of building stones (made in Germany).

To Old Bailleul.

And then, suddenly, you come to Bailleul, whose town-hall is a gem of old Flemish architecture. With its quaint cupolas and fantastic turrets, the Hotel de Ville always used to remind me of an illustration from a book of fairy tales. The old-world place, with the town hall bulking large in the foreground, flanked on either side by the old shops and houses all crowded together, as though leaning against one another, came as a delightful surprise after the plain uniformity of the surrounding country.

The road from Hazebrouck to Merville—where the Indian Corps had its headquarters for so long—furnishes another pleasant surprise. When the main road plunges into the Forest of Nieppe the ugly sordidness of this Frontier land slips away. The forest is large and thickly planted with oak and beech, and there are pheasants and rabbits in the undergrowth. Many a summer night coming through the forest, I have stopped and heard the nightingales warbling full-throated about the old chateau which lies on the edge of the wood.

Merville has nothing about it to justify its pretty name, except the picturesque, high-framed bridges across the muddy River Lys. The chateau, which was the headquarters of the Indian Corps in the old days, was a monstrosity such as only a nouveau riche would be guilty of perpetrating. It was a bogus antique from roof to basement, with a little most (if I remember aright). There was brand new, staring, yellow wainscot in all the rooms, and suits of armor and very bright coats-of-arms and everything to match.

Occupied by Asylum.

I had a friend at Bailleul, the director of the great female lunatic asylum lying on the north of the town on the road going out to Locre. He was a witty and amiable French doctor, shrewd and fair-minded and tactful, who liked the British Army, and did all in his power to make their stay at Bailleul agreeable. The nuns who ran the asylum, aided by a detachment of harmless lunatics, used to do the washing for the troops in connection with the first-class patients' baths, which were used as a bathing establishment by the men quartered in the vicinity. It was a splendid bath, large, and tiled in yellow, with unlimited supplies of hot water; and I often used to watch the men revelling in it.

When the Germans were at Bailleul before—in the autumn of 1914—they occupied the asylum. They made Monsieur le Didecteur very angry because they broke several slates from the belfry chapel, where they had installed a machine gun to fire on the advancing British. Every time I passed the chapel with my friend the director he would point out to me the gap in the belfry made by the missing slates. To his mind it was the enduring evidence of German frightfulness. Poor man, if he is still Bailleul, I fear he has had by now a worse lesson of the character of our foes.

First Bathing Station.

At Nieppe, which lies to the southeast of Bailleul, was installed the first bathing establishment on the Western Front. It was in the late winter of 1915, when the Army was suffering much from the inclemency of the Flemish climate, and "trench feet" were causing many casualties. The baths were set up in a ramshackle old factory on the banks of the River Lys. A hot water installation was put in, and the men bathed in great wooden vats, while, in another part of the buildings, their uniforms were disinfected. Their shirts, socks, and underclothing were taken away, and they were issued with fresh sets on emerging from the baths. Shirts were mended and socks were darned by a party of old women, recruited locally.

The bathing establishment at Nieppe had a grisly relic, of which the officer in charge—the Army doctor who had originated the scheme—was inordinately proud. It was known (saving your presence!) as "The Lousy Shirt." It was, in fact, the most verminous article with which the disinfecting branch of the establishment had had to handle, and was reverently preserved, as a relic, between two sheets of glass. It certainly showed abundant traces of the ruthlessness with which the bathing establishment waged war on these soldiers' pests.

The River Lys, which has played such a large part in the desperate fighting, is a muddy, uninteresting stream, which, in my mind, is principally associated with the Indians, who spent so many weary months in the Lys Valley. Some of the sowars had the ingenious idea of using Mills' bombs for the purpose of catching fish. The procedure was simple. You just pulled out the safety pin, dropped the bomb into the river, and then collected the dead fish thrown up by the explosion. But the authorities, probably fearing that some over eager Oriental would blow himself to bits, stopped the practice, so grenade fishing fell into desuetude.

HUMAN TANKS IN WAR.

Novel Devices For Defence Used in Italian Army.

No belligerent has shown more resourcefulness than the Italian in devising novel means of offence and defense. Their army was the only one to enter the war with a trench helmet and a steel chest-protector, and it is now provided with a more efficient body-shield than is possessed by any other of the warring nations.

Early in the war it was discovered by the Italians that many lives could be saved in skirmishing at close quarters if the soldiers carried or pushed bags of sand in front of them, and the present body shield has been an outgrowth of that idea. They are made in the one-man and two-man type. The former are worn by infantry advancing in the open, attached to the shoulders by a pair of light steel arms, and are long enough to protect the head and vital organs of a man standing erect.

Lying at full length, or even crouched, it covers him completely. Each shield is pierced with a small, round eye-hole and an oblong loophole for firing from, both of which may be closed by a sliding door when not in use. The two-man shield is principally used in wire cutting. It is carried on the back of one man, who may also work his rifle from the loophole in the top, while a second man works a long wire-cutter through a hole at the bottom. It is held up by short legs if the first man desires to move independently.

ROYAL NAVAL AIR SERVICE.

British Outclass Germans in Seaplane Service.

Britain's naval airmen are piling up a wonderful record of successes. Day after day they encounter the enemy's seaplane patrols along the North Sea coast from Dunkirk right up to the waters of the Bight, and hardly ever return without having destroyed two or three hostile machines. Their own casualties are amazingly light.

German seaplanes are quite outclassed, and their pilots seem very inferior to the German military airmen. It is quite a common occurrence for a group of enemy seaplanes to turn tail at full speed, on sighting a much smaller flight of our own, and only rarely will they accept a combat. The list of R.N.A.S. "aces" is now a very long one.

The French have a way of making a year-old fowl as tender as one that is half the age, by wrapping it in brown paper before it is put into the oven, and allowing it to cook in this envelope until it is nearly done. The paper retains the juices, allows the fowl to cook slowly and evenly and grow tender before the outside is browned. At the last the paper is removed long enough to bring the surface of the fowl to the desired color. Young mutton can be brought to lamb-like tenderness in the same way, and roast veal may be cooked thoroughly without the hard outer crust which sometimes spoils this meat when roasted.

RUBBER FAMINE IN GERMANY

NO SUBSTITUTE HAS YET BEEN FOUND ADEQUATE.

Allies Hold the Key to the World's Rubber Supply—All Sources Are Closed to Germans.

Germany was prepared to make sacrifices in food, human life and money when she embarked on her dream of world dominion. But for every loss she foresaw a compensation which would enable her to keep her armies at maximum efficiency.

The victories that Pan-Germany in fantastical egotism saw have failed to come. She has been unable to secure the sorely needed raw materials at the expense of the nations she would have overrun.

She did not foresee that there were certain essential materials that she could not produce herself and that the might of her armies could not bring to her.

Among these materials—and there is a long list of them—is rubber. That she has been sorely pressed to fill her requirements for this necessity is evident from the extensive and elaborate scheme put into effect in the United States for smuggling through the most minute quantities, secreted in letters and on the persons of travellers.

Conserving the Supply.

Le Pays de France (Paris) in a recent issue tells an interesting story of the German Government's activities in trying to conserve her supply within the fatherland, outside being closed to her.

The requirements of Germany at war are far in excess of her needs in peace times. Some of these are: Automobile tires, motorcycle tires, rubber clothing for her soldiers, trench coverings and gas masks. Her hospitals and physicians in the field need gloves, ice bags, water bottles, cushions and innumerable surgical accessories. Besides these there are the industrial necessities such as rubber belting, hose, tubing for insulation, wagon covers, boots, joints, mats, cloth and thread.

These are but a few of many of her requirements for rubber. Before the war 264 factories employing 40,000 workmen were engaged in fabricating supplies from the raw material, the scarcity of which is now revealed in the various orders that have been issued by the government for the seizure of rubber products used by the civilian population.

Seizure of Rubber Articles.

On May 16, 1916, the German War Minister ordered the seizure of all commercial automobile tires, both casings and inner tubes. In September he an edict ordered the obligatory sale to the Government of all old rubber in the possession of civilians. October 24, of the same year there followed another order commandeering all stocks of crude rubber.

In August of 1916 all nursing nipples were requisitioned and several months previous billiard tables had been stripped of their cushions in an effort to increase the depleted stocks. On April 1, 1917, the War Minister extended his seizures to include all articles being manufactured for civilian use which were not absolutely indespensible. Even the production of rubber shoes was discontinued.

Germany before the war secured her stocks of crude rubber from Brazil, India, the Congo, Western Africa, Ceylon, English and French African colonies and Venezuela. The amount secured from her colonies in Africa was negligible, being no more than 4,000 tons.

Just Enough For Allies.

There never has been an adequate supply of crude rubber for the requirements of the world. In 1900 the production amounted to 54,000 tons. In 1915 the total tonnage produced was 164,000 tons. Consumption statistics reveal that this was no more than sufficient to meet the demands of the countries fighting against Germany.

The United States demanded 80,000 tons; Great Britain, 58,000 tons; Russia, 20,000 tons; France, 13,000 tons; Italy, 9,000 tons, leaving a remainder of 8,000 tons to be divided among the rest of the nations. The great commercial club which the allied nations can wield is apparent from these figures.

If a commercial combination were entered into untold hardships could be inflicted on Germany after the war, not only in depriving her population of this necessity of daily life, but in wiping out of existence her rubber manufacturing trade.

As in all other fields Germany has sought to overcome her obstacles by the expedient of substitution. It is a well known fact that reclaimed rubber has never proven satisfactory. The amount of sulphur that has to be used in the process renders the product short lived through its brittleness and inelasticity.

Synthetic rubber has been tried, but as yet the results are disappointing in their imperfection. Germany has tried innumerable substitutes, all of which are known to the Allied nations, but rubber is rubber and as yet there has never been found a satisfactory product that can adequately fill its place.

GERMANY'S LOST AFRICAN COLONY

IS A COMPARATIVELY YOUNG COUNTRY.

History of That Portion of East Africa That Has Passed From the Kaiser's Control.

As far as annals are concerned, German East Africa is a very young country. Until the middle of the nineteenth century only the coast land of the territory was known, either to Europeans or to the Arabs. The Arabs, indeed, were the first people in possession, and when the Portuguese, stretching out hands of dominion in all directions, as they did during the fifteenth and sixteenth centuries, arrived in due course on the east coast of Africa they found the Arab everywhere in power. The hold of the Portuguese on the country was never firm, never extended very far over the vast unknown hinterland to the west, and when they finally took their departure, in the early years of the eighteenth century, the Arabs returned like water to an old watercourse. All the coast towns north of Cape Delgado, the present southern limit of German East Africa, fell under the sway of the Arabs of Muscat, and later on under that of the Sultan of Zanzibar.

Now, the Arabs of Zanzibar were apparently more enterprising than the Arabs of Muscat. They had a strong penchant for exploration. From about 1830, or even earlier, they began to penetrate inland, and by 1850 had established themselves at Ujiji, on the eastern shore of Lake Tanganyika, a name which has figured preminently in the events of the last two years. The Arabs also penetrated as far as Nyasa—to the south, and the result of all this was that the Sultan of Zanzibar began to make vague claims to include all this vast country within his dominions.

Ceded to Germany.

In those days it was nobody's business in particular, but, of all the powers, the United Kingdom was, of course, most nearly concerned, as Zanzibar was in a state of semi-dependence on India. When, however, the Sultan Bargash, through Sir William Mackinnon, offered to lease the whole territory to Great Britain, the offer was declined. Shortly afterward, largely owing to the explorations of Stanley, a movement was set on foot for the partition of Africa among the powers. Germany desired territory on the east coast, but British influence was so strong at Zanzibar that the German Colonization Society determined to accomplish its purpose secretly. The result was the famous exploit of the three young Germans, Karl Peters, Joachim Count Pfeil and Dr. Juhike. Making their way inland, they got into touch with the chief Usambara and induced him to sign a treaty with them, and to declare his independence of the Sultan of Zanzibar. Other treaties quickly followed, and early in 1885 the German Emperor granted a charter of protection to the Colonization Society. Zanzibar resented the movement, but it was acquiesced in by the British Government, and finally, after much negotiation between Germany, the United Kingdom and France, the Sultan of Zanzibar ceded absolutely to Germany the mainland territory for 4,000,000 marks.

Blackest in History.

Meanwhile German companies had begun to exploit the country. In 1888 the German East Africa Company took over the administration of the Arabs, and thereafter quickly followed the first of those periodic risings, whether of the Arabs or the natives, against the Germans, which dogged the steps of German rule in the country for many years. The story of how some of these risings were suppressed is one of the blackest in the history of German colonial administration. Ultimately, after some twenty years of struggle, Germany made good her hold on the country, but development was slow, and it was only during the eight years or so immediately preceding the war that adequate measures were taken to develop the resources of the colony.

Economic Value of Vegetables.

A writer in the Royal Horticultural Society Journal sets out the economic value of vegetables on the following standards:

(a) Food value in calories.
(b) Digestibility and absorbability.
(c) Cost of production in seed outlay, land requirement and plant food.

Based on a formula derived from the above, the chief vegetables are thus arranged in order of economic value:

(1) Potato	25 points
(2) Carrot	19 points
(3) Beet	18 points
(4) Parsnip	16 points
(5) French beans	10 points
(6) Onion	9 points
(7) Broad beans	6 points
(8) Peas	4 points

Peas, though of high food value stand low on the list owing to the small crop per acre and the length of time it takes to mature. Cabbages and greens are omitted, but they have an important dietetic value.

GLAMIS

Quite a gloom was cast over our village on Friday evening when the sad news spreads that Mrs. McDermid was found dead in her home. She had been staying alone through the day, but had a young girl stay with her at night. Friday evening a little before dusk the girl went as usual, and when she entered the house she found Mrs. McDermid lying on the floor. She quickly gave the alarm, and in a short time a number of neighbors were on the scene. Some time Mrs. McDermid had been ailing for some time, with heart trouble, but was able to be around the house. She was in her 67th year and was very much respected by all. She leaves to mourn the loss of a loving mother two daughters—Jean and Kate, of London; and two sons—Alex and Neil, in France. The funeral on Monday to Riverton cemetery was well attended, a big crowd turning out to pay their last tribute to the departed.

Rev. Mr. Reith has returned from London where he attended the General Assembly.

Mr. Telford motored to Wood Memorial last week. Mrs. Telford, who had been visiting her parents here, returned with him.

Miss Jessie McKennan, who was under the doctor's care in Toronto, returned last week.

Miss Minnie McNally, of Lapeer, Mich., is home for the time being.

Mr. Peacock and Mr. Stillwell, of Maxford, motored up and spent Sunday with friends.

Mr. and Mrs. Neil McFarlane returned with them on Monday and will stay two weeks.

Mr. John Webb, from the west, is renewing old acquaintances here.

Mr. Kirkstowe, who has been in Markdale for some weeks, returned on Sunday, accompanied by his daughter, her husband and two children, Mr. and Mrs. Montgomery.

Mrs. Deuff and two children, Miss May Ferris and their father are moving into the Baptist parsonage.

Miss Margie McKay, of Toronto, is visiting at the home of her brother, Mr. Murdock McKay.

Mr. Jackson, of Holland, his son-in-law and family Sundayed at the home of his daughter, Mrs. Hastie.

Misses Jean and Kate McDermid, of London, arrived home on Saturday.

Mr. MacInnes, Mrs. McCormick, Mrs. Knetson and Mrs. Ferguson motored up to Kincardine on Friday and spent the day with friends.

The marriage of Miss Abbie Symons to Mr. Jack Ferris took place in Kincardine on Wednesday last week. They have taken up housekeeping on the old Tom Caldwell place on the boundary.

CASTORIA

For Infants and Children

In Use For Over 30 Years

Always bears the Signature of *Chas. H. Fletcher*

TURNER'S

Mr. and Mrs. J. Scanlan, of Nanton, Alta., are visiting friends here.

Mrs. Pace spent last week with her daughter, Mrs. R. Pollock.

The Young People's Guild of St. Andrew's and North Bruce church intend to hold a picnic at the lake Friday afternoon.

Davidson Bros. are improving their house by building a new kitchen.

Mr. Allan Pollock has purchased a fine thoroughbred bull from John Scott.

CARGILL

Miss Nellie Clancy of "Silverwoods," London, Miss Mabel Clancy of the post office staff at Walkerville, and Mr. Oswald Clancy of Oshawa, are enjoying holidays at their home here.

Dr. Wittich, of London, who has been visiting his brother here, returned to the city on Friday.

Mr. Chas. Welsford, who visited his brother here last week, returned to his home in Guelph on Saturday.

Mr. Gordon Young, of the high school staff at Norwich, visited friends here over Sunday.

Miss Verna Loughleen returned to her duties in Woodstock on Saturday after a week's visit with her parents here.

Dr. and Mrs. Ferguson, of Teeswater, spent Sunday at Mr. John Cargill's.

Rev. R. Storey, pastor of the Methodist church, preaches his farewell sermons next Sunday evening. Mr. Storey has been transferred to Freeman. We understand a Mr. Hazelwood succeeds him.

Mr. Wm. Welsford, of Guelph, renewed acquaintances here on the first of the week.

Mr. and Mrs. Jas Clancy, of the county town, spent Sunday at Mr. John Clancy's.

Messrs. W. J. Loughleen, P. Balsdon, W. Russell and R. Fowle attended the funeral of the late Mr. Lambert in Hartford on Sunday.

Born—To Mr. and Mrs. Wm. Meyer, on June 14th, a daughter.

Road work has commenced.

Don't forget to register on Saturday.

Mr. Kaufman, of Tavistock, spent over Sunday at Mr. Wm. Russell's.

EBENEZER

Misses. Sam and Walter Kirkland, of Aitchison, motored down and visited the Kirkland family on Sunday.

Mr. John Martin, of Owen Sound, visited his uncle here, Mr. Wm. Martin, for a couple of days last week.

Mr. Russell Fleming is engaged with Mr. J. D. Poole for the haying.

Mr. and Mrs. John Conites and Mrs. Wm. McFadden and family, of Port Elgin, visited at J. H. McFadden's on Sunday.

Eleven of the farmers here have clubbed together and bought Mr. Chris Reif's threshing and sawing outfit. Robert McKinlay and Jas Martin are busy these days cutting wood. A large pile of logs to make into wood when Bob and Jas are on the job. Robt. McKelvey has been hired by the company to be foreman of the breaking this fall. It will be a pleasure to have the threshing done promptly this fall, as winter threshing is out of date nowadays.

Mr. and Mrs. McLean, Mr. and Mrs. Byrne, of Owen Sound, visited at Mr. Sam Fleming's on Sunday.

The Sunday School is having their annual picnic on the church lawn on June 22nd. The Mount Hope S. S. has been united.

Capt. Thomas Wm. Will Grant, Mr. Cecil McFadden and Miss Gertie McFadden went to Tara on Tuesday as delegates from the Sunday School here to the S. S. convention.

Rev. W. W. Prudhom and wife, of Wiarton, and Rev. C. D. Draper, of Milton, visited at Mr. J. H. McFadden's one day last week.

Mr. Wm. Martin has received word that that his son, Pte. Wilbert Martin, has landed safely in England. His three other sons are serving in France.

Mr. Jas. Sloan, of Chesley, visited at Mr. Geo. Grant's on Saturday.

The government food board has announced that special arrangements by order-in-council are to be made at an early date so that housekeepers may procure extra supplies of sugar for canning purposes. The law at present is that no one may have more than enough for fifteen days' use in the house, does not make any allowance for preserving, and this will be taken care of under special orders.

CARD OF THANKS

The family of the late Wm. Watson desire to express their appreciation and gratitude for the kindness and sympathy extended to them by many friends and acquaintances in their recent bereavement.

GILLIES HILL

Mrs. John White is slowly recovering from the effects of a badly sprained ankle.

Although Presbyterianism in past days has been famed for its strong faith in time of persecution and trial, it seemed to have almost collapsed before the regulations of the food controller, but after getting its bearings and a little information this congregation has buckled on its armor and hopes to have a rousing garden party on the 27th inst. The ladies of the congregation will be heard, and altogether a good time is expected.

The second annual convention of Elderslie S. S. Association was held in the Presbyterian church here on the 13th inst. Owing to the wet, drizzly weather the attendance in the afternoon was small, but in the evening about a dozen auto loads came out from Chesley, and the seating capacity of the building was pretty well taken up. Those were able to be present at both sessions were ample repaid. In the afternoon devotional exercises were conducted by Rev. A. H. Wilson, who welcomed the delegates to Gillies Hill.

Rev. Mr. Draper, of Milton, spoke on "The Boy Problem." The address was far above the average on occasions of this kind. The speaker's object undertook to teach a class of boys had a problem, but, the speaker said, never lost faith in the boy. The question was not how much scripture can cram into that boy's head, not to make him feel he is wicked and evil and must change his way or be a disgrace, but rather get near him, try to understand his likes and dislikes; what he is interested in and then follow him out. Never give up but woo and win him.

Rev. Mr. Daniels, of Tara, gave a splendid address on township organization and told of the census taken last winter in Arran, and the benefits they were deriving from the knowledge they had gained of the ground that had been allotted to their care. Also he had broadened their sympathy and created a spirit of co-operation for all the districts.

In the evening Mr. Draper spoke on "The Front in the Sunday School," and Rev. W. W. Prudhom, of Wiarton, gave a good address on "Organize to Win."

The executive committee met after the afternoon session and the following officers were elected: President, J. E. Cass; Secretary, Donald Reid; Elementary Division, Mrs. McKinnon; Second Division, Wm. Scrimmill; Adults, C. E. Hastings; Organist and visitation, Rev. W. Prudhom; Training, P. S. McLachlan; Temperance, A. H. Mills; Missionary, Rev. A. H. Wilson.

As there had been some misunderstanding as to the terms of Chesley and Paisley being linked up with Elderslie, it was agreed that this association be known as the Chesley, Paisley and Elderslie Association, the next annual meeting to be held in Chesley.

As to finances, it was agreed to continue the offering adopted last year, namely, three cents per enrolled member.

H. S. Anderson's home here on Sunday by Methodist church rendered several selections, and Mrs. D. G. Leitch a solo.

Both sessions were presided over by President J. E. Cass.

CANTIRE

As King George's loyal subjects here are these days doing their bit to keep the king's highway in a passable condition it was no surprise that a number of them should betake themselves to Chesley on Monday evening to have a peep at this county's representative on this part of the realm. They report him to be a very well looking person dressed in ordinary attire. The real attraction seemed to be that his special train was a double-header with seven coaches and carried a retinue of two hundred guests and servants. People are wondering if the duke's party expected to strike snowbanks in Bruce Co., or was it a demand from an ocean coal.

Mr. H. A. McIntyre, of Swift Current, Sask., is paying a visit to her father, Mr. John Black.

As registration day draws nigh, the minds of the old and middle aged folk go back — retrospect to the good old days when there were no automobiles or bicycles, no telephones or rural mail, yet they were happy days.

Mr. and Mrs. Dug Taylor, Mr. and Mrs. Wismer, of Port Elgin, were callers at Donald Reid's on Saturday last.

Mr. Isard, of Port Elgin, in company with Robt. Alexander, were motoring into Chesley on the machine became unmanageable and turned turtle, precipitating the occupants to the bottom of the ditch. A nearby farmer came to the rescue and succeeded in extricating the pair from their unenviable position.

We have heard of wars and rumors of wars, but at present we seem to be having an epidemic of war time rumors. There are strongers of farmers being fined two hundred dollars for giving strangers a good square meal, woman book agents being arrested as spies. The latest is that farmers are to be taxed ten dollars a head for milk cows. Would the editor of The Advocate be kind enough to interpret some of the latest regulations just to quiet the nerves so we will be able to do our haying.

CYCLONE STRIKES TARA

The worst rain and wind storm probably in the history of Tara struck the town about 7.30 o'clock on Tuesday evening, which did damage to the business section to the extent of over two thousand dollars. The rain fell in torrents and one like a cloudburst, and the streets were running with miniature rivers, while hail fell the size of pebbles. The wind reached a velocity of possibly forty miles per hour, and the cyclone first damaged Frank King's livery barn, blowing the roof completely off and landing it on the road several yards from the building. If next whirled across the street and struck the new abutting rink, breaking the timbers like matchwood and damaging it about fifteen hundred dollars. Geo. Certley, the owner of the rink, will be a heavy loser just to speak of. The building is about 60 x 170 feet, and it is very unfortunate that it was damaged, but Mr. Certley stated to The Leader yesterday that he will rebuild. Mr. Frank King's loss will be between two and three hundred dollars, and this is his second loss within a year, his livery barn having been burned to the big fire last September. The hydro and telephone wires were broken and will require considerable repairs, and other damage was done.—Leader.

ELORA ROAD NORTH

Mr. Clarence Fraser was in Toronto for a few days.

Mr. Arch. Reynolds is home from the coast.

Pte. John McNeil is home from London on 30 days' leave.

Mr. and Mrs. Nick. Tanner spent a few days in Walkerton.

Mr. Dora Bryce has sold his black team and bought another.

Mr. Hugh Watt contemplates a cement roof sun for Mr. Harry McTavish.

Mr. R. McGill has bought Mr. Mike Sarrow's farm. We understand that the price paid was $2500.

The road north of Dunblane, which was

CASTORIA.

The Kind You Have Always Bought

Senior Boy—Have you ever heard Tara Elgin Tunes? What would you do if you saw a fine, big, black bear sunning in the fields of the road as you rounded a sharp curve and looked into his face? Some would say shoot him. Others would tell how they would grab a rock and kill him with a mighty throw, like David slew the giant, while others again might tell how they would tear his jaws apart, and so on. But perhaps most people would do just what the editor of the Times did. Step up, roughly short and wonder what the bear would do. Such a procedure with the establishment of registration places we had to visit the post haste. So one way back from Tobermory, just eight miles this side and just at three in the afternoon, we had passed over the brow of a hill and when we slackened the speed of our car because a couple of motorcycles were scampering along in front, when suddenly rounding a sharp corner, there squatted in the centre of the road was a big BEAR which held not forty feet from us. Naturally we just slammed on the emergency brake and expected brain would perhaps first change as to what to do. Well, we didn't do it. Not he did neither, he just shook his head and scampered off in the bush, while we, we just gave her gas and steam ahead. After a short distance we collected our thoughts, stopped the car and figured it out. Snakes! woodchucks! bears! Only for the fact that we had been hobnobbing with Reeve Phil Forbes, Reeve Whit Moore, Dr. Hacking and other celebrities we certainly would have believed there was something wrong with the editor. But there wasn't. We saw the bear.

Coming—McFadden

A very pleasant event occurred at the home of Mr. and Mrs. Jas. McFadden, 2nd con. Saugeen, on Wednesday, June 5th, when their only daughter, Alice M., was united in marriage to Mr. Russell Cunningham, son of Mr. and Mrs. John Cunningham, Bruce. To the strains of Lohengrin's wedding march played by Miss (Rev.) Dahl, the young couple took their places under the arch which was beautifully decorated for the occasion, where the ceremony was performed by Rev. W. Dahl. Little Ann Luttrell, cousin of the groom, acted as flower girl. The bride, who was given away by her father, was charmingly attired in a gown of white satin de chene trimmed with pearl and lace. During the signing of the register, Mrs. C. Boggs, aunt of the bride's mother, sang "Rest in the Lord." A dainty lunch which the young people had prepared by the dining room where a sumptuous repast was partaken of. The numerous gifts included many useful and costly articles and bank cheques, the groom's gift to the bride was a substantial cheque and to the flower girl a brooch. Guests were present from Trout Creek, Chesley, Paisley, Carlsruhe and other points. The young couple left on a motor trip to Owen Sound, Bognor, Kilsyth and other points, after which they will reside on the groom's farm, 11th con. Bruce, where they will be at home to their many friends after July 1st.

Pace—McBeath

A very interesting event happened at the home of Mr. and Mrs. John McBeath, 4th con., Elderslie, on the evening of June 5th, when their second daughter, Isabel G., was united in marriage to John A. Pace, of Bruce Tp., in the presence of about seventy guests, relatives and friends of the contracting parties. At 7 o'clock the handsome bridegroom took his place under a beautiful arch of evergreen decorated and interwoven with bridal roses, and awaited the coming of the bride. To the sweet strains of Lohengrin played by Miss Annie E. McBeath, sister of the bride, the sweet and winsome young bride appeared leaning on the arm of her father, attired in a gown of white brocaded chiffon and carrying a beautiful bouquet of carnations and maiden hair fern. With the exception of little Rachel Pollock, niece of the groom, who acted as flower girl, the young couple were unattended. The bride looked beautiful as she took her place beside the groom and very modestly plighted her troth to the young man of her choice. The ceremony was conducted by her pastor, Rev. G. C. Little, B.A. After the trying ordeal which made the happy couple one, and the usual congratulations were over, the guests were invited to the spacious dining room where a dainty wedding supper was served by the hostess, Mrs. McBeath and her assistants. The tables were beautifully decorated for the occasion. The groom's gift to the bride was a pearl necklace, and to the little flower girl a gold brooch. The numerous gifts included many useful and costly articles, also a number of substantial cheques, one of which was from the bride's mother for $100. The genial host and hostess gave their guests a very enjoyable time. Those present were from Owen Sound, Aberdeen, [illegible], Paisley, Glammis, Chesley and other points. The young couple will reside on the groom's farm, 8th con. Bruce, where they will be at home to their many friends after June 25th.

—The village by-law prohibiting riding bicycles on the sidewalk is being enforced. A boy was fined for the offence a few days ago.

To Be Tried at June Assizes

McPhail vs. Nicholls, an action by Lachlan McPhail, of 12th Bruce, to recover the price of seven head of cattle alleged to have been poisoned through being given substances purchased as Epsom salts at the store of the defendant, John S. Nichols, of Paisley, is one of the cases to be heard at the county June sessions, which opened at Walkerton on Tuesday.

New Methodist Pastor

The Hamilton Conference, held at Guelph, was attended by about 300 ministers. Reports of the past year showed an increase of 466 in membership, $14,000 increase in missionary contributions, $[illegible] increase in educational fund. All departments of the church gave evidence of greater zeal and activity with an aim to meet successfully changing conditions. The stationing committee made several changes in Walkerton district appointments. Rev. H. E. Walker is stationed at Paisley, and Rev. S. L. Flagg at Port Elgin. Rev. J. A. Jackson is the district chairman. The new pastor here, Rev. Mr. Walker, is a returned missionary, who labored in the foreign field for several years.

Another Old Resident Gone

After an illness extending over several months, Mr. William Watson, of Albert St., passed away on Friday evening. The deceased was an old and highly respected resident of this settlement, having farmed on the Elora Road south from about 1859 to 1893, when he retired and came to live in Paisley. He was born in County Tyrone, Ireland, and came to Canada at the age of 18. He was married in 1860 to Jane Richardson of Teeswater, who predeceased him over five years ago. The family surviving are James, in Winnipeg; Wm. J., in Chicago; David, in the west; Annie, in the west; Mrs. Alexander, of Brampton; Mrs. C. Walsford, in Guelph; Mrs. R. Sloan, of Elderslie; and Rebecca, at home. Mr. Watson was a man of cheerful and helpful disposition, honorable in his dealings. He was a Presbyterian in religion and Conservative in politics. The funeral on Monday afternoon was largely attended. The services were conducted by Rev. Mr. Wilson of Salem, in the absence of the pastor of Knox church, Rev. Mr. Diehl assisting. Interment was made in the family plot in Ward Hill cemetery.

Soils and Crops

By Agronomist.

This Department is for the use of our farm readers who want the advice of an expert on any question regarding soil, seed, crops, etc. If your question is of sufficient general interest, it will be answered through this column. If stamped and addressed envelope is enclosed with your letter, a complete answer will be mailed to you. Address Agronomist, care of Wilson Publishing Co., Ltd., 73 Adelaide St. W., Toronto.

Alsike and White Clover as Honey Plants.

Farmers know the value of the two perennial clovers, alsike and white Dutch clover, for hay and pasture, but it is not always remembered that a large bonus may be obtained from them in the form of honey. They produce more honey in Canada than all other plants put together, and this honey is of the highest quality.

Production of clover honey is greatest in the farming lands of Eastern Canada. Almost the whole region south of the Ottawa River is excellent. The St. Lawrence River Valley is almost as good. The valleys of the St. John, and other rivers in New Brunswick, marsh hay lands in Nova Scotia and the rich farming lands of Prince Edward Island and around Lake St. John, Que., are very good too. In the clay belt of Northern Ontario, notably around Haileybury and Dryden, these clovers grow in immense quantity and luxuriance, and some years produce heavy honey crops. While alsike as a commercial honey plant has reached its highest development in the Eastern Provinces, white clover does well in a large part of Manitoba and British Columbia.

The cultivation of clover on suitable lands as a combined farm and honey crop is recommended as follows:—

1. Growing alsike with timothy for hay. Alsike is better for this purpose than red clover because the latter is of practically no value for honey production and is beginning to spoil by the time the alsike and timothy are ready to cut. Alsike will grow on certain types of soil, for instance, ill-drained land, better than red clover.

2. Growing alsike for seed. An abundance of honey bees increases the yield of seed per acre; and leaving the plant to produce seed lengthens the honey flow.

3. Sowing white clover in grass mixtures intended for pasture. On favorable lands the white clover will keep spreading, improving the pasture both for cattle and bees. Grazing, if not too close, will not seriously curtail honey production, and it lengthens the honey-flow.

The honey-flow from clover lasts three or five weeks, beginning, according to latitude, between mid-June and mid-July. Good management of the bees, to build them up strong in time for the honey-flow and keep them from swarming, is necessary. There is no better food for bees in winter than clover honey.

Crow vs. Corn.

In Canada, the most serious enemy to the corn crop is the crow. A dose of shot is an infallible cure for the latter's fondness for corn, but, unfortunately, it is more easily prescribed than administered. There are, however, other means of combatting the trouble.

1. Treating the Seed: Immerse the corn for 2 or 3 minutes in water as hot as can be borne by the hand. Drain, and while the corn is still moist and warm, add half a cupful of coal-tar or pine tar per gallon of seed. Stir until every kernel is coated with tar. As a drier, add a small quantity of lime, plaster, or even dry road dust. If the work is well done, seed so prepared may be sown by machine, but the feed should be watched carefully for fear clogging may occur.

2. Deep Planting: Plant the corn not less than 3 inches deep. This will prevent it from being washed to the surface by heavy rains and, after germination, the young shoot will break off when the crow attempts to pull up the plant.

3. Poisoned Corn: When crows are noticed on the field, take some corn, say two gallons, more or less according to the size of the field, and boil for about thirty minutes in just sufficient water to cover corn to the depth of one inch. To the water and corn, before boiling, add about one-eighth ounce of strychnine or, better still, of strychnine sulphate, for each gallon of water. Allow the corn to lie in the strychnine and water over night. In the morning drain off any water remaining and scatter the corn thinly over the corn field.

In making use of the above plan great care should be taken to pour the water off the corn into some hole or in a spot not likely to be frequented by children or domestic animals. Care should also be taken to keep poultry off the corn field for two or three weeks after the poisoned corn has been scattered thereon.

4. A device much used in some localities is "stringing the field". Stakes 3 or 4 feet high are placed here and there and connected by twine to which may be attached pieces of paper or bits of bright tin. Dead crows obtained by method 3 may also be attached to the twine or stakes. The time-honored "scarecrow" may also be tried but it must be admitted that the crow of to-day does not seem very deeply impressed by this old device.

5. If crows are noticed in or near the corn field have a boy watch the field for 2 or 3 days, firing a gun now and then when the crows are in sight and carrying himself quite openly. Then put up a sort of tent in the field (a stack cover or binder cover will do). The crows are never sure but that the boy with the gun is in the tent and will give the spot a wide berth.

A combination of some or all of the above plans, which are simple and inexpensive and have been tested out with good results, will soon persuade the crow that the locality is an undesirable one.

Poultry

Every poultryman interested in maximum production at minimum cost should market all mature male birds early in June. The time has arrived when the male bird is no longer useful. Except in a very few instances where special matings are made this season's breeding work is done. It costs as much or more to feed and care for a male bird for a year as it does a laying hen. When the slacker hen is culled cull the male bird. Keep no individual that does not produce a value greater than the cost of feed and care. There are some males worthy of being kept over for another year's breeding work, but they are the exception. In the breeding work has been carefully planned there should be young males growing up that will be equal or superior to the old ones.

The male bird does a still greater harm than eating his head off during the summer, fall and winter. If allowed to run with the hen he will fertilize the market eggs during the warm months when nearly half the season's supply is produced. A few hours under a broody hen, in a warm room or in a store window and incubation starts. Then the temperature changes, the germ dies and the eggs spoil. This loss is much greater even in our nearby markets than is commonly supposed. It is worth while to produce infertile eggs.

The male is in no way necessary for egg production; in fact his presence in a flock of hens may slightly decrease production. Egg production frequently drops slightly when males are placed with the hens for breeding purposes.

To Our Heroes.

Methinks the scarlet poppies on the fields
Of France—in this dark hour—
Are but the blood of our dead heroes,
Blossomed into flower.
'Tis watch and wait, and not in vain;
For, though they blow and toss impatiently
At last shall bow their glorious heads
And whisper "Victory!"

CARE OF SPRING DUCKS

By W. E. Gage.

More and more farmers are taking up with ducks, and many tell us that this is the easiest money in poultrydom. Of course, this is an individual matter, but the fact remains that ducks are becoming more and more popular on the markets, and the prices paid for duck meat is continually on the increase. But the fact that caring for ducks is so unlike the care of chickens, it would seem timely to give a few of the important items.

Ducks are great layers producing an astounding number of eggs. I had a pen of 14 ducks, of Indian Runner strain, that produced not less than ten eggs per day during the hatching season, and on several occasions laid eleven eggs. The eggs will hatch successfully in incubators, more so than will hens' eggs. The eggs should be turned regularly twice each day, and must not be more than ten days of age when placed in the machine. The eggs demand more moisture than hen's eggs, and the ducklings are slower in coming out of the shell than chicks.

Very few people understand the care ducks should receive. The beginner is very enthusiastic at first, but when he finds that poultry methods fail, that the ducks "just ale," he becomes discouraged, and quits. The main trouble is that the little fellows contract diarrhea, which kills them off by the bushel every night. And if kept in the sun without shade, they will be sunstruck and die. The pens should be placed so that shade and sun are combined, and little trouble will follow, rations being proper.

Feed When Young

The ducklings should not be fed until thirty-six hours old. Then feed the following mash, barley wet with skim-milk or water: One measure of cracker or stale bread crumbs; one measure of middlings; one-half measure bran; five per cent. sand. Feed four times daily. The first forty-eight hours keep a supply of food and water before the ducklings day and night, but have the water in vessels which will allow the beaks to enter, and not get the ducks wet. After they have been in the brooders for forty-eight hours give the regular rations.

From one week to five weeks old feed the following growing mixture four times a day: Four measures of bran, three measures of middlings; one measure of corn meal, three measures of fresh green stuff or two of dry clover steamed, five per cent. sand, five per cent. fine ground beef scrap. Mix all together dry and wet up with cold water or skim-milk to make crumbly mash.

Feeding for Market

From the fifth to tenth week, when the ducks should be ready for market, feed the following mash three times a day: Two measures of corn meal, two measures of middlings, one measure of bran, one measure of green stuff, ten per cent. beef scraps, five per cent. sand. At any time if the ducklings show any signs of looseness of the bowels add a little ground charcoal to the mash. Oyster shells, granulated bone and fine grit are always kept before the birds.

One of the large duck farms where the feed is all bought except the green stuff, the claim is made that it costs five cents for food alone and from six to ten cents per pound for labor and food to raise a duckling to ten weeks—a marketable age, after which are they fall away in flesh and profit is less. Each duck should pay a profit of fifty cents when properly raised.

No expensive grains are needed for ducklings, but they must never be fed musty, spoiled grains. After they are five weeks old they can be left out in the open air unless the weather is bitter cold and stormy.

Ducklings need fresh air, and should have a dry bedding of some kind. The houses must be so that no draughts will enter during the early age, nor during the night when the ducks are resting. Do not forget the water in feeding ducks. It adds volume to the food and makes feeding cost less because it makes the same amount of feed more filling. But such breeds as Indian Runners should not be allowed any more water than poultry, as they are "dry land ducks," and too much water will kill them. The Pekin ducks will do better in swimming holes, but this may be arranged by using an old vat, on farms where there is no creek, and a creek is a dangerous thing, as there are minks and other animals that will prey upon the flock at night and kill off the best of the stock.

Sorting Them Out

Drakes may be sorted from ducks by the curled tail feather, which curls upward. A duck quacks, a drake does not. These become noticeable when the ducklings become four weeks of age. The ducks should never be handled as hens. Always carry them by the necks.

Making money with ducks is not easy. It demands hard work, persistence, and careful watching, but the fact still remains that ducks can be turned into ready money in ten weeks, which is not possible with chickens, and the fact that ducks are more prolific layers, that the eggs hatch easier, and that the care which ducks should receive is not greater, should cause a larger number of farmers to enter this business.

GOOD HEALTH QUESTION BOX

By Andrew F. Currier, M.D.

Dr. Currier will answer all signed letters pertaining to Health. If your question is of general interest it will be answered through these columns; if not, it will be answered personally if stamped, addressed envelope is enclosed. Dr. Currier will not prescribe for individual cases or make diagnosis. Address Dr. Andrew F. Currier, care of Wilson Publishing Co., 73 Adelaide St. West, Toronto.

Tonsilitis.

By this term is meant inflammation of the almond shaped bodies and the tissues around them which are on either side of the throat or pharynx.

These organs are no doubt, of importance in guarding the entrance to the throat but they are also exceedingly troublesome for they are very often the seat of disease, and they become so greatly enlarged as practically to block up this entrance and interfere greatly with the function of breathing.

When they are enlarged and the crypts or glands they contain, full of offensive infectious material, in addition to the other infectious material with which the mucous membrane of the mouth is always supplied, they are subject to frequent attacks of inflammation, become a constant menace to the hearing and to the health in general and should be removed.

But this is not an argument for their indiscriminate removal. Like the troublesome, though much abused appendix, they have a mission to fulfill, and if they cause no trouble, as is true in countless cases, I do not believe any one has any business to remove them.

The acute form of inflammation of the tonsils, also known as quinsy or quinsy sore throat, is a very troublesome and painful affection which is very common in children and young adults, particularly during the winter and early spring.

It may be due to the infectious material already in the mouth and tonsils, or to tuberculosis in the mouth or the glands of the neck, and it is often followed by an attack of rheumatism.

It begins with dryness, stiffness and soreness of the mouth, with thirst and with difficulty in swallowing.

It resembles grippe in the general discomfort which comes with it, the chill, pain and soreness in the legs and back and "all over," headache and raging fever.

Swallowing becomes more and more painful and difficult and the throat more dry, saliva dribbles from the corners of the mouth, opening of which becomes impossible, the speech becomes inarticulate, the tongue is coated, the breath very offensive, hearing is impaired and at length an abscess may form in the neck, the throat, or the ear.

When the abscess discharges or is opened, there is a feeling of relief and improvement generally takes place.

One form of tonsilitis called follicular or croupous tonsilitis may be mistaken for diphtheria, the tonsils being covered with a deposit which suggests the false membrane of diphtheria. But it is quite different from the latter, for it may be easily scraped away which is not the case with the membrane of diptheria.

In tonsilitis the patient should have nourishing fluid food and as much as he can digest, for the disease is an exhausting one.

It is better for him to be in bed, and isolated from other members of the family.

If an abscess forms it is desirable to open it, let it drain freely and keep the surrounding tissues clean, rather than to leave it to mature.

The bowels must be kept open, preferably with an antiseptic like calomel. The entire cavity of the mouth must be frequently rinsed and cleaned with peroxide or some other good mouth wash, and the tonsils swabbed several times daily with a strong solution of nitrate of silver.

J. W. M.—Answer—If the person referred to was in good physical condition, I can see no harm in what you suggest.

Horse Sense

How to Select a Horse.

The following specifications, issued for the guidance of those who buy army horses, are quoted in an article appearing in the Breeders' Gazette, and as the general description given applies to all horses for each and every purpose in the army, it may well be applied in the selection of horses for any good purpose:

Head.—Small and well set on neck; with ears small, thin, neat and erect; forehead broad and full; eyes large, prominent and mild with well developed brow and fine eyelid; vision perfect in every respect; muzzle small and fine; mouth deep; lips thin and firmly compressed; nostrils large and fine; and branches of under-jaw (adjoining neck) wide apart.

Neck.—Light, moderately long and tapering toward the head, with crest firm and longer than under side; mane and forelock fine and intact.

Withers.—Elevated, not unduly fine, well developed and muscled.

Shoulders.—Long, oblique and well muscled.

Chest.—Full, very deep, moderately broad, and plump in front.

Forelegs.—Vertical as viewed from front and side and properly placed; with elbow large, long, prominent and clear of breast; forearm large at elbow, long and heavily muscled.

Knees.—Nearly outlined, large, prominent, wide in front, well situated and well directed.

Back.—Short, straight and well muscled.

Loins.—Broad, straight, very short and muscular.

Barrel.—Large, increasing in size toward flanks, with ribs well arched and definitely separated.

Hindquarters.—Wide, thick, very long, full, heavily muscled, rounded externally and well directed.

Stifle.—Well defined, prominent and well supported by muscles of that region.

Tail.—Fine and intact; well carried and firm.

Hocks.—Neatly outlined, lean, large, wide from front to rear, well situated and well directed.

Limbs.—From knees and hocks downward vertical, short, flat, wide laterally, with tendons and ligaments standing well out from bone and distinctly defined.

Pasterns.—Strong, medium length, not too oblique, and well directed.

Feet.—Medium size, circular in shape, sound; with horn smooth and of fine texture; sole moderately concave, and frog well developed, sound, firm, large, elastic and healthy.

Mrs. Progress and Mrs. Oldways.

"We seem to have lost our taste for apples," remarked Mrs. Oldways. "Can you account for it?"

"I think so," replied Mrs. Progress. "Apples that have been stored through the winter lose flavor. The flavor may be restored to those that you cook by adding the syrup left from canned fruit of almost any kind, but especially from quinces, cherries or peaches. This will also partly sweeten them so that less sugar will be required."

One [illegible] gives you as much [illegible] as [illegible] slices of bread.

WOOL

Farmers who ship their wool direct to us get better prices than farmers who sell to the general store.

ASK ANY FARMER!

who has sold his wool both ways, and note what he says—or, better still, write us for our prices; they will show you how much you lose by selling to the General Store.

We pay the highest prices of any firm in the country, and we pay the express charges in Canada. Payment is remitted the same day wool is received. Shipping tags and bags sent with the above letter. Write us to-day, and you may be pleased if you do, and you cannot be if you do not.

H. V. ANDREWS
13 CHURCH ST., TORONTO

What About the Girl?

A great deal is said about keeping the boy on the farm; not so much about keeping the girl there. Yet the latter is quite as important as the former. The country needs fine, competent women leaders in community life fully as much as it needs men who will lead in first-class farming.

The home and its surroundings are what count in keeping the girl interested in rural life. Every girl, as she grows up, wants attractive, interesting things. If she cannot find them at home, she will find them elsewhere.

It is not an expensive matter to make things attractive for the growing girl. It is more a matter of thought than of cost. She wants, first of all, a pretty room. A man or woman who is at all handy can enamel the furniture in white. Flowered chintz can be bought and curtains easily made for the windows.

That leaves just the floor and the walls. Wall paper is needed anyhow. It might as well be attractive and harmonious with the rest of the room as not. The floor may be painted to match the furniture, and two or three inexpensive small rugs or one larger one may be purchased.

Some good magazines will interest her. Her teacher can tell you what she will like. Magazines make good presents for a birthday or at any other time. They are surprisingly cheap, and each succeeding issue acts as another remembrance of the donor.

In summer, of course, any girl wants to spend some time out of doors. Why not let her take full charge of the flower garden? You want a flower garden, anyway, and she will give it more time, attention, and loving care than any other member of the family would think of giving. She will learn, a lot, too, by planning a flower garden and keeping it going. Caring for a flower garden is not bad as a preparation for caring for bigger community enterprises that may come later on.

None of these things cost much money. Of course, they all cost something, but no more than a reasonably prosperous farm family can afford—no more than it would gladly expend if it realized that this meant the difference between the girl's staying in the community and her going to the city to make her own way.

Why Father Has Good Seed Corn.

Father has good quality, germinable seed corn to plant next spring. This in spite of the fact that his farm is in a district where but very little corn matured last fall. In talking this over a short time ago father and I concluded there are at least two big reasons why there is plenty of good seed corn upstairs: Year after year planting of a medium-sized corn that matures near the middle of September, and selection of the seed ears on stalks in the field, storing it shortly after the first frost killed the plants.

More than twenty years ago my father adopted a policy of planting only home-grown seed corn. At first it was hand-selected at husking time. But five years ago he began choosing ears from standing stalks, about twice as many of them as will be required for planting the coming year's crop. Ears chosen are not necessarily the largest ones. The aim is, rather, to get a medium length ear—eight and one-half to nine inches long.

An ear from a single stalk hill is not taken, neither is one from a two-stalk hill unless the two stalks have produced three good-sized ears. Most ears come from three-stalk hills that have produced at least three ears and often four. The ears are marked when the corn is well dented, by cutting off the top of the stalk. After the first heavy frost the ears are collected, or earlier if the corn is cut before frost.

Growing a medium corn adapted to climatic conditions, and selecting corn on standing stalks and storing it early are the reasons why father has good seed corn. He knows it is good, for a general test of two hundred ears selected at random early in January gave 95 per cent. of germinative ears.

On Sale everywhere: 25 cents the bottle.

RIGA PURGATIVE WATER CO. MONTREAL.

This is the message British papers were asked to flash daily on their pages during Britain's campaign. Now Canada's Food Board is asking those in the Dominion to do likewise.

ITALY'S RATIONS REDUCED.

Consumption of Meat Curtailed to Prevent Exhaustion of Supply.

In order to reduce the consumption of meat in Italy new restrictions have been imposed by the Food Commissioner intended to assure even distribution and at the same time prevent the exhaustion of the rapidly diminishing supply of cattle. For this object the military commissions appointed to requisition cattle for the requirements of the army have been entrusted with the task of providing beef for the civil population, and the number and weight of beasts to be slaughtered in each province will in future be fixed by the Food Commissioner.

No beef can be sold besides that similarly assigned and only on Saturdays, Sundays, Mondays and Tuesdays. Pork and mutton can be sold only on Wednesdays. Prices will be fixed by the Food Commissioner and heavy penalties are imposed on butchers for overcharging.

As meat rationing by means of personal or family cards cannot be adopted in Italy for various reasons, nor is it possible to reduce the consumption of meat by fixing the amount to which each person is entitled, the same system successfully adopted in the case of bread and macaroni, consisting in limiting the supply by assigning a fixed quantity for each commune in proportion to the number of inhabitants, has now been resorted in the case of meat. In order to better control the supply and distribution of food the special commissions existing in each province have been placed under the immediate direction of the Food Commissioner and changed into regular State organizations.

A Personal Duty.

Every pound of food saved by each Canadian citizen is a pound given to the support of our army and our Allies. Every pound wasted or eaten unnecessarily is a pound withheld.

How many slices of white bread can a family do without if a few more potatoes are on the table at every meal?

The potato is a great patriot. It has helped to save nations. Let it help to win the war by releasing other essential foods for export.

The Test

of a change from tea or coffee to Postum comes when you note better health and all round improvement. Not a thing harmful in Postum. Besides, it saves waste and fuel. The flavor is delightful. For your own sake try

POSTUM

Two Useful Designs

This is a very practical design for the one-piece apron. McCall Pattern No. 7935, Ladies' and Misses' One-piece Apron. In 3 sizes, small, medium and large. Price, 15 cents.

An extremely good-looking dress that only requires four and one-quarter yards of forty-inch material. McCall Pattern No. 8049, Ladies' 44 bust. Price, 20 cents.

These patterns may be obtained from your local McCall dealer, or from the McCall Co., 70 Bond St., Toronto, Dept. W.

Metric Money.

This year may make history for the Mint, for Lord Southwark has just introduced a Decimal Coinage Bill in the House of Lords, says a London paper. If it be approved, Great Britain will come into line with her allies, and will adopt their monetary rate of exchange.

The simplicity of the metric system is not its only virtue. It is urged—and reasonably—that trade with other nations can be increased and friendly relations strengthened by negotiations in one universal "money tongue."

It is suggested that our present-day pound note be divided up into thousandth parts, each to be known as one "mil." These "mils," therefore, will represent rather less than one farthing each. Higher rates of coinage, including four silver and four bronze tokens—multiples of the "mil"—are also suggested. Certain British professions are already under the decimal rule, the metric system being installed in all branches of the medicine world, and also at the Meteorological Office; where only two years ago rainfall was first registered in terms of the millimetre instead of the inch.

Cut out all deadwood from blackberry and raspberry bushes if this has not been done. Burn the brush.

The Arc of the Covenant.

The fretted silver of the river flows
Beneath the hills the low light rests upon,
While in the east a circling rainbow glows,
Facing the storm light of the sinking sun.

God sets His bow of promise on the dark,
Holding the earth within its gleaming span
Whose dual elements still form the Arc
Of the Eternal Covenant with Man.

For while the Water and the Fire hold sway
And whirl their shapeless being into form,
Futile and fleet about the Rainbow play
The forked lightnings of earth's fading storm.

LEMON JUICE IS FRECKLE REMOVER.

Girls! Make this cheap beauty lotion to clear and whiten your skin.

Squeeze the juice of two lemons into a bottle containing three ounces of orchard white, shake well, and you have a quarter pint of the best freckle and tan lotion, and complexion beautifier, at very, very small cost.

Your grocer has the lemons and any drug store or toilet counter will supply three ounces of orchard white for a few cents. Massage this sweetly fragrant lotion into the face, neck, arms and hands each day and see how clear, soft and white the skin becomes. Yes! It is harmless.

World's Costliest Necklace.

It remains to be seen whether the pearl necklace to which so many wealthy society women are contributing each a gem from their collection, and which is being sold for the benefit of the Red Cross, will establish a record as regards price for this particular kind of trinket, says an English paper.

Probably it will, for its intrinsic value is certain to be very great, and this will be vastly enhanced by the associations connected with it, and which will render it an heirloom to be treasured for all time by its possessor and her descendants.

Up till now, the record price for a pearl necklace bought in the open market stands at £53,000, which was the sum paid for one of 240 pearls in Paris seven years ago. The highest price recorded in an English auction room so far is £24,000, paid for a three-row necklace of 193 pink pearls at Christie's in June, 1916.

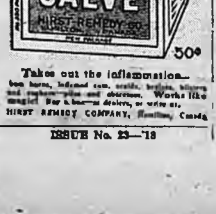
The biggest sum ever paid for any kind of necklace anywhere was the £85,000 handed over by Cardinal de Rohan for the famous diamond one which he proposed to present to Queen Marie Antoinette of France.

At the Yarmouth Y.M.C.A. Boys' Camp, held at Tusket Falls in August, I found MINARD'S LINIMENT most beneficial for sun burn, an immediate relief for colic and toothache.

ALFRED STOKES,
General Sec'y.

Soldiers Producing Food.

The food shortage is recognized as so serious in Europe that the soldiers are cultivating 50,000 acres between the lines in France, 7,000 in Salonica and approximately 700,000 in Mesopotamia, Egypt, Palestine and Cyprus. In Egypt, Palestine and Salonica the British Armies will this year grow all their own vegetables and a large part of their hay and forage. All the military camps in England are being cultivated also. At Aldershot where 28 acres were being cultivated 18 months ago, 1,200 acres are now under cultivation.



Keep Minard's Liniment in the house.

Millions Starving Already.

Deaths from starvation in Europe are estimated by the United States Food Administration at 4,750,000 since the war began as compared to 4,250,000 killed by fighting.

Dry bread can be ground in the meat chopper and used in place of flour in making gingerbread.

Buy now any farm implements required for the present season. Delivery will necessarily be delayed in any case, and failure to order early may mean no delivery until the season is over.

Takes out the inflammation... boils, burns, inflamed sore, wounds, bruises, blisters and sunburn. Heals and disinfects. Works like magic! For human desires, or write us. HIRST REMEDY COMPANY, Hamilton, Canada

WOMEN! IT IS MAGIC! LIFT OUT ANY CORN

Apply a few drops then lift corns or callouses off with fingers—no pain.

Just think! You can lift off any corn or callus without pain or soreness.

A Cincinnati man discovered this ether compound and named it freezone. Any druggist will sell a tiny bottle of freezone, like here shown, for very little cost. You apply a few drops directly upon a tender corn or callus. Instantly the soreness disappears, then shortly you will find the corn or callus so loose that you can lift it right off.

Freezone is wonderful. It dries instantly. It doesn't eat away the corn or callus, but shrivels it up without even irritating the surrounding skin.

Hard, soft or corns between the toes, as well as painful calluses, lift right off. There is no pain before or afterwards. If your druggist hasn't freezone, tell him to order a small bottle for you from his wholesale drug house.

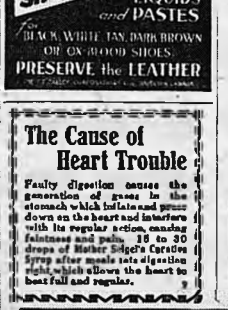
Increase Your Acreage.

Despite the difficulty, we must produce more food than we have ever done before. Set apart all your land for growing crops and plant as much wheat as you can. Plan to bring as much new land under cultivation for another crop as possible and thus increase acreage for next year. It will be needed then just as much as now.

You will agree that a satisfying cup of tea is economical at five cups for a cent, yet that is all the genuine Salada costs. Low-priced teas actually cost you more, for they yield far less in the teapot and, of course, have not that delicious flavor.

Street Cars as Travelling Kitchen.

An electric tramway car belonging to the Halifax (Eng.) Corp., has been converted into a travelling kitchen. It is equipped with an electrical outfit capable of producing a thousand portions of food, and carries a tank holding 1,200 gallons of water. Current for the stoves is obtained from the overhead wires.



Meals can be served from either side of the car, and there is a cash office at each end. The kitchen may be run over any part of a system of 33 miles exactly like an ordinary tramway car.

Minard's Liniment Lumberman's Friend.

In watering vegetable gardens care must be exercised not to wash out small plants. When strong plants are watered they should be well watered as simply moistening the top soil does as much harm as good.

There is no one best bread. Each standard bread has special qualities and particular values. Bread-eaters do best with the breads they like best for their special purpose.

"Every man has a physical right to think as he pleases, for he cannot be discovered how he thinks. He has a moral right, for he ought to inform himself, and think justly."—Sam Johnson.

The Cause of Heart Trouble

Faulty digestion causes the generation of gases in the stomach which inflate and press down on the heart and interfere with its regular action, causing faintness and pain. 10 to 30 drops of Mother Seigel's Curative Syrup after meals aids digestion right, which allows the heart to beat full and regular.

Poppies.

I grasped my flowers to see them fall apart,
Wind-blown and scattered at my feet they lay;
Too beautiful to last, their fragile life
A passing glory of a summer day.

Such sunset tints! Such silken leaves of gauze;
Farewell, dear flowers, ye are my thoughts so bright
Seen in the visions of my sleeping hours,
Scattered with coming of the world's daylight.

Too sweet to last, the fancies that we weave;
We guard them from a rude, destroying breath;
The Hand that fashioned your pure loveliness
Shall give them to us in the hour of death.

Minard's Liniment used by Physicians.

Use for Corncobs.

Canadian farmers who grow corn will be interested in the announcement that the United States Bureau of Chemistry has discovered value in cornacobs. Hitherto these have been thrown away as of no value. In the search for valuable extracts: from neglected materials the chemists have discovered commercial processes by which 37½ per cent. of cobs can be made into glucose, 30 per cent. usable mucilage, 5 per cent. xylose, new baking powder material, and acetic acid. If these discoveries prove practical under long tests corn-growing will be greatly promoted.

MONEY ORDERS.

A Dominion Express Money Order for five dollars costs three cents.

Everything that can be said of live-stock improvement can be said of potato improvement. Have a standard variety in your community; one that is adapted to your soil. Use the best seed obtained by selection and then give it good care. By doing this a market will come to you for all your potatoes. Your buyer will give you a premium for your crop if the whole community has the one brand of potatoes.

Ask for Minard's and take no other.

Hyacinths and tulips may be taken up as soon as they are through flowering and heeled in, in some out of the way place, where they may ripen their bulbs.

Convenience

The AutoStrop Safety Razor is always ready for use—the edge is uniformly keen and it is a simple matter to keep it so.

It strops, shaves and is cleaned without taking apart.

This explains why the AutoStrop is universally used and liked by the boys overseas.

Give your soldier an AutoStrop—it's the gift he needs.

HOW MRS. BOYD AVOIDED AN OPERATION

Canton, Ohio.—"I suffered from a female trouble which caused me much suffering, and two doctors decided that I would have to go through an operation before I could get well.

"My mother, who had been helped by Lydia E. Pinkham's Vegetable Compound, advised me to try it before submitting to an operation. It relieved me from my troubles so I can do my house work without any difficulty. I advise any woman who is afflicted with female troubles to give Lydia E. Pinkham's Vegetable Compound a trial and it will do as much for them."—Mrs. MARIE BOYD, 1421 5th St., N. E., Canton, Ohio.

Sometimes there are serious conditions where a hospital operation is the only alternative, but on the other hand to many women have been cured by this famous root and herb remedy, Lydia E. Pinkham's Vegetable Compound, after doctors have said that an operation was necessary!—every woman who wants to avoid an operation should give it a fair trial before submitting to such a trying ordeal.

If complications exist, write to Lydia E. Pinkham Medicine Co., Lynn, Mass., for advice. The result of many years experience is at your service.

SMOKE TUCKETTS

T&B

The Paisley Advocate

PAISLEY, JUNE 12th, 1918

—Within recent years the editor of The Advocate came to the conclusion, as the result of his observations, that the farming industry, as carried on even in this advanced age by the people of our progressive Province of Canada, is immensely wasteful of effort, expensive in method and does not return the dividends to those investing their capital in farms and engaging in the pursuing that one-man way. (Instead of only a few yards being made in a day by a weaver, the mill operative has charge of a number of automatic looms that turn out cloth at the rate of hundreds of yards of fabric. Similar progress has been made in the manufacture of any everything that man requires to-day, but in the advantage of the whole world the principal pursuits have also greatly helped and improved by the introduction of a great many machines in various departments of work, yet the farms remain small under the system of individual ownership and each proprietor or tenant carries on his little business without much effort at co-operation in any way. Take the average township or the average community system of a township in Ontario, and [illegible] who are working with what-ed-budgery it will be noted that the results well off in the course of a few years, while another does not, although the latter may be the hardest worker. One is a good manager and the others are not, although any of the latter may be able to do a higher day's work. In the joint management of one farm or community all the lands of the whole can be the same amount of produce and stock could be raised with the men working shorter hours, with fewer sets of implements and the buying and selling done to much better advantage. With the co-operative plan on a larger scale than that outlined the results should be comparatively greater. We first enlarging further upon the point, it is apparently possible to greatly improve the farming industry by adopting co-operative systems. This is the idea expounded by Major Medcalf, officer of the Food Prices Bureau, and which is set forth fully in his letter which appears in this issue of The Advocate, and should be read by everyone interested in the welfare of our soldiers after the war is over and they return to Canada.

The Toronto World points out that Arthur Henderson, M.P., leader of the British Labor party, has been setting forth the policy or reconstruction which his party has in mind, and the breadth and scope of it are a sufficient warning to all and sundry that the age in which most of us came to maturity has passed away forever. When the war broke out it was often said that we had entered a new age, but most people thought no more of it than of entering a new year and opening a new calendar. The war has done far more than this, and what is regarded as readjustment must be understood to be something far more radical than anything the average man has contemplated. Already the great corporations are preparing themselves for the new conditions by recognizing not merely the claims but the rights of their employes to something of the status of co-partners in the concerns in which they labor. No one can foresee the end, and very few understand even the beginning of the revolution which is afoot. The one thing to remember is that it is nothing to be feared, but a change to be welcomed, because it means eventually a more stable, a more satisfied and a happier social organization.

The old civilization is in ruins and the world will not be satisfied to live in ruins in the future. Our world must be built anew from the foundations. At the annual conference of the Labor party in Nottingham, the report on reconstruction declared that there were four pillars on which the edifice must rest.

First of these is the enforcement of the prescribed minimum of leisure, health, education and subsistence for everyone. Everybody will have to work, and work enough, but not too much; everyone must get a sufficient education, have reasonable leisure, be preserved in health by proper sanitation, and get sufficient to live on.

Secondly, all public utilities and resources, railways, electrical powers, mines, etc., must be under democratic control. This may not be state ownership, but it may be municipal ownership, some similar local scheme. Profiteering of every description must go.

Third, the national system of financing is to be revolutionized. Present systems of taxation do not provide an equitable incidence of taxation. The labor ..... would replace the national debt by direct taxation of private fortunes.

Fourthly, all surpluses, extra profits on industry, and everything in the shape of profiteering must go into the common fund. The unearned increments and the unearned above what is needed for fair profits, must be devoted to the national funds, instead of going to swell private fortunes.

This will not please a lot of people, but this is the British Labor programme. The British voting list has been raised from six to twelve millions. The changes that are coming, whatever they may be, will be no less such as these that the Labor report lays down. Mere opposition will avail little. What is needed is the spirit of understanding and co-operation which recognizes that the best interests of all can only be attained by mutual action.

WOMEN TO BE A GREAT FORCE

At the women's mass meeting in connection with the Presbyterian General Assembly in London last week, Dr. McKay, of Vancouver, B.C., delivered an address in which he urged the church to be in close contact with the social question of the hour. Dr. McKay declared that the women will be the greatest force in solving these problems. "The failure of the men to solve the problems of the country is due to the fact that the women are not in it. For example, the question of relationship of the men returned from the war will be one of the tremendous problems ... though we will have to face. A man who has spent three years fighting death in every horrible form cannot come back the same man as a woman he went away, and it is going to take great sympathy and understanding on the part of our women to reinstate these men.

"There will also be the problem of readjustment after the war. Many women are now occupying positions hitherto held by men, who, when the war is over, may well be out of jobs. The state is willing to pay as far as possible in this matter of readjustment, but some relationships and points of contact are bound to create friction unless everyone does his part.

Readjustment to Alien Citizenship

"Still another problem is readjustment in regard to our alien citizenship. Never again must our civilized world go back to old pagan methods. Both of the Russian leaders to-day spent a great amount of time in the Y.M.C.A. Huts, and Trotsky lived for some time in Vancouver. If we had done our duty toward this man, we might have made him a different man instead of a firebrand in Russia. Nearly all of the men connected with the Bolshevist movement in Russia have come from the ranks of the so-called Christian and civilized lands. Do you know the number of foreigners in your own city of London? Yet your boys are dying day because you have not realized how the mental atom floating about in Vancouver, a wreck of human life, can influence the world. Perhaps there are Bolshevist in London to-day and yet you are doing nothing to change them.

Spirits of Troops Count Most

"I believe that the great leaders of the Christian Church and the great statesmen throughout the world are seeing to-day as they never saw before that this war is a conflict between the power for evil and the power that makes for good; that the enlightened power in winning of battle is not the number of troops, but the spirit of those troops. What then is our Christian church going to do about these impending tides of Orientals, reaching a hand in one hand? I believe that Japan and China are closely watching and waiting, to see which of the two greatest armies fighting to-day shows the greatest spirit toward humanity a power is and on which type they may mould their nations.

Make Democracy Safe for Itself

"Further the recognition of the power of the Spirit in the world. We see that Trotsky, drifting about Vancouver, may some day become a factor of Russia, the immense power either for good or evil. And I believe that if it were not for Russia this war might have been over to-day. We cannot make the world safe for democracy until we make democracy safe for itself. The problem is tremendous on every side, but we shall lose it, if we concentrate our men and women to the service of Jesus Christ, for I believe that this war is merely the result of materialism, which we have too much upheld ..... There is no force in the universe so great for the bringing in of a perpetual peace as the Church of Jesus Christ. May God grant to every one of us a new consecration to the great problem of making the world safe for democracy and for making democracy consecrated to the love of Jesus Christ."

OUR DISSOLUTION OF PARTNERSHIP

- SALE -

STILL CONTINUES DAILY, AND LASTS TO WEDNESDAY, JUNE 26th

Read these Items, If you do not want any of these we can give you a Big Reduction on what you do want

Groceries

We must all eat. It will pay you well to stock up at our sale prices of all standard Groceries. For instance:

Our regular line of BULK COFFEE —ground while you wait. Per lb. .38

ALL AT HOME SHOULD PREPARE FOR WAR

The first test a man is put through for either war or life insurance is an examination of his water. This is most essential because the kidneys play a most important part in causing premature old age and death. The more injurious the poisons passing through the kidneys the sooner comes decay—so says Dr. Pierce of Surgical Institute, Buffalo, N. Y., who further advises all people who are past thirty to preserve the vitality of the kidneys and free the blood from poisonous elements, such as uric acid—drink plenty of water—great sense daily and take Anuric, double strength, before meals.

An-u-ric is a discovery of Dr. Pierce, and can be obtained at drug stores. For that backache, lumbago, rheumatism, "runny" joints, swollen feet or hands, due to uric acid in the blood, Anuric quickly dissolves the uric acid as hot water does sugar. Send 10 cents to Dr. Pierce for trial pkg.

Wheeld, Ont.—"I think Anuric is the best I have ever taken. My kidneys had given me [illegible] I would suffer from backaches and also headaches of the limbs. I took Anuric and it has entirely cured me of all my backaches and has strengthened my back and limbs. I feel glad to recommend it to others who suffer."—Mrs. C. A. Clarke, Box 119.

Toronto, Ont.—"For the last eight years I have been troubled with kidney trouble and rheumatism. It began with pains in my back and finally left my back and went down into the legs. It developed into a chronic case. I tried every medicine I could hear of and combined some good doctoring, but still I kept on suffering. About a year ago a friend advised me to give Anuric a trial, and am happy to say I am today a well man—never had any trouble at any time since. Anuric is a wonderful medicine in every sense."—E. W. Garrison, 6 Matilda Street

A Soldier's Farm Community Scheme

Major Moffat, of the 160th, has an Ideal

Witley Camp, Surrey, May 14th, 1918

To the Editor Advocate:

Dear Sir—Copies of the enclosed letter will reach practically every man who was a member of the Bruce Battalion and also many others who enlisted in other units from the county.

I have explained the scheme fully to many of my comrades from time to time, all of whom were enthusiastic regarding it and seemed to see in just this effort an ideal opportunity.

In order that this or any other scheme for the permanent benefit of the discharged soldier be given a fair trial, it must first meet with the unswerving and sincere support of the editors of Bruce County papers.

My faith in the press is unbounded and for that reason I look to you for this support, in order that the county may treat with her soldiers in a practical, sensible and dignified manner, which they so manifestly deserve.

Once the community is established, discharged soldiers can be absorbed in the community as fast as they are discharged from the army; giving them permanent employment and immediately relieving the farmer and front street merchant of those constant calls for charitable and patriotic purposes by means of a subscription list.

The demands for production and employment will be solved in Bruce county; what applies to Bruce rightly applies to Canada at large.

It remains with you and the Bruce Preparedness League to support some such scheme as outlined.

The men in the army are solely dependent upon the people at home for constructive plans and expect such plans to be in operation in plenty of time.

It has been an honor and a great privilege to command and serve with the Bruce boys, your sons and neighbors, and in requesting you to support this scheme for their benefit, I am confident you will be true to the traditions of the county of Bruce.

Yours faithfully,
A. McLEAN MOFFAT, Major
O.C., 160th Infantry Battalion

To Soldiers from Bruce County

Bruce County with a population of 43,000; 27,000 living on farms and 16,000 in towns and villages, has given 2,400 men to the service; they are young men, unmarried and likely to be unsettled in mind as to their ultimate future upon discharge from the army; all are intelligent, capable, in the prime of youth, and many with farming experience, the majority being farmers or farm laborers.

Never before have they lived in such close contact with their fellow men as those forming the army; they have travelled thousands of miles; have met people from the four corners of the earth, and are undoubtedly the most cosmopolitan product of war; all of these wonderful experiences, and more, too, have been crowded into a short period of two years.

With these facts in mind, I have often asked my comrades in the Bruce Battalion if they will not find it difficult to return to civil life. The answer has invariably been in the affirmative, and the question is often asked:—What do you propose to do when you go back to Canada? In many cases, as the answer is:—I don't know. This answer may be given for reasons similar to the following:

A—He may have sold his farm before or since joining the army.

B—He lived on a rented homestead and sold his improvements at a sacrifice.

C—The farmer with whom he was employed has secured another farm hand.

D—The factory or shop he was employed in is working with a reduced staff.

E—The bank manager who promoted him his old job back with increase in salary will not discharge the clerk who was faithful to him while the soldier was fighting in Flanders' mud.

F—His time in the army may have entirely changed his vision of the future, and like many of the early settlers of Bruce he has heard the call of the west.

Certainly he wants a home. He turns to the Government who he expects to do its duty and fulfil its promises. He is told of the soldiers' land grant, which is provided for by an order-in-council, making reservations of Dominion lands under the Soldiers' Settlement Act, which stipulates that all vacant and available Dominion lands within settlement districts of every other side of the railway, in districts where there are sufficient lands to warrant it, shall be reserved for the purpose of the Act. This applies to lines of railway in Northern Alberta, where as a rule the best remaining homestead lands are located. Soldiers' entries under the Act will be allowed as soon as the regulations are completed and passed by the Cabinet.

The Act further provides that along the railway lines throughout Manitoba, Saskatchewan and Alberta, and the railway belt of British Columbia, where lands are held under entry and duties are not being performed in accordance with regulations, action may be taken to have the entries of such defaulters cancelled for the benefit of the Soldiers' Settlement Act.

Any returned soldier has the privilege of applying for a quarter section of any vacant or available Dominion land whether in the Reserve or not.

Major E. J. Arthur, the soldiers' representative on the Soldiers' Land Settlement Board, is quoted in "Canada" as stating that the Soldiers' Settlement Act will be administered in the spirit of leaning up the acres of the returned soldier in preference to the ordinary civilian's right to homestead acres, and that the Board has provided that on first mortgage security a soldier can be advanced up to $2,500 provided the value of the land will warrant the loan and it is considered probable that the soldier is going time to paying all additional charges, etc., will be able to make a living off the land.

His heart swells with pride in his native land as he reads the Government's provisions for him, but one thing is sought to ask himself this question [illegible]

Other knowledge of farming to undertake the project, and will she go to a lonely homestead? He has been thinking of her constantly for two or three years in the camps of England and in the trenches and shell-holes of Flanders. His reasons that a home will not be a home without her, and in many instances her answer will influence his actions.

How then can it be made attractive to both parties; in a measure, to teach the inexperienced in the art of farming; to remove to a minimum the financial responsibility of the young soldier untrained in business transactions; to relieve to a minimum his living expenses, construction and farm buildings, feeding of his necessary stock and provide for modern labor-saving farm implements, in order that the Government loan will tide him over the first few years; also will his surroundings be made attractive and homelike? Will the home be comfortable? Will the necessary sanitary arrangements be made? Where and from whom will he purchase the necessary equipment; and will winter employment be provided, etc., etc., etc.?

These are as yet present know, the answer to all his questions are in the negative, and many will be influenced by the answers. I therefore venture to suggest to my comrades of Bruce County, to the Bruce County Members of Parliament, the Bruce County Preparedness League, and public-spirited men and women of Bruce, who have all shown by their actions such great concern by the welfare of Bruce County soldiers, the following scheme which may be modified to meet requirements.

THE BRUCE COUNTY FARMING COMMUNITY SCHEME

For Discharged Soldiers of Bruce County

1.—To secure for Bruce County's discharged soldiers a large tract of Government land in some western province which offers the best inducement and is found most suitable to the requirements.

2.—To establish in the community the discharged soldiers, organized as a co-operative society or limited joint stock company.

3.—The members of the society to pool their acreage, Government Loans, profits on land stock, co-operative stores concessions, investments, trades, amusements, etc.

4.—The community to be incorporated under Federal or Provincial Charter as a Company, and Limited, that is the Company with common stock. Equity in the society to be in shares, not acres; by that means, the soldier with little to no land will possess the same equity in the company as the soldier with 160 acres, and a title to the best land in the Community.

5.—The society to be organized and operated strictly in compliance with the Soldiers' Settlement Act and other legislation governing land grants to soldiers.

6.—The soldiers' interests to be safeguarded by such means as the employment of a Co-operative Manager, who will govern the purchase, selling, construction, education, sanitation, amusement and legislation, etc., etc., of the Society.

7.—Adequate salaries to meet the individual's needs would be advanced from the Government Loans, which would be conserved by the economical purchasing of the Community's necessities and wholesaling the middle man and his profits to the maximum extent.

8.—Only such salaries would be paid as may be fixed by the Society's constitution and by-laws.

Acquisition of Land

1.—The local Members of Parliament to immediately interview for Bruce County Preparedness League the location and particulars pertaining to available lands.

2.—The Bruce County Preparedness League to appoint some reliable and capable farmer to inspect and classify all west farm lands to inspect and report upon the available land.

3.—The Bruce Preparedness League to appoint a committee of at least three persons to consult with and select the best block of land from land reported upon (approximately 50,000 acres—fifty thousand acres).

4.—One thousand dollars ($1,000) of Bruce County funds, which I am depositing in bank with the Bruce Preparedness League, to be immediately at once by the League to defray necessary expenses in connection with the reservation of western lands for discharged soldiers of Bruce County.

5.—It is suggested that a paid secretary be selected by the Bruce Preparedness League at once to carry on an aggressive campaign to further the project, and furnish once monthly a bulletin reporting work accomplished, the bulletin to be published by the Bruce County papers for the information of Bruce County soldiers.

6.—Two thousand of these circular letters have been mailed for distribution to soldiers who related to Bruce County, and attached to each circular letter is a letter and envelope, addressed to the Secretary, Bruce County Preparedness League, which will furnish the League with the names and particulars of the majority of those who are interested in the scheme.

Advantages of Scheme

1.—Bruce County should have in operation by Nov. 1st, 1918, not a vague plan, but machinery for placing returned soldiers on the land, taking full advantage of Government land grants and loans.

2.—The building of the Community's assets will commence in time, labor and expenses.

3.—Consideration of land will enable the Government to appoint an agricultural expert, who can be established a maximum amount of instruction, forming an active bureau of information and aided practicably by the Community's local agricultural experimental station.

4.—The pooling of loans will permit the immediate purchase of labor-saving implements and machinery such as tractors, etc., thereby increasing production of grain and stock and minimizing the farm labor difficulty. The meagre Government loan would not permit the single homesteader to purchase labor-saving machinery, such as tractors, resulting in the loss of production.

5.—The daily interchange of ideas and experience would mean better methods and success. Economy would be effected in acquisition of cows, farm buildings, water supply, car are arrangements, road construction, transportation, telephone, fire insurance, fuel and light, and even a doctor's chances of the doctor required to visit the family settler.

6.—The lonely homestead spells indifferent farming, minimum production, poor farm buildings, poor implements and stock and too frequently insanity.

7.—The Community system means renewals of associations the soldier treasures dearly, the resident doctor, the visiting dentist, schools, churches, post office, telegraph, telephone, electric light, water supply, fire protection with a minimum insurance rate, modern sanitary arrangements and comforts, permanent modern homes, library, social gathering and happy, healthy, contented citizens; centralized, in can all be accomplished in one year.

Examples of Economy Which Might Be Effected

1.—Agents' commissions on farm implements, machinery, tools and insurance of various kinds.

2.—Interchange of machinery and farm implements; facilities for repairing, reducing depreciation to a minimum.

3.—Economy in animal husbandry; feeding, stabling, labor, straight ratios, etc.

4.—Minimum number of wells, farm buildings, etc.

5.—The average barn erected by a homesteader would cost approximately $2[illegible]. A Community of two hundred settlers with pooled cost of barns could erect adequate stabling for dairy stock and a modern dairy which would be the source of immediate revenue and provide winter employment for many of the Community.

6.—The operation and control of the Community's co-operative stores would reduce the cost of necessities of life to a minimum, eliminating the middle man, produce revenue, and furnish employment to the soldier's family.

7.—Economy would be effected in threshing of wheat by the Community's labor and machinery; also in warehousing and transportation of all the Company's product and manufactured articles.

8.—Factories can be erected which would give employment to those in the Community when not required for farm work.

9.—The items of economy above mentioned and innumerable others would greatly conserve the Community's capital derived from Government loans, reducing the amount of interest payable to the Government annually by thousands of dollars and enabling the homesteaders of the Community to repay Government loans in a very few years.

The doctor, lawyer, dentist, in fact all professional men as well as all tradesmen would share equally in the profits of the Community, but not at the expense of the producers.

Summary

In order to take advantage of the Government gratuities to soldiers, comprising three hundred and twenty acres of farm land and a loan of $2500, you will be required to actually live on the homestead. The decision you are requested to make is, whether you prefer to locate and take up your homestead alone and possibly miles from any other inhabitant, or settle on a homestead which has been located for you and where you may live with some degree of comfort, modern conveniences and daily contact with your former neighbors and comrades.

If you approve of the scheme I have roughly outlined, kindly comply with the following:

Instructions

Discuss the scheme with your comrades. Keep out circular letter for your own information.

Fill in and sign one letter addressed to the Secretary, Bruce County Preparedness League, and mail at once.

Forward one copy of my circular letter addressed to the Bruce County Preparedness League to any comrade you may know, who enlisted from Bruce County in any unit other than the 160th Battalion, in order that he may take advantage of the scheme if he desires to do so.

I wish you the very best of luck.

Yours truly,
A. McLEAN MOFFAT, Major,
O. C., 160th Canadian Infantry Batt.

(c) What other work can you do well?

11. If an employee, state employer's name — Nature of business

12. Do your circumstances permit you to serve in the present national crisis by changing your present occupation to some other for which you are qualified, if the conditions offered be satisfactory? (a) Where you can return home daily? (b) Away from home?

13. (a) Were you brought up on a farm? Until what age? (b) Have you worked on farm? How long?

(c) Are you retired farmer? (d) Can you handle horses? Drive tractors? Use farm machinery?

(e) Are you willing to do farm work? Where? During what periods?

I affirm that I have verified the above answers and that they are true

Signature of Registrant

Procedure of Registration

On June 22nd every person residing in Canada, male or female, British or alien, of sixteen years or over, must attend one of the registration booths located in his or her district, and there observe the procedure explained below.

Where to Register

Every person required to register has the privilege of registering at any of the public places provided for that purpose. The location of all such places will be specified in proclamations posted conspicuously.

The card shown in the illustration is a facsimile of the registration card for males. An advertisement showing the card for females appears in another paper.

Study the questions carefully so that you will be able to answer them promptly when registering. If you have any special qualification, or feel that your services would be more beneficial to the country in some other line of work, say so.

While all are compelled to register on Registration Day, it is not contemplated by the Government to force the aged, feeble and invalids to attend. If such persons cannot register on June 22nd of their inability to attend at a place of registration, an effort will be made to register them at home, provided the request is reasonable and justified.

Remember the Day—June 22nd—Remember the Hours—7 a.m. to 10 p.m.—Remember your card and your Conscientious opinion—no exemption.

Issued by authority of **Canada Registration Board**

How to Register

The procedure of registration is simple. The questions upon the registration card can be answered very easily, but they must be answered truthfully and fully.

Winning a Home And a Wife

By Vernon Records

Farmer Goodneighbor paid Bill Rickey the wages due him, and added for good measure the following uncomplimentary remarks:

"I can't employ you any longer, Bill. I have no use for a man with a cigarette stuck in the northwest section of his mouth. You are always looking for a job of cutting ice in the summertime, and making hay in the winter."

"That being the case—I'll quit smoking," Bill snapped. "I'll go over to Zoe Tucker's 1,000-acre farm—and win a home."

"That's the talk, Bill. Zoe is the best cook in Snowshoe county. I heard last night she needed a mechanic."

When Bill Rickey arrived at the Tucker farm, a pink sunbonnet bobbing around a farm tractor caught his eye. Zoe Tucker was unable to secure a mechanic to operate the machine, so she was trying to tinker it herself.

He walked over the plowed ground to where Zoe was working.

"Good-morning," said he. "What appears to be the main difficulty?"

"I don't know," she confessed. "It was in perfect order when it arrived. Several of my hired men have tried to operate it. Something went wrong. They tried to fix it—"

"That's the trouble," Bill interrupted, "it is fixed. What it needs now is repairing. I'm a mechanic. You go and prepare dinner. I'm hungry enough to eat the word 'welcome' off a doormat. And I will tinker this critter."

"But you don't ask what wages I pay," she said.

"I don't care!" he replied.

He examined the tractor's engine with a trained eye, and turned the engine over. It snorted and ran like a sick rooster.

"That's just the way it acts," Zoe explained.

"Please hurry up those oats," Bill begged, "before I starve to death on your farm!"

"You certainly have a queer way of speaking," Zoe said, half angrily, as she started in the direction of the house.

"Has the new mechanic arrived?" Mrs. Tucker inquired a few moments later.

"He has," Zoe answered.

"What's his name?"

"What wages does he expect?"

"He doesn't care!"

"Where did he come from?" was the next question.

"He didn't say," Zoe confessed.

"There is something radically wrong here, Zoe. Probably he escaped from a lunatic asylum."

"Probably he did, mother," said Zoe as she lighted the blue-flame oil stove.

"I'll keep my eye on him, anyway," Mrs. Tucker warned.

Zoe made no comment.

Bill soon located the trouble. The magneto was sick. He secured a screw-driver and went to work on the magneto. The set-screw he adjusted so that the platinum points were just far enough apart. Then he tightened the lock-nut and tried to get a spark. He got it.

"Now, old-timer, show how nice you can perform," he said to the tractor as he mounted the seat. The engine purred like a contented kitten. He seized the steering-wheel and shifted the gears from neutral to low. The drive-wheels bit into the wheat stubble and moved ahead. Sixteen furrows turned over on their backs and smiled at the sun.

The dinner bell rang. Bill didn't hear it. He had forgotten all about eating. He stopped the engine. The third section of the train of gang-plows didn't turn the furrow to suit him. He shortened up one of the guide rods. This finished, the ground was turned over smoothly.

Zoe rang the bell again.

"Gee!" Bill muttered. "I forgot about that dinner. The best cook in Snowshoe county! Huh! I hope she is. I wonder if she ever contemplated matrimony?"

He walked to the house. Stopping at the wood-pile near the barn he gathered an armful of firewood. Mrs. Tucker was surprised to see Bill enter the kitchen and place the wood in the box behind the cook-stove. He then secured a basin and proceeded to wash off the road astain.

"Dinner is ready Mr.—Mr.—why you never told me your name!" she stammered.

"It's William Rickey, from now on, Miss Tucker," he said.

Bill made the dirt fly all afternoon. About seven o'clock he stopped work and went to the house. He wasn't thinking about farm tractors just at that moment. He extracted from his suitcase a silk shirt, blue serge trousers, tan oxfords and—last but not least—a silk necktie. With his safety razor he mowed the alfalfa off his smiling face. This accomplished he donned his new clothes and proceeded to doll up. He was whistling merrily.

"That new man certainly has a good disposition," Mrs. Tucker confided to Zoe.

Supper was served.

After supper Bill took a stroll. He wanted to be alone, and think. When he returned Mrs. Tucker had retired. Zoe was sitting on a bench under an apple tree watching the moon. Strange to relate, Bill's number seven oxfords started in that direction—of course Bill went with them. His heart thumped in an unaccountable manner. She certainly was the prettiest girl he had ever seen in his life!

Zoe smiled at him. Bill sat down on the bench. Dan Cupid tried to sit between them, but finding there was no room he gave it up.

Oh, well, you can guess the rest of the story! Bill did not win a home and a wife in one day—nor in two or twenty. But he manfully lived up to his new resolves, worked hard, and in time won the confidence and esteem of Zoe and Mrs. Tucker. The rest was easy.

IF HOLLAND ENTERS WAR.

Queen Can Unlock Dyke Gates and Inundate Large Tracts of Land.

The following figures give an idea of Holland's military and naval strength:

Population (approximately) 7,000,000.

Total area (square miles) 15,760.

Troops under arms (army and navy) 400,000.

Infantry equipped with Mannlicher magazine rifles.

Field artillery equipped with Q. F. Krupps, 75 cm.

Field army has four divisions and a cavalry brigade.

Navy has four large cruisers, eight coast defence ships, thirty-four torpedo boats, twelve destroyers, and four building, ten submarines and a number of gunboats.

Four destroyers being built in Germany for Holland when the war broke out were seized by the Germans.

In Holland all males between the ages of 19 and 40 are subject to army service and the period of service is ten years, with about three or four years in actual training or service.

Holland is bordered on the south by Belgium and on the east by Germany. It has few fortresses and its scheme of defence is concentration of all forces in a restricted area, known as the "Holland fortress." Two-thirds of this area is surrounded by water and could be made more impregnable by inundation.

It is said that three persons, including the Queen and the commander-in-chief of the army, carry keys which would unlock the dykes and inundate the greater part of Holland.

Since the outbreak of war Holland has greatly strengthened her forces and defences, but no official data on what has been done is available. Practically the entire male population is under arms and plans have undoubtedly been made for emergencies that might arise. The Dutch are sturdy fighters of low-German origin, well officered and present a formidable force to be reckoned with.

Only One Shovel.

Many delightful villagers appear in Miss Rosalind Richards's A Northern Countryside; there are people amusing and lovable, eccentric and pathetic. Old Eliphalet Marston, hero of one brief anecdote, stands out among them all as the best exemplification of the principles on which real business success is founded.

Eliphalet, who built and owned the shovel factory, made it his study to produce the best-wearing and the soundest shovel that could be made. In later life his son tried to induce him to go about through the country, look up his customers, and do what he could to increase trade. The son was very emphatic about it. It was what everyone did, the only way to keep up-to-date and advertise the business, and Eliphalet must not become moss-grown. The old man shook his head, but after much discussion consented to start off, although he was not really persuaded of the wisdom of the suggestion.

He went to a big wholesale dealer in Chicago, but did not mention his name—merely said he was there to talk shovels.

"Don't mention shovels to me," said the dealer. "There's just one shovel that's worth having, just one that's honest, and that's the one that I'm handling. There it is," he said, producing it. "Look at it! That's the only shovel that's made in this country; made by a man named Marston, at Marston Plains, State of ——"

Eliphalet chuckled and went home.

A Laundry Hint.

A flat button will usually make its journey through the wringer in safety by two methods. The first one is to fold the button into the garment, being sure that it is flat. This makes the garment act as a cushion or a packing to resist the pressure of the wringer. The second way is to hold the garment out straight so that it feeds in a line parallel with the wringer. For thick buttons the first method is perhaps safer.

Keep feed troughs and drinking pans clean and filled.

A new clothes-line should be boiled before being put out. This prevents it from stretching and makes it last much longer.

Grow your own supply of vegetable seeds for next year. The Dominion Department of Agriculture has issued a leaflet to tell you how.

A Grave Question.

Shopkeeper—Now, look here, little girl, I can't spend the whole day showing you penny toys. Do you want the earth with a little red fence round it for a penny?

Little Girl—Let me see it if you please.

Come to Toronto TO DO Your Buying

In addition to the outing and change, a shopping trip to Toronto may save you much money. The advantages of buying in a large metropolitan city are very many. Wider choice, newer goods, fresher commodities, special bargains, all of which mean a saving in money, in addition to a pleasurable trip. And all this is doubly enhanced by the fact that you can stay at the most home-like and comfortable hotel in Canada, and at moderate cost, and have your parcels sent direct to our check room. There is no extra charge.

The House of Plenty

TORONTO, ONT.

KITCHEN EFFICIENCY.

The busy woman of to-day realizes what efficiency in the kitchen means to her further ability to easily supply to her family nutritious food without waste of time and strength.

The problem of obtaining help brings to the housewife a thought of the time, strength and energy required to keep the household at par. So that to equip the kitchen with modern tools and to replace the furnishings of the household laboratory in an attractive manner is no longer a fad, but a dire necessity.

Cleanliness is an absolute essential that is based upon fundamental principles. The kitchen should be compact in its arrangements, so that no motion may be lost. Unless one can afford a tiled kitchen, a durable wash paint is the most economical. While the costliest kitchen is not necessarily the best, intelligent and careful planning will count quite as much as money.

Color schemes can easily be followed. But for general utility a Colonial buff is the best color with which to paint the walls. The window trimmings may be ivory and white. A good quality of linoleum for covering the floor will be found satisfactory. A kitchen cabinet, a fireless cooker and a good range, a refrigerator and a table with a sanitary porcelain top would complete the large furniture needed in the kitchen.

Have the man of the house build and attach to the kitchen table a frame that will act as a rack, above the table, to hold dippers, strainers and other utensils that are necessary.

A drawer in this table to hold the knives, measuring spoons, etc., will make for time saving and efficiency. A careful selection of pots and pans is vitally necessary, and right here I wish to tell the housewife my pot and pan story.

Sixty-five out of every hundred persons suffer from some form of intestinal indigestion. That is due to the manner in which the food is cooked or to the utensil itself. How many women are there who, in cooking food in an enamel saucepan, stir the food while cooking and then tap the spoon on the edge of the pan. Ah! I see you smile, for you all recognize the old trick. Now, do you know that often you chip the enamel off the saucepan, sometimes into the food, and you have to pick it out; then again, oftener you fail to see the damage you have done until, when washing the pots and pans, you find a spot where you have chipped off the enamel. Now, if you have a broken spot in the bottom of your saucepan and you are stirring the food that is cooking in this pot, using a metal spoon to stir with, you are grating off the glass coating on the enamel saucepan into your food. Think about this, and then use wooden spoons for stirring all foods while cooking in all saucepans.

These wooden spoons need not be costly, and any handy man around the house can whittle a couple of paddles for you from any piece of hardwood, preferably maple or ash, in a very few minutes. Learn to use the fireless cooker for cereals and breakfast foods and also for cooking the cheaper cuts of meat. Meat cooked in the fireless cooker loses proportionately less per pound than meat cooked upon the coal, gas or electric ranges.

Use all left-over breakfast cereals in making bread.

A word about the refrigerator. Upon this important household utensil depends the health of the family. The ice compartment should be sufficiently large to keep a piece of ice that will keep the food compartments at a temperature of not less than 50 degrees Fahrenheit constantly. A thorough cleansing three times a week is an absolute necessity. Remove the drain pipe and flush and swab out the trap. This is very important. Do not place the refrigerator in a dark, damp place.

Do not permit the drain to be connected with the sewer. If the waste pipe is attached have it made so that it may be frequently taken apart and flushed with boiling soda water. Drain the waste water from the refrigerator into the garden or yard. To make a drain from the icebox, cut a hole in the floor and place a large funnel in the hole. Now connect sufficient length of pipe used for speaking tubes to this hole and drain into the yard or garden. This pipe can easily be taken apart for frequent flushing.

To Have Clean Windows.

There are few women who really enjoy cleaning windows, and one reason must be that the result is so often disappointing. Soap always seems to smear the glass, and the cloth gets too drippy and countless things happen. But one housewife, has thought about it hard and has decided just what is the best method of cleaning her windows. She sent us her decision, and here it is:

"I have found a way," she says, "to polish windows brilliantly with the least possible work. I can clean them whether the sun is shining or not, so infallible is my method. First wipe off the dust with a dry cloth, or if very dirty, with a damp one, then put a small quantity of water in a basin and make it very strong with household ammonia, using not more than two parts of water to one of ammonia. Dip a small cloth or sponge in this and wring it nearly dry, then go over the glass, rubbing hard but working rapidly. Wipe immediately with a dry, lintless cloth, or the pane will be dry before you can get over it. The sole objection to this method is in the effect of the strong solution on one's fingers. A rubber or leather glove may be used, but even without gloves I find it takes so short a time to clean a number of windows that if one is careful to wash the hands immediately after the task, then rub them with lemon juice or vinegar and rinse again with clear water, there will be no unpleasant effect."

How to Clarify Fats.

Here are three methods of clarifying fat. Method 1. Melt the fat with an equal portion of water in a double boiler. Strain through a cloth. When cold remove the layer of fat from the water. Method 2. Follow directions given under Method 1, using sour milk. Flavors and odors are modified. Method 3. Follow directions given in Method 1, adding several pieces of clean hardwood charcoal. If beef fat is being clarified, the yellow color is removed and a white odorless fat is secured.

The Paint That Costs The Least

Is the Paint that covers the greatest surface—that takes the shortest time to apply—that wears the longest. Martin-Senour "100% Pure" Paint does all three. Here's the proof—"100% Pure" Paint covers 900 square feet of surface per gallon.

Hand-mixed-lead-and-oil, and cheap prepared paints, cover only about 500 square feet.

The greatest cost of painting is for labor. It takes less time to apply Martin-Senour "100% Pure" Paint because its fine, even texture spreads much easier.

MARTIN-SENOUR

"100% PURE" PAINT

(Made in Canada)

Is guaranteed to be exactly as represented. The purity of the White Lead and Zinc Oxide—the high quality of the Linseed Oil—the minute fineness of the grinding by powerful machinery—insure a paint that gives years of protection and beauty to your home.

Why use cheap paint—that is expensive to put on—when Martin-Senour "100% Pure" Paint wears nearly twice as long?

If you are painting this year, you'll be interested in our books—"Town and Country Homes" and "Harmony in Neo-Tone". Write for copies—free.

GREENSHIELDS AVENUE, MONTREAL

PARIS STATUES ARE PROTECTED

MONUMENTS COVERED WITH SAND AND PLASTER.

Art Works Removed—Subway Stations Used by People to Escape Falling Shells.

The most manifest result to the casual observer of the recent Paris air raids is the cementing and boarding up of Paris statues and monuments. The famous groups of sculptures of the Arc de Triomphe, notably Rude's Chant du Depart and the Marseillaise, are in the swaddling clothes they wore when they were first put in place, except that timber plays as little a part as possible for fear of damages to the statues underneath in case of fire. Plaster and sacks of sand are now everywhere to be seen in Paris where there is a public monument to be preserved.

The most notable of these are Napoleon's tomb in the Invalides, which has a heavy vaulting of bags over it, banked up on either side with brick or cement. The Medici fountain in the Luxembourg Gardens has its cloak of air resisting armor, also Carpeaux's avalt figures of La Danse at the Opera, the Arch of the Carousel in the Tuileries Gardens, the Chevaux de Marly at the entrance of the Champs Elysees and the historical portal of the Chateau de Gallion, now re-erected in the forecourt of the Ecole des Beaux Arts. It all changes the physiognomy of Paris greatly, and not for its artistic betterment.

Art Objects Removed.

Most notable chefs d'ouvres of the museums have been transported to other parts of France, the famous Gobelin tapestries, the pictures of the Luxembourg and the Louvre, some of them—and wherever there was thought to be a possible danger of the foul birds of the air laying their eggs to the detriment of the art treasures of France something has been done. It is said many private individuals have taken like precautions with their art objects.

It is difficult to conceive that a bomb from the air with any reasonable surety could fall plump on any particular art object or statue or monument. Some fantastic ratios have been worked out by statisticians, but these were not enough assurance. Then too there is almost as much danger from the crossfire of anti-aircraft guns and their shrapnel, which scatter like birdshot and pick places out of stone as big as one's head.

Another chapter of the same history is the opening of bomb shelters for the public. Largely these are in the subway stations, where they are of a sufficient depth to be a real protection. Posters at the entrances indicate the safe refuges, but they all have a qualifying clause to the effect that the shelter is only supposed to be safe, in other words, without guarantee as to whether it is or not. In addition to the subway refuges there are others in public buildings—always excepting railway stations, which are supposed to be particularly vulnerable marks—and many of the large privately owned apartment buildings have opened, or have been compelled to open, their cellars to those who may be seeking shelter from the street.

Posters Put Up.

The municipality of Paris has caused to be put up great staring black and white posters announcing there is shelter within for a certain number of persons. The doors of these buildings are supposed to be kept always open during the period of a raid for any who may come, but here arises a difficulty in that the same accommodation may be required for the tenants of the building. The surveillance is performed by volunteer aids, who wear a brassard with a big S. V. A. in black on a white ground. These are usually the concierges or other persons of stability, and if they guard the doorways with anything like the severity with which they watch after the tenants' interests in the ordinary course of events it is foreseen they will have their hands full.

Theatres and hotels have their own regulations. The hotels usually have sufficient cellar accommodation for their guests, and some of them have fitted up these holes in the ground with electric lights, carpets and chairs.

With the theatres and cinemas the case is somewhat different. Audiences are supposed to disperse with the first sound of the tramp alarm. This is probably right, as the average theatre, above all the movie show, is usually but a glass roofed auditorium. The theatres are better off, but the movie house is probably the most fragile thing that was ever put together with struts and sheet glass to house an audience. All skylights of factories and theatres are painted with a blue wash, which is supposed to make them far less visible than otherwise, and a few scattered blue lights only mark the entrances and exits.

50,000 English Girls for the Land.

Instead of the 30,000 women who were being asked for by the Food Production Department of the British Board of Agriculture, 50,000 are now being sought at the rate of 15,000 a month to meet a very urgent need, says the London Times.

WHEN WILL THE END COME?

What Some Famous Folk Think About a Big Question.

Sooner or later the war must end. That, by the law of Nature, is an unquenchable fact. But, meanwhile we wonder longingly when the fact will be accomplished, and the views quoted below represent the opinions of some of our foremost men on the subject.

Earl Curzon is not particularly hopeful of an early peace. He foreshadows another war Christmas—possibly two. "The Government forecasts," he says, "have all along been made for a war that embraces at least the year 1919." With that view he concurs.

Mr. Lloyd George will not commit himself definitely. He thinks that the present action may prove decisive, though the settling up afterwards may occupy another couple of years. He suggests, however, that the Kaiser has made up his mind to get a decision before next autumn.

Lord Leverhulme's views dashes any hopes of an early peace to the ground. He is absolutely confident that we can outlast the Germans, but when asked how long it would take us to beat them, he replied, "From three to five years more. I don't see how it can be less."

Sir A. Conan Doyle, who never expresses an opinion before he has carefully thought it out, also invites us to steel our nerves for a prolonged tussle. "I see no reason," he says, "in view of the Russian collapse, why this war should not last several years."

Lord Loreburn strikes a different note. He remarks succinctly, "The war has lasted far too long already."

Sir Edward Carson declares, "I have such faith in the British nation," he says, "that if this war goes on for one year, or two years, or three years, it will never cease until the Germans have confessed themselves the robbers and burglars we know them to be."

M. Clemenceau strikes the same note in the following utterance: "The nation which conquers is that which can believe in victory a quarter of an hour longer than the other." But at what time he thinks the clock will tick away that vital fifteen minutes he does not reveal.

Professor Gilbert Murray refuses to be drawn into the net of definite prediction. "It is not wise to speak confidently about the future," he writes. "Many unpleasant things may happen. But if we can hold out, if we can still keep a large enough tract of Northern France free for the Americans to land and manoeuvre in, it seems almost a mathematical certainty that ultimately the Germans must lose the war."

Rear-Admiral Mark Kerr took a very optimistic tone when approached a few months ago. He said then that he would not be surprised if the forecast of Lord Kitchener proved to be right within a margin of six months. Lord Kitchener's forecast—which, by the way, was never advanced in the form of a definite prediction, but as a "working proposition" for those who took hopefully estimated that the war would be short and sharp—gave the conflict a run of not less than three years. Add six months, and we reach last February 2nd. The one patent fact about the end of the war is that no one can with any certainty predict it.

The Wooden Cross.

It bears not heavy on his shoulders strong,
But in the Father's heart a load is imposed.
Freighted with love, and sadness sorely borne,
And if a tear rolls down his cheek,
Count it not weakness! His son has died,
And rests amid the blood-stained Flanders mud.

Two strips of wood, some nails, a dash of paint,
Thereon inscribed his name, rank, number,
When he died—a simple wooden cross—
He reverently places o'er his dear boy's grave,
And with averted head and steadfast gaze
Thinks of the life now spent. His early days
As infant sleeping at his mother's breast
And happy boyhood free from worldly cares.
The youthful promise, unalloyed, fond parents' joy,
And then the call to war summoned the boy.

He sleeps with Britain's glorious dead
From far-flung shores,
Whose spirit animates and thrills
where freedom flows.

—Corp. S. H. Bleakley (Canadians).

Tapioca Cream.—Four tablespoonfuls tapioca, one pint of milk, two eggs, one-third cup sugar, one-quarter teaspoonful vanilla. Soak the tapioca in a double boiler, using enough water to cover. When the water is absorbed, add the milk and cook until transparent or about half an hour. Beat the sugar and a pinch of salt into the yolks of the eggs and pour the hot tapioca over the mixture. Stir well. Return to the double boiler quickly and cook two or three minutes. Remove from the fire, add the vanilla, and fold in the whites of the eggs, stiffly beaten. Serve cold.

GERMANS EXPECT PEACE IN AUGUST

CONFIDENT DRIVE ON PARIS AND CALAIS WILL SUCCEED.

England's Spirit to be Broken by Training Long-range Guns on London.

A man to-day on his return from Germany told me of the great nervousness now felt in all the Rhine frontier districts because of the Entante air attacks, says an Amsterdam correspondent writing on May 28th. The Cologne attack made a very deep impression and its details are being repeated far from Cologne. The Germans fear attacks on Aix-la-Chapelle and also greatly dread the American air campaign against their cities.

"At 8 o'clock in the evening everything in the Rhineland is dead quiet. Should there be an air raid alarm the population descends into cellars. Cafe life in this industrial region is virtually a thing of the past, those who still visit cafes being mostly Italians and Dutchmen. Patriotic enthusiasm no longer exists. The people constantly talk of 'this cursed war.'

Count on England Breaking.

"There is no display of flags any more. The last time I saw a flag displayed was on March 21, on the occasion of the German offensive.

"Although patriotism as exhibited earlier is now conspicuous by its absence, the Germans still believe they will win the war—in fact, the idea that they could possibly lose is wholly excluded. England is still the enemy par excellence, but these Germans, who are very ignorant of almost everything but what the Government allows them to be told, are fully convinced they will bring England to her knees.

"They think August will see the end of the war and believe they will take Paris and Calais. They attach more importance to taking the Channel ports than Paris, because they are confident they will break England's resistance. England's spirit is to be broken by training long-range guns on London; they no longer talk of submarines doing the business.

Food From the Trenches.

"The diminution of the German bread ration caused the greatest discontent, because the people expected supplies from the Ukraine. When the Ukraine peace was signed printed bills were displayed in the shop windows showing statistically the resources of that country; figures of wealth compared with other parts of Russia were given to prove it was the richest portion. Now the grain is not forthcoming the people believe it is being reserved for them later with the view of preventing the Entente from starving Germany out.

"The German working class food is now very bad. Such meat as the people now receive consists of horse flesh derived from horses killed at the front, whose carcasses are sent back in barrels. This meat is offensive. Otherwise there is nothing in the way of meat. You receive a meat card, but you can get nothing on it. Bread is so scarce that if you receive a week's supply on Monday and eat three slices daily you have finished the whole quantity by Thursday and must then go without.

Russian Treaty Ignored.

"There are many Russians working in the Rhineland. It is stated the peace treaty with Russia has been broken and these Russians who were at first liberated are now again interned. They are compelled to work excessively hard, and their appearance is deplorable. The condition of workers in the war industry establishments may be gathered from the fact that no one expresses the slightest surprise if, as it often happens, a man falls and has to be carried away.

"People have become callous to the loss of human life. Women and girls have as hard a time as any man ever had, and their hands are like iron.

"I repeat, that those Germans I know fully expect Germany to win the war. They are very proud of the forty-six-centimetre gun, which is so long it has to be carried on seven railway trucks.

"Finally, to give an idea of the feeling prevailing, I lived in a house where the father, who is forty-six and has lost two sons in the war, is anxious to go to the front and himself avenge their loss."

Why We Break the Bottle.

In these days of war, when the launching of a battleship is no longer a public ceremony, it would be interesting to know if the custom of breaking a bottle of wine over the vessel is still observed.

The act had no convivial meaning. The careful uncorking of several dozen bottles at the lunch which followed fulfilled that side of the ceremony. Nor had it any association with Christian baptism, for a man-of-war's name was given long before the shores were knocked away. The real meaning of the rite was nothing short of sacrifice. Building a town and launching a ship were solemn matters to our forefathers, not to be done without devoting a life to propitiate the gods. Our timid civilization no longer dares to sacrifice a slave or a prisoner on such occasions, and therefore we break the bottle, signifying the taking of a man's life.

BRITISH LEARN SECRET OF DYE

GRATIFYING PROGRESS IN IMPORTANT INDUSTRY.

Plant Springs From a Little Factory To One of Big Proportions Engaging Many Chemists.

In a secluded Yorkshire valley is being fought one of the grimmest and most far reaching battles of the war. It is the preliminary bombardment of the great commercial war after the war. For here are situated the works of the British Dyes Company, which is struggling with Germany for one of the most vital industries of the modern commercial world, that of the dye.

The works of the British Dyes undertaking are typical of the evolution of the new industry and the new idea. Sprawling the length of a scarred and smokestacked Yorkshire valley, the sheds, boiler plants and serried rows of retorts occupy acre after acre of ground. Sunk in the background, in a tiny cobbled street, a little factory that struggled for years against swelling German competitors, has tacked on either side and behind it a phalanx of raw red brick buildings. Stretching far along the valley, absorbing green fields and coppices, fed by miles of light railway and drained by thirteen miles of sewers, are the great new sheds.

Many years ago an English chemist discovered that artificial dyes could be made by submitting coal tar to various processes. On that discovery a great industry responsible to-day for almost every atom of color in our clothes, our books, our pictures and our household goods has been built. Germany was the first to realize the value of such an invention. Every possible inducement was put in the way of intending manufacturers and all German firms engaged in the new industry were subsidized by the Government.

British Progress Rapid.

What took Germany over thirty years to accomplish with laborious research cannot of course be achieved by British chemists in a year or two, but surprising and gratifying progress has been made. The cheap production of the "intermediate" products, without which the finer products cannot be made profitably, is guaranteed. Patience and perseverance are expected to win further success.

It is essentially a key industry. The problem the British works attack is not that of providing this or that dye or discovering the secret of one or another obscure German patent, but that of establishing an industry which can stand on its own bottom and which is not to be upset by the withdrawal on the part of a foreign competitor of any essential substance used in the manufacture.

In this valley the gospel of thoroughness has not been preached in vain. In building after building there goes on a silent, almost automatic, series of operations that prepare the raw material and produce the intermediates.

Results Savor of Magic.

In the laboratories a chemist performed two or three little pieces of magic with colorless liquids from glass stoppered bottles, these soothing into brilliant color before one's eyes. The magic that one meets in the factories is less visibly impressive. There is a sufficiently arresting sequence of smells to be encountered in a walk through the works, but a surprising absence of color.

There were remarkable experiments with new found secrets in acid, basic, mordant, sulphur, union and vat colors, all of which are being marketed by British Dyes. Through three miles of works one passed to the intermediate and auxiliary service plants, to examine the costly equipment of the oleum and nitric acid instillations, and ascend among boiling greens; samples, it seems, of a thousand different odors varying from the hot vinegar variety to the scents of Araby; to see the new discovery chloranthene blue, the first of a series which has been followed by chloranthene blue R D and chloranthene yellow D; and on into the alizarine delphinol factories, where acid dyestuff for wool and silk, with extraordinary properties in Bright shades of fast blues, are now produced and sold under distinctive brands B and E E, and pass through mountains of crude chemicals.

This leads to the last point—the research and chemical laboratory. It has a hundred chemists and more, and has made a great beginning in guaranteeing the cheap production of "intermediate" products.

Soldiers of the Soil.

Boys enrolled as farm helpers in the Soldiers of the Soil organization, under the auspices of the Canada Food Board, are doing good work with the seeding. In Ontario 15,000 boys have been enrolled, many of them are now on the land; in Manitoba over 1,000 are at work; in Saskatchewan 1,100 are placed; in Alberta 624; in British Columbia 540; in Nova Scotia, 1,358; in Quebec over 1,000 have been already enrolled. New Brunswick and Prince Edward Island are still to be heard from but the enrollment is under way.

GERMAN RAIDER SOWED MINE FIELD

OFFICER OF THE WOLF GIVES DETAILS OF VOYAGE.

Explosives Put in the Ocean From Colombo to Bombay and on the Cape.

In a speech at Lubeck, Commander Witschewsky, first officer of the auxiliary cruiser Wolf, gave some details of the raider's cruise. He said that the Wolf went out to sea by way of Iceland and then round the Cape and into the Indian Ocean, passing close to Madagascar. In the Indian Ocean a southeasterly course was taken for safety, and after passing round Australia, New Guinea and New Zealand, the Wolf proceeded to Bombay, Ceylon, the Indian coast and the Red Sea, then to the south, round the Cape and through the Atlantic back to Iceland, whence the ship went home through the Norwegian coast.

Commander Witschewsky says that the first object of the cruise was to lay mines. The first mines were laid off the Cape by night "in the bright light of English searchlights," and on January 27, 1917, the Wolf picked up an English wireless reporting submarines off the Cape and advising caution.

It is claimed that on arrival at Ceylon "a large wreath of mines" was laid about Colombo, again with the help of English searchlights and without interference. Further mines were laid along the Indian coast as far as Bombay, and it is stated that, "as appears from a wireless message which was picked up, the English commandant of Bombay was the first to guess that the danger to traffic was due to a German mineship."

Laid Mines Around Australia.

It was between Ceylon and the Red Sea that the Wolf made her first capture. This was evidently the ship which other accounts have mentioned as the Turritella, and which the German christened the Iltis. Commander Witschewsky says that the Turritella, or Iltis, was originally a sister ship of the Wolf, named Guatenfels, and belonged to the Hansa Company, of Bremen. She had been seized by the British in the Suez Canal. The Iltis was sent to lay mines off Aden, but was blown up by her commander.

The Wolf was now very short of coal, and, learning that she could expect to get no coal in India, proceeded toward southern Australia, where she laid the rest of her mines. The Wolf cruised "for weeks" in Australian waters without making a capture, and "at last found a remote group of islands, where she anchored for repairs." Commander Witschewsky asserts that the engines of the Wolf had been taken to pieces when the approach of a ship was reported. This was the Wairuna, which, according to previous reports, obeyed the order to stop and to make no use of her wireless telegraphy which was given by the seaplane Wolichen, sent up from the Wolf. After taking over the stores of the Wairuna, the Wolf was painted black and continued her cruise.

A WATERPROOF MATCH.

Article Discovered by Belgian Inventor is Foolproof.

An inventor, who is said to have once won a large prize from the Belgian Government for inventing a non-phosphorous safety match, has recently developed a match which, he claims, is waterproof, windproof, and also foolproof. After tests made by United States authorities, orders have been placed for a quantity of these matches, which will be especially serviceable in lighting signal rockets, certain types of bombs, and on shipboard in bad weather. Water does not harm them and in the face of a strong wind they will burn for five seconds at least. As soon as a blaze is extinguished the ash is cool, and the burned match can be thrown anywhere without danger of starting a fire. Because of this feature the new article is called foolproof.

The Safest Place.

Suppose—and it is a big supposition—the Hun succeeded in invading this moated stronghold we call England, which would be the last place to be touched? asks an English writer. Well, perhaps the centre of Wales and the fastnesses of Scafell would be the first choice. But if it depended on distance from the point of landing, it would be the town of Leamington.

How can you prove it? Carefully cut the map of England round its coast line, going into every bay and rounding every cape. But before doing this mount your map on a piece of thin cardboard. Now run a pin through the spot which is named Leamington; or, better still, balance your map on a pin point on that exact spot, and you will be able to spin your outline map without a wobble or any threat of collapse.

So, you see, Leamington Spa is the hub of England—the very centre. Do not suppose that the good folk of Leamington are unaware of this distinction. They are, in fact, exceedingly proud of the fact that all England revolves round their town, and that they are at the very core and centre of things!

BRITISHER HAS CROP DOUBLER

EXPERTS IMPRESSED WITH THE NEW METHOD.

English Farmer Has Amazing Scheme To Increase the Yield of the Soil.

In these days of cereal and fodder shortage the farmer who succeeds in growing two blades where one grew before would be looked upon as a public benefactor, but an English farmer has succeeded in going one better and writes to the London Times to give details of the new method.

He suggests that if his plan is adopted there will be more grazing this year, more beef next winter, more oats, wheat and hay in 1919, and more grazing in 1919. If the new method is as successful over a large acreage as it has proved to be in the experimental stage it may be termed a discovery in agriculture.

The new method is as follows:

In July, by the use of a specially devised drill, a winter cereal and an artificial fertilizer are simultaneously drilled through any grass land intended for haying the following year. By September or October the cereal will have made a top growth of from eight to ten inches. This is then grazed off with the grass by whatever live stock is turned out upon it, and the grain, nominally an annual, is thus turned into a biennial by virtue of its yield of valuable grazing in the autumn preceding the year of the normal grain harvest.

Double Crop.

The autumn grazing encourages and strengthens the roots of the cereal. Owing to the protection from frost given by the covering of the turf, normal spring growth begins earlier, more heads are thrown up, development is more rapid, and the grain ripens at the same time as the hay, both being harvested together. The harvesting is done by means of an ordinary mowing machine fitted with an extra knife at the proper height above the grass to cut the heads of the grain. The lower knife cuts the hay as usual and the upper knife acts as a header.

A carrier behind the "header" knife deposits the grain in a separate swath.

The advantages claimed for this method are many, among them being the following:

The productive capacity of the land is doubled. Old and valuable grass lands are not only not destroyed, but are improved. Economy of labor throughout; ploughing and harrowing are not needed; both crops are gathered together, planting and rolling are done at the same time, and the grain crop is gathered with ease and certainty, as there is no green growth with the grain to be stood in the sun to dry. Economy of fertilizers. A saving of one-half of the seed usually needed. The autumn grazing is of a fresh nitrogenous character. The passage of the drills through the turf improves the surface drainage. The equal mixing of straw with the hay for fodder. The great convenience of July planting for the farmer.

Many Advantages.

It is asserted that under this method no permanent pasture need be broken up, rather that the larger part of the arable land might be put down to permanent pasture. The permanent pastures are in hay and corn one year and grazed the next. In the spring of the grazing year seeds of annual legumes can be planted though the pastures with the same machine as is used to drill in the grain, not only on account of their feeding value, but also to increase the nitrogen in the soil for the following cereal crop.

The drilling of the seed through the turf is accomplished by a small knife bladed foot that can be attached to any drill in place of the disc.

Government experts have been so impressed with the possibilities of the method that priority certificates have been granted for the manufacture of the fittings or the import of any parts which may be necessary if they cannot be obtained here in time for this season's planting.

The British Navy.

Since the days of Drake and Nelson, the British Navy has never been without ships bearing those names, and no less has the personnel of the navy ever been lacking in the spirit of its great naval heroes. The latest daring project, that of the bottling up of Zeebrugge, clearly demonstrates that the spirit of the navy is resplendent with a daring and bravery worthy of the heroes who made it famous—a spirit that shows no fear of what would ordinarily be called insurmountable difficulties such as the entering of a narrow and shallow harbor strewn with floating mines, beset with submarines and defended by powerful shore batteries. The naval forces that took part in the enterprise deserve the thanks of all the allied peoples for their gallantry and devoted service. And the freemen of the world join with the men of the Navy in voicing the spirit of prayer that arises every morning from every British warship in the singing of the naval anthem, "Oh God that made the mighty, make them mightier yet!"

GLAMIS

Mrs. McClung and two children left on Saturday for Calgary where they intend to spend some time with her parents.

The funeral of the late Miss Fletcher took place on Saturday afternoon from the residence of her brother to Purdy's cemetery.

Miss Ethel Johnson, is visiting her sister, Mrs. W. J. McKinnon.

Mrs. Macintyre and daughter Zeta are spending a few days with friends in Pinkerton.

A number of the young people of the Baptist church went to Mr. Gerry's on Saturday evening and presented Mr. George Gerry with a wrist watch. George left on Monday for London to join the colors.

Mrs. Mc. Mitchell and Miss Mary A. McKinnon) returned on Saturday from Detroit.

Mr. and Mrs. Gosse, of Toronto, are visiting Mr. Gosse's parents, Mr. and Mrs. Greer.

Mr. and Mrs. Gosse's daughter, from California is visiting here also.

Miss Reta McKinnon spent Saturday at Harrietsville with friends.

Rev. Mr. Reith is in Toronto attending the General Assembly. Union services were held on Sunday evening. Mr. McCreary occupied the pulpit.

Mr. Jas. McLennan purchased a new driver.

Mrs. McEwen took a trip to Lucknow on Monday.

Miss Hyland was the guest of Mrs. R. Campbell a few days.

Mrs. Chas. Graham left on Saturday for Detroit to attend the marriage of her sister, Miss. Gertrude Duffy.

A large delegation attended the ordination of Rev. McCaskey on Friday afternoon and evening. Delegates and pastors were present from nearly every church in the Association. Afternoon session was held for the purpose of examining the candidate regarding his views on doctrines of the bible which he gave very clearly and satisfactorily. Induction speech were assigned in securing Mr. McCaskey for ordination. Dr. Farmer, of McMaster University, was present, also Rev. J. A. Cormack, Secretary to Home Mission Superintendent, Rev. T. R. Welsh, of Peterboro, Rev. P. E. Dwivedi, of Toronto. Rev. T. R. Welsh preached the ordination sermon in the evening. Dr. Farmer gave the charge to the candidate, Rev. Mr. Buckborough of Port Elgin, gave the right hand of fellowship. Rev. H. B. Common gave the charge to the church. Duets were sung by Mrs. Dingham of Wingham, Miss Giles of Riverview, and Mr. Duncan McLennan of Glamis, were very much enjoyed.

PINKERTON

Miss Jessie Pinkerton spent a few days with her sister, Mrs. Ali Fiddis, at Alma Craig last week.

Rev. Jas. Gale occupied the pulpit of Riverwood and Malcolm on Sunday. The week previous he was at Hyde Park near London.

While assisting to set up his assembly here on Saturday, Senator Donnelly had the misfortune to lose part of his thumb and two fingers by having them drawn into a pulley.

Among the young men who are effected by the U. S. A. in this district are Harry Mutrie, Melville Reid, Willie Keyes, Elmer Reid, Wm. Knox and Geo. Wilson.

The local lodge of the C. O. F. will attend divine service in the Anglican church here on Sunday afternoon. There will be no service in the Presbyterian church.

Lieut. Harold Pinkerton, of Toronto, spent a few days at his home here.

Anniversary services will be held in the Pinkerton church here on Sunday, June 23. Rev. Mr. Cranston, of Palmerston, will occupy the pulpit.

Deputy Registrars.

Following are the deputies appointed for each station for registration day, June 22nd: Paisley—Poll 1 Alexander Jack, 2 E. F. Boyle. Elderslie—Poll 1 David Walks, 2 Zed Paisley—Poll 1, Alexander Jack; 2, E. F. Boyle. Elderslie—Poll 1, David Walks; 2 William Mitchell, 3 Thos. S. Pearce, 4 R. C. Pearce. Greenock—Poll 1 Alex Forsyth, 2 J. G. Carter, 3 Wm. Cammack, 4 Joseph Clancy, 5 Thos. H. Poole, 6 R. J. Nelson, 7 Wes Pinkerton, 8 Fred Young.

CARGILL

Mrs. Charleton, of Montreal, is here on a visit to Mrs. Saunders.

Pte. Francis Dunn, of Woodstock, spent over Sunday at Mr. J. Laughlin's.

Messrs. Fowler and Belcher and children are away on a visit to their friends in Wallaby and Picketing.

Messrs. Saunders, Sims, Cargill, Hunstein and Jos. Clancy, Jr., made an auto trip to London last week, returning in a Ford car for the Dominion Well Supply Co.

Miss Verna Laughlan, of Woodstock, is home on a week's visit to her parents.

A number from here attended the funeral of the late Miss Fletcher who was buried in Purdy's cemetery on Sunday.

Miss Fletcher was well known here, having lived in this village with her brother some years ago, and for many friends here are sorry to hear of her demise.

Mr. G. Hettrich purchased a Chevrolet touring car on Monday.

Whoso giving a write-up of the Red Cross bowling tournament last week's edition we were unable to give a list of the members of the winning rinks, as publish this week. Trophy winners—Wright, Neal, Sylvester, Kingsmill (skip). Runners-up—Mc-Farlane, Laughlan, Dunn, Clancy (skip). Consolation—Hunt, Cowperthwaite, Powers, Clancy, sr. (skip). First prize—Martin, Cargill, Belcher, Sutherland (skip). Consolation—F. Hunt, C. Powers, C. Thompson, Dr. Bricker (skip).

TENTH CON. BRUCE

Messrs. Leonard Christie and Alex Young, from Brant, Sundayed at Mr. Rich. Christie's.

Miss H. Pumpey, of London, spent last week at Mr. C. Wesmacott's.

Mr. and Mrs. Robertson and children spent Sunday at Mr. Alex. Mc-Donald's on Sunday.

We are glad to hear that Willie Christie is improving nicely.

Mrs. Jonathan Adamson is in poor health at present.

Quite a number from these parts went to Walkerton on Tuesday to hear the McPhail and Nichol case.

SIXTH CON. BRUCE

Mr. and Mrs. J. C. Hafkey, from Drayton, Sundayed at Mr. Jas. Lamont's.

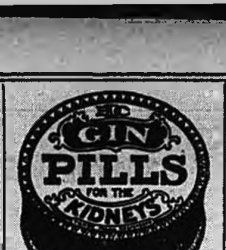
Pte. Jas. Lamont is [illegible] on thirty days' leave of absence.

Miss Belle McLeod, of Port Elgin, is visiting at Mr. Robt. McKaye.

Mr. and Mrs. John Repsley spent a few days in Chesley.

Mr. and Mrs. Menno Roppel spent Sunday in Port Elgin.

Mr. John A. McKay has hired with Mr. Jas. B. McKay and has moved other things away, but he added with an air of satisfaction: "He got nothing, no cat like." The judge sent the two down for thirty days.



Talking to Mr. Louis Yack the other day about war souvenirs, he showed us a conversation of the Franco-Prussian war which he has kept for 46 years, in fact he carries it around with him. It consists of a small bear on six rigs which There is a story connected with this bear. At the time of the Franco-Prussian war Mr. Yack was a well known boy of 20 years of age living in a town in the French province of Alsace. One day as the invading Germans drove through the town, the small boys crowded around to see the excitement. One of the soldiers asked the lads if there was a grindstone while he sharpened [illegible]. The lad complied, and as a reward the soldier handed the little fellow carving knife which he had in his possession. Louis slipped his new treasure in his coat and carried her home, but in his hurry he fell and the point of the blade cut a slit in his wrist, the scar of which is still visible. Mr. Yack kept the carving knife for many years and it was not until after he came to Canada that he disposed of it. Two of Mr. Yackle's sons are now in khaki, Corporal Wilfrid having recently been invalided home, and Norman, who left last week to join the Royal Air Force, to have a part in the big fight which has for one of its objects the restoration to France of his father's old native province of Alsace.—Telescope.

Children Cry
FOR FLETCHER'S
CASTORIA

WILLOW CREEK

Mr. and Mrs. Chas. Hebeig, Mr. and Mrs. Jos. George are in Neustadt on Friday last attending the funeral of the late John Hellwig.

Mr. Reuben Wittig reports for military duty on Friday of this week.

WALKERTON

One of the first Walkerton boys of the 48th to get on the casualty list is Capt. Bob Rowland, son of Mr. and Mrs. John Rowland, who has had a share of getting one in one of the enemy's recent "attacks." Letters from the front state that Bob was completely but his voice for ten days. Last week his parents had a reassuring letter from Capt. Rowland stating he was out of the hospital and back on the firing line.

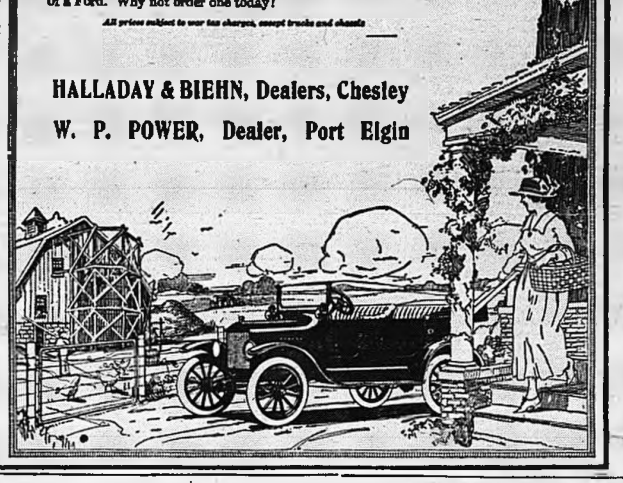
Two Saugeen Indians, Elijah Moses, aged 35, and his brother, Michael, aged 18, were brought down from Port Elgin on Monday by the constable and charged before Judge Klein with breaking into a store at Allenford on May 28th and stealing a quantity of victuals to the value of $25. In court Elijah told the story of his misdeed in quaint Indian style. He said he and his brother had regretted to cut wood in the bush for a farmer at $1.25 a cord and hence their crime. He needed the money to buy seed potatoes. Michael said: "We have no bread and eat the meat for nay. No nay, Saturday go to town and have lots money. So me awful hungry and go to store." At the store the brothers found nobody in. So they helped themselves to [illegible], chewing gum, tobacco, sardines, salmon and other articles. Elijah testified that men came into town the day before and he sold other things away, but he added with an air of satisfaction: "No get salmon, no eat him." The judge sent the two down for thirty days.

Every Farmer Needs a Ford

THE Motor Car is a greater convenience to the average farmer than the telephone, the rural mail or even the grain binder.

The binder which is considered as a very useful implement is rarely used more than a few days during the entire year. The rest of the time it stands idle, taking up space, while the automobile is available for use throughout all seasons, and both day and night.

It is ever ready to run down the lane to the back field or the pasture with a parcel or a message, or take you and your family to town for shopping purposes—or on an errand to the neighbors.



The motor car is called upon whenever anything is wanted in a hurry. It is the most useful implement or convenience for the farm. It helps you conserve your energies and time for productive work and enables you and your family to accomplish more with less energy. You surely feel the need of a Ford. Why not order one today?

All prices subject to war tax charges, except trucks and chassis

W. P. POWER, Dealer, Port Elgin

PRESENTATION TO J. BELL AND FAMILY

A presentation party of about fifty neighbors and friends stormed the home of Mr. and Mrs. Joshua Bell, west of the village, on Monday evening. The attack was a very friendly one, the occupants of the home being made the recipients of a nice memento on the eve of their removal to their new place of abode on the Mc Bride farm, Elora Road south. The meeting came to order under the direction of Mr. D. McBeath, who was appointed chairman. The following address was read by Miss Ethel Roberts:

To Mr. and Mrs. Joshua Bell and family:

Dear Friends—We ventured to come unbidden to your home this evening to spend a few social hours with you before your removal from this neighborhood which has known you for about twenty-six years. Your unfailing friendliness and neighborly kindness at all times during this period has won and held our esteem and regard. While we are glad to know that your new home will still be within sight of the old, nevertheless the change will cause a breaking up of our associations as they have existed in the past. Therefore, we wish you to accept this library table as a small but tangible expression of our regard for you, and the place will be accompanied with our very best and heartiest wishes for your future welfare.

Signed on behalf of your friends and neighbors—Minto Jackson, Peter McLeod, David Grant.

Following the reply of Mr. Bell, there were short speeches by A. D. McKay, J. J. Bradley and Kenneth McLeod, and a sing or two by a chorus of girls. Lunch was served by the ladies, and the balance of the evening was spent in the enjoyment of games and social amusements.

CRESHAM

Rev. Mr. McLachlan, of Hamilton, preached here and in Underwood last Sabbath, and will also preach next Sabbath.

Gresham is fortunately situated on the Government road, which adds very much to the value in several ways. Already we have had the good grader at work under competent management.

Mr. and Mrs. J. B. Cottrell and family, of Port Elgin, motored over to visit his sister here, Mrs. R. D. McKinnon.

WHERE TO REGISTER ON JUNE 22ND

Bruce and Saugeen Booths and Deputies

In last issue we gave a list of booths in this section of South Bruce. Below are those in neighboring townships of North Bruce:

Bruce—Booths [illegible]; S. S. No. 9, Kinloss; Duthie deputy; S. S. No. 10, Retta McKenzie deputy; S. S. No. 9 (Meshaweya's), no teacher, Mr. Alex Meshibbow, volunteering to serve; Underwood, at township hall, Miss McRae deputy; S. S. No. 11, Miss Judith Bear deputy; S. S. No. 12, Miss Nellie McGillivray deputy; S. S. No. 12, Miss Florence Young deputy.

Saugeen—S. S. No. 4 Derwent Wells deputy; S. S. No. 1, Emsley, Rennie deputy; S. S. No. 6, Gerrie, Morgan deputy; S. S. No. 7, Walter Kaechele deputy; S. S. No. 1 S., A. & E., Muriel Bryan, deputy.

CASTORIA.
Bears the Signature of Chas. H. Fletcher. In Use For Over 30 Years—Bought

An Expensive Runaway at Tara

There was a big falling in eggs on Thursday evening of last week and as a result Andy Lewis, of Walkerton, king of egg buyers, had to settle with each hen for it. Councillor Thos. Dolphin was engaged that day to deliver four cases of eggs to Frank King, the town druggist, and the last load for the day was 22 crates of eggs to be taken to the station for shipment. The eggs were loaded on the dray and our aggressive councillor was perched on top enjoying the sweet summer breezes. Everything went well until near the station bridge when a rut in the road caused the dray to roll, throwing the driver to the ground. He fell between the horses but managed to extricate himself. The horses became frightened and bolted, finally the big dray load of eggs came into contact with the station and then, Oh! what a smash. The ground was literally covered with eggs, and when if the food controller had viewed the destruction he would have ordered the culprits hanged. The unfortunate accident caused the breakage of nearly two hundred dozen eggs, the loss of which will be borne by our local druggist.—Tara Leader.

Every municipality will have to appoint a tax collector this year, as the bank has decided to discontinue the collection of taxes for townships.

Queen St. Garage

Agency of Overland and Chevrolet Cars

High Grade Gasoline, Light and Heavy Cylinder Oil.

Full line of Tires and Accessories.

Vulcanizing a specialty, also all kinds Repairing done.

All work guaranteed, and at prices to suit the customers.

BRANT TP. COUNCIL

The municipal council of the township of Brant met on Monday, the 27th day of May, as a Court of Revision, and for general business. Members all present. Minutes of last meeting of council read and declared correct.

Johnston—Rowand—That Geo. W. Harris be appointed vendor of government fish for the village of Elmwood and vicinity, and his account be guaranteed by municipality of Brant.—Carried.

Rowand—Findlay—That this council do now go into committee of the whole with the reeve in the chair, as a Court of Revision to determine the appeals against the assessment roll for the current year.—Carried.

Johnston—Rowand—That in the matter of the appeal against his assessment roll that Wm. Lamberton's assessment be reduced $100 and that the assessment of Samuel Fish be sustained.—Carried.

Findlay—Rowand—That the roll as now revised be accepted, and that the same be the basis upon which the rates and levies for the current year be struck, and that the assessor be paid his salary in full of $180.—Carried.

Gregg—Findlay—That this council do now adjourn as a Court of Revision and resume general business.—Carried.

Rowand—Gregg—That the reeve and Wm. Johnston or a committee to arrange to have the road on the 6th con. west of the river bridge cemented.—Carried.

Johnston—Gregg—That the reeve and clerk issue orders for all accounts passed at this meeting of council.—Carried.

Dan Ernest, sheep killed by dogs, $20; C. J. Schnurr, cement tile for culverts, $5.25; Mano Monto, sheep killed by dogs, $25; Jos. Monk, valuating sheep killed by dogs, $4.50; Alex Tulloch, hauling tile and putting in culvert, lot 17, con. 9, $3; Wm. Tulloch, breaking ice jam during spring freshet, $6; Chris Perzio, grading, $12.60; Robt. Murray, repairing grader, $1.50; Hugh Traynor, bridge covering and labor on lot 6, con. 5, S. R., $2.50 $2. Orders next, leather work and sharpening water roads, $11.10; Sidney Parker, salary as assessor for the year 1918, $180.

Johnston—Findlay—That this council do now adjourn to meet on Monday, June 10th, for the transaction of general business.—Carried.

M. A. McCALLUM, Clerk.

Reroof with Brantford Asphalt Roofing

Don't let a leaky roof damage the wall paper, carpets or furniture in your home, the crops in your barn or the goods in your store. Tear off the old shingles or other worn out roofing material and put on a lasting roof of Brantford Asphalt Roofing.

This roofing is made of a blend of hard and soft asphalts on a long-fibred felt base. By blending the asphalts a roofing of remark[illegible] elasticity is secured—one that is flexible, durable a[illegible] capable of resisting all kinds of severe climatic extremes.

Brantford Asphalt Roofing is, in addition, surfaced with silicia sand on both sides, which adds to its weight, fire-resistance and durability. You may be offered other sanded roofing, but it will not have the quality of material or weight of saturation of Brantford Asphalt Roofing.

Made in three weights:—60 lb., 70 lb., 80 lb. per square.

Brantford Rubber Roofing

Is the same quality as Brantford Asphalt, but has a smooth, rubbery surface instead of the sand. It is particularly suitable for verandah decks and floor coverings. Three weights:—40 lb., 50 lb., and 60 lb. per square.

Standard Mohawk Roofing

consists of the same grade of materials as Brantford Asphalt Roofing but is lighter in weight—a thoroughly reliable roofing at a low price. Tested for years and has given entire satisfaction. Sanded on one side. One weight:—40 lbs. per square.

Mohawk Rubber Roofing

The same quality as Standard Mohawk but with a smooth surface. Used for all classes of temporary work—sheds, bunkhouses, camp sites, even dugouts in the trenches. 35 lb., 45 lb., and 55 lb. weights.

Leatheroid Roofing

Slightly lower quality than Mohawk Rubber. Used for same purposes. 35 lb., 45 lb., and 55 lb. weights.

Samples of any of these roofings and prices will be furnished by either the makers or their agents in this locality.

D. H. COOPER

—Messrs. J. and B. Metcalf, of Bradford, spent the week end at the home of their cousin, Mrs. Chris Parker, jr.

—Miss Ina Galbraith was in charge of entrance examination classes at Southampton, and Miss Boyle at Paisley.

—Roger Hood, son of Mr. and Mrs. Gemmel Hood, of Ellengowan, underwent an operation for appendicitis last week at his home.

—Miss Nettie Parker, graduate nurse of Guelph, is spending a few days at the home of her parents, Mr. and Mrs. Chris Parker, Greenock.

—Mrs. H. E. Isaard, of Wingham, and her mother, Mrs. Burwash, were visitors last week at Mrs. S. Gordon's, Greenock. Mr. Isaard, who motored over for them, gave The Advocate a friendly call.

—Principal Aylesworth, of Port Elgin, is presiding at departmental exams here this week. Mr. Aylesworth has accepted the position of principal of the Lindsay central school of ten rooms, at the salary of $1225 with increase each year.

—Mr. Wm. Thornburn, barrister, of Winnipeg, accompanied by Mrs. Thornburn, arrived a few days ago to visit his aged mother, who was recently stricken with paralysis, and is not expected to survive.

—Every person over the age of 16 years seems to have been duly catalogued under the registration last week. Messrs. A. Jack and E. F. Boyle, the deputy registrars here, were assisted in their work by the following: H. R. Putnam, J. Hope, Misses Hattie Scott, Ina Galbraith, Jessie Collins, May Boyle and Mary Ogilvie.

—A Paisley autoist is reported to have run over a pig on the Elora road near Mildmay on a recent Sunday, and damaged his car to a considerable extent.

—Mrs. H. R. Putnam, Mrs. Geo. Grant, Mrs. (Rev.) Neilson and Miss Irma Porter are attending the Bruce Co. W.C.T.U. convention at Teeswater on Wednesday and Thursday of this week.

—Mr. Thos. McBeath, of Goldie St., has received an invitation to attend the centenary celebration of St. Andrew's Presbyterian church at Scarboro, Ont., of which congregation he was a member before he came up to this settlement over 65 years ago.

—Mr. and Mrs. Thos. Switzer of Saugeen, motored to Toronto last week and attended the graduating exercises at Grace Hospital, where their daughter, Miss Fanny Switzer, has just entered upon her third year in the training course, after passing the second year exam.

—Mrs. A. B. McCallum and family, who have been residing here since Judge McCallum's death nine years ago, left on Tuesday for Toronto, where they will reside. Miss Gladys, who recently passed the Entrance to Normal examination, is working on a farm for the three months' term.

—At the School Board meeting on Monday evening it was decided to offer the teachers re-engagement at present salaries except in the case of those in charge of the second and third departments, who are given an increase of $50 each. The levy for school purposes was fixed at $5400 for 1918, an increase of $600 over last year.

The Strictly Cash and One Price Store

Pink Gingham and Blue Chambray

By Mabel McKee

With an impatient gesture, Fanny Warden pushed the crock that held six and a half pounds of butter, into the centre of the milk trough and turned toward the farmhouse. Halfway there she met big Dan Kelly. He shifted the bucket of wheat, which he was carrying on his left hand and awkwardly tried to slip his right one through the bend of Fanny's brown gingham covered arm.

"I'm just going down to the feeding troughs in the chicken-yard," he began in a rousing voice. "Your mother vowed you might go on with me. She said there wasn't anything for you to do, now that the butter's finished."

Disputedly Fanny turned and walked with him down the path that led away from the house. Once inside the chicken yard however she insisted on taking the bucket from him and apportioning the feed herself. Big Dan followed her from coop to coop, watching her pour the wheat into the feeding troughs. With gentle hands she patted the baby chickens. One tiny mass of snow white down she held close against her cheek.

"She's great on mothering," reflected Dan. His eyes grew wistful. "I wonder if she'll treat me that way?"

He tried to reflect that all girls were reserved like Fanny when they were betrothed. He reached out his rough hand and stroked her sleeve.

"Your mother said that she told your aunt it was going to be in September," he informed her proudly. "I thought that now perhaps you might be willing for me to tell my folks about it too. They'll be mighty surprised."

Fanny stared far past him into the heart of the wild cherry tree that shaded the patio. There a pair of orioles were proudly fluttering about a long pocket of a nest, suspended from one of the boughs. Then she turned toward him. "You were saying something about the marriage."

The word, marriage, pronounced by her, ceased to be mere speech and became exquisite music. Big Dan's rough hand crept out and closed over her smooth, slender one. "You're glad it's 'most here," he ventured.

Fanny moved almost impatiently away from him. "I can't see as it's going to make much difference with me," she asserted. "It isn't as if we were going to have a new home of our own like Mary Lee and Bob Moore. They went to Niagara Falls too."

"But there's your mother, Fanny," Dan protested. "We couldn't leave her alone and she doesn't want to go away and live on mother farm with us. I couldn't very well leave the farm then to go to Niagara. It'll be harvesting time. Perhaps after the harvesting is over—"

The hired man in the barn lot called to Dan in an imperative summons. Fanny, left alone, stared at the big, rambling farm-house in which she lived.

"It was Father's and Mother's," she muttered, "and it's old now—not like the new bungalows the rest are getting. It won't be like getting married if we can't go into a new home all our own. Of course I know we can't leave Mother now but I don't see why Dan isn't willing to wait for us to be married until Tom gets big enough to manage the farm. We'd go on just the way we are now. Dan would still manage our farm and—"

Dan's cheery whistle as he came down the path with twelve-year-old Tom, Fanny's only brother, interrupted for a minute her soliloquy. After he and Tom had entered the summer kitchen she continued it. "I want a house all my own and I want a wedding trip and I want a real trousseau of pretty things exactly like Jane's."

Cousin Jane's trousseau had been a nine day's wonder to Fan. Her own approaching wedding grew drab and odious, hateful beside the memory of this splendid one.

"It can't be in September," she decided stubbornly. "Dan and I will have to wait until we can have a real wedding."

When her father died two years before, big Dan Kelly left his father's prosperous farm to manage the Warden place. Now after twenty-four months of being almost constantly together he and Fanny had become betrothed. Mrs. Warden was glad and encouraged an early wedding. She knew that they would have to live with her. Graciously she apportioned to them as their private suite the three choice rooms of the great farmhouse.

"There's a living room and two bedrooms, dear," she told Fan. "Your father and I only had three tiny rooms in our entire house when we were married. I'll refurnish the dining room too if you want me to."

Fanny had vochsafed no reply then. Mary's bungalow persisted in towering before her. With a little shrug of her shoulders, she picked up the empty wheat bucket and carried it to the porch.

"I'll tell Dan and Mother to-night that we'll have to postpone it for a few years," she decided as she opened the door of the summer kitchen.

No chance for telling her decision presented itself during the evening meal. A guest was in the dining room when Fanny entered.

Later in the big living room Tom challenged the visitor to a game of checkers. Moving away from the library table to watch the game, Dan left Fanny and her mother alone. Mrs. Warden leaned nearer her daughter. "We ought to be getting some things so we can begin on your sewing, evenings. I wish the men weren't so busy right now so that one of them could take us into town. If it only wasn't so far and they didn't need the horses so badly! Anne Bradden said yesterday that she could come over week after next to do the most particular sewing."

Fan shook her head.

"I don't want Anne Bradden to sew on my things. I think our own sewing is better than hers. Cousin Jane bought—"

The visitor, having won the game, came over to the table for congratulations. From checkers the talk drifted to the year's wheat crop. When Fanny arose from the table to go upstairs big Dan followed her out into the hall. He slipped one arm about her shoulders. With the other hand he stroked her blond hair. "I told my mother about the wedding when she called me up over the telephone just before supper," he whispered. "She was so glad for us."

After a reluctant embrace Fan hurried up the stairs to her own room. Her mother, carrying a long roll, followed her. "Cousin Nell sent you a new magazine, dear," she said lovingly. "I thought perhaps you might want to read yourself to sleep. Don't worry about the light. I'll come and put it out if you are asleep."

(Concluded next week.)

USE OF SMOKE SCREENS IN WAR

PROPOSED BY SIR FRANCIS DRAKE IN 1589.

Kaiser Doubtless Got the Idea of Poisonous Gas-clouds While Visiting England.

The use of smoke-screens in the glorious landing at Zeebrugge last April, and the parallel that has been drawn between the daring of that exploit and the doings of Sir Francis Drake, make the fact that Drake proposed the use of a smoke screen as far back as the year 1589 doubly interesting. Drake and Essex—the favorite of Queen Elizabeth—set out the year after the Armada on the fool's errand of seating Dom Antonio upon the vacant throne of Portugal. First, however, it was necessary to turn the Spaniards out of Lisbon, and Essex, being a soldier, was for assaulting it from the land; while Drake, a sailor, was equally keen on attacking the city from the water. To be sure, Drake had first to get his ships into the Tagus, the mouth of which was defended by batteries whose guns, unless silenced, might "play old Harry" with his ships.

Drake's Idea.

His place, therefore, was "to spoil the aim of the gunners at Fort St. Julian by letting four smokeships drift down upon the fort, while he slipped past with the rest, and forced a landing at Lisbon. Essex, however, insisted on having his own way, so the "trick" was never attempted.

Some sixty years later, during the war between Charles I. and the Parliament, the smoke-screen—strange to relate—was successfully practised at the identical spot where Drake proposed its use.

How It Grew.

That the idea of a smoke-screen as an aid to military operations was still exercising men's minds is evident from an occurrence in 1760. On September 20th of that year George III. reviewed from a tent in Hyde Park Colonel Burgoyne's regiment of Light Dragoons, after which a new experiment was tried of a shell charged with fuming combustibles, which threw out a great smoke, and is intended to cover a retreat and on other occasions."

One hundred and thirty years later another experiment similar to the one above described took place under circumstances which, in view of recent events, may be regarded as not entirely devoid of significance.

The Kaiser's Visit.

During the summer of 1890 the Kaiser was in England, and his interest in military inventions being well known, arrangements were made for a private demonstration of a "smoke-bomb" invented by Colonel Crease of the Royal Marine Artillery, at Eastney Barracks, near Portsmouth.

In a jealously guarded field a company of Marines was drawn up in readiness for the performance, each man being provided—in addition to his rifle—with a suitable supply of small bombs, whence the smoke-screen was to be emitted. The men were then ordered to advance in skirmishing formation, and, as a means of screening themselves from hostile fire each skirmisher, before running forward, threw a bomb as far to the front as possible, and then advanced under shelter of the smoke.

Picking Our Brains.

His Imperial Majesty, being averse to "interviewing"—on the part of newspaper reporters—left the public in ignorance of his opinions on the performance. But the device would be discussed with his military advisers after his return to Germany, and doubtless was the germ of the idea of poisonous gas-clouds with which the Prussian savage heralds his advance over the battlefields of Flanders.

The English Channel has an average depth of 110 feet.

THE MAN WHO BLOCKED U-BOATS

VICE-ADMIRAL SIR ROGER J. B. KEYES, C.M.G., D.S.O.

Made Record in Boxer Rebellion and Decoyed German Cruisers Early in the War.

Roger Keyes is his name, Vice-Admiral Roger John Brownlow Keyes, and he found fame by raiding Zeebrugge and Ostend with the gallant Dover patrol.

He is young as Vice-Admirals go, only 45, and he has the vigor and air of youth. Years ago when the Boxer rebellion in China was at its height and it was as much as a white man's life was worth to show his face inland he took a couple of destroyers up the Yang-Tsei-Kei and boarded and captured four Chinese torpedo boats. Then he landed with about a dozen men, seized a Chinese fort which threatened trouble and despite the garrison blew the place up and withdrew his little party without a single casualty.

That is one of the reasons his capabilities are so highly thought of. That and the fact that he is a leader, who even in the British navy, where the standard of energy and courage is high, has always been noted for his combination of coolness and extraordinary daring.

Served in Africa.

As a midshipman he served in one of England's petty wars in Africa. As a lieutenant he leaped into fame by his conduct during the Boxer rebellion. Of him it might be said that he has done nothing without putting forth all his strength, and that, like his immortal predecessor, Nelson, he has always counted nothing done while aught remains to do.

Vice-Admiral Sir Roger Keyes of Ostend-Zeebrugge Fame.

For his services in China Lieut. Keyes was promoted to the rank of Commander, was mentioned in despatches and received the praise of the Admiralty. A few weeks later he again distinguished himself by diving from a height of thirty feet into the Pei-ho to save a midshipman from drowning.

In the years before the present war he specialised as a submarine and torpedo officer, and for his daring and enterprise was chosen to command the British submarines. In the operations against the German high seas fleet carried out by the British navy on August 28, 1914, he was once more conspicuous. Hoisting his flag as Commodore in the Larcher he set out with eight submarines which were used as bait to decoy the Germans out.

Trap Proved Great Success.

The trap worked so successfully that the German light cruisers Ariadne, Mainz and Koeln were sunk with a loss to the enemy in killed or drowned which was probably 800. Other German warships and destroyers were severely punished, and any attack by German ships on the British transports which were then conveying large reinforcements to France was prevented.

Commodore Keyes was again foremost in the air attack on Cuxhaven which was attempted by British seaplanes on Christmas, 1914, when some damage was done to the enemy and great alarm was caused in Hamburg and Bremen. He went to the Dardanelles when the Government decided to attempt the forcing of the passage and there he served as chief of staff to Vice-Admiral Sir Michael de Robeck.

In 1917, after his promotion to Rear Admiral, he was appointed director of plans at the Admiralty, a position for which his strong liking for the strenuous offensive fitted him peculiarly. He did excellent work in that position, but his professional qualities and his special aptitude for executive work led to his appointment at the end of last year to the command as Vice-Admiral at Dover.

Results are Far Reaching.

It is not permissible to state what the material results of this change have been, but they have been important and far reaching. It can only be said that his unremitting efforts have made the Straits of Dover less pleasant than ever to the German submarines and thus greatly hampered their campaign against the Allies.

Admiral Keyes has always been unsparing of himself. The heroic fighting men who man the drifters on the Channel anti-submarine guard are all the better at their work because they know that there is no danger of there he does not eagerly share.

The secretary of the Admiralty announced on April 25 that "His Majesty the King has signified his approval of the promotion of acting Vice-Admiral Roger J. B. Keyes, C.B., C.M.G., M.V.O., D.S.O., to be a member of the Second Class, or Knight Commander of the Most Honorable Order of the Bath (military division) in recognition of his distinguished service in command of the raid against Zeebrugge and Ostend on Tuesday, April 23, 1918."

The Eternal Feminine.

The teacher was examining the class in physiology.

"Mary, you tell us," she asked, "what is the function of the stomach?"

"The function of the stomach," the little girl answered, "is to hold up the petticoat."

Infertile eggs are very much better than those fertilized.

For canning bottles of fruit or pickles an excellent wax is obtained by melting together equal parts of resin and beef suet.

About the House

INSTEAD OF SUGAR.

Every Canadian is urged by the Food Board to enlist in the campaign to save sugar. As a nation we have always used more sugar than we really needed. This awakening to the use of other forms of sweet in our diet and cooking will not injure our health and will be of great service to our Allies.

Among the sugar substitutes we have the syrups which include molasses, corn and maple syrups; honey; maple sugar; dried fruits which include figs, raisins, dates and prunes; jams, preserves, jellies and sweet canned fruits with their juices.

Corn syrups, molasses and honey all contain about four-fifths sugar and one-fifth water so that in using any of these we obtain about four spoonful of sugar per one five spoonfuls of syrup but as the syrup contains moisture, more flour must be used or an equal amount of a flour, such as barley flour, which takes up more moisture.

In substituting corn syrup in a recipe calling for all sugar, we may use one-half syrup and one-half sugar by deducting one-quarter cupful of amount of liquid in original recipe, for each cup of substituted syrup.

In preserving, part syrup gives excellent results and manufacturers assert it is superior to all sugar. One part of syrup and three parts of sugar is the best proportion although equal parts are often used; this reduces the consumption of sugar one-third or one-half.

Unfortunately the cost of the substitutes is so high at the present time that it does not lessen the cost of a recipe to use them in place of sugar but it is our patriotic duty now to do so.

We can easily do without sweet drinks, candy, sugar frostings and sugar on our cereals.

The following suggested desserts require little sugar and should find a place in our menus at this time:

Baked apples with raisins or dates.

Apple dumplings (made of wheat substitute such as barley flour) sauce sweetened with honey or molasses.

Gelatine desserts with fruit juices and canned fruits.

Junket or Irish blancmange with coconut or jam.

Cornstarch puddings with dried fruit or canned fruit, and sweetened with fruit juices.

Shortcakes (made of wheat substitutes such as barley flour) with canned or dried fruits.

Steamed puddings with molasses or corn syrup.

Gingerbread with cream cheese.

Raisin or brown breads with cream cheese.

Hot barley biscuit and honey.

Ice cream made with sweetened fruit juices and served with maple syrup, honey or marmalades.

Uses for Blotters.

Save every piece of blotting paper that comes into your home, even those that have advertising upon them, for besides being useful in the writing desk it is very practical for absorbing other things about the house besides ink.

A piece of blotting paper put under table mats wherever vases of flowers are to be set protects the polish of the table from dew drops from the flowers or any dampness that seeps from porous pottery.

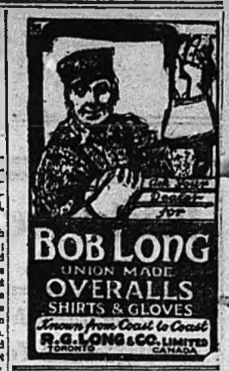
To press out light grease spots a piece of clean blotting paper placed under the fabric to absorb the grease will cause the spots to disappear, usually, when a hot flatiron is pressed directly on the spot.

When the children apply for "paint rags" for water color painting a square of blotting paper is a fine substitute, for it absorbs the color and water from a wet paint brush immediately and is less "messy." In drying paint brushes the same blotter can be used again.

In cooking greasy things, such as croquettes, doughnuts and potato chips a large square of clean blotting paper on which to drain these foods as they come hot from the frying kettle helps make them more appetizing, healthful and daintier to look upon.

When water is spilled upon any delicate table cover an immediate application of fresh blotting paper will preserve it in good condition. When any liquid is spilled upon the table cloth a small square blotter will absorb it quicker and more satisfactorily than wiping up with a cloth.

Lemon Pie with Corn Syrup.—1 cupful corn syrup, 1 cupful milk, 2 tablespoonfuls cornstarch, 2 eggs, 1 tablespoonful orange juice, 2 tablespoonfuls lemon juice, grated lemon rind, pinch salt.



Cook the milk, syrup and cornstarch in a double boiler for fifteen minutes; add the well-beaten yolks of eggs and stir until smooth. Add the orange and lemon juice and grated rind, salt and cook a minute longer. Bake one crust of pastry on the bottom of the inverted tin and when done, place in tin and fill with the lemon mixture. Beat the whites of the eggs stiff and put on top of the pie. Set in a hot oven to brown the meringue quickly. If the oven is not hot, the meringue will be tough. Part corn meal may be used in the pastry.

Plain Ice Cream with Corn Syrup.—1 quart plain cream or 1 quart plain custard, 1 cupful corn syrup (white), 1 teaspoonful vanilla. Either the cream or a plain custard makes a nice cream. Add the corn syrup to the cream or if a custard is used, add to the cold custard, also the vanilla. Freeze and serve with nuts, fruit or chocolate sauce.

Corn Syrup Steamed Pudding.—½ cupful butter substitute, ½ cupful suet, 1 cupful corn syrup, 1 egg, 2¼ cupfuls flour (substitute part barley, corn or rice flour), 2 teaspoonfuls baking powder, 1 cupful currants, 4 tablespoonfuls cornstarch, ¼ teaspoonful grated nutmeg, 2 teaspoonfuls cinnamon, 1 cupful raisins. Mix the shortening and corn syrup together, wash the fruit and add to the flour which has been sifted with the cornstarch, spices and baking powder. Add the wet materials to the dry, beat hard, pour into well-greased molds and steam three hours.

Corn Syrup Buckwheat Cookies.—½ cupful fat, 1 cupful corn syrup, 1 egg, ½ teaspoonful baking powder, 1 teaspoonful cinnamon, 1 teaspoonful cloves, ½ teaspoonful salt, 2¾ cupfuls buckwheat flour. Cream the fat, add the corn syrup then the well-beaten egg. Sift the dry materials together and add to the wet. Roll the dough thin, cut in shapes with a cutter and bake in a moderate oven.

Corn Syrup Spice Cake.—1 cupful corn syrup, 1 cupful brown sugar, ½ cupful cooking oil, 1 cupful coffee, 2 eggs, 2 teaspoonfuls cinnamon, grated rind of one lemon, ½ grated nutmeg, 1 teaspoonful salt, 1 teaspoonful soda, 3 cupfuls flour (one barley, two of wheat), 1 teaspoonful ginger. Mix the corn syrup, sugar and oil, then beat the mixture; add the well-beaten eggs and beat thoroughly. Add the hot coffee and the dry materials sifted together. Mix quickly until smooth, add the grated rind of lemon, turn into a well-greased loaf-cake pan and bake in a very moderate oven thirty or forty minutes.

Use for Dead Locusts.

Locusts are plentiful in Uruguay, and the farmers of that republic are compelled to keep up a constant war against them. Millions of these destructive insects are killed every year. Recently it was learned that soap, fertilizer and lubricating oil may be obtained from the dead locusts, and in the future they will be utilized for that purpose.

MILK WEED
Ingram's Milkweed Cream

Ingram's Milkweed Cream

When youth takes flight on the wings of years beauty of complexion goes too, unless you give your skin proper and daily care. Use of Ingram's Milkweed Cream will enable you to appear youthful when you are no longer young. Its discursive remedial effect upon the tissues of the skin keeps the complexion colorful, soft and free from blemish. It does actually "feed life" and beautify your complexion. Since 1885 there's been nothing else "just as good." Take no other.

Warm days, household work, and kitchen heat, all cause perspiration and shine; daily bath. Two cups avoid this by using Ingram's Velvola Souverain Face Powder. It blends perfectly with the complexion. A light touch hides little blemishes, makes your complexion smooth, soft, and flawless. A full line of Ingram's toilet products, including Zodenta for the teeth, is at your druggist's.

FRED'K F. INGRAM CO., Windsor, Can.

For the BOYS & GIRLS

THE BOY AND THE FLAG.

Do you know the story of it?
Do you sense the glory of it
With a pulsing rapture that thrills you through and through?
When you see it gleaming there,
When you see it streaming there,
Do you grasp the meaning of the Union Jack to you?

You can see the beauty there—
Can you read your duty there
When you see it flutter against the sky to-day?
Does it stir the soul of you,
Does it fill the whole of you—
The flag that flies above you and around the world alway?

Think of those who wrought for it!
Honor those who fought for it—
Who gave their lives to save it in the darkscme days of old
Not a blot is staining there!
Every cross remaining there!
All the hopes of millions its red, white, blue enfold!

Show yourself a man for it!
Do the most you can for it!
Remember that you owe it the best you have to give!
Duty's voice may call to you,
The post of honor fall to you,
O then to die beneath it were sweeter than to live!

Marnie And The Flag.

Erect and alert, like a little soldier in blue gingham, Marnie stood at attention and saluted the flag. Then with blazing eyes she turned upon the two little boys across the aisle, whom the teacher was scolding, and fairly withered them with a scornful glance. To think that there could be two Canadian boys who would giggle during the salute—giggle and have to be made to do it over!

John, however, was her neighbor, and as soon as Marnie came out to play that afternoon he ran right over.

Marnie drew her skirts round her with great dignity and started back toward the house. "You know well enough, John Grover!" she said. "I don't want anything to do with a traitor!" And she held her curly head very high indeed.

"Traitor!" stammered John. "What do you mean?"

Marnie turned round just for a minute. "Any boy who laughs at the Union Jack is as bad as a traitor!" she said.

John took a step after her. "Why, what do you mean, Marnie?" he said. "I never laughed at the Union Jack, never! Why, I had a great-great-grandfather or something who was a United Empire Loyalist! So!"

Marnie turned again, and her eyes blazed even more than they had before.

"That makes it all the worse!" she cried. "What would your great-great-grandfather think if he knew how you laughed at the flag when you ought to have saluted it!"

"Oh!" John understood now, and he felt better. "Is that what you mean? Why, there wasn't any flag there to laugh at, Marnie Evans. That's the joke, don't you see? Saluting the blackboard and pretending it's a flag!"

"Why, John Grover," cried Marnie, "do you mean—why, it is there! I mean it's just the same as there. Don't you see?" She stopped helplessly. "Why, when I salute or when I sing God Save The King, I do see it—not a real one, of course, but something up in the air, bigger and lovelier than any flag I ever saw—almost. And that's what I salute. O John, don't you understand?"

But John shook his head. "No," he said firmly. "It's because you're a girl that you see things in the air like that. When I see a real flag I'll salute all right, and so'll the rest of the fellows; but saluting the blackboard is just a joke. So! Come on now and play."

But Marnie shook her head and walked slowly up the steps. She had something to think about, and wished to be by herself.

To begin with, Marnie had to make up her mind to the idea that other people did not see the great beautiful flag that she saw up in the sky when-ever she heard God Save the King or went through the pretty exercise that they call in school Saluting the Flag. And then someway she saw that it was not a good thing for boys to laugh about saluting the flag, even when there was not any flag there.

And last, there was the question of daddy's present that he did not bring her from Toronto.

For Marnie's father had come back only that morning from Toronto; and as he had been too busy to buy her a present there, as he usually did, he had promised to let her go downtown with her mother and choose a present for herself.

Now the trouble was that there were two things that Marnie wanted—a beautiful doll that she had seen in Shores' window and a set of books; and before John had come over Marnie had thought that it would take her every single minute until mother was ready for her to decide which she would choose. But now, all of a sudden, here was a strange new idea.

She sat down in the house, perfectly still for ten minutes, and then ran upstairs.

"Mother!" she called. "O mother! Could I get a flag with daddy's money, do you think?"

"Yes, indeed," said mother.

"A big flag?"

"Yes, a fine big flag. I should think," said mother. "Daddy was going to give you a particularly fine present, you know, because he had to disappoint you this morning. But what do you need of a flag? Daddy and I have a fine one to put on the front verandah on Dominion Day."

Then Marnie told her all about the boys who laughed, and the flag that she seemed to see but that the boys did not see, and how she felt that they must have a real flag.

Mother smiled and nodded and smiled again as she listened—and I think a little bit of mother's money, too, went into the flag that they bought that afternoon, for it was just as beautiful as a flag could be, and as big as a nine-year-old girl could possibly carry over her shoulder.

But the best thing of all happened the next morning when she stepped out of the door, with her head high and her precious flag waving proudly aloft. For there on the sidewalk were all the little boys, with John at their head. Not Marnie or Laura Secord or General Wolfe himself, could have seen a thing to criticize in the way they saluted the flag that morning and marched behind it, a guard of honor, until it landed safe and sound in their room at school.

THE GROWTH OF OUR DOMINION

EXPANSION FROM ATLANTIC TO PACIFIC.

Factors Which Tend Toward the Best Development of the Canadian People.

Canada's expansion from ocean to ocean has not been accomplished in a day, but the new Dominion, once established, quickly took in hand the matter of adding new territory, until nine Provinces in all were established by 1905. Newfoundland, which had withdrawn from the Quebec scheme in 1865, has not yet seen fit to join, though negotiations have taken place at different times, which came to no conclusion.

In the same year in which the Dominion was established, 1867, proceedings were taken in the House of Commons for the purchase of the Northwest Territory from the Hudson's Bay Company. William McDougall, who moved the resolutions to this end, and George E. Cartier, were sent to England and conducted the negotiations by which they secured this vast inland empire from the "Great Company" for $1,500,000. McDougall was then named as first Governor, but he never reached his goal. He was met on the boundary, at Pembina, by a committee from the Provisional Government set up by the rebel half-breed, Louis Riel, and after weeks of bluffing, compelled to withdraw. The incident, which was in part due to lack of support from Sir John Macdonald and his Government, was a fatal blow to the prestige of McDougall. Early the next year peace was restored and Manitoba entered Confederation.

New Provinces Join.

British Columbia was the next district to join the Confederated Dominion. The Hudson Bay Company in 1849 had been permitted to take possession of Vancouver, and the discovery of gold in British Columbia in the fifties caused the British Government to take over control of a part of the company's field. The company's license was revoked, owing to disputes with the inflowing miners, and a Governor of the Colony, Sir James Douglas, was appointed. His control lasted until about 1864. Though British Columbia was not represented at the Quebec Conference, the Legislative Council in 1868 unanimously expressed the desire to join the union. Negotiations were begun, and on May 20, 1871, British Columbia became a Province of the Dominion.

Though the conference at Charlottetown was one of the main confederating influences, Charlottetown remained unmoved—a group instances of a prophet being unhonored at home. In 1866 the Assembly there resolved against union because they believed that it could not be accomplished "on terms that would prove advantageous to the interests and well being of the people of this island, separated as it is and ever must remain from the neighboring Provinces by an immovable barrier of ice for many months of the year." By 1873 the island was threatened with bankruptcy, through its new railway undertakings, and was ready to accept an offer from Ottawa. On July 1, 1873, the Island became a Province of the Dominion.

Progress in the Prairies.

The creation of the two newest Provinces of Alberta and Saskatchewan in 1905 was as much an economical question as one of politics. The progress of the prairie sections towards autonomy was gradual. The Canadian Pacific Railway had been completed in 1885, and the powers of self-government were extended from time to time until full autonomy was conceded with imposing ceremonies at Regina and Edmonton.

Lines of steamships on the lakes were both extended and improved; immigration took a tremendous swing upward through the policy of the Dominion and Provincial Governments with the railway companies, and the development of the prairie lands went on by leaps and bounds.

Brief statistics will give an idea of some developments. In 1867 the population of Canada was 3,871,000; in 1911 (official), 7,206,000. Railway mileage in 1867 was 2,278; in 1914, 30,800. Foreign trade in 1867 was $131,000,000; in 1915, $1,120,250,000. Government Revenue, 1867, $13,687,000; in 1915-16, $170,000,000. Bank capital paid up in 1867 was $50,500,000; in 1915 it was $115,984,000.

A Wide Dominion.

Sir Robert Borden, whom no one would accuse of having a too fanciful imagination, has drawn a striking picture of the geographic extent of Canada. "Do you realize how great a country Canada is?" he asked, "If you could pivot Canada on its eastern seaboard it would cover the northern part of the Atlantic Ocean, the British Isles, Norway, Sweden, Denmark, Holland, Belgium, the northern part of France, the entire German Empire and a considerable part of European Russia."

The territorial expansion of united Canada, in a sense, has not stopped. In 1896 the discovery of gold to all intents and purposes opened up a new country in the Yukon. The same thing might be affirmed of the addition of Ungava to Quebec and of the adding of New Ontario to the old within recent "newspaper" memory. The brief history of Northern Ontario is but an earnest of what is to come as inevitably in the "last great West." No one can look at the map without seeing that the Peace River district is destined to carry a large population.

Speculation as to Future.

In the Dominion settlement is still sparse compared with Europe, or even many of the States to the south. There is plenty of room yet for development, but was been brought out a characteristic which it would be well to notice even in such a sketch as this may be. The capacity for work and effort of each individual seems to have undergone growth. Better methods are being used in farm and factory. What has been lost to the Dominion by arrested immigration appears made up by concentration of effort. Perhaps quality rather than quantity may henceforth be more sought, as a consequence, in the future newcomer.

Then a powerful current of public thought has been directed to the Dominion resources, the larger utilization of natural gifts, especially water-power and fuel, and to the better conservation of the fine forest wealth. The dream destined to influence the future more than the geographic extension of border.

When I Come Home.

When I come home, dear folk o' mine,
We'll drink a cup of olden wine;
And yet, however rich it be,
No wine will taste so good to me
As English air. How I shall thrill
To drink it on the Hampstead Hill
When I come home!

When I come home and leave behind
Dark things I would not call to mind,
I'll taste good ale and home made bread,
And see white sheets and pillows spread.
And there is one who'll softly creep
To kiss me, ere I fall asleep,
And tuck me neatly—counterpane,
And I shall be a boy again
When I come home!

When I come home, from dark to light,
And tread the roadways long and white,
And tramp the lanes I tramped of yore,
And see the village greens once more,
The tranquil farms, the meadows free,
The friendly trees that nod to me.
And hear the lark beneath the sun,
'Twill be good pay for what I've done,
When I come home!

Conservation, a Moral Issue.

The conservation issues in a moral issue. When a few men get possession of one of the necessities of life, either through ownership of a natural resource, or through unfair business methods, and use that control to extort undue profits, as in the recent cases of the Sugar Trust and the beef packers, they injure the average man without good reason and they are guilty of a moral wrong. It does not matter whether the undue profit comes through stifling competition, by rebates, or other crooked devices, through corruption of business officials, or through seizing and monopolizing resources which belong to the people. The result is always the same—a toll levied on the cost of living through special privileges.

When you waste wheat you break bread with the Kaiser.

VALOR OF FRENCH COLONIAL TROOPS

ALONG THE FAMOUS "CHEMIN DES DAMES."

How the Senegalese, Moroccans and Algerians Strike Terror into German Hearts.

It was a big attack and a big job was on.

The wounded came in so fast that finally there was not room for one more stretcher in the hospital. I noticed that nothing but Colonial came in—Senegalese, Zouaves, Moroccans, Algerians, Chasseurs. I talked with a youngster who was shot in the head, writes Preston Gibson.

The youngster said the fight was going splendidly. He was one of the first over the top. The attack was launched after midnight, following a terrific tirada barrage which had been going on for eleven days and nights, and which had used up about $100,000,000 worth of ammunition.

Boche Fears Long Knives.

With star shells illuminating their path the negroes, Zouaves and Algerians, armed with hand grenades and long knifes only, went over and kept going in wave after wave.

The Germans could not stand the thousands of knives glittering in the star shell light and they gave way. The first trench was taken and the Chasseurs came over, followed by the Zouaves.

The French lieutenants then rounded up the Senegalese, who took advantage of many opportunities to dodge the bullets from German rapid fire guns by hiding in shell holes.

The officers simply gave them a kick and said, "Get up and go on," and if the negroes did not obey they of course would threaten to shoot them, but the order is usually sufficient.

Throat after throat was slit from ear to ear by these expert negroes.

The Germans don't like this kind of fighting and fall back over the Chemin des Dames, up to the Fort of Malmaison, where they had their big guns.

Treachery of the Germans.

This killing of the Germans has become necessary, as so many boche have feigned to be wounded or shouted "Kamerad!" with both hands only to stab their captor from behind as soon as his back was turned. This piece of treachery accomplished, they lie down again, awaiting the next victim.

So these Senegalese, who are marvelous with the knife, cut each throat. It is the only safe method.

The Zouaves, Chasseurs and Senegalese do not like to take prisoners in any event. They have suffered too much from the "Kamerad" trick. I know of one case in which a whole regiment of boches were taken prisoners with their hands up.

Then suddenly, at a signal, they all lay down on the ground, and behind them a section of rapid-fire German guns got into action and simply laid 900 French Chasseurs dead on the ground. They then retreated.

German Wounded Only Boys.

Now the German wounded began to come in, all boys of from 17 to 20. I must have seen about 150 of them and I saw not one who looked over 20. I talked with a number of them in French and in English.

They were brought in with the French wounded, in the same ambulances and there was no discrimination in the treatment of the French and of the German wounded.

Yet in the face of this Germans, when on the way to a French hospital in a French ambulance to be cared for by a French doctor at the expense of France, if they have a free hand, reach over in the car and tear open the bandage from a helpless Frenchman, hoping that he may bleed to death before he reaches the hospital.

There have been a number of cases in which a boche has torn off a Frenchman's bandage with his teeth, thus opening an artery and causing the death of the Frenchman.

A boy of 17 who was shot in the head told me he had not tasted food or drink for four days; had not even had any water. I got him some.

He had no shoes or stockings or underwear, just his coat and breeches which were soaked through with rain, mud and blood. A French stretcher bearer outfitted him.

Pigeons Bring News.

Carrier pigeons now came back and brought the news that the French had captured the high tower of Pinon, which was two and a half miles from their starting point, together with about 5,000 prisoners and seventy-five cannon.

The method of the French attack in detail is as follows: The attacking division is brought up to within four or five kilometers of the third line, where it rests and prepares for the attack. Its ammunition and artillery wagons are going all night, bringing up artillery and ammunition. This takes a period of from one month to two months.

About a week before the attack—which was on Oct. 23, at the Chemin des Dames—two holding attacking divisions are sent up to the lines, and they replace the division which has been there. They occupy the first and second line trenches. They are composed of what one would call defensive troops.

The third line is then occupied by the attacking troops, made up of the Moroccans, Algerians, Chasseurs and Zouaves. These colonial troops do not like barrage fire and they are therefore not put up to the front line until the night before they go over the top. They are men particularly high strung and temperamental and are really only good for attacking; but no soldier is better in this capacity.

After the two holding divisions and the colonial troops are in the first three lines their ammunition and guns are also brought up closer to the lines. This takes about another week.

On the night of Oct. 23 the first holding and second holding divisions came back and occupied trenches two and three and the attacking colonial troops went up during the night and occupied the first line trench. In the morning they are given a teaspoonful of brandy, some bread and coffee, and as dawn comes they pull down the gates and go out over the top into the face of the enemy rapid fire guns, hand grenades and shrapnel.

FIRES ON RAILWAYS.

Government Railways Should be Under Regulations of Ry. Commission.

"The requirements of the Board of Railway Commissioners have been well observed on the whole, and the loss to our forests for which the railways can be held responsible is but a small fraction of the total fire loss," stated Sir Clifford Sifton at the Ninth Annual Meeting of the Commission of Conservation. "This, as compared with the situation ten years ago," he continued, "is an improvement of the first magnitude. I should here explain that we secured the adoption of legislation by which the Board of Railway Commissioners was authorized to impose fire protection measures upon the railways, and we then assisted the Board in drafting the regulations. When these were adopted and Board appointed our chief forester as its inspector in the enforcement of fire protection regulations for all the privately-owned railways of Canada. The jurisdiction of the Railway Commission now extends to approximately 85 per cent of the railway mileage of Canada.

There are still 4,087 miles of Dominion Government railways and 350 miles of provincially chartered railways in Alberta not subject to regulation and inspection by the Railway Commission, and the fire prevention service applicable to these two classes is not comparable to that applied under the Board of Railway Commissioners. The Minister of Railways has, so far, declined to take the progressive step of adopting the regulations of the Board or Railway Commissioners in full and putting their enforcement in charge of our chief forester, unquestionably the best qualified man in Canada for the work. We trust this will soon be done. The situation at the present time is, therefore, that the Parliament of Canada, in its zeal for the public good, requires all privately-owned railways, such as the Canadian Pacific railway, the Canadian Northern railway and the Grand Trunk railway, to submit to the regulations which are imposed for the public good by the Board of Railway Commissioners, but they will not allow the Intercolonial railway, which they themselves own and manage, to be put under those regulations. The result is that on the Government's own railway the fire protective service is the worst that we have in Canada. Urgent necessity exists for dealing with the northern railways in Alberta, and it is to be hoped that the government of that province will fall in line with the progressive spirit which has been adopted throughout the remaining portions of Canada."

My Wartime Garden.

In bygone days when war-dogs slept,
My garden was so trimly kept:
In bed and border treasures grew
Of every shape and every hue.

But now instead of gorgeous blooms,
And their delicious sweet perfumes,
Is seen the strangest state of things,
One of the changes wartime brings.

I've columbines and kidney beans,
Carnations bold and curly greens;
I've peas next to the pansy bloom,
While Brussels sprouts surround the broom.

My roses I could hardly spare.
But radishes sown with great care
Fill all the spaces in between,
While here and there a swede is seen.

I've artichokes where once I grew
Anchusas of the heavenliest blue;
White picotee and poppy strive
For pride of place with cos and chive.

My garden, once a place of dreams,
A sheer delight of color schemes;
Instead of soothing wearied eyes,
The inner man now satisfies.

The Police Are Enforcing Food Laws.

All over Canada municipal police authorities are enforcing the food regulations in a firm, vigorous manner. They are also enforcing the Anti-Loafing Law. There has been a great improvement on the streets of most of the Canadian cities since this law was passed. Fines of $100 and costs have been imposed in Calgary, Montreal, Victoria, Saskatoon, Toronto, Port Arthur, Ottawa, Regina, Stratford, and many other points report cases of fines and imprisonment.

Two English women on a Titan tractor plowed 23 acres in a week.

THE MEN WHO SWEEP THE SEAS

GALLANT MEN ON BRITISH TRAWLERS AND DRIFTERS.

Ever Surrounded by Peril From Mine and Submarine Are Keeping Seas Clear for Traffic.

Minesweeping is one of the newest phases of warfare, so new that it is still in the process of experiment.

The British method consists of towing a single steel cable over the bottom, which catches the moorings of whatever enemy mines have been laid, and rents the mines loose, allowing them to rise to the surface, when they are sunk or exploded by rifle fire.

At present the British are conducting experiments to determine the size of the cables used, the size of the kites used to sink the cables to whatever depth it is desired to sweep, and even to discover the safest sort of craft in which to sweep for mines. It is the most glaring fault of the fishing trawlers with which Britain, in common with other warring Powers, is sweeping for mines, that they draw fourteen feet of water, making them quite as likely to fall a victim to enemy mines, which are moored on an average some ten feet below the surface, as the larger craft they are designed to protect. It is, of course, not possible to tell of the experimental craft which the Navy is trying out for minesweeping purposes.

Dangerous Floating Mines.

"You can count on losing ninety per cent. of your crew when one of the trawlers hits a mine," a lieutenant of the Royal Naval Trawler Reserve told the writer. "With the new craft, you stand far less chance of hitting a mine, and when you do, you lose only forty per cent. of your crew."

All mines laid by Germany and England alike are fitted with the safety gear on their moorings which is required by the Hague Convention. This gear automatically renders harmless any sea-mine which breaks from its moorings and floats as a lost mine on the surface. But there is this vast difference between the holls when day was done, Upon the holls when day was done, mines and the lost English mines which have been discovered thus far at sea. Many of the floating German mines have been discovered with their safety gear deliberately filed in two, so that the mine has not automatically become harmless, but is as dangerous floating about as when it was moored in a minefield. This was done by Germans solely because they are unable to ore the seas at all, and they count on any vessel which falls victim to their floating mines as being either an Allied or neutral vessel, Germany possessing no scruples about the sinking of neutrals.

When a Mine is Found.

This is a fact which has been demonstrated time and time again by torpedo and mine experts of the British Navy. Officers of the minesweepers usually run their sweepers in close to a German mine when one is found—i.e., from seventy to one hundred yards—for the purpose of seeing whether the mine discovered is of a new type. This can usually be told by noting the markings on its dull red exterior. If the mine is of the usual sort—i.e., a globe, with four detonator horns if it has been laid by a submarine, or with five horns if it has been laid by a surface craft (the submarines carry their thirty mines in tubes, so submarine-laid mines have no horn on top)—it is sunk or exploded in the usual way. If it is of a new sort, a mine expert is sent for and the mine is brought back to the base for analytical purposes.

This is one of the most dangerous tasks that any man could wish for. The mine expert is usually rowed out to the floating mine which it is desired to salve in a small boat, and when about ten yards from where the mine is bobbing up and down in the sea, he leaps overboard and swims to the mine. Then, with a monkey wrench, he unscrews a circular piece at the side of the mine and takes out its primer, a job which is often made tremendously difficult if the mine has been in the water a long time and is coated with razor-like barnacles. With the primer out, the mine may be towed in to the base and finally brought up from the water and shipped away to an analytical station.

When the war was young, a great many trick mines were loosed at sea by the Germans. Some of these were disguised as innocent wreckage, many were made to look like barrels floating at sea, and some had a dummy periscope attached to provoke a merchantman to ram, thinking he was ramming a submarine, when in reality he was blowing himself up. For a time the sea was made filthy with this hideous trickery, but by this time merchantmen are too wise to fall victims to such devices.

In Dyeing Anything.

Remember, in dyeing anything, that to get the best results the things that you dye must be free from dirt. Boil them clean in a boiler of water and then rinse them thoroughly in clear cold water.

Give the calves whole milk for the first two weeks, then feed part for two weeks, then give all separator milk with oil meal added. Crushed oats and clover should be given as soon as the calves will take it.

The Paisley Advocate

PAISLEY, JUNE 26th, 1918

BRUCE COUNTY COUNCIL

The June session of the County Council of Bruce was held at Southampton commencing on Monday, the 17th inst. The warden and all members were on hand ready for a heavy session.

To a large extent it was a session devoted to county highways and deputations, and between the two Council was kept decidedly busy.

A large deputation of ladies waited on the Council asking that the grants to their societies for war work be continued. In January the Council appropriated certain money for this purpose, but had no means whatever then of ascertaining about how much money would be required. They set aside what they thought to be ample to carry on the work until the June session, but the members of Council and the people generally had their eyes opened as to the wonderful extent to which this work was being carried on by the women of Bruce. The money expected to last until June did not live much over half that time. The result was many societies were disappointed when they could not get further grants. Some ladies seemed to think the grant had been stopped, but it was just a case of waiting until the Council had time to vote more money for the cause. Some of the delegates asked that the grant be made to each Woman's Society without reference to moneys raised by such society as at present, but Council could see no way of equalling such a grant, some societies having a larger membership and being more aggressive and doing more work than others. It was therefore decided to continue the grant on the same terms as before, that is, dollar for dollar with the moneys raised and expended by each society. The council was firmly of the opinion that no money voted for war purposes was more free from criticism in its expenditure or did greater good to the boys at the front than the moneys granted to the Woman's Societies of Bruce.

Other matters concerning the war included a grant of $20,000 to the Y. M.C.A. for their work on the front. On account of the charges made against the Y.M.C.A. the grant is not to be paid over until such charges are satisfactorily cleared up. Members did not seem to think much of the charges but did think it only prudent to have them cleared up before payment of grant.

The Bruce Patriotic League asked for a grant of $1,000 to assist in paying expenses in connection with the work they are doing arranging for returned soldiers. Council granted $500 to be paid as accounts were certified by officers of the League.

A large deputation was present from Chesley asking that the town be allowed the use of the band instruments returned by the Bruce Battalion until they were again required. It was pointed out that such instruments would be much better in use and taken care of than stored away where they would rust and otherwise deteriorate. The Council agreed to allow Chesley the use of them, upon receiving a proper bond to return all such instruments in proper shape whenever called for by the Council.

The usual grants of $2,500 to Walkerton Hospital and $1,500 to Kincardine Hospital were made, and an extra grant of $250 was given Kincardine Hospital to assist in installing a water system.

The Council joined with other counties in asking the Legislature to amend the act so that a township could make the poll tax $5 instead of $1.50 as at present.

The usual grants to high schools and continuation schools were made.

A grant of $1,000 was made to the Salvation Army to assist in erecting the Rescue Home in London.

The equalization of the county remains the same as last year except the division between Carrick and Mildmay.

The committee appointed to examine the bridge on the south line, Kincardine Tp., asked to be assumed as a county bridge, reported against assuming it but recommended a grant of $700 to repairs, which grant was made. A grant of $500 was made to Brant to assist in repairing a washout, and grants of $50 each made to Hepworth and Lion's Head.

The committee appointed to consider joint children's Shelters and jails for two or more counties reported that they had met a similar committee from the County of Huron and gone into these matters. As to the shelter, the joint committee did not think this possible and recommended no action. As to a joint jail, the committee thought this could be worked out and recommended that a joint committee of the different counties be appointed to consider it.

The question of County Highways was very prominently before the Council a large part of the time of session, being taken up in committee of the whole, considering the question. Much of the difficulty arises from the fact that the Council thinks the question should be viewed from the standpoint of the county system as a whole, that is, that the system finally adopted should be such a one as is of most benefit to the whole county, rather than as to how it will affect the individual municipality. At the January session many requests were made for the addition of roads to the system as laid out originally. These, as well as the roads first adopted, were referred to a committee with instructions for the committee to go over the whole system and report to Council which roads they thought, after thorough and personal examination, should be included in the county system. This committee brought in a report this session and the discussion on this report occupied very much time, but the subject was a long and important one.

The question of the provision for towns and villages brought on a long and warm discussion, and for some time it looked as though the representatives of these municipalities and of the rural municipalities would be unable to agree. Finally a sub-committee was appointed to deal with the matter, and they recommended a compromise between the claims of the two classes by which the outlying sections of roads in towns and villages, where farm lands adjoin these sections, should be taken in as part of the system, and that there should be an annual grant to each town and village equal to 75 per cent of the amount they are assessed each year for county highways, the money to be spent only on the street of the town or village which lies between the parts of the system ending at the limits of said municipality, and to be spent under the supervision of the County Highway Inspector. This was considered fair by all parties and was adopted.

After full discussion the changes made in the roads first adopted were as follows:

(1) That one-half the boundary line between the counties of Grey and Bruce be adopted as part of the system, Grey County to adopt the other half of this line as part of the Grey system.

(2) That that part of Road No. 10 in said by-law from the village of Tara to the north gravel road (boundary of Arran and Amabel) be taken from the system.

(3) The boundary from Lovat to the village of Paisley on Road No. 14 struck off.

(4) The 5th sideroad of the township of Greenock was struck off.

(5) That part of Elora Road through Mildmay struck off.

(6) That part of the 6th con. Carrick, from its junction with the Elora Road to the boundary of Carrick, was struck off.

(7) That part of the 15th sideroad of Amabel lying north of the 10th con. of Amabel was struck off.

A number of applications to add other roads to the system were referred to a committee to examine and report.

The question of having some of the roads on the system adopted as part of the Provincial Highway System was referred to the committee to look into.

The Highway System is recognized by Council as a large and important one and it was felt better to go slowly and try to avoid expensive mistakes.

The county rate is high this year (8¾ mills) raising $218,489.40. A large part of this is accounted for by war expenditure, as follows:—Grants to Patriotic Fund, Red Cross, etc., $45,000; Provincial War Tax, $28,000; grant to Y.M.C.A., $20,000; Women's Societies, $15,000; and the Good Roads, $45,000. So that the ordinary expenditure is well within that of other years.

Council closed a more than ordinary busy session on Friday, and adjourned to meet at Walkerton on December 3rd, next.

P. A. Malcomson, County Clerk

LOCAL AND DISTRICT NEWS

—Of course, you won't miss Port Elgin's Dominion Day celebration. Big program of races. Concert at night. Come to the lake town for Monday, July 1st.

—Judge Elias H. Jones, of Dobson, Mich., is here on a visit at the home of his aunt, Mrs. Wm. Jones, Greenock hill. The visitor is an old townline Elderslie and Brant boy. About forty years ago he went to Detour, and for thirty-five years has been judge of the local court in that live little water front town. He is renewing many acquaintances of long syne.

—We are told that there are at least 100 pigs being fattened in Paisley back yards this summer, and the owners are vieing with each other as to who can raise the finest porker. The names of our pork producers should not be overlooked by the title committee who are making recommendations for the next batch of six thousand to receive the "Order of the Empire."

—Tara Leader: The town has received the account from the Hydro Electric Commission for power used in February, March and April. Thirty horse power was used for each month and at $37 per horse power it cost the town $92.50 per month. With the revenue derived from the inside lighting the town should have a cheap street lighting system.

Supplies for Garden Party

Our friends in town and vicinity who have always so generously contributed on such occasions, will please remember us again with contributions of cream, cake, pie and sandwiches for the garden party. Kindly leave at town hall or at Mr. Cormack's residence. **The W. P. L.**

Died in Saskatchewan

The sad news has arrived here of the death of Mrs. John H. Houston, (nee Mary Mooney) of Rothilda, Sask., formerly of Paisley. Her demise occurred on June 20th, following an operation for appendicitis. The bereaved husband and infant son will have the sympathy of many friends here in their sad loss.

Raised Fine New Barn

Mr. Jas. D. McKay, of Lovat, had the framework of a large new barn erected on Friday last. There were about 150 men present to assist, and they got it up in fine shape. On account of the rainy weather that day, there were no chosen sides, as it was considered somewhat dangerous to have any hurry due to civility. The barn is 55 x 60 feet.

No License Required for Garden Parties, etc.

Food regulations and just how far they go have been causing more or less vexation to societies, fraternal and church, which have been planning the usual summer lawn socials and so on. The question has been taken up with the authorities at Ottawa, and as a consequence they have given out a definite ruling that no license is required for serving refreshments at lawn socials, tea-meetings, public or private luncheons, picnics, fairs, lodge, club or fraternal meetings and such like functions. The board, however, points out that refreshments served at such functions should be kept to the spirit of food conservation and should be strictly to the limits placed upon public eating places.

INTESTINAL PARALYSIS

"Fruit-a-tives" Quickly Relieved This Chronic Trouble

530 Cadieux Street, Montreal.

"In my opinion, no other medicine is so curative for Constipation and Indigestion as 'Fruit-a-tives'.

I was a sufferer from these complaints for five years, and my sedentary occupation, Music, brought about a kind of *Intestinal Paralysis; with nasty Headaches*, belching gas, drowsiness after eating, and pain in the back.

I was induced to try 'Fruit-a-tives' and now for six months I have been entirely well". A. ROSENBURG.

50c. a box, 6 for $2.50, trial size 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

An Old Resident Died in Kansas

News of the death of Mr. Francis Crowe, an old-timer in this section, has lately been received by friends. The deceased was very well known as "Black Frank" Crowe, and lived on lot 4, con. 1, Arran. He was an enterprising horseman. His famous dapple grey "Lion of the North" was the first Clydesdale sire brought to this part of the country, and attained a wide fame. Mr. Crowe left here over forty years ago, and went to Lincoln, Neb., where his death occurred at the age of 83 years. Mrs. Wm. McKelvey, of Arran, is the only surviving sister, and Mr. H. Crowe, of Port Elgin, is the only brother.

Standard Bank Closing Paisley Branch

The announcement given out at the end of last week that the local branch of the Standard Bank is to be closed, came as a great surprise to the town and district. The only explanation of the change is that given by the management in a notice to depositors, which states that "owing to the large number of our officers having enlisted for military service, our staff has become so depleted that we are compelled to seek relief in every way possible. To this end, we have made arrangements to transfer the business of our office in Paisley over to the Royal Bank of Canada." The transfer is to be made on July 2nd. While business men and other patrons of the Standard, as well as the public generally, will regret the move which deprives us of the service of a monetary institution which has been doing business in our midst for many years, there is no grounds for feeling that we are being seriously handicapped, as the Royal Bank has also been catering to the financial needs of all classes for a considerable time and with a degree of public confidence that gives assurance that for the future our requirements will be met in a satisfactory manner. Our loss in this instance only indicates how the effects of the war are being felt in Canada, and causing all public institutions, including our churches, to make adjustments for new conditions that have arisen.

North Bruce Shorthorn Club Organized

A meeting of stock farmers interested in Shorthorn cattle breeding was held at the farm of Mr. W. J. Hopper, Ethelgreen, on Friday afternoon, about fifty of the leading farmers of the surrounding townships being present. An excellent and instructive address was given by Mr. Geo. E. Day, late of O.A.C. staff at Guelph, and recently appointed secretary-treasurer of the Dominion Shorthorn Breeders' Association. Mr. Day, who is one of the best informed stock breeding experts on this continent, traced the history of Shorthorns from the first selections made with a view to establishing distinct strains over a hundred years ago, and reviewed the results accomplished by such famous men as Colling, Bates, Booth, Cruickshank, Duthie, Sheen and others who established some of the greatest herds in England and Scotland, and from whence came the blood that is to be found in the foundation stock for the world to-day. He emphasized the adaptability of the Shorthorns for the dual purpose of producing beef and milk, and the advantages of selecting a breed whose popularity is based upon solid, everyday utility. The North Bruce Shorthorn Club was organized at this meeting with the following officers: Pres., Wm. McIntosh, of Arran; Vice-Pres., John Scott, Dunblane; Sec'y, N. C. McKay, Agr. Rep. at Walkerton; Directors—D. Darroch, A. Cowan-lock, Jas. Creamer, of Elderslie; Thos. Howe, of Bruce Tp.; D. Christie, of Saugeen; John Clancy, of Brant; Hind Black, of Arran; W. H. Hooper, of Brant; Executive Com.—The President, Vice-President, with D. Darroch and Thos. Howe. The ladies of Elora Road south served a Red Cross lunch, realizing $22 for the soldiers' needs.

Presentations at the Parsonage

A most enjoyable time was spent at the Methodist Parsonage on Monday evening, June 24th, when a goodly number of the Ladies' Aid met to wish the Rev. Mr. Crighton and his family success and Godspeed in their new field of labor, wherever it may be. The gentlemen also joined in with their wives in the pleasant task. Mrs. Albert Pearce read the address to Mrs. Crighton and Mrs. Gregg presented an envelope containing a sum of money to Mrs. Crighton, who replied in a most charming manner, very feelingly referring to the happy two years spent in Paisley. Then Mr. F. B. More read another address to Mr. Crighton, Mr. Albert Pearce presenting an envelope containing a larger sum of money, thus showing the high place this most clever and Christian couple have gained in the affections of their congregation which consists of many other people who are not regular members of the church. The Ladies' Aid provided a most sumptuous repast which was enjoyed by all. Miss Edna Carter, Miss Lottie Kerr, Miss Trelford and Miss C. Carter regaled the guests with a feast of music, both vocal and instrumental. The gathering broke up by all joining in the singing of "Auld Lang Syne" and "God Save the King." Following are the addresses:

To Mrs. Crighton:

Dear Friend—We, the members of the Ladies' Aid Society, and your friends of the Methodist church, have met together to-night to convey to you our good wishes, and our regret that you are soon to remove from our midst. We also desire to give expression to the esteem and love which we have learned to feel for you in the two years that you have been with us. You have gained our love because of the kindly manner which your face wears borne towards us, also for the unassuming way in which you have taken your part in whatever we have undertaken in this branch of the Lord's vineyard, and we feel that in your own quiet way you have shown forth the spirit of the Master. And now in token of our good will we present you with this little gift, not for the value which it represents, but as a reminder of the pleasant times which we have spent together and with the hope that wherever your lot may be cast God's blessing may rest upon you, and that you may bear in remembrance your friends in Paisley. Signed on behalf of the Ladies' Aid Society of the Methodist church, Paisley. Mrs. A. Pearce, Pres., Mrs. B. Tooke, Sec'y.

Dear Mr. Crighton—We are gathered here to-night with a desire to spend a social hour with you and your estimable wife before your departure to other fields of labor. We feel that your sojourn amongst us has proven your estimable qualities of heart and mind in such a way as to elicit our sincere regard. We feel that the present unrest in the world's crisis are so absorbing that continuity of purpose and earnestness are necessary in all our endeavors after eternal peace without which all things are vain, and as sure as the light of the morning follows the darkness of the night, may we believe that God's love in our hearts shall dispel all doubt and fear and bring us into the morning of light and joy. We are here to wish you Godspeed and success in your future labors, and to express in a humble way our appreciation of your ministry to us. The good wishes of our people go with you in large measure and wish you a greater and larger sphere of activity of which you have proved yourself most worthy and capable. We beg of you to accept of this small amount of money as a slight token of our love and esteem. Signed on behalf of the members and adherents of the Methodist church. F. B. More, Recording Steward.

—Mr. Thos. Rankin, the veteran retired teacher of Port Elgin, who was temporarily secured to fill the principalship of Walkerton public school, has been engaged for the coming year at the salary of his predecessor, $1025. Mr. Rankin has a length of experience in public school teaching which spans, we are safe in saying, over three generations, as some of those whom he first taught are now grandparents of public school children. He is a graduate of Paisley public school, his student days here dating back to that period when men of mature years and full beards, who had left the farms to seek the paths of learning, occupied seats at the feet of such master instructors as Principal McKellar, Mclntyre and McKee. Educationalists of the calibre of these mentioned are nowadays at the head of our larger institutions, such as the collegiate institutes or big town high schools. There were not so many frills to the public school course in those days, but there was such a thorough grounding in the work taken up that those who, like Mr. Rankin, are still physically fit, are still able to hold their own with the more modern pedagogue.

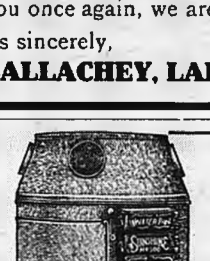
BALLACHEY, LAIDLAW & CO.

The Store with the Stock

To our Friend and Customer:

AFTER ten years' pleasant association with our customers and friends we, as a firm, announce our withdrawal from business.

We extend our sincere thanks to the people who have helped us attain the measure of success we have enjoyed, and we trust that our individual associations with you in the future will be as pleasant as in the past.



For your information we now state that any credit notes you have on our books will be redeemed by our successor, Mr. S. F. Ballachey.

Any accounts due us are now due, and payable at the store. Different disposition may be made of them in the near future, of which notice will be given, but we hope to have no accounts unsettled after July 15th.

Thanking you once again, we are,

Yours sincerely,

BALLACHEY, LAIDLAW & CO.

A Simple Proposition

Here is the McClary Sunshine Furnace proposition.

McClary's heating engineers will give you advice and estimates of cost of correct heating plant free. When you purchase a Sunshine Furnace, McClary's engineers will provide you proper plans for installing it the McClary way by which they will guarantee satisfactory results.

Full information about the Sunshine Furnace will be sent free to any address upon request to our nearest branch office.

—The advertising rates of Toronto dailies have recently been increased. The rate per word for condensed advertising has doubled in the majority of the leading dailies in the province of Ontario. This will mean a big increase in the revenue of many papers, but, in fact, it will not affect the proportion which the cost of advertising bears to the total cost of publishing a paper. Everything used in the manufacture of a newspaper has increased in price, and many things cost far more than they did a few years ago, and for these reasons it is only fair that the rates should be increased.

WHEN GRIT AND TORY MEET ON THE HUSTINGS

MacKenzie and Tupper in the Seventies

Sir John Willison, formerly editor of the Globe, and later editor of the Toronto Daily News, is writing his Reminiscences, and the first instalment appears in the May number of The Canadian Magazine. After describing his own early life in the then bush country of Huron county, he gives impressions of some early political meetings attended by him. One of these was at Whitby in the middle seventies, when Hon. Alexander Mackenzie, then Premier, and Hon. Charles Tupper were the opposing speakers. Sir John writes:

A Remarkable Debater

"Many of those who saw Mr. Huntington overcome at Oshawa attended the meeting at Whitby. The Conservatives were happy and exultant, the Liberals depressed and anxious. But Mr. Mackenzie had resource in debate such as few men of his time possessed. Sir Wilfrid Laurier has said that when he was on his legs he had no peer in the House of Commons. There was little or nothing of the finish of oratory in his speeches. There were few ornate or elegant sentences. There was no elaborate preparation or dependence upon memory for felicitous phrases or orderly sentences. His strength was in facts, simplicity of statement and complete knowledge of the subject. Of stern aspect and without natural gaiety of spirit, he yet had a penetrating humor and was fertile in illustration and anecdote. If he was austere he was just, and seldom sour or intemperate.

Giants in Combat

Mr. Mackenzie's first speech was a quiet, orderly, logical defence of the acts and policies of his Administration. There was frequent cheering, but the Prime Minister's statement did not lessen the desire to hear Dr. Tupper, nor did Dr. Tupper face an audience in which there was a predominant feeling of personal or political hostility. He was well received and quickly won the favor of the meeting. In those days Dr. Tupper was in full physical vigor. He spoke with tremendous energy. His vocabulary of denunciation was equal even to his own conception of the ineptitude and depravity of his opponents. On this occasion he was—himself. He held the Government responsible for drought and blight, for excessive heat and extreme cold, for the blasted corn and the barren fig-tree. The Conservatives warmed by degrees into sympathy, jubilation and confidence. Long before he had finished the meeting seemed to have gone hopelessly against Mr. Mackenzie.

An Effective Reply

But the Prime Minister had fifteen minutes for reply. As the last word fell from Dr. Tupper's lips he sprang to the front of the platform. He stood, stern and unsmiling, while the long cheering for the Conservative spokesman died away. Then with swift, impetuous sentences he fell upon Dr. Tupper. He wasted not a word or a moment. He struck Dr. Tupper had reared with such unspeakable assurance and confidence seemed to fall column by column in ruin. I have heard many speeches since that day, but nothing so trenchant and destructive. Of what was said by either speaker I have little recollection. I know that Dr. Tupper was merry over the inconsistencies and 'broken pledges' of the Government, and that Mr. Mackenzie met the accusation with the history of a measure that Dr. Tupper had fathered and abandoned. He was guilty, Mr. Mackenzie said, of 'the horrible crime of infanticide.' He had 'not only slaughtered his own child, but had trampled on the remains.' I was young when Mr. Mackenzie and Dr. Tupper met at Whitby so long ago. To youth wonder and enthusiasm come easily. But I repeat, that I have heard nothing since from any platform as powerful, destructive and overwhelming as Mr. Mackenzie's reply. Conservatives around me who never had and never would cast a vote for a Liberal candidate rose to their feet and cheered with delight over the performance. That I have seen once only. Recalling such a glorious encounter one regrets that joint political meetings have been abandoned."

Killed by Poisons

All scientists agree that poisonous products in the blood are eliminated by the kidneys and liver. The kidneys act as a kind of filter for these products. When the kidneys are clogged or degenerated, by disease or old age, then these poisons are retained in the body. If we wish to prevent old age coming on too soon, or if we want to increase our chance for a long life, Dr. Pierce of Invalids' Hotel, Buffalo, N. Y., says that you should drink plenty of water daily between meals to flush the kidneys. Then procure Anuric at a drug store. This Anuric drives the uric acid out. Scientific men have learned that in gout, also rheumatism, poisonous uric acid crystals are deposited in or about the joints, in the muscles—where inflammation is set up.

If we wish to keep our kidneys in the best condition a diet of milk and vegetables, with only a little meat once a day, is the most suitable. Drink plenty of pure water, take Anuric three times a day for a month.

You can obtain a trial pkg. of Anuric by writing Dr. W. M. Pierce, Dr. Shoffner, N. Y., or Bridgeburg, Ont., enclosing 10c.

St. Catharines, Ont.—"For sixteen years I have been a sufferer from kidney trouble. My back has ached almost continuously and I have had rheumatic pains in my arms, hands and lower limbs. I have doctored and tried all kinds of medicine recommended to me, but have never found the relief in anything (as matter how much I tried), that I have found in one small package of Anuric. Anuric was the morning cleared and my bladder was stronger than for years, so that I was able to sleep all night, where I always had to rise several times during the night. I only regret that many will not try Anuric if they suffer with any sort of kidney trouble."—Mrs. JACOB LOHRENZ, 56 Adelaide St.

—In our issue of May 1st we suggested that the production campaign might be helped by having men in the cities who had been brought up on farms and were accustomed to farm life in their young days, taken from non-essential industries and put to work on the land. The following letter from a farmer which appeared in the Daily Globe advocates the same plan:

To the Editor of The Globe:—So much is being said and written in reference to help for the farm that I, as a practical farmer myself, take the liberty to suggest a method of procuring the necessary help for the farm that I have not seen so far advocated. The farmers themselves freely admit that the farms have been depleted quite as much at help through their sons and daughters going to live in the cities as by the inroads of war. A crisis now arrived on the battlefields of France, and, to a certain degree on the agricultural fields of Canada, when one man's cause should be no more considered than another's, no matter what his vocation. Duke's sons and cook's sons should be dealt with alike. And for agricultural purposes too much consideration should not be shown even to married men with farming experience. There are thousands of such in our large cities who were born and bred on farms, and who are not engaged in work of national necessity, and only work of such a nature should be considered a moment's consideration. Whether married or single, I would have such conscripted back to the land. The "floor" should be age limit be at all very much restricted. A man anywhere up to fifty anyway is quite fit for farm work.

But what about the families of such, it may be asked. Let them remain where they are. The sacrifice of separation for a short period on the farm is a small matter in comparison with the perils and hardships of the front. If the farmer cannot afford to pay sufficient for such help as this scheme would bring him let the Government allow so much in the way of separation allowance in addition as individual circumstances may demand. A properly organized scheme of this nature would secure for the farmer a help he help required without the conscripts being one while the worse for the experience. On the return of winter they could go back to their city furnaces and the movies. Two enough, many of them would miss the motor outings, golfings and other diversions.

If the contourse of farmers who recently went to Ottawa had gone with a feasible scheme of this nature they would have had more success in their mission. Instead, they went in a blustering mood, virtually daring anyone to lay a finger on their sons. So far many of them have done very well owing to the war. Some have given their sons. The writer has given three sons and a daughter, consequently he may be excused for writing with strong feeling on this matter. Others, too, may have held their families back, and now threaten their parliamentary representatives with the direst penalties if they support conscription applicable to the farm.

To defend the front in France is more essential than even food production in Canada. This should be made clear to all by those in authority. There are various ways of getting down and securing the crops, but there is only one way of keeping the enemy at bay—by sending men and more men to stop the onrush.

Although a farmer myself I do not consider the average farmer so highly patriotic as some would give him credit for, nor do I think he has striven as very hard for greater production. Any impetus is more attributable to higher prices for grain, hogs and other stock than to lovelit patriotism. Consequently he growls at all the louder at conscription, for disturbing the "even tenor of his way."

Finally, if men conscripted from the cities to the farms should balk at the tasks allotted them they should upon fair evidence be treated exactly as conscientious objectors are now being treated.

Port Credit, May 21. A Farmer

SOCIAL CONDITIONS RESPONSIBLE FOR MANY NOT MARRYING

At the Laymen's Association of the Toronto Methodist Conference, T. O. McCarthy, the president, said in his address that the church was not doing its part in helping young people to marry. He felt sure the average young man and woman preferred marriage, but social conditions and low standards of wages prevented it being possible in many cases. He felt the church should not only preach morality, but do something to make morality possible by seeing to it that such wages were paid that young people would find it married life possible. He stated that there were 100,000 more women than men in Canada before the war that would have been married were conditions otherwise. He further stated that in these circumstances is the text. "Faith without works is dead" was never true than ever before in the history of the world.

Scrapping a Railway Line

The disposal of the material in connection with the Ontario West Shore Railway will be of interest to those who have to pay the bonds. The Hydro Electric Commission have so far paid into the Toronto General Trusts Corporation the sum of $105,540.00 for material delivered up to January 16th of this year. On February 21, there were 25 carloads of rails were shipped from Rincardine, making 286 rails in three shipments. There are 31 rails still at the station. These will be shipped when the balance of the rails between Huron 29, are gathered up. There are several carloads of material that will be shipped. It is estimated that when the entire material is taken by the Hydro people that the money received will be about $90,000.00.—Kincardine Reporter.

—Many who spend dollars for tea begrudge a dime for wisdom.

"LEST YOU FORGET"

How dear to our hearts is the steady subscriber,
Who pays in advance at the birth of the year;
Who lays down his money and offers it gladly,
And casts round the office a halo of cheer!
Who never says, "Stop it; I cannot afford it"
Or, "I'm now getting papers for more than I can read;"
But always says, "Send it; the family all like it"—
In fact, we all think it a real household need!
How welcome is he when he comes to the sanctum!
How he makes our hearts throb! how he makes our eyes dance!
We outwardly thank him—we inwardly bless him—
The steady subscriber who pays in advance.

—Mr. Geo. S. Henry, the new Minister of Agriculture for Ontario, has active a long connection and agricultural experience. He is a graduate of Upper Canada and Toronto Universities, and later took a course at the Ontario Agricultural College. In 1908 he was Warden of York County, and for many years he has taken an active interest in the good roads movement and is now a member of York County Highway Commission. Since his election to the Legislature in 1911 Mr. Henry has been an active member of the Agricultural Committee and has labored a long time to bring the relationship between the farmer and consumer into closer contact.

—A great many of us blame heredity and conditions for what we are. Heredity, it is true, is a strong factor in our make-up, as is also environment, but the wise man will consider heredity, the shrewd environment, and look beyond the horizon of his present surroundings.

Eye Rest For Tired Eyes

Is obtained by our scientifically fitted glasses. They enable the eyes to do as much work and possibly more without tiring than they ever did. Satisfaction guaranteed. Eyes tested free.

BEAUTIFUL JEWELERY

in great variety of novel patterns and artistic designs, rings, chains, necklaces, bracelets, everything in the jewelry line, may be found at our store. We give you a cordial invitation to come in and see what we have to offer, for we feel sure there will be something that will just suit you.

Quality Counts Every Time
ELLIOTT Business College

Yonge and Charles Sts., Toronto, has lately been asked to fill positions worth from $1000 to $1500 per annum. The demand for graduates is five times greater than the supply. Boys of 14 to 19 years of age and young ladies are in great demand where they can earn $6 to $8 weekly. Enter now. Write for prospectus.

W. J. ELLIOTT, Principal.

CANADA BEFORE CONFEDERATION

The Growth of the Colony Under the Union Jack Until It Acquired the Proud Status of a "Dominion" in the British Empire.

When the capitulation of Montreal of 1760 was confirmed there were in Canada about 40,000 French descendants. Later came another 40,000) the Loyalists from the revolted Colonies. But these were scattered in Nova Scotia, New Brunswick and what later became Ontario. Both race had to work for extension through what was practically virgin forest. How they did it is a tale too vast and too heroic to be fully told in a newspaper article.

Yet what were the commercial and other conditions in the years just preceding Confederation? It was remarked that the united Provinces flourished in all except politics. Trade had begin to grow with a rapidity which it has rarely been surpassed even since.

Coming of the Settlers

"During the quarter of a century that elapsed between 1842 and 1867, the crucial period of national development," remarks Bourinot, "an industrious population flowed steadily into the country, the original population became more self-reliant and pursued their vocations with renewed energy, and confidence increased on all sides in the ability of the Provinces to hold their own against the competition of a wonderfully enterprising neighbor. Cities, towns and villages were built up with a rapidity not exceeded on the other side of the (American) border. In those days Ontario became the noble Province that she now is by virtue of the capacity of her people for self-government, the energy of her industrial classes, the fertility of her soil, and the superiority of her climate"—a summary of conditions written over twenty years ago, whose exactitude in every detail is only emphasized to-day.

The Maritime Industry

"The Maritime industry of the lower Provinces," the same genial chronicler-historian continues, "was developed most encouragingly, and Nova Scotia built up a commercial marine not equalled by that of any New England State. The total population of the Provinces of British North America, now comprised within the Confederation of 1867, had increased from a million and a half in 1842 to three millions and a quarter in 1861—the ratio of increase in those years having been greater than at any previous or later period of Canadian history."

There had been since the forties a flood of immigration, from Scotland and Ireland in particular. The first Scottish settlers had sent back good reports and personal influence in a clannish race did as much then as Provincial propaganda later. In Ireland there were economic conditions after the potato famine of 1845, which benefited the Canadian Provinces, as the Irish settlements in Montreal, St. John and Halifax attest. About the sixties the larger English influx began, when artisans rather than farmers came in to the growing eastern cities.

Perhaps it is not often enough recognized how closely the date of Confederation coincided with that of the blossom-time of railways in the Dominion. The terms on which New Brunswick and Nova Scotia came into the compact showed that they had realized how important the Intercolonial Railway would be. Its subsequent history, whatever one may say of collective versus private ownership, has fully justified the foresight of the easterners then. In 1850 there were only fifty miles of railway in the old Province of Canada. But the Grand Trunk was commenced, and by Confederation there was the highly respectable total of three thousand miles, including the fine Victoria bridge at Montreal, which for the first time linked up the American systems with Canadian lines.

As in steam railroads, so on sea. The Cunard line of steamships was inaugurated by a Nova Scotian, Samuel Cunard, who had been a successful builder of wooden ships in the Maritime Provinces. At the suggestion of Hon. Joseph Howe he tendered and secured the mail contract for the transatlantic passage. His vessel, the Britannia, started the first steam mail service from Liverpool on July 4, 1840.

In the same period the development of shipping on the Great Lakes took place. By 1870 there was a good steam river service from Niagara to Quebec, as all readers of William Dean Howells know. In fact, in travel the coming of Confederation synchronized with the going of the old stage coach and all it meant.

Spread of Education

Then still more important was the emancipation which free primary education brought. The year 1870 is practically the world's turning point in this. It was about that year that Great Britain, France, Germany and Italy in Europe, with several of the United States and some of the Republics of South America adopted free and compulsory education for all. Indeed it has been claimed that Nova Scotia, thanks to Sir Charles Tupper, led the civilized world in this particular. A system was begun there in 1864. Ontario's record under Egerton Ryerson is everywhere acknowledged.

Another national factor which cannot be over-estimated in the twenty years before 1867 was the facilitating of trade through the fine banking system in Canada. By means of a facile paper currency and a sane method of credit, this gave an impetus to trade in the middle of the last century to which no tribute is too high to-day. Close study of the American system enabled Canadian bankers then to avoid many of their errors, so that, combined with the stability which Canada enjoyed as a part of the British Empire, there was established a confidence which soon invited investments of money within the Provinces. This has not ceased to-day, and it is possible that after the war experience will still more be that "trade follows the flag."

All this may be "as a thrice told tale," but its recapitulation can only tend to fuller consideration at this time of what it was that went to the making of the twentieth century Canada, with which we are all concerned.

THE BANNER OF THE BRITISH EMPIRE

The Flag That Flies Over One Quarter of the Human Race and One-Fifth of the Surface of the World.

The Union Jack, Symbolizing Three Centuries of History, Combines the Crosses of St. George, St. Andrew and St. Patrick.

The flag under which the British army is fighting is not the Red Ensign of the mercantile marine, nor yet the white ensign of the British navy, but the Union Jack, that we see "cantoned" (to borrow a word from the language of heraldry) on the upper corner nearest the staff of the red ensign with which we are most familiar.

As befits perhaps the most venerable flag among the nations of the world, a flag which has left its imprint on the American Stars and Stripes and on the flags of the British Dominions and colonies, the Union Jack has a long and complicated history. Other nations have "scrapped" their former emblems, and set up new ones during the changes of their history. The Union Jack, on the contrary, can trace its descent to those dim times when knights rode in the lists; when the Cross of St. George stood red against a white field, and flew victorious among the arrows of Agincourt; when the flag of Britain met the "Bright St. Andrew's Cross" of Scotland in mortal combat.

To Canadians and to the rest of the world, who know nothing and care less about the venerable precedents and stern dictates of the ancient school of heraldry, the Union Jack teaches a particular lesson, namely, that flags are not the creations of color-loving committees and fanciful artists, but that they all have definite origins, and every detail has a meaning, if you can understand their language.

Story of Britain's Flag

So here is the story of the Union Jack, containing in its carefully modulated stripings the whole history of a united Britain. It is a story of heraldic terms and details, but if you read it, you will know how to hang the flag from your house, and what is more, you will not reverse it, nor yet hang it upside down as a signal of distress.

The first "Union Jack" was adopted in 1606 soon after the union of England and Scotland under James I. (4 Jac. I.), and the "Jack" is supposed to be a corruption of Jac., which was the common abbreviation for Jacobus or James. The Union Jack combined the ancient flag of England, the red cross of St. George on a white field, with the ancient flag of Scotland, the white cross of St. Andrew on a blue field. The two flags were combined by putting the cross of St. George with a white edge, or fimbriation as the heralds call it, representing the white field of the old English flag over the old Scotch flag. The rules of heraldry applicable to flags as well as to coats of arms did not permit color on color or metal on metal. The white represented silver, and in a formal description of the flag is termed "argent." Consequently the fimbriation not only preserved a portion of the ancient white field for the red cross to repose in, but avoided the heraldic solecism of placing a red cross on a blue field. The first Union Jack was azure, a saltire argent, surmounted by a cross of St. George fimbriated of the second (argent).

The Cross of St. Patrick

The union of Great Britain and Ireland (1801) introduced a third cross into the Union Jack—the red cross of St. Patrick, which was a saltire, like the cross of St. Andrew. These two crosses were combined, an arrangement which the heralds described as "quarterly per saltire, counterchanged." In each arm we see the two crosses lying side by side and properly of equal widths. In the opposite arm the white becomes red and the red becomes white. This is what is meant by counter-changing. When the two crosses were thus placed side by side, the red cross of St. Patrick fell on the blue field and it became necessary to resort to another fimbriation to avoid color on color. Hence the narrow white strip separating the red part of each arm from the blue field. Then over all again was placed the cross of St. George, with its white fimbriation. This produced the Union Jack of to-day. It is officially described as follows:

Azure: The Saltires of St. Andrew and St. Patrick, quarterly per saltire, counterchanged, argent and gules; the latter fimbriated of the second; surmounted by the Cross of St. George of the third, fimbriated as the last.

Other British Flags

The Union Jack has a top and a bottom. The cross of St. Andrew came in before the cross of St. Patrick and takes precedence. Consequently the broader white stripe, representing the cross of St. Andrew, should be uppermost next the staff.

The red flag with the Union Jack in the corner which we see flying at the sterns of steamships is known as the "Red Ensign." It is the flag appropriated to the use of the mercantile marine. The British flag, the flag used by the army, and flown on public buildings, is the Union Jack—no more and no less. Still another flag is used by the British navy. It is a white flag with the red cross of St. George and the Union Jack occupies the upper canton next the staff.

Thus in Flanders to-day the British soldier, if he is from Old England, sees floating above him the cross of St. George, as the Scotchman sees the cross of St. Andrew, as the Irishman sees the cross of that venerable saint who banished the snake from his native heath.

Outgrowths of the Union Jack

The influence of the Union Jack has spread far beyond the British Isles. It is safe to say that it has left its trace on every Anglo-Saxon emblem. The American flag, after all, is nothing but the Red Ensign, the red striped with white, the crosses of the Union Jack removed from the canton, and stars substituted on the blue field to represent the union of the States. Australia, Canada, and New Zealand, all of them bear the Union Jack or part of it cantoned on their emblems. The flags of the thirteen American colonies, the antiquarian will tell you, are all of them outgrowths of the British emblem, containing the cross of St. George or other parts of the Union Jack. The pictures in the U. S. grammar school history books to the contrary, the flag that the Americans carried at the battle of Bunker Hill had on it the cross of St. George, with, as the heralds say, the plain tinc of Massachusetts for "difference." Many is the time that British emblem, its component parts, and its descendants have clashed on the field of battle, but to-day the Union Jack has reached a unique stage in its history. For the first time every Union Jack in the world has joined in a common alliance against a common enemy. The crosses of the Union Jack have finally united against the Black Eagle, which Gladstone might have justly called "the negation of God."

A Vital Necessity In Peace or War

The operations of Water-Power and Public Utility Companies are a vital necessity to the industrial and social welfare of Canada, and are as essential in times of peace as in war.

THE SOUTHERN CANADA POWER COMPANY, LIMITED—a Water-Power & Public Utility Company—controls water powers capable of 100,000 H.P. development, and supplies light and power to over 46 municipalities in the Eastern Townships and vicinity.

These are two of our reasons for recommending the 6% BONDS OF THE SOUTHERN CANADA POWER COMPANY, LIMITED, which we are offering with a bonus of common stock, thus giving investors an opportunity of participating in the future success of the Company.

Send for special circular, and map showing territory served.

CANADA'S CONSTITUTION IN THE MAKING.

At the Westminster Conference, Held in London, in December, 1866, the Idea of Union Took Shape in The British North America Act.

The Charlottetown Conference met on September 1, 1864. All the invited Provinces sent delegates, but the oldest colony in the Empire, Newfoundland, was not represented. Taking a later term in Canadian history it might be said that the conference was one of "bonne entente" more than of detail. Mr. A. H. U. Colquhoun remarks in his book, "The Fathers of nConfederation,"; "The Charlottetown Conference was an essential part of the proceedings which culminated at Quebec. The ground had been broken. The leaders in the various Provinces had formed ties of intimacy and friendship, and favorably impressed each other."

It was, however, in the Quebec Conference that the working plan of the union was framed. The conference began its sessions on October 10. There were thirty-three representatives present. These are the Fathers of Confederation. After sitting for fourteen days they agreed on a set of seventy-two resolutions which were to be submitted to their respective Legislatures. The first, which was proposed by J. A. Macdonald, seconded by S. L. Tilley, read:

"That the best interests and the present and future prosperity of British North America will be promoted by a Federal union under the Crown of Great Britain, provided such union can be effected on principles just to the several Provinces."

An Historic Gathering

It was a momentous gathering in the old building in Quebec, now demolished. The thirty-three were in deep earnest about their work. Their sessions were held in secret. At the time a good deal of rumor ran around as to what went on in the chamber, but the facts have since become pretty well known. The gossipy, charming records will remain one of the most interesting parts of Canadian literature. But they cannot even be summarized here. The resolutions were the essential outcome.

A great many views have been expressed about the act which has come to be almost universally known as the Constitution of Canada. Dr. Bernard Pilot, the Clerk to the Canadian House of Commons, holds that the real "constitution" of Canada can only be said to lie in the unwritten laws which make up the British Constitution. Prof. J. E. C. Munro, professor of law at Owens College, Manchester, looking at the British North America Act with the impartiality which distance gives, summed up the effort, not of the Quebec Conference only, but of the subsequent conferences and consultations with Colonial Office officials in London, as follows: "A study of the Canadian constitution offers a special field for inquiry. It is a successful effort to solve the problem of uniting distinct States or Provinces under a central government. While the American States had to create not merely a central government, but a government which, within the limits laid down, should be supreme, the Canadian Provinces had to organize a union, subject to a supreme Executive, Legislature and Judicature, all of which already existed. The executive supremacy of the Queen, the legislative power of the Imperial Parliament, and the judicial functions of the Privy Council remained unaffected by the union, and this to some extent simplified the work."

The London Conference

It was in London that the act was finally shaped.

The Westminster Conference at London in December, 1866, comprised of delegates from the Canadas, New Brunswick and Nova Scotia, drafted the British North America act from the resolutions adopted at Quebec in October, 1864. The British Government was now a thorough convert to the idea of the union, and Cartier was able to tell the people of Montreal a few months afterwards how loyally the delegates had been supported.

"It is a great source—I will not say of pride—but a great source of encouragement," he said, "to the public men who then took part in that great scheme, that it was adopted by the English Parliament, without, I may say, a word of alteration."

"Provincial Rights" Battle

To understand clearly what has become known as the "Provincial rights" fight, it is well to recall that one of the impelling causes of the Confederative movement was the fear that "State" right would run wild as it was believed it had in the United States, causing, some thought, the Civil War. In the constitution of the United States the powers not specifically delegated to the Federal Government at Washington are within the jurisdiction of each State. The contrary was the effect of the Canadian constitution. Any powers not specifically given to Provinces are reserved to the Dominion Government. How this has resulted not merely in the slow evolution of Provincial Parliaments, Provincial courts of law and other departments, and how the apparent duplication of some of this work had to go on under the Dominion control cannot now be told. It is a long story of the gradual fitting of two sets of machinery to each other. In the end, though the process is not yet finished, it can be said there has been evolved a facile and workable scheme. Under it Canada has grown in strength and prosperity.

In all this competency one thing stands out. It is the high standard of the Canadian Judiciary. To the Judges of the land has time after time fallen the decision of saying what the Fathers of Confederation aimed at in a loose phrase. The result, where there was so little light to guide, has been such that Canada may well be proud of the intelligence, the independence and the integrity of her lawyers.

In the strictly political arena there have been odd developments, some of them far other than those anticipated, but which do not seem in working to be attaining dissimilar ends than those sought. For instance, in the United States the power of the Senate grew at the expense of the House of Representatives. In Canada almost the contrary took place; the Senate dwindled in influence and in public estimation as the House of Commons extended.

Conditions, however, are so tactfully observed on the one side, and control so mildly exercised on the other, that, instead of causing friction, the actual limitations have become a bond of sentiment and obligation; they form that unuttered something which gives the apt link of love to Kipling's lines:

"Daughter am I in my mother's house,
But mistress in my own."

The First of July.

This is a great anniversary day in the history of Canada, one of the most brilliant members of the British Empire. Canada is a bulwark of freedom, and her sons have fought with magnificent courage in this great war. Their deeds of valor on the Vimy Ridge, and many another battlefield, are now a matter of history. They have shown the might of Canada and the strength of the British Empire. When the Old Country was assailed in its defence of freedom, the great Dominions were the first to make common cause with the Old Country, and together they have shown that there is more in the might and the master of the British Empire than ever its enemies reckoned.

This day is also a day sacred to the commemoration of those who died untimely far from their homes in the great Dominion, the men who fell tortured by poison gas holding the line at Ypres, the men who stormed and held the crest of Vimy Ridge, and were keen in victory. By their deeds Canada has won an honor which glorifies and sanctifies the triumphs of peace. So the deepest note in our Dominion Day celebration is the thunder of the war for freedom. The glad music of the Dovekey is a hymn in honor of sacrifice. Our joyful thanksgiving for Canada's marvellous achievement in the use and government of her great territory has a deeper and nobler significance in the commemoration of those of her sons who have given up their rich inheritance and life itself for their loyalty and their faith in liberty.

CANADA

1867—1918

Wild trackless land, where trod the dusky race
Uncutored those short years ago,
Stands forth our fair Domain, and with a place
And name revered and honored far away.

Thou country of broad acres, whose Ideal
Of Liberty and Justice days gone by
Fulfilled that promise. So the dream is real
To-day. And hearts are proud to do or die.

The way was lengthy, and the path untried,
And bloody storms oft mark'd that growth of years,
But with that faith of Home, and trust in God
The way was clear'd, and smiles shone through the tears.

So stands to-day our monument of pride,
Broad surging land that sweeps from sea to sea,
Whose sons to-day are standing side by side
On blood-stained fields to do or die for thee.

—Robert Partridge.

"His Dominion shall be also from the one sea to the other, and from the flood unto the world's end."—Psalm 72, 8.

The "Dominion" of Canada.

It was only after much discussion of the question and after changing their minds more than once, that the Fathers of Confederation decided to call the union they formed a Dominion. Sir John Macdonald was in favors of calling it a Kingdom, says The Mail and Empire. In some of the drafts of the bill which finally issued from the Imperial Parliament as the British North America Act it is provided that the Queen be authorized to declare by proclamation that the provinces in question "shall form and be one united dominion under the name of the Kingdom of Canada."

"Dominion" was the term finally adopted, not because it was altogether satisfactory, but because it was less open to misunderstanding. To some minds the name Kingdom might suggest the idea of separation. But if the name "Kingdom" suggested too soaring an ambition, the term "Dominion" seemed rather humble. In fifty-one years Canada has made it a term of dignity, one that the daughter States of Britain throughout the Empire have been proud to adopt. The self-governing communities of Greater Britain are now all "Dominions." That term of distinction differentiates them from the "colonies." New Zealand formally adopted the name "Dominion." The British Colonial Office was reorganized some years ago and a Dominions branch was established.

It was in London, England, that the Fathers of Confederation met in 1867—51 years ago—in a room of the Westminster Palace Hotel, which is now in its 68th capacity inhabited by many Canadians of the C.E.F. There was born the Dominion of Canada.

WAS A MEMORABLE DAY

June 14th 77 Years Ago Parliament of Canada Met in Kingston

June 14th was a memorable day in the history of Canada and Kingston, for it was on this day, 1841, just 77 years ago, that the sitting of the first Parliament of Canada was held in the small frame building next to St. Paul's Church, Queen st., Kingston. In this building, which is still intact and occupied, the members of the Parliament of Canada went into session to carry on the business of Canada, then in its infancy. The speech from the throne was delivered by his Excellency, Lord Sydenham, Governor-General of Canada, and after this event the Gazette du Canada published its first, extra in Kingston. The guard of honor to the Governor-General was furnished by the 14th Regiment.

These patterns may be obtained from your local McCall dealer, or from the McCall Co., 70 Bond St., Toronto, Dept. W.

Fired 8,300 Shells a Minute.

The veriest layman will perhaps be able to form some idea of modern artillery fire from the statement attributed by a Swiss officer to a member of the German General Staff that, during the three hours' bombardment just before the attack on March 21, the Germans used 1½ million shells. This is over 8,300 a minute, or, taking the front at 50 miles, over 160 for each mile. The total number of shells used by Germany in the war of 1870-71 is usually given as 650,000.

Better Off if you drink INSTANT POSTUM instead of tea or coffee.

Postum is nutritious, healthful, economical, delicious and satisfying.

TRY IT FOR EVERY GOOD REASON

MERCHANTS BANK

Adds Nearly Twenty Millions to its Assets. Continuance of Remarkable Growth of Deposit Accounts During Past Year Enables it to Render Immense Assistance to Canadian Trade and Industry.

The 55th Annual Statement of the Merchants Bank of Canada, presented at the annual meeting on June the fifth, shows a continuation of the remarkable progress which has attended the career of this Bank for many years past, and particularly since the beginning of the war. Thus the total assets of the Bank are now $146,237,544 as compared with $121,130,589 in 1917, and $94,261,263 in 1916, and this growth is entirely due to the confidence of the thrifty Canadian public, as exhibited in a constantly expanding volume of deposits. The interest-bearing deposits of the Merchants Bank are now $75,946,985, an increase of eleven million dollars, the non-interest-bearing deposits are $34,886,747, an increase of seven and three-quarter millions, and the note circulation is $12,827,168, an increase of three millions.

Of chief interest among the assets is the item of Current Loans and Discounts in Canada, representing the assistance given by this Bank to the activities of trade and industry. This amounts to $76,194,016, an increase for the year of nearly thirteen and a half million dollars, showing that the Merchants Bank is making a full use of the facilities afforded by its expanding deposit accounts, to meet the requirements of commercial clients, which have been greatly increased by the rise in market price of all classes of commodities.

Notwithstanding this generous support of Canadian business, the Bank still maintains a strong reserve of liquid assets. These now total $57,667,481, against public liabilities of $126,322,671, or a ratio of 45.6 per cent. and they include about thirty-four millions in the form of cash, bank balances and call loans, immediately available if required, and $5,435,464 of Dominion and Provincial Government securities, $14,589,065 of Canadian municipal and non-Canadian public securities (this item being composed largely of British Government borrowings) and $4,060,204 of other securities.

Profits for the year, at $1,236,680, showed an advance, attributable doubtless to the greater volume of commercial business. But they were subject to a deduction of $400,000, for contingencies, while war taxes and pension fund took another $120,000, so that the net result after payment of the 10 per cent. dividend was the addition of $16,680 to the balance carried forward, a moderate rate of earnings considering that every share of capital carries with it another hundred dollars of Reserve Fund.

At the annual meeting the Vice-President, Mr. K. W. Blackwell, pointed out that the money in charge of the banks was not that of "capitalists" in the sense in which that word was employed by socialist agitators but that the average holding of Merchants Bank depositors was only $500.00. The interest of this class must be defended against unwise and wanton action, or the whole financial fabric would be broken down. Mr. D. C. Macarow, the General Manager, stated that the assets of the Bank had been most carefully scrutinised and ample provision made for doubtful contingencies, so that the balance-sheet represented dollar for dollar of actual value.

Rock Plants.

For rockeries, start with aubrietias, dwarf phlox, dwarf campanulas, sedums, saxifrages. The sedums are good for carpet bedding, for covering graves, &c. Saxifrage will thrive in any soil, in any location and are good also for the front of the shrubbery border; they are the first of the perennials to flower in spring.

Lithospermum prostatum is an elegant creeping plant for rockeries, bearing masses of light blue flowers from April to September.

Helenium pumilum magnificum grows about 18 inches high, covered with golden yellow blossoms all summer.

Helianthemums are pretty, low growing evergreen plants, forming broad clumps, quite covered with bloom from July to September. They are not only good plants for rockeries, but also for dry, sunny banks and for the front of the border.

Dianthus deltodes, a creeping variety, with small pink flowers, flowering in June and July.

Geums make good plants for rockeries; the colors of the flowers are scarlet and orange, flowering from May to July.

Oenothera, or evening primrose, is a good subject for rockeries or for sunny exposures in the border, blooming all summer.

Silene schafta or autumn catch fly is another good rock plant, growing from 4 to 6 inches high, covered with masses of bright pink flowers from July to October.

All these plants can be purchased from pot grown stock so they can be safely planted at any time during the summer.

Teacher's Fault.

"Mamma," said little Ethel, with a most discouraged appearance. "I'm never, never going to study any more."

"Why, dearie, what's the matter?" inquired mother.

"'Cause it's no use," was the impulsive answer, "It's no use at all. I cant never learn spelling. Teacher keeps changing the words all the time."

Blood Drops of Heroes.

When the woods at Kilmorie are scarlet and gold,
And the vines are like blood on the wall,
I dream of the faces all pallid and cold,
Of our brave ones who answered the call;
Like the bright autumn leaves,
Or the rich, garnered sheaves,
Our truest, our greatest, our all;
For my heart beats in Belgium, or far France's wold,
When the woods at Kilmorie are scarlet and gold.

When the woods at Kilmorie are scarlet and gold,
I see but the beauty of God,
Not the small ways of men, and the mean faiths they hold,
Like the blind worm under the clod;
But the brave and the true,
Who knew but to do,
Like those glorious banners of God,
Arrayed on His hills, or at rest on His mold.
When the woods at Kilmorie are scarlet and gold.

When the woods at Kilmorie are scarlet and gold,
There's another dread harvest afar;
Where our greatest, our truest ones struggle to hold
Back the modern world's Juggernaut car;
And my heart only sees
In the pageant of trees
That horrible pageant of war,
Where God's men, for righteousness, strive, as of old—
When the woods at Kilmorie are scarlet and gold.

When the woods at Kilmorie are scarlet and gold,
And the vines are like blood on the wall;
I hear on the winds o'er the wood and the wold,
A bitter, insistent call.
"Tis the cry of our slain,
Appealing in vain,
For help where the brave hearts fall;
And its tragic demand doth the whole world hold,
When the woods at Kilmorie are scarlet and gold.

—Wilfred Campbell (Born June 1, 1861).

BIG U-BOAT ALMOST FAILURE.

Two Such Submarines Did Little Damage in 1917 Cruise.

The new type of German submarine cruisers accomplishes little, according to an official note commenting on German undersea boats, says a Paris despatch. Exact information relative to the operations of two of these boats which left Germany at the end of 1917, cruised as far as the equator and were absent for four months, shows that they accounted for only 29,000 tons of shipping.

This was equal to only one day's total loss from submarines in April of the same year. At this rate Germany would require sixty submarine cruisers at sea simultaneously to inflict the same loss as that visited upon shipping by submarines in European waters in a month.

"But Germany cannot maintain more than twenty of these boats," says the official note, "since the Allies destroy submarines faster than they are built. However, if they sink a few ships, the submarines operating in European and American waters are useful because their cargo space enables them to bring back to Germany valuable materials which are totally lacking there."

What It Came To.

The class was being conducted in the mysteries of mental arithmetic. "Now, Robert," said the teacher, "supposing your father owed the butcher $29.20, the baker, $30.40, the greengrocer $6.70, the milkman $2.10, and the coal man $16.90, what would that come to?" Robert was not a bright pupil, and the teacher was prepared to repeat the sum once or twice, but to her surprise Robert was ready with his answer. "It would come to a flitting, 'mum," he said.

WITH THE FINGERS!

SAYS CORNS LIFT OUT

WITHOUT ANY PAIN

Sore corns, hard corns, soft corns or any kind of a corn can shortly be lifted right out with the fingers if you will apply on the corn a few drops of freezone, says a Cincinnati authority.

At little cost one can get a small bottle of freezone at any drug store, which will positively rid one's feet of every corn or callus without pain or soreness or the danger of infection.

This new drug is an ether compound, and dries the moment it is applied and does not inflame or even irritate the surrounding tissue. Just think! You can lift off your corns and calluses now without a bit of pain or soreness. If your druggist hasn't freezone he can easily get a small bottle for you from his wholesale drug house.

One of the most essential things in the poultry yard is an abundant supply of clean water for the chicks.

Greenland has no cats. How thankful the Greenlanders should be—Imagine cats in a country where the nights are six months long.

Faith.

Willie, on a visit to his uncle's in the country, admired a fine colt.

"Uncle, give me that colt, will you?" he asked.

"Why, no, Willie," said his uncle. "That's a very valuable colt, and I couldn't afford to give him to you. Do you want a colt so very badly?"

"I'd rather have a colt than anything else in the world," said Willie.

"Then," said his uncle, "I'll tell you what you ought to do. Since you want a colt that much you ought to pray for one. Whenever I want a thing I always pray for it, and then it is sure to come to me."

"Is that so, uncle?" said Willie, eagerly, "Won't you please give me this colt, then, and pray for one for yourself?"

LEMONS MAKE SKIN WHITE, SOFT, CLEAR.

Make this beauty lotion for a few cents and see for yourself.

What girl or woman hasn't heard of lemon juice to remove complexion blemishes; to whiten the skin and to bring out the roses, the freshness and the hidden beauty? But lemon juice alone is acid, therefore irritating, and should be mixed with orchard white this way. Strain through a fine cloth the juice of two fresh lemons into a bottle containing about three ounces of orchard white, then shake well and you will have a whole quarter pint of skin and complexion lotion at about the cost one usually pays for a small jar of ordinary cold cream. Be sure to strain the lemon juice so no pulp gets into the bottle, then this lotion will remain pure and fresh for months. When applied daily to the face, neck, arms and hands it should help to bleach, clear, smoothen and beautify the skin.

Any druggist will supply three ounces of orchard white at very little cost, and the grocer has the lemons.

Britain's 4 Per Cent.

The inadequate provision of the forests of the United Kingdom for national needs is shown by the fact that only Portugal of all European countries ranks lower than Britain in percentage of total area under forest. Great Britain has just 4 per cent. in woods, Sweden 47 per cent., Russia in Europe 37, Germany 25, Norway 23, France 18.

Western Crops Promise Well.

With the advent of weather favorable to the crops the tone of reports of the condition of growing grain in Western Canada is generally optimistic.

In the weekly report of the agents along western lines of the Canadian Northern Railway to the executive officers of the company, 102 of the 250 agents reporting declare the wheat is advancing splendidly and that where the favorable conditions has not already overcome the setback due to adverse weather conditions in early weeks, the recovery will not be long delayed. Only 29 of all the agents reporting to the Canadian Northern from the Western Canada grain belt, indicate delay now from unfavorable weather conditions.

Instead of snapping out, "What makes you always so late?" when you come to the house and find dinner not quite ready, why not ask, "Mary, isn't there something I can do to help?" That would make the good wife's heart glad and the dinner taste better.

To economize on tea you should use only the genuine Salada. A pound of Salada yields so many more cups than does ordinary tea that it is a real saving compared to the ordinary tea.

Burglars Dread a Noise.

"Noise is the greatest enemy of the burglar and is what he most fears. Bear that in mind if you believe a thief has entered your home," says an experienced detective.

"The best of alarms in a household," he continued, "is a glass or chinaware pitcher or similar vessel. Slam it through the window and its crash above will be followed by another as the missile falls to the street or the areaway below.

"Never grapple with a midnight prowler, for he is prepared for such eventualities and has it on you. Generally no qualm of conscience would come between him and murder if there was danger of his being caught."

Ask for Minard's and take no other.

As for years, $60 worth of clothing is furnished in the navy gratis at the start, enough to last two years. Thereafter men must replenish and supply themselves.

TOMMY ATKINS GETS A RAISE.

Ration Allowance on Leave Increased To 50 Cents Daily.

Tommy Atkins will receive a further concession at once, says a London despatch. The War Office has decided to increase his ration allowance while on leave by 8 cents a day. In the past this ration allowance has been fixed at 42 cents a day.

The amount may not seem reasonable, but arrangements are in force by which soldiers may obtain at hostels or canteens throughout the country three excellent meals for 42 cents. If the soldier takes advantage of these hostels for meals it will leave him the whole of his pay of 36 cents, or more, according to the branch of the service he is in, as pocket money.

The new concession is said to be part of a plan to improve gradually but consistantly the financial position of the soldier and his dependents.

STRIKING EXHIBIT.

Diverse Resources of Canada Shown at Windsor Station.

Visualizing in a striking manner a large number of the diverse natural resources of Canada, the Canadian Pacific Railway has just opened to the public an exhibit at the Windsor street station. This exhibit, which is situated in a room immediately adjoining the main entrance to the station on Osborne street, has been prepared by the collaboration of the Quebec Government and the C.P.R.

One half comprises the Quebec exhibit, consisting of samples of the resources of the province—lumber, asbestos, and other minerals, grain, maple sugar, fur-bearing animals, such as the ermine, marten, mink, fox, and beaver, and fish and game birds.

The C.P.R. exhibit has been gathered from the entire Dominion. A splendid display of grains produced in the fertile fields of Western Canada is a special feature. Supplementing this is a big collection of fruits, forestry products and minerals. A number of colored transparencies show the methods used in developing the forest resources of Canada, from the primary state to the finished product, such as wooden ships. Other transparencies illustrate some of the summer resorts along the company's lines. Complete and recent statistics of all the country's resources add conviction to the display. The exhibit is installed in handsome showcases, brilliantly lit; and it is interesting to know that all the material used in the construction room is Canadian material exclusively.

Getting Her Strength Back.

A weather-beaten woman, somewhat over six feet in height, with shoulders proportionately broad, appeared at a house in the city and asked for light housework, explaining that she was convalescing from typhoid fever. "Where did you come from, and where have you been?" she was asked. "I've been diggin' out on a farm," she explained, "making post holes whilst I was gittin' my strength back."

In small gardens keep the plants up off the ground. Tomatoes, pole beans, cucumbers, squashes and melons can be grown successfully trained upon stakes. The sun reaches the fruit and hastens ripening. Begin about four inches from the ground and tie the plants loosely to the stakes, tying every twelve inches. This system makes cultivation and spraying easier.

Minard's Liniment Lumberman's Friend.

Clover cut at the right stage and run through the cut-box makes most excellent ensilage. It is in the best shape to put into the silo when the blossoms are just beginning to die.

KEEP YOUR SHOES NEAT

Minard's Liniment used by Physicians.

Also Miraculous.

"Grocery butter is so unsatisfactory, dear," said Mrs. Youngbride, "I decided to-day that we would make our own."

"Oh, did you?" said her husband.

"Yes; I bought a churn and ordered buttermilk left here regularly. Won't it be nice to have really fresh butter?"

Minard's Liniment used by Physicians.

Perennials can be started now in a moderately shady border, lightened up with well rotted manure or leaf mould and sharp sand. Rake the surface level and fine, free from stones and lumps. Sow the seeds thinly in drills a quarter of an inch deep and six inches apart. As soon as the little seedlings are large enough to handle move them to a nursery bed.

MONEY ORDERS.

Dominion Express Money Orders are on sale in five thousand offices throughout Canada.

Visitor: "I suppose, Timmy, that you can spell short words?" Timmy (whose father keeps a garage): "I can spell words of four cylinders."

Keep Minard's Liniment in the house.

Basic slag is good for lawns, spread in the early spring or late autumn.

GRESHAM

—Garden party, the best ever, at A. Cormack's, Paisley, on June 28th.

Mr. and Mrs. John McKinnon, of the 6th, left this week for Kinnondale, Alta., to visit their sons. On their return trip they will visit friends in Saskatchewan and Manitoba, also their son and daughter at the Soo and other friends in Ontario. We all wish them a pleasant trip during their well earned holiday.

Rev. Mr. McCulloch preached here and in Underwood last Sabbath very acceptably. He will also preach next Sabbath.

Mrs. J. Young and family and Miss Gladys McCallum motored to Tiverton on Sunday to hear Rev. Dr. McLennan preach to his old congregation there. The doctor spoke on "The Nations at War," taking as his subject the troublous times in which the prophet Isaiah lived, down to the present war, and showed from scripture in every case the triumph of right and downfall of wrong doing.

Mrs. Jas. R. Aitchison and granddaughter, of Clifford, visited her sister, Mrs. Wood, this week.

We are all pleased to see Miss Emma Snowdon home from the west.

Mr. Mewhinney, of Tiverton, was a caller in this neighborhood this week.

Five pupils from this vicinity tried the entrance exam. We wish them success.

Mr. A. P. Mewhinney and his assistants were busy on Saturday, and by the crowds we judge all have registered.

Mrs. Wade and son are visiting her sister, Mrs. L. Shipley.

Elderslie S. S. Picnic

The annual union picnic of Elderslie Sunday School Association will be held in McDermid's grove at Gillies Hill on Thursday, July 4th. In addition to the usual outing and entertainment, there will be arrangements made for raising a sum of money in aid of overseas Y.M.C.A. and Prisoners' Aid Funds.

CASTORIA

SIXTH CON. BRUCE

—June 28th—Red Cross garden party at A. Cromack's, Paisley.

Mr. and Mrs. John McKinnon left for the west on Monday.

Our teacher, Miss Simpson, who has resigned, is leaving for her home in Listowel on Saturday.

Mr. Geo Baptist, of Teeswater, spent Sunday at Mr. Andrew Russell's.

Mr. Jas. B. McKay had a very succ .sful barn raising last week.

CLARIS

—June 28th—Red Cross garden party at A. Cromack's, Paisley.

The marriage of Mr. Wm. Ferris to Miss Verna Husk took place on Wednesday, the 20th, in Kincardine.

Miss Phyllis Moffat was in Tiverton a few days last week writing on the entrance exams.

Miss Lizzie McCormick, of Detroit, is visiting her parents here.

The Misses McDermid, who are having a sale of their household effects this week, will leave later for London.

Mrs. McGregor, of Kincardine, is spending a few days with her son, Richard McGregor, on the 4th of Bruce.

The Red Cross Society sent the following monthly shipment: 6 pr. pyjamas, 6 wash cloths, 12 pillow covers, 18 personal property bags, 1 parcel of hospital cotton, 30 pr. socks.

Miss Vera Harrison, of Toronto, is visiting her grandmother, Mrs. J. C. MacIntyre, before returning to her home in Calgary.

Mr. Tom Colwell, Mrs. Dezell and Miss May Ferris motored to Walkerton on Saturday.

TENTH CON. BRUCE

—June 28th—Red Cross garden party at A. Cromack's, Paisley.

Mr. Adrian and Miss Erva Gayelle, from Kincardine, Sundayed at Mr. C. Walmsley's.

Miss Myrtle Jones, of Paisley, Sundayed at her home here.

Mr. Dave Agnew purchased a new rubber-tired buggy recently.

Mr. and Mrs. Will Thornburn and little girl are down from Winnipeg visiting friends on this line.

Mr. and Mrs. Albert Farrell, from Huron, spent Sunday at Mr. Tom White's.

Girl Offers to Do Roadwork

Some idea of the acuteness of the labor problem in this section may be understood from the fact that a young high school girl, living with her widowed mother on a Carrick farm, volunteered to go out and drive the team to haul gravel to put in their statute labor. The only son on the farm had been drafted, but the daughter was ready to do her part.—Mildmay Gazette.

Children Cry

FOR FLETCHER'S

CASTORIA

—Enoch Weltz, aged 35, a farmer residing two miles south of Hanover, was fatally injured when his foot caught as he was trying to keep a belt from slipping on the wheel of a gasoline engine while he was sawing wood. He was hurled through the air and landed on top of the engine. He had both legs broken, one of them in three places, and every rib on one side torn from the spine. He lived for 24 hours after the accident.

WALKERTON

A house to house canvass in behalf of the Bruce County Children's Aid Society will be held in Walkerton on Monday next, commencing at 9 a.m. The amount aimed at for Walkerton is $500. As similar campaigns will be put on all over Bruce, it is hoped that Walkerton will start the ball rolling well by reaching its objective and thus set a worthy example to the others.

Mr. Fred C. James, who recently returned from overseas and is opening up an office as civil engineer and architect in Walkerton, was appointed by the county council this week to succeed the late Jas. Warren as county engineer for Bruce. The appointment is an important one, and Mr. James will have the looking after of many bridges and have much other work under his wing. He has also been appointed town engineer, as well as being assigned by the Saugeen Electric Light Co. to superintend the constructional work of their new power dam at Southampton.

That dandelion wine will put a wobble in a man's gait and make him eligible for a drunk charge was demonstrated by a complaint laid by License Inspector White against Charlie Hetsler of Cargill for being boisterous in a public place. The accused pleaded guilty last week to the charge before Magistrates Geo. Sirrs and Thos. Chisholm, and was assessed $10 and costs. In explaining how he came to get a slant on Hetsler stated that he had taken a glass of dandelion wine on an empty stomach, and this had apparently done the trick as well as any race-horse whiskey. While Old Glory was at its height he went out and stepped on the coms of the goddess of justice by appearing on the street with, as some, a rather demonstrative jag on. The majesty of the law took its course and relieved him of a bunch of currency for the offence.

The tearing down of the old post-office in Walkerton last week marks the demolition of the first store in Walkerton and of the oldest building in Bruce. Erected in 1851 the structure was 67 years old and was found to have four floors, all badly worn, in the postoffice department. The practice was to tack a new floor each time on the old one, and the fact that three of them were of stout hardwood shows by their wear how well they were tramped by this community. The late Malcolm McLean, who was the oldest postmaster in Canada when he died, served mail for over forty years in the old building, which had also the distinction of being Walkerton's first, and for some years, its only store. Mr. Ed McKelvey, of Brant, who is erecting a new house out of the lumber and timber from the structure, found the frame work in such splendid condition that he believes the building would have reached the century mark had it been left for the ravages of time to lay low.

While Mr. Harry Bodt was fishing at the Indian Rapids on Friday afternoon last, he encountered a stranger who drew up and threatened to throw him in. Thinking the gink was only joking Harry kept on fishing, but was soon disillusioned by the culprit taking hold of him and dumping him in. Harry, who is handy in the water, soon got his bearings and kicked for shore. The guy, however, at this juncture started to pelt him with stones, and between dodging the rocks and keeping his head above water Harry had the busiest time of his life. Fortunately the foe's ammunition ran out, and with his teeth set like a gorilla the stranger stood and scoffed at the local who was puffing in the water like a steam yacht. Finally Harry reached land, but on issuing from the wet the fellow, who looked like a demented hobo, closed with the Walkertonian and they both fell back into the stream. Talk about a naval battle, but ex-alderman Weiss, who witnessed the struggle from the opposite shore and called upon Harry to "drown the sucker," found life pretty exciting for a time. Finally the opposing forces became exhausted and had all they could do to make shore. Being in no shape on landing for continuing hostilities they slunk off in different directions, Harry beating it home for a change of raiment, while his antagonist headed for parts unknown. Who the stranger is and what his object was in trying to drown Harry is still a mystery, but had the local not been able to swim he would without doubt have been a candidate for a coroner's inquest.—Herald and Times.

CASTORIA.

Bears the Signature of Chas. H. Fletcher.

ARRAN COUNCIL

Council met June 8th, all present. Treasurer's statement showed in hand and bank $6453.46. On motion of Miller and Scarrow, Councillor George was appointed to examine 15 s. r. at rear of 8th con. On motion of Scarrow and Thompson it was decided to pay $4 for man and team and $2.25 for men, 10 hour day. The reeve and councillor George reported that they had examined bill on con. 10, lot 19, and decided to have the work done by day's work under the supervision of Geo. Barclay. The following tenders were received for Sang's bridge: Jas. Cole, $3250 to complete the work; Hugh Watt $1572; D. Sutherland, 40c per cubic yard for filling. On motion of Thomas and Scarrow the tender of Hugh Watt was accepted providing he deposits a cheque marked good of 5 per cent. of tender. Councillor Thomas was appointed inspector of the work on Sang's bridge. The following were appointed weed inspectors and bylaw No. 12 was passed confirming the appointments: Wm. Harper, Wm. Grant, J. W. Bailey and Stanley Porter. The following soldiers were given $5 gold pieces each: Stanley Ferguson, Joe Cammie, Harvey Hopper, Roy Barclay and Harvey Kearns, with a wish for their safe return to old Arran again. Orders to the amount of $274 were passed and council adjourned until July 6th.

H. T. POTTS, Clerk

Fall Wheat Seed Announcement

IN VIEW of the partial failure of the Fall Wheat crop in this province this year, it will be necessary for farmers to make early arrangements for the supply of seed which they will need for fall sowing. Under these circumstances farmers who have on hand quantities of wheat suitable for fall seeding are urged to conserve them for this purpose. If there is no demand locally, the information should be supplied to this Department or to the local office of the Department in your county, so that every effort may be made to have an equitable and satisfactory distribution. The need for foodstuffs justifies a large acreage of fall wheat in this province again this year, and the co-operation of the farmers in the mobilization and distribution of the available seed supplies is invited.

PUBLIC NOTICE

Military Service Act, 1917.

Men 19 and 20 Years of Age.
Harvest Leave.
Leave of Absence on Ground of Extreme Hardship.
Procedure to obtain Leave of Absence.

Men Nineteen and Twenty Years of Age.

It has come to the attention of the Government that there is a widespread impression that young men of nineteen years, and those who became twenty since October 13, 1917, as well as those who may become nineteen from time to time and who have been or will be called upon to register under the Military Service Act, are to be immediately called to the colours.

This impression is quite incorrect. No date has yet been fixed for calling upon such men to so report for duty, nor has the question been brought before the Cabinet for decision. In view of the need of labour on the farm, it is most unlikely that consideration will be given to the matter until after the harvest is over, although of course the Government's action must be determined primarily by the military situation.

There is no further obligation incumbent upon young men of the ages above mentioned who have registered or who do so hereafter, until they receive notice from the Registrars.

Harvest Leave.

Some enquiries have been received as to the possibility of granting harvest leave to such troops as may be in the country at that time. No definite assurance can be given on this point as advantage must be taken of ships as they become available. On the other hand, harvest leave will be given if at all possible.

Leave of Absence on Grounds of Extreme Hardship.

It is desired that the Regulations respecting leave of absence in cases of hardship should be widely known and fully understood. Such leave will be granted in two cases:— (a) where extreme hardship arises by reason of the fact that the man concerned is either the only son capable of earning a livelihood, of a father killed or disabled on service or presently in service overseas, or in training for such service, or under treatment after returning from overseas; or the only remaining of two or more brothers capable of earning a livelihood (the other brother or brothers having been killed or disabled on service, or being presently in service overseas, or in training for overseas or under treatment after his or their return from overseas); brothers married before 4th August, 1914, living in separate establishments and having a child or children not to be counted, in determining the fact that the man is the "only" remaining son or brother; (b) where extreme hardship arises by reason of exceptional circumstances such as the fact that the man concerned is the sole support of a widowed mother, an invalid father or other helpless dependents.

It is to be noted that in all these cases the governing factor is not hardship, loss or suffering to the individual concerned, but to others, that is, members of his family or those depending upon him.

Procedure to obtain leave of absence.

A simple system for dealing with these cases has been adopted. Forms of application have been supplied to every Depot Battalion and an officer of each battalion has been detailed whose duty it is to give them immediate attention. The man concerned should on reporting to his unit state that he desires to apply for leave of absence on one or more of the grounds mentioned and his application form will then be filled out and forwarded to Militia Headquarters, Ottawa. In the meantime, if the case appears meritorious, the man will be given provisional leave of absence for thirty days so that he may return home and continue his civil occupation while his case is being finally disposed of.

ISSUED BY DEPARTMENT OF MILITIA AND DEFENCE.
DEPARTMENT OF JUSTICE.

Died at Vancouver, B.C.

On June 12th occurred the death of Mrs. Angus Galbraith, formerly of Paisley, but for the past thirty years a resident of Victoria, B.C. Mrs. Galbraith, whose maiden name name was Mary McNeill, was born in Argyleshire, Scotland, over 85 years ago and came to this country when quite young. Angus Galbraith, in company with John McPhee, came to Canada in 1847 and first settled in Mariposa Tp., but in 1852 the opening of new lands lured them westward and they took up the land on the Elora Road where they and their families lived for many years. At that time there were in the township of Elderslie 10 souls in all and these were to be found principally in Paisley and Lockerby. Many were the privations endured by the wives of these early settlers, for their lot was even harder than that of their husbands. To-day we do with less sugar in our tea, and with a little less meat and white flour and we call it sacrifice, but we have not yet learned the meaning of the word. Mrs. Galbraith was of a bright and cheerful disposition and had a large circle of friends. More than once has the grim reaper taken a loved one from her home, yet all her sorrow and suffering was borne with Christian patience and fortitude. She lived to see her husband, four sons and two daughters carried to their last resting place on earth. She was one of those who formed the nucleus of the Paisley Baptist church, having been baptized by Pastor Sinclair. She leaves to mourn her loss a daughter, Sarah (Mrs. Dinsmore), and no daughter was ever more devoted and faithful than she has been. A son, Finlay, is living in Dawson City, also two sisters—Mrs. John Freeman of Victoria, and Mrs. J. Galbraith of Kansas City. Three nephews reside in Victoria—Wm. McNeill of Brackman & Ker Co., Angus B. McNeill, Inspector of Revenue, and Angus Galbraith, of the Comptroller-General's Department. Many old friends of the family attended the funeral service, and the floral tributes were beautiful and abundant.

KYANIZE Floor Finish stands kicking, stamping, scuffing. Unequalled inside the house for floors and linoleum—for kitchen, bathroom, stairway, doors, ceiling, woodwork, furniture. Outside the house it's unexcelled for piazza floors and outside doors. A money-back guarantee proves these statements.

Ask for Kyanize Spar Finish for Canoes, Motor Boats, Exposed Surfaces; Kyanize White Enamel for Furniture, Bathrooms, Iron Beds.

D. H. COOPER

—Mr. John Little, who is working in Hamilton, was home over the holiday.

—Mr. and Mrs. Longfield and little daughter, and Miss Hester Munn, of Toronto, are visiting the ladies parents, Mr. and Mrs. D. Munn, Goldie St.

—Messrs. I. Shoemaker, W. Rae, Geo. Craig and Dr. Allen comprised a rink of bowlers who went to the Mount Forest tournament on Dominion Day.

—Dr. J. J. Bonnar, of Toronto, formerly of Chesley, was up to visit his sister, Mrs. Thornburn, sr. Mrs. Lloyd, of Mulmer, a sister of Mrs. Thornburn, was also up for two weeks.

—Rev. Jas. A. Gale, a son of Rev. R. M. Gale, of Pinkerton, was last week ordained and inducted as pastor of Hyde Park and Komoka Presbyterian church, at London. The young minister has just graduated from Knox College.

Civic Holiday for S. S. Picnic

The annual union S. S. picnic to Southampton beach will be held on Tuesday next, and on petition Reeve Steele has proclaimed the day as civic holiday.

Again Appointed an Inspector

Mr. W. L. Chisholm, B.A., formerly principal of Paisley Continuation and Public Schools, has been appointed inspector of public and separate schools for Ontario at the salary of $3500. Mr. Chisholm has for a number of years been on the staff of Principal Normal School, and prior to that was P. S. Inspector for West Bruce.

Presentation to Teacher

On Friday afternoon the pupils of S. S. No. 1, Brant and Elderslie presented their teacher, Miss Mary Kerr, with an appropriate address expressing their appreciation of her work during the four years she was in charge of the school, and regret at her departure, and asked her to accept a purse of money as a token of their respect. Miss Kerr resigned at the close of the term.

Safer Bathing Facilities

Three drownings within seventeen years is a very heavy toll upon the main power of this little community, so heavy that it is worth while doing something towards providing a safer place for boys to disport themselves in the water on summer days. There would be nothing gained by denying bathers the privilege of going into the water at the bridge unless a more suitable place is designated. The river is dangerous at all points chosen by the boys for swimming. There is generally a greater probability of one in distress being rescued at the bridge—where people are continually passing and naturally observing the movements of those in the water—than in some out-of-the-way spot up or down stream. It should be possible to have the little chaps enjoy themselves at a shallower place, say immediately above the bridge or a few hundred yards further up, where they would still be under the eyes of the public. As we have said before, we should have a citizens' or business men's association to deal with just such problems as this.

—Printing Invitations is part of THE ADVOCATE'S business.

—Fresh Salmon Trout at P. Ottcher's butcher shop.

—Deering Twine and repairs at F. Carter & Son's.

—Marriage licenses issued and money to loan. T. H. George.

—We have lots of sugar, by the pound or the hundred pounds. S. F. Ballachey.

—Full line of fine engagement and wedding rings at I. Shoemaker's jewellery store.

—For Sale—One 10-h. p. gasoline engine nearly new, one lumber wagon all complete with box, hand made by H. Reed, one cook-stove. Apply to W. W. Wynne, Paisley P. O., R. R. No. 2

—Highest prices paid for hides and sheepskins. R. E. McGregor, Butcher, Steele Block.

—Highest price for beef hides, horse hides, calfskins, sheepskins, tallow, &c. P. Ottcher, Paisley Meat Market.

—For Sale—Heating drum, window blinds, gem jars, baby carriage, baby's sleigh, window awnings, refrigerator, lamps. P. C. Ryan.

—For Sale—Two good young Shorthorn grade cows. Good milkers. Due to calve in July and August. R. J. Nelson, Greenock, R. R. No. 2, Paisley P. O.

—E. Stevenson's quick healing salve is the best made. We have a choice line of tobaccos and cigars, stationery and school supplies. Agent for daily papers and magazines. Give us a call.

—Flour, Feed, Seeds, Grain—We keep a full stock of Five Roses and Stark's high grade flours, bran, shorts, Royal Purple calf meal, poultry foods and tonics. Always in the market for coarse grains. Morning delivery only. W. Stark.

—L.O.L. Notice—The annual church service for the L.O.L. will be held in the Church of the Ascension on Sunday morning, July 7th. Brethren will meet at Putnam's hall at 10.30 a.m. and march to church. Visiting brethren cordially invited. E. P. Collins, Master; J. Bannerman, Secy.

Notice

Now is the time to look after your wardrobe. Cotton has advanced in the same proportion as wool, which makes a vast difference in trimmings. Place your order now at today's prices. They will be higher (we know it). A large stock and full line of blacks, blues, tweeds, worsteds, also spring, fall and winter overcoatings. Specials in pantings. G. B. Irwin, Ladies' and Gents' Tailor.

Keep a Smart Appearance

You can be smartly dressed without being extravagant if you will leave your next order with us. We have a good assortment of the very newest patterns in fancy suitings. Look them over before buying. Also in Ladies' Suitings we have a full line to choose from of the newest patterns and styles,

I. S. CRUICKSHANK, the Tailor

—Mrs. Neilson Stark is visiting in London.

—Mrs. A. Sinclair is visiting in Brantford.

—Miss Mary McBeath is visiting in Guelph.

—Mr. A. Ball was in Toronto for a couple of days this week.

—Mrs. D. Galbraith has sold her house to Mr. Wm. Walker.

—Miss Blanche Gibson is home from London for holidays.

—Miss Mildred Johnston is home from Toronto for the vacation.

—Miss Annie Stanley was visiting in Southampton for a few days.

—A Bruce Tp. farmer says that snow fell at his place on 1st July.

—Mr. and Mrs. G. B. Irwin were over to Ripley for Dominion Day.

—Miss Agnew, of Kilsyth, is visiting her sister, Mrs. J. R. Laidlaw.

—Miss Prudence Kerr, of Dutton, is spending the vacation at her home here.

—Miss Gertrude Mitchell, of Toronto, is a visitor at Mr. Thos. Johnston's.

—Mrs. Houston went to Toronto last week to visit in the city for a few days.

—Miss Jean Shaw went to Toronto on Wednesday, intending to remain in the city.

Soils and Crops

By Agronomist.

This Department is for the use of our farm readers who want the advice of an expert on any question regarding soil, seed, crops, etc. If your question is of sufficient general interest, it will be answered through this column. If stamped and addressed envelope is enclosed with your letter, a complete answer will be mailed to you. Address Agronomist, care of Wilson Publishing Co., Ltd., 73 Adelaide St. W., Toronto.

H. W.,—1. What is the best keeping onion, those grown from seed or from Dutch sets? 2. What is the best time to sow buckwheat and what is the best variety? 3. What variety of millet do you recommend and when should it be sown? Can you give me directions for the culture of millet and rape? What is the best soil for all these crops?

Answer:—1. Both systems of growing onions are used. Some produce them from seed and others from Dutch sets. The yield from Dutch sets is usually less than that from seed, but the advantage is that the sets can be planted as soon as the ground is ready in spring and the green onions are ready to use earlier than those raised from seed. As a rule better bulb onions for keeping are produced from seed. 2. Buckwheat can be sown any time early in spring until the first of July. Possibly sometime in June is the best time to sow it. In tests at Ontario Agricultural College these four varieties stood high,—Common Gray, Japanese, Silver Hull, Rye Buckwheat. 3. In Ontario tests the following millets have given good results, Siberian, Hungarian, Canary Bird. Millet can be grown on any good soil. It can be planted later than most other farm crops, and produce a fair yield of hay. In order to get a good stand of millet, after the ground is plowed it should be thoroughly disked and harrowed and if still lumpy should be rolled and harrowed. The millet is then sown broadcast at the rate of 20 to 30 pounds per acre. It is worked into the soil by a light harrowing. Under normal conditions the germination and growth will be rapid. The crop should be cut before it is too old else the hay will be woody and of poor nutritive value. Rape can also be grown on most farm soils but does not do its best on muck soil. The seed bed should be carefully prepared by plowing, disking and harrowing and the seed can be sown in rows broadcast at the rate of 2 to 4 pounds per acre. A medium loam or a heavy loam soil is best adapted for the growing of rape. As to variety, Dwarf Essex Rape has given best results in Ontario.

W. W.:—1. What will eradicate twitch grass from the garden? 2. How would you treat potato blight?

Answer:—1. Twitch or quack grass is exceedingly troublesome since it propagates by running root stalks just under the surface of the soil. Small pieces of these roots will begin to grow wherever dropped, hence the area afflicted with this pest may be rapidly enlarged if care is not taken to collect every bit of root stock possible, and to dry and burn it when the ground is being worked in early spring. The only thing that can be done for quack grass in the garden is to keep its growth down by continual hoeing. Various methods to eradicate the pest have been suggested. One is by smothering it out. For this purpose a thick seeding of rape is probably the most successful crop to grow. Thickly sown millet is also very effective. 2. Late blight of potatoes must be treated by careful spraying with Bordeaux mixture. This mixture consists of 5 lbs. copper sulphate, 5 lbs. lime, 10 gallons of water. The lime and copper sulphate must be dissolved separately. A gallon of water will dissolve a pound of either copper sulphate or lime. When the material has been dissolved mix it in the proportions indicated, and spray the potatoes every ten days or two weeks from the time they are five inches above the ground. If any plants have missed the spraying and the tops have gone down early from blight attacks, care should be taken not to store stock from such plants with healthy potato stock.

W. W.:—1. What can I do for cutworms? They are cutting off my tomato plants. I wind them with paper but they crawl up the paper and cut them just the same.

Answer:—For controlling cutworms, the Maine Experiment Station gives the following advice:—

"Control cutworms with a poison bait. This is very easily made up of white arsenic (can be bought at any drug store) some molasses and something such as bran with which to make a mash. Mix the white arsenic and the bran material while dry and put the molasses into a cup or a bucket of water to dissolve. Then add enough of this sweetened water to the bran to make it just moist throughout. Place a teaspoonful at the base (not touching) of each plant affected and near the base of adjacent plants. Where the damage seems to be along an edge bordering a piece of grass-land, put some down near each plant along the border.

Use the following quantities:—

For gardens of ¼ acre or less use:—

Bran (or substitute)	1 quart
White arsenic	1 teaspoonful
Molasses	1 tablespoonful
Water	to moisten

For 1 to 2 acre gardens use:—

Bran (or substitute)	10 lbs.
White arsenic	1 lb.
Molasses	1 quart
Water	to moisten

Many people add to this poison mash, the juice and crushed pulp of some fruit that happens to be handy, such as grape fruit, apples, tomatoes, oranges, cantaloupes, etc., which may have "just one by," and it is considered by scientific people to be a very good practice. This poison bait is cheap, easily mixed and easily applied. The fact that it is a very old remedy which was standard many years ago has given a sufficient test of its reliability. One of the best features of the poison is that as soon as the worm has fed he crawls into the ground from which he never emerges so that the birds do not eat the dead cutworms.

Hogs

Thousands of pigs die a week or two after birth from mismanagement of the sow. The cross, constipated, flabby sow may kill and eat her pigs at once, or have little milk for their nourishment. If the sow is heavily fed just after farrowing, her milk kills her pigs, or they scour and fail to thrive. The careful man will let the sow have only luke-warm water to drink, without feed, for the first twenty-four hours; after that he will feed very lightly for a week or two. He will avoid making corn the exclusive feed during pregnancy and after farrowing, and will provide a patch of oats, peas and rape, clover or alfalfa, for the sow and pigs.

Every hog raiser must remember that the fat of milk is absolutely necessary for every young growing animal if it is to develop normally and prove prolific as a breeder. Grain does not perfectly take its place. Leaves and grain fed together, the whole plant utilized, may prove fairly effective as a ration, but milk can not profitably be withheld. No wide-awake swine raiser will sell all of his milk and try to raise his young animals with substitutes.

Pigs will die if allowed access to their dams after weaning. The old milk is poisonous. Pigs will have piles or protrusion of the rectum, and they may die or fail to thrive if fed unscreened ground oats, or much bran or boiled potatoes for a prolonged period of time. They may be killed, too, by slop from dirty, germ-infested barrels and troughs; while sour or decomposing slop partly made of tankage will cause ptomaine poisoning, which is fatal. It is better to feed the tankage dry, from self-feeders, if the slop can not be fed fresh. Sanitation of beds, pens and yards is not enough; it must include barrels and troughs, and prevent access to contaminated yards, old wallows and running streams.

Cabbage Plants

Of all leading early and late varieties, 40c. per hundred, mail prepaid, $1.25 per thousand, express collect.

Also Cauliflower, Brussels Sprouts and Onion Plants.

Plants are being shipped successfully to all parts of Canada. Ask for price list.

Harold's Farms, Fruitland, Ontario
Dept. "F" Niagara District

WOOL

Farmers who ship their wool direct to us get better prices than farmers who sell to the general store.

ASK ANY FARMER!

who has sold his wool both ways, and note what he earned—or, better still, write us for our prices; they will show you how much you lose by selling to the General Store.

We pay the highest prices of any firm in the country and are the largest wool factory in Canada. Payment by return mail the same day wool is received.

Ship us your wool to-day—you will be more than pleased if you do, and our parcel of it square shall treat us.

H. V. ANDREWS
17 CHURCH ST., TORONTO

Poultry

While it is possible for vermin to live the entire year when conditions are favorable, they seem to do their most deadly work in June. Houses that are cleaned once a week and fumigated every month, are seldom infested with vermin.

The writer has found that the use of tobacco stems in the nest boxes, instead of hay or straw, is in itself one of the best insecticides. Even in selling hens tobacco stems are used exclusively, with the result that when the chicks are hatched there are no lice present to sap the life out of them.

A good whitewash is made as follows: Take one pint of Zenoleum, three quarts of kerosene, five quarts of milk of lime; mix all with an equal amount of water. Milk of lime is obtained by slaking enough lime with the water to get five quarts of creamy consistency, to which the other materials are added. It is better to apply the whitewash with a spray pump than a brush, as the force will drive the mixture deeper into the crevices. Zenoleum used in the spray will kill the bacteria and fungi, kerosene will kill the mites, and whitewash will give the pen a clean appearance.

A good dog and a faithful cat are excellent guardians, and when these animals are well trained there will be very little loss from hawks, crows, rats, weasels and minks. Rats will not harm chickens after they are half matured, so long as some grain or other feed is lying about. They never loiter about a building where there is no place to hide. It is therefore wise to guard against hiding places.

The Wartime Garden.

The gardener's best friend is the hoe —so keep it going. Nothing has done more to further the science of farming than the discovery of the fact that if you keep stirring up the soil around a plant it grows and produces better. There is no necessity to hoe deeply—an inch is enough. Hoe every seven days at least and always after rain or a watering in order to break up the crust which forms. This is because the dust or "mulch", as it is called, which is formed by the breaking up of the surface soil into fine particles, keeps the moisture around the roots of the plants from evaporating.

Thinning should be going on continuously these days. The war gardener must show himself to be merciless in getting rid of all weaklings for they serve no purpose other than to sap for themselves the strength which should be reserved for the stronger plants. It stands to reason that if too many plants are trying to take nourishment from the soil, none of them will thrive as it should. Ordinarily in thinning it is better to pull out the plants in the centre of the bunches which have come up together.

In districts where grasshoppers are abundant, farmers and gardeners should co-operate and arrange to fight the insects at the same time. The young hoppers hatch in May. As soon as they are noticed to be destroying crops, either of the following mixtures should be used early in the morning, about the time the insects begin to move about after their night's rest: (1) Bran, 20 pounds; Paris green or white arsenic, one-half pound; cheap molasses, 2 quarts; oranges or lemons, 3 fruits; water, 2 to 2½ gallons. The bran and poison are mixed thoroughly in a wash tub while dry. The juice of the fruit is squeezed into the water and the pulp and peel are added after being cut into fine bits. Then add the molasses and when the whole is thoroughly mixed, pour it over the dry bran and poison, stirring constantly so as to dampen the bran thoroughly. The other mixture is as follows: (2) Sawdust, 20 pounds; Paris green, one-half pound; salt, one-quarter pound; water, 3 gallons. The quantities given here would make sufficient for a fair-sized community and it might best be handled in this way.

GOOD HEALTH QUESTION BOX

By Andrew F. Currier, M.D.

Dr. Currier will answer all signed letters pertaining to Health. If your question is of general interest it will be answered through these columns; if not, it will be answered personally if stamped, addressed envelope is enclosed. Dr. Currier will not prescribe for individual cases or make diagnosis. Address Dr. Andrew F. Currier, care of Wilson Publishing Co., 73 Adelaide St. West, Toronto.

Infant Feeding No. 1.

This subject is of great importance at all seasons, but especially so during the heat of summer when the sensitive digestive apparatus of babies is thrown out of equilibrium.

It would seem unnecessary to urge that every mother who is able to nurse her baby should do so.

The food which is supplied by her body is the natural and proper nutriment for her child.

Occasionally it is not nutritious and cannot be used, somewhat more frequently it is insufficient in quantity and has to be pieced out with cows' milk, rarely it must be suppressed in the interest of the mother's health or life.

It is a sin against society, against nature and against God when a woman with an ample supply of breast milk deliberately elects to suppress it to suit her convenience.

It is next to procuring an abortion, which so many women do merely because it is inconvenient to have babies and bring them up.

I appeal to every honest, decent, woman who has a baby or is about to have one to see that her baby is nourished at the natural source, so far as it is within her power.

If this source fails the next best thing is to get a wet nurse, or if this is impossible to use the milk of animals.

The milk of asses and goats has curd or casein which quite resembles that in human milk, but such milk is usually hard to get and hence we must usually resort to cows' milk, preferably from cows that are dry fed.

Grass fed cows often eat plants which injure their milk as an article of healthful food, but the same plants which when green are injurious may be harmless when in the form of hay.

Milk is a complex and perfect food containing albumen in its cheese, fat in its butter or cream, sugar, water and mineral salts, and these are all the body needs for its upbuilding.

It varies greatly in the proportion of these constituents, some containing more cheese than others, some more fat, hence all milk is not equally suited for nourishing babies.

At different periods in a baby's life more of one constituent is required than of another.

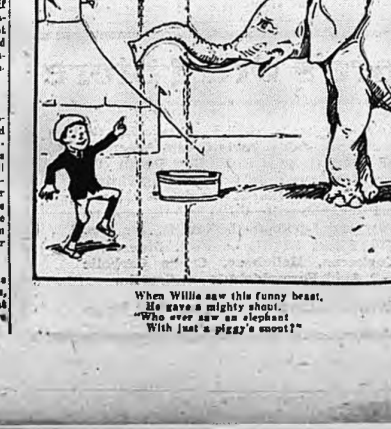
Casein or cheese in cow's milk is usually too tough to be digested by a young infant's gastric juice, and hence this substance must often be diminished.

Milk spoils very quickly unless it is kept cold on account of the action of the bacteria which gets into it almost as soon as it is drawn.

These bacteria may be destroyed or prevented from growing by the action of heat.

The process of doing this is called pasteurization by which it is heated to 140 degrees F., forty minutes.

Cream or fat may be added to it until its total volume is three per cent.



QUESTIONS AND ANSWERS.

M. K.—Have been advised to rub my baby girl, who is four weeks old, every other day with olive oil, in order to strength her bones. Is it desirable?

Answer—It will do no harm, but I think cocoanut oil is preferable, it is less greasy and it has nutritive value, as well as the olive oil.

FUNNY FOLD-UPS

CUT OUT AND FOLD ON DOTTED LINES

When Willie saw this funny beast,
He gave a mighty shout,
"Who ever saw an elephant
With just a piggy's snout?"

The Southern Canada Power Co., Limited

Controls Water Powers on the St. Francis River capable of over 100,000 H.P. development, and through stock ownership controls several Light & Power Companies.

The Company supplies power and light to over 45 municipalities in the Province of Quebec, principally in the Eastern Townships.

Work has been commenced and is progressing rapidly, on the development of one of the Company's large powers on the St. Francis located at Drummondville.

This plant is being developed to supply the increased demand for power in the territory served by the Company and enable more manufacturers to locate in this district.

The development of water power now is a patriotic duty, as well as a commercial advantage.

We recommend the 5% BONDS of the SOUTHERN CANADA POWER COMPANY, LIMITED, which we are offering with a bonus of common stock, thus giving investors an opportunity of participating in the future success of the Company.

Send for circular and map showing territory served.

BONDS MAY BE PURCHASED FROM US ON MONTHLY PAYMENT PLAN

MOTHER-WISDOM

There is a Right and a Wrong Kind of Fatigue in Children.

By Helen Johnson Keyes.

Of course children must be tired sometimes and if they rest quickly, then after a night of sound sleep or after a wholesome meal followed by a period of thorough relaxation, all is well. Indeed, fatigue of this kind is actually healthful. Particularly at that time of life during the teens, which we call adolescence, the body and mind work best through periods of hard, fatiguing activity, followed by profound relaxation and indolence. All parents should be shown to adolescent boys and girls who choose to get through their tasks in this manner, although to their parents it may be somewhat irritating and inconvenient.

There is, however, a fatigue which is dangerous and which should be met at once with proper remedies, for the longer it is allowed to persist the more difficult it is to overcome. The symptom by which it may always be known is the lack of power the sufferers have to become rested again. It settles down on them like a permanent condition of weakness and discouragement.

Children suffering from this dangerous fatigue awaken irritable in the mornings, have poor appetites and little interest in anything which they do. They perform their home tasks and their school work in a blundering, inattentive way. This lays them open to diseases of all kinds and makes recovery from these diseases more uncertain, slower and less complete. Morally, it leads to dullness, indolence and failure all along the road.

The explanation usually made for fatigue and nervousness in children is that they are studying too hard. As a matter of fact, this is seldom the cause and if they are taken out of school, little improvement occurs unless in addition to removing them from their studies a number of other changes are made in their manner of living. I believe that if you will search your memory and experience you will decide that among all those run-down youngsters whom you have seen taken out of school, the only ones who have improved have been those who at the same time were sent away for visits or put on diets or made to sleep on porches. The truth is that hard study will not hurt any normal boy or girl if it is done under healthful, happy conditions.

Yes, it is trying conditions under which school life often proceeds, which usually result in dangerous fatigue and nervousness—sometimes running on into that twitching disease, known as Saint Vitus' dance, or into tuberculosis. The causes are threefold and lie in the faulty hygiene of the home, the poor hygiene of the school and the system of marks or competition with other pupils and examinations which are often pushed to a senseless and truly criminal excess.

Children frequently start off the day with insufficient breakfasts, arrive at school chilled and perhaps with wet feet and are provided with a murderous basket-lunch of pickles, ham, cake and candy. What wonder that their heads ache and that they believe that their studies—which are indeed difficult and painful under these circumstances—are the cause of their ill health! They feel far too sick to eat supper but are hungry by bedtime so they eat a generous slice of pie before sleeping. A bad digestion makes a person feel cold so probably they do not open the windows very wide and the pie, plus the poor ventilation, produces restless sleep. So they go, from day to day, in a widening circle of ill health.

The schoolroom, perhaps, is heated by an unjacketed stove. Close beside it the air is so hot that the children are drowsy; in the back of the room the youngsters are shivering. In both places the air is poisoned by the breaths of the children and the burning up of fuel in that same stove—which equals twenty-five men in its power to exhaust pure air. The desks, very likely, face the door, and windows on both sides shed cross lights upon the children's work, causing eyestrain. It takes so long to put on coats and hats that outdoor recess is omitted much of the time. The only wonder is that any study progress is made and even a tolerable health maintained by most of the pupils.

The system of promotion is too apt to be a scramble by the children to get ahead of one another instead of a serious pursuit of knowledge. They wear themselves out in the nervous excitement of doing better than somebody else. These boys and girls who happen not to be good recitation-scholars often fail in this scramble and grow despondent and ashamed. They are frequently the most promising pupils in the school but nobody knows it because we are all blinded by the false standard we have set up. By discouraging them, testing them by what they cannot do instead of by what they can, we thrust them into the ranks of the nervous, the tired and the discouraged.

Before taking your run-down children out of school try this cure:

In the bitterest cold of winter let them sleep with wide-open windows. As soon as the weather is milder put their beds on a porch. If you have a bathroom, let the day begin with a cold plunge in the tub or a cold shower. Give them a breakfast of well-cooked cereal with cream on it, and eggs and toast—no fried foods or sweets. See that their feet are dry-shod and their bodies comfortably clad for the trip to school. Prepare them nourishing lunches of well-baked bread spread with butter, or sandwiches of chicken or beef. Do not include ham, pickles, jams or candies. Children should not drink tea or coffee; instead, give them a bottle of milk or cocoa. Fresh fruits will supply all the sweets they need, in the best possible form. When they must have cake let it be simple. Nuts and raisins make an excellent dessert with real food value but they should not be added to a meal already heavy with meat. This is true, too, of cheese. Cheese should be added only to a light meal of green salads or vegetables or fruits.

Then let the mothers of the community form a mothers' club or a parent-teachers' association and see that the school stove is properly jacketed; that there are always two windows open, one at the bottom and one at the top; that the desks are turned with their backs to the door and that the windows on the right side of the room are darkly curtained, allowing the light to fall only from the rear and left side. If the school has but one room, urge the fathers to build on a second one where an oil stove and a few kitchen utensils can be kept for heating dishes for the midday lunch or even for simple cooking.

There will be few tired or nervous children in a community where such home and school hygiene methods are practiced.

Economy With Grain Bags.

By reason of the unusual heavy demands on the jute supply of India, and on the Calcutta bag industry, farmers are advised to order, as soon as possible, all the new bags they will need for sacking grain and other products, and, in addition to prepare for use all old bags which can be made serviceable. Very large orders have been placed for sand-bags for use in mining trenches, one English order alone being for 150,000,000 bags.

Fruits and vegetables supply the body with necessary mineral salts, starch and sugar, and those who eat plenty of these will seldom require medicine of any kind.

Sheep Notes

There is a tendency for farmers to keep their lambs until they weigh 100 pounds or more, instead of selling them when they reach a weight of seventy-five to eighty pounds and bring the top market price.

Packers will not pay the top price for lambs, no difference how fat, if they weigh over eighty pounds. The reason is because the best cuts of meat can be obtained from the smaller carcass.

In addition, the one who sells March lambs in June or July when they have attained seventy-five or eighty pounds, instead of waiting until fall to dispose of them, avoids the danger of disease in the last two summer months. Lambs make very small gains during this period. They make the cheapest gains under five months of age. They can reach the necessary weight by the last of June or middle of July if fed liberally with grain, pasture crops and milk from their mothers.

The marrow from the soup bone makes a pleasant addition to soup.

How Little Bear Helped The Wildcat Babies.

One time the wildcat babies ran away. It was late in the afternoon when Little Bear found them crying beside the brook. They were not far from their home, but the trouble was that they were on the wrong side of the brook.

"Swim across!" advised the beavers. But the baby wildcats were afraid of the water and would not try to swim.

"Wade in, wade in!" advised Father Deer. The baby wildcats shook their front paws and would not wade into the water; they did not like to get wet.

"Slide right in and paddle over!" suggested Mrs. Otter. But the baby wildcats would not slide in and paddle over; they were afraid of the water; they did not like to get wet.

"Float over, float over!" advised the ducks. But the baby wildcats would not even try to float.

"Jump on a log and spread your tails wide and sail across!" said the red squirrel. But the wildcat babies did not dare to jump on a log. They were afraid that it would turn over and dump them into the water.

By the time Little Bear came along, the baby wildcats were crying big tears into the brook and wailing at the top of their voices. Little Bear could not help laughing; but he felt sorry for his little neighbors, and determined to help them out of their trouble. He thought and thought and thought and thought! At last he asked the baby wildcats how they happened to be so near home and yet on the wrong side of the brook.

"Mother went away and didn't come back," Yowler explained, "and I said we ought to stay home and be good, but—"

"He did not!" interrupted Billy Wildcat. "He said, 'Ma will never know if we go walking just a little way,' didn't he, Fluffy?"

"Yes, he did," answered Fluffy. "And we walked and we walked until we were lost— and Yowler was the worst one of us. Why, why, Yowler!"

"Don't quarrel," said Little Bear. "I want to know how you happen to be on the wrong side of the brook?"

"Yowler, he made us cross the away-off-seven-mile bridge," was Owley's answer.

"If you don't stop this quarreling, I shall leave you," threatened Little Bear. "And now I know what to do, if you will be good. We will build a bridge. I'll carry big stones and drop them into the brook, and every one of you shall bring little stones."

So straightway Little Bear began building a bridge of stones. It was hard work, but he tugged at rocks and rolled stones and lifted stones and splashed and struggled and struggled and splashed until at last there was a fair bridge of stones across the singing brook. The baby wildcats did not help much because they were too busy quarreling and crying.

"Now step over," advised Little Bear, "and be careful that you do not slip."

One by one the little "frald-cats," careful not to slip, crossed the brook, stepping high and carrying their tails in the air. At last Little Bear left them at their own door, just as Mother Wildcat appeared.

"You naughty children!" she exclaimed. "I have searched the woods far and near for you! There is a circus man wandering round here, and it is a wonder he didn't find you! Scoot into the house this minute!"

"Little Bear is good!" piped in the shrill voice of little sister Fluffy. "He made a stone bridge for us and brought us home!" Little Bear loved her for owning up like that.

"Well," said Mrs. Wildcat, "if he knows what is good, he will be glad to have me take him home, or the circus man may get him."

Little Bear knew what was good for him; so he gladly put his little wet paw into Mrs. Wildcat's paw and trotted along by her side. Mrs. Maria Wildcat was not well, and he knew it. Some folks are always irritable when they are worried. Anyway, she took Little Bear home; and great was Little Bear's surprise when, on reaching his own gate, Mrs. Wildcat suddenly stopped and said, "Mer—rrow! Mer—rrow!" in her most impolite fashion.

At the same moment Father Bear and Mother Bear came running down the path from the house to see what was the matter; and at that very minute up jumped the circus man from beside the gate, where he had been hiding, and ran away as fast as he could go—so fast that he looked like a straight line flying down the road!

For the first time in his life Little Bear kissed Mrs. Maria Wildcat good night without being told. And all that evening until bedtime he and Father Bear played a merry game of Mrs. Maria Wildcat scaring a circus man—"Mer—rrow!. Mer—rrow! Mer—rrow!"

Tissued Whale Beef.

Though the whale has been taken for many years on the Pacific coast, its beef was first offered in any quantities for human consumption in the summer of 1917. Then for the first time it appeared in butcher shop windows, retailing for ten cents a pound. The result was sufficiently satisfactory to start the whaling companies preparing for better cold storage facilities for the present season. For the first time also in Pacific coast history the whale will be canned. A big factory was erected at Kyukout, British Columbia, and a minimum of 30,000 cases will be put up this season. If the new tinned whale beef meets public approval the output will be increased.

There are four species of whale common to the Pacific coast — the finner, humpback, sperm and sulphur bottom. The former two are best for meat, not being as oily as the sulphur bottom and sperm. Of these the sulphur bottom is the largest. Some specimens reach ninety feet in length and weigh up to eighty tons.

Previous to 1917 the whale was used only to supply fertilizer, bonemeal and oil. In 1917 about 125 tons in all were sold on the Pacific coast. Only those whales taken in close to the stations, which can be moved quickly to be cut up, are used as beef.

The whaling season lasts from the 1st of April to the end of October, and this year doubtless many Canadians and Americans will become familiar with the taste of whale beef before the season is ended.

TO REGULATE FRUIT PRICES.

England's Food Chief Will Limit Cost of Tommy's Jam Supply.

Last year, the military authorities, taking into consideration "Tommy's" greed at the ever recurring plum and apple jam, tried to solve the question by buying other fruits at considerably above the market prices, says a London despatch.

They succeeded in giving the rank and file a change of jam, but the fruit growers held up both the jam manufacturers and the public for equivalent prices, with the result that when the Ministry of Food wished to fix prices for the retail trade they were far above the real value.

This year the Food Controller is not to be caught napping. He will issue an order fixing maximum prices for all English grown fruit for the manufacture of jam. Lord Rhondda also intends to fix prices for fruit pulp on an equitable basis after due regard has been given to the average price of fruit and controlled price of jam.

The Ministry has issued an order which restricts the use of potatoes, potato starch, farina and other potato products to purposes of animal and human food and places these articles in the same category and under the same restrictions as certain cereal products for which they are a substitute.

The conditions for the issue of licenses for dealers in potatoes have been issued. The Controller will issue licenses through the trade societies and it is compulsory on the dealer to be a member of a society, otherwise he will not have either a license or be able to renew an existing one.

With the issue of licenses for this year's crop on July 1 the whole system will be subject to entirely new conditions and evasions of orders will be practically impossible.

Above the Fields of France.

O April Moon, hast thou looked down
Upon the fields of France?
So tranquil is thy lovely face,
It doth not seem thy glance
Hath rested on a ruined town,
On heaps of bodies, pools of brown,
On fields of agony.

"Oh! tranquil am I and serene—
These are visions I have seen
Above the fields of France:

"Through battle-smoke that dimmed the skies
I've seen a people's soul arise;
Oh, it was fair to see!
I've seen a holy purpose grow;
I've seen brave, youthful faces glow
With a new-born chivalry;
I've seen a light in dying eyes
Of love's supremest sacrifice,
Light caught from Calvary;
I've seen black crosses, thickly set,
Sign of a faith from Olivet,
Of immortality.
And o'er the fields where heroes lie
A star of hope is in the sky,
Hope of a race, transformed, redeemed;
I've seen that star, of late hath gleamed
Above the fields of France.

"Oh, I am tranquil and serene—
These are the visions I have seen
Above the fields of France."

Keep Hoeing.

War gardeners should not relax their efforts because it is too hot to be comfortable in the garden. It is too hot to be comfortable in the trenches but the war goes on. Keep hoeing. The results will be worth it.

FLYING ABOVE BOCHELAND

A STORY OF THE AIR BY A BRITISH AVIATOR.

Flying the Fortitude and the Quick-Wittedness of the Boys in the Royal Flying Corps.

The daily routine work in the Flying Corps consists usually of three hours' work above the lines; then we go back of the lines twenty miles or so and rest. Does this sound pretty soft, as you Canadians say? If it does seem like little actual work, let me relate an incident which occurred during one of these flights.

We were flying over St. Quentin at the time. I had a light machine and had been given instructions to get some photos. At least, my observer had been so instructed. We had been up probably half an hour and had almost finished our "shots" of the enemy trenches. Suddenly we heard an ominous buzz. We both turned. To say we were surprised would be putting it mildly, as we thought we were alone. When we started there was not a single enemy plane to be seen in the sky.

And there, right back of us about two hundred yards or so, was one of those Taubes. The Boche was steering directly for us. I surmised he intended to hit us on the tail. You know, when a fellow decides to ram you he is courting disaster himself. But that wasn't his intention at all. As he drew nearer he opened with his machine gun. His first shot tore through the right wing, ripping the linen. Why the plane didn't skid right then and there is still a mystery to me. I turned the nose of the machine earthward with the intention of escaping. Not that I was afraid to fight him, but instructions must not be disobeyed, and we had been given explicit orders to get photos of the enemy trenches. To return safely to headquarters with the "shots," was our aim. But the German had other views on the matter—and they didn't exactly coincide with mine.

The Observer's Leg Goes.

Before we could dip out of his range he opened up with a regular fusillade. One of the shots "got" the observer. It tore his right leg off at the knee. When I say tore I mean it literally. When the poor fellow dared to look down at his injury he beheld the bleeding stump.

"I'm goin' to head for home, Bill," I shouted.

Bill peered below. The scene beneath us presented some excellent opportunities for pictures for the use of the staff.

"No, you don't Jock." His voice seemed miles away because of the din of the engine, but I understood what he was saying.

"Let me get a couple o' shots to the west," he bellowed.

I turned her nose, and we stayed there for fully three minutes, with this plucky lad working on an artery of his bleeding stump and checking in this crude but effective manner the flow of blood with his right hand, while he pressed the bulb of his camera with his left. The Boche had left us. I guess he thought we were done for. He didnt know Bill as I did.

I brought the wounded man down back of our lines as soon I could tilt her nose earthward. Bill was soon in Blighty. I felt sure he would get the V.C. for his work. He was merely mentioned in the despatches, but such is life.

You know the Victoria Cross is a mighty treasure. It is not as common as the Iron Cross, which the Kaiser hands out to any one. Why, I once heard of a Prussian receiving this German medal simply because he had succeeded in raising an extra large head of cabbage. The rumor may be true.

Not more than six or seven of the fellows who had the V.C. pinned to their breasts are living now. I speak of the Royal Flying Corps. The man who brought down the first Zeppelin in Belgium received the V.C. The fellow who crumpled up the first Zeppelin which was brought down over London also came in for the distinction.

An Incident of Battle.

Let me relate how one of my best friends, since "gone west," disposed of one particular Boche flyer. It was early in the war and he was pursued by a Taube. His engine stalled and he glided as far as possible before he was forced by sheer necessity to land. He was among the dunes near the coast. The Boche had been taking pot shots at him right along. When the Boche discovered he was going to land he also brought his machine to earth. There they stood—one hundred paces apart. Each took out his revolver and began firing. The German dropped, shot through the shoulder.

Albert—for that was his name—dragged the wounded Boche to a tree and placed him comfortably against it to await some of his own men. He then applied a torch to the enemy machine and started his own—this time without experiencing engine trouble—and flew away. Some strategy—what?

Speaking about engines, we had some difficulty in getting proper motors for our planes during the early periods of the war. A Dutchman by the name of Fokker built an engine which he believed was suited to the needs of the Flying Corps. He promptly offered it to the English Government, but for some reason or other they did not find it practicable to accept. He straightway offered it to the German Government—and they took him up immediately.

A Streak of Ill Luck.

They soon installed it in their machines, and during the spring of 1916 it proved far superior to the English engine. It balked at nothing—and it often reached heights of 10,000 feet (high for those days) with the utmost ease. If this makes you feel sorry or makes you curse fate, just listen to another tale in which the English Government ran into a streak of hard luck.

Soon after this the government took up the building of a particular type of aeroplane engine. They say it was an American patent. They installed it in a machine to test its worth. The commanding officer in charge of the particular barracks where this machine was to be given its test decided that a flight of two hundred miles would be sufficient to demonstrate the engine's worth.

The day was named, the aviators chosen and many military men aside from the flyers were anxiously awaiting the result of the trial. He went up amid much ceremony. To be sure, he went up—and away, 350 miles—and came down at Bruges in enemy territory.

The flyer had never made a flight in that territory before, and being unfamiliar with the course the engine proved so successful and made the flight in such record time he was not aware when he entered enemy territory. Of course the Germans pounced on this engine pattern with high glee.

This was a terrible blow to the British, it almost floored 'em. Immediately an investigation was instituted on the part of the British to ferret out any possible treachery. Nothing came of it, however. To my mind, in recalling the incident, it was but an unfortunate occurrence. Let us think no more about it

The Code of the Air.

Notwithstanding many articles printed to the contrary, there is a certain code of ethics followed by the aviators at the front—a certain politeness, as it were. If an Englishman is brought down back of the lines his "pals" are sure to receive a note telling his whereabouts, possibly the next day. A German drops this information over our lines. The same tactics are followed by the English flyers. This sounds strange, does it not? I am not attempting to say this code of manners is followed in any other branch of the service.

There is another case where politeness enters into the war game in connection with flying. There is a sort of unwritten agreement that the sleeping quarters will not be disturbed by the enemy flyers, especially at night, when the tired men are trying to snatch forty winks.

I have not yet become reconciled to the death of poor Guynemer. Splendid fellow—and brave as they come. Guynemer was a regular daredevil in the air. There was no hazard too great for him to accept. He was always a high flyer—but in this he had a reason.

His method of combating a fighting plane was to get the jump on the Boche by soaring way above the other machine. Then, without any warning to the enemy machine, he would swoop down earthward with the speed of an express train. Just before he passed his man he would straighten out and almost sideswipe him. Before he passed he would open up with his Lewis gun.

He was an expert at this particular type of strategy. If he missed his man and the Boche sailed away unscathed Guynemer would never follow. He took his chance; if he failed he would never return—and incidentally it might be stated that the Boche never lingered looking for trouble.

It was quite a long time before we had any other weapon to use in the air than an ordinary rifle; then came a pistol, and finally we were equipped with the Lewis gun. By George, that's the weapon for you!

I'll be glad to get back to the lines. I'm getting ten shillings a day now while I'm in Blighty. At the front it's one pound.

FRUIT-JAR RINGS.

Size and Quality of Packing Must Be Right to Properly Seal Cans.

Rubber rings of inferior quality and of improper sizes are held responsible for much of the spoilage of canned goods the past year. Because of a good deal of complaint the Department of Agriculture carefully investigated the question and found that many of the rings were not sufficiently durable to be used in the cold-pack method. Not only must the rubber rings be able to withstand hot water and steam, but they must not enlarge very much when heated. Rings for standard jars should have an inside diameter of 2¼ in. and the width of the circular band should be from ¼ to ⅜ in. Government investigators have drawn up a set of specifications for rings which have been adopted by the manufacturers.

Prunes cooked very slowly in their own water will need no sugar.

PACIFIC WHALE TO THE RESCUE

WILL GIVE MUCH MEAT THIS SEASON.

And Thus Help the Allied Cause—Whale Beef May Become Popular in Canada.

With April showers and budding flowers came also spouting whales in the waters adjoining the Pacific coast of North America. On April 1 a dozen ships of the Pacific whaling fleet left various harbors in the State of Washington and British Columbia and sailed out to the whaling grounds.

And though whaling is the oldest industry upon the Pacific coast, it became this year an old industry in a new guise, for during this year thousands of pounds of whale beef will be sold in Canada and the United States. It is a first-class food and, best of all, sells at the wonderful (in these days) price of ten cents a pound.

The furthering of the use of whale meat in huge quantities is largely a patriotic idea. By consuming it at home, large quantities of other kinds of meat can be released and forwarded to the Allied armies and civilian populations in Europe. Even whale will reach them, for the first canning factory to put it up was just recently finished in British Columbia.

Not New as Human Food.

Recently in Canadian and American cities banquets were held at which whale steak was served as the piece de resistance. It was part of an active campaign started to popularize the flesh of the great leviathan.

But whale meat is by no means new food to human beings. Since time immemorial the Eskimos of the Hudson Bay and Alaska coasts have eaten it. It was and still is one of their main food supplies, as well as giving oil for fuel. As is well known, the whale has a very small throat, averaging in the largest about ten inches in diameter. It lives on various forms of pelagic life, very minute creatures which whalers call "brit," and upon shrimps, herring and various small crustaceans.

Last year out of the stomach of a freshly killed whale five barrels of shrimps were taken. Because they could never find anything solid in any of the whales they killed, the Eskimos came to believe with passing years that the animal never ate; was, in fact, a spirit animal. For this reason before killing one for food and fuel a large amount of religious ceremony has to be gone through. This sometimes occupies two weeks, and as the whales can only be killed at a certain short period when they pass through particular waters, the Ehkimo ceremonies are often still in progress when the whales begin moving. Yet such is the Eskimo's peculiar adherence to this rite that rather than cut them short he allows the whales to go unhunted.

Dilemma of Eskimos.

A very amusing incident and one with rather a tragic side occurred a few years back to a band of Eskimos. Just shortly before going to the point where the whales were to pass this band had accepted Christianity. This, of course carried with it new rites, such as washing and refraining from work on Sunday. When they got to the point where they were to wait for the whales to appear it suddenly occurred to them that perhaps it would be just as well to perform their ancient rites, for, they argued, gods were strange beings. They had done everything so far to please this newly adopted white man's God; but, in so far as their own had proved very satisfactory for a good many generations, perhaps it might be just as well to propitiate him as before, which at the same time should not spoil their standing with the newly acquired God of the white man.

Thus strangely do these primitive people reason. So they began their ancient rites. In part the ceremony consists of drawing the whaleboats on shore and performing a long and intricate dance about them. What oil is also sprinkled around the boats and on a little path leading from them to the sea. Two poles are also crossed above the boats, upon which are hung bits of wearing apparel, pieces of whalebone, an old piece of chain, articles of clothing and a miscellany of other things. Each of these things has a certain significance toward the hunt.

Used in Europe.

Just as they finished their ceremony the whales made their appearance. Greatly rejoicing, the Eskimos were about to put to sea in pursuit when suddenly they remembered that this was the day set apart for the white man's God. Sunday was a taboo day, upon it no work or hunting could be done; and your Eskimo never breaks a taboo. So they sat down again to wait for the day to pass, and the whales went on and out of reach.

The Indians of the Pacific coast before the white man came hunted the whale in their swift, high-prowed narrow canoes, killing it with light harpoons. For many years whale meat was used largely by them. The Japanese for centuries have eaten whale beef. Among the nations of Europe it has been a common food in the past. To-day Norway and Denmark use a great quantity of whale fat in the manufacture of margarine.

In Britain last year 1,000,000 pounds of whale beef was consumed.

The meat is dull red in color when raw. When cooked it looks very much like venison. To some folks it tastes somewhat like liver, with a slight flavor of salmon. Others compare its taste to that of moose meat. Cooked with gravy and mushrooms, it makes an excellent dish. It is tender, though a little dry.

WEST INDIES SEEK NEW GOVERNMENT

CONFEDERATION OF BRITISH ISLANDS URGED.

Peasants Forced to Pay More Than Share of Taxes While Wealthy Are Favored by Law.

The future of the British West Indies is a question that must sooner or later receive the attention of the British Government, says a recent despatch from Jamaica. The war has brought about conditions which indicate that a scheme will have to be devised for the development of these colonies. Whether it will be confederation or a linking up with the Dominion of Canada is a matter of speculation. The idea of a Dominion of the West Indies is gaining ground, the feeling being that the colonies should play a more important part in the affairs of the empire than has hitherto been the case.

The bringing together of the best brains of the West Indies with the object of working out plans for the advancement of the colonies would be hailed with delight, and already the greatest interest is being shown in the confederation movement, which is spreading in the Caribbean, with St. Lucia as the base of operations.

Cost of Government.

The cost of administration in these colonies is higher than in the Dominion of Canada and nearly as large as in the Commonwealth of Australia. For administrative purposes Canada spends slightly over $140,000,000 a year, Australia over $106,000 and the West Indies $100,000. But it cannot be said that the advantages derived from the expenditure of upward of $150,000 a year in the West Indies for governors, administrators and commissioners can in any way be compared with the results achieved in any of the great self-governing dominions.

That the system of government which obtains in the West Indies is defective goes without saying. The want of a business government in almost every island is a factor that tends to retard the development of the country. In these days of advanced ideas it is certainly not wisdom to cling to a system that might have been considered useful, say, 100 years ago.

A government that is not dedicated to the development of the resources of the country, the extension of railways, the opening up of new roads to lands to be brought under cultivation; a government that fails to encourage the production of foodstuffs within the territory under its jurisdiction, while on the other hand, hundreds of thousands of dollars in money are sent out of the colony each year to North America to purchase grains and other articles that could well be produced at home, can hardly claim to be enlightened.

Tax System Ridicous.

A peasant owns a small plot of land with merely a hut on it; he is called upon to pay taxes on a $200 valuation. To improve that hut, to adopt methods that make for better sanitation and raise the morals of the occupants, is to bring the owner within the pale of increased taxation. On the other hand, the large landed proprietor enjoys the distinction of paying on a valuation which, pro rata, is considerably lower than the scale imposed on the peasant. In a word, it may well be said that the rich man is encouraged to increase his broad acres while the small man should not endeavor to leave the "squatter" class.

A business government in Jamaica would long ago have laid plans for the development of the shipping trade in the Caribbean, the natural result of the opening of the Panama Canal. But Kingston has not yet been made a free port; light and harbor dues are still being collected; the Government continues to impose restrictions in the matter of quarantine that make it embarrassing to shipping companies to send their vessels to this section of the Caribbean.

The Jamaica Imperial Association was recently formed to create a healthy public opinion on matters affecting the economic social, agricultural and commercial welfare of the colony.

Increase in Agricultural Exports.

The increase in staple products exported from Canada last year over the average annual shipments of the three years previous to the war are very striking. Here is the increase as given out by Chairman H. B. Thomson of the Canada Food Board: Pork, 122,000,000 lbs.; beef, 74,000,000 lbs.; butter, 12,000,000 lbs.; cheese, 80,000,000 lbs.; eggs, 15,000,000 doz.; wheat and flour, 85,000,000 lbs.

More than 100,000,000 acres will, it is reported, be planted to corn in the United States this spring.

By means of succession cropping, two or three crops may be grown, one after another, on the same land during one season. Early radishes, spinach and lettuce, may be followed by late potatoes, late cabbage, egg-plant, peppers, beans, sweet corn, melons or cucumbers. Early peas and beans may be followed by late beans, celery or sweet corn. Early cabbage, cauliflower and early potatoes may be followed by turnips, string beans, lettuce or winter onions.

The Paisley Advocate

PAISLEY, JULY 3rd, 1918

LABOR FOR FARMS MAY BE DRAFTED

Suggestion that this Will Be First Result of National Registration. Farmer Would Pay So Much, and Government Make up Ordinary Earnings of Workers

(Toronto Star Weekly)

Now that national registration is an accomplished fact, the first question which doubtless occurs to each of us is to ask just how registration is going to affect the individual. Those in charge of registration commonly made two announcements as to the purpose; one was to have a stock-taking of the country's population from an industrial point of view, and the second was to know the population, in order that an over-supply of foodstuffs might not be kept in Canada when the Allied nations are in need of our surplus. Whether this will be followed by a card rationing system such as exists in England is a matter of official consideration, but upon the standpoint of labor one suggestion has already gone to Ottawa. It was taken early in the week by the Government official who has been closely in touch with the farming situation, some provision made for farm labor if the supply of food is to be kept up.

The answer to the whole problem, he believes, has been found in question thirteen on the registration card, which, if answered fully, would give the officials at Ottawa a pretty good idea as to the number of men were raised on them, who have since taken up other employment, and who might therefore be sent back to the farms to help out during the rush season.

The suggestion which has gone to Ottawa has the conscription of labor for farms at its backbone. But it would be conscription tempered with judgment. There would be no financial burden placed upon anyone, for it is recognized that the farmer, accustomed to getting his labor for $2.50 a day, cannot afford to pay a city man his regular five or six dollars a day, no more than can the city man afford to go back to the farm and accept the lesser wage. To ask the farmer to pay more than the accustomed wage to a man who could not do a full day's work on the farm, would be unjust to the farmer, and to ask the city man to go out on the farm and work twice as hard physically as he was in the habit of working, for half the money, would likewise be unfair to the worker.

An Elastic Plan

Also, it would be unfair to ask John Jones to leave the factory and work for two-fifty a day, and to leave his neighbor Sam Smith, in the factory to earn five a day. Just because one man was raised on a farm and gained a little experience, there would be no reason why he should be penalized any more than any other man. So the point which the Government will have to decide is how to strike some happy medium whereby there will not be injustice done.

The idea is that every available man should first be listed, so he could be reached at very short notice, and there would be regular agricultural boards appointed to serve as the mediums between the farmer and the conscripted labor. Then, for example, if a farmer out in Markham township wanted three men for a week to help with the harvest or with any other special work, he would merely phone the Toronto agricultural representative and make his wants known. The representative would in turn notify three men from his lists, to report at such and such a farm and to remain there as workers for a week. That could be carried out all through the country and would provide the hopper through which the stream of men could be passed along to the farmers and back to their regular employment after their services were no longer required. Any farmer who wanted a helper for two months or three, or eight, could get him in the same way. The suggestion as to overcoming the financial difficulty of such an arrangement is this: A fixed rate of pay could be arranged which the farmer would have to pay into the Government, and the Government would be the one to pay the man for the time he was on the farm, paying him his regular rate of wage. In this way it would be the Government who would make up the difference between the wage on the farm and in the factory, and the only inconvenience would be what came to the worker in being asked to work a little harder than ordinarily.

In such an arrangement as this, provision would necessarily have to be made to see that the men drafted to the farms in a manner did not lose their regular employment, and this is a matter which is suggested should be taken up immediately between the Government and the employers. The employer would be given to understand that any man drafted in this manner could not be discharged because he might be away from his work at irregular intervals. This plan is being outlined as an alternative to closing down any definite industries, for it is recognized by those in close touch with the situation that to close down certain industries would accomplish nothing more than to throw a number of people out of employment, without providing the proper kind of labor for the farms. Whether or not the Government will act upon the suggestion is not known.

—A warning is given to the public in these days not only of wars and rumors of wars, but rumors of all kinds, not to be influenced by the same. Take the trouble to prove the truth of all you hear before you believe them; or what is still more important, before passing them on to others. A rumor came to our ears the past week that a man called at a home near Listowel, got a meal and then collected $200 from the house keeper for serving him food prohibited by the government's food controller. Such a report is too absurd to be seriously entertained, as ever having had substance in actual fact. If such a thing were done it would certainly be a fraud perpetrated by some rogue who chose burglary in that way.

LOCAL AND DISTRICT NEWS

Terribly Burned by Gasoline

Mrs. McDonald, wife of Mr. Wm. McDonald, M.P.P., of Chesley, was terribly burned on Wednesday of last week as a result of her clothes becoming ignited when she was cleaning a dress with gasoline. Her right side, arm and hands were terribly burned, but it is expected she will recover. Mrs. McDonald was alone in the house at the time and with great presence of mind put the greater part of the flames out by wrapping a rug around her body before a neighbor girl arrived and beat the fire out.

Will Be Very Much Missed

The removal of Mr. and Mrs. F. C. Ryan from town is universally regretted by the people of Paisley and surrounding country. Mr. Ryan has been manager of the Standard Bank here for ten years. Besides being a most capable business man, he took a pleasurable part in the social life of the community, was prominent in the A.F. & A.M., I.O.O.F., and C.O.F. fraternities, a leader in musical circles, an enthusiastic devotee to such sports as hockey and bowling, and last, but not least, was serving his second term on the school board, of which he was this year the chairman—an all-round citizen of useful talents and jovial disposition. Mrs. Ryan is an accomplished musician whose assistance was freely given and highly appreciated on many occasions. She was also connected with a number of women's social and patriotic organizations. We shall certainly miss this worthy and estimable couple from our midst, and continue to take a keen and friendly interest in their future welfare.

Death of Mrs. Parrott

Minnie May Majury, wife of Lionel R. Parrott, of Toronto, passed away very unexpectedly on Saturday evening at the home of her parents, Mr. and Mrs. Ed. Majury, of con. A, Elderslie. The deceased had been visiting in Toronto since a couple of years before her marriage five years ago. This spring her health failed and she came home to recuperate. Quite an improvement took place in her condition, and it was confidently hoped that she would fully recover, but on Saturday morning she took a hemorrhage, followed by another in the evening, which completely exhausted her vitality and caused her death. Mr. Parrott came up from Toronto on Saturday, arriving on the late train, and did not know of the serious turn until apprised of the death of his wife by the friends here. Their one child, a boy of three years, also survives. The sympathy of a wide circle of friends goes out to the sorrowing ones. The funeral took place on Tuesday afternoon, to Stark Vale cemetery, Rev. Mr. Diehl conducting the services.

Drowned While Bathing

Gordon Bailey, the ten-year-old son of Mrs. Jos. Bailey, met his death by drowning on Saturday afternoon when he went bathing in the Saugeen at Goldie St. bridge swimming hole. Gordon was a strong, sturdy lad of his age, but could not swim. He went into the river alone just after noon and got beyond his depth. His plight was noticed by at least one passerby, also by two smaller boys who were preparing to go in swimming, and the alarm was given. Several boys and young men did their best to locate the body by diving, and two boats were brought into use by them, but it was about twenty minutes after Gordon disappeared that Mr. Walter Stark, on his first attempt, dove and brought the body to the surface. Dr. Fourney and Dr. Gage, assisted by others, employed all available means of resuscitation, but without success. Gordon was a lad in whom many of our citizens took more than a passing interest, because of his bright, active disposition and cheerful readiness to render a service or do a favor when called upon. He was liked by his schoolmates, and the beginning of the holiday term is very much saddened to many of them by his sudden taking away. The funeral on Sunday afternoon, conducted by Rev. Mr. Diehl, assisted by Rev. Mr. Little. The sympathy of the community towards the grief-stricken mother, little sister and guardian uncle was manifested by the very large attendance. Interment took place in Douglas Hill cemetery.

A Great Garden Party

A statement of the receipts alone will prove that the garden party on Friday evening under the auspices of the Women's Patriotic League was the greatest success of anything of the kind ever held in town. The proceeds at the gate amounted to $115, and the sales at various booths brought the total up to $256. We are safe in saying that there are no grounds in this big county of Bruce better adapted for such an occasion than those at the residence of Mr. A. Cormack, where the garden party was held. The spacious level lawn, extended and well-trimmed hedges, numerous stately shade trees, and the terraces rising from lawn to house level, make it a most beautiful spot, where it is possible to have perfect arrangements for accommodating a large gathering of evening pleasure seekers. Chesley band was engaged for the occasion, and their splendid music, also cornet solos by Mr. C. B. Robinson of Walkerton, along with folk dances and drills by school children under the direction of the principal Mrs. Burchill, and two admirable addresses by Rev. Mr. Farney of Chesley and Mr. C. M. Bowman, M.P.P., of Southampton, made up a first-class programme. Mr. Wm. McDonald, M.P.P., had been advertised as the speaker of the evening, but could not be present owing to the serious accident which Mrs. McDonald met with. Mr. Hugh McKerracher was chairman for the evening. The crowd was a large one and very generous in its patronage of the refreshment booths and tables. The ladies of the Patriotic League desire to thank all those who took part in the programme, as well as those who contributed supplies or assisted in any way to make the affair such a great success. To Mr. and Mrs. Cormack they are particularly grateful for the use of their grounds.

INTESTINAL PARALYSIS

"Fruit-a-tives" Quickly Relieved This Chronic Trouble

580 Cassgrain Street, Montreal.

"In my opinion, no other medicine is so curative for Constipation and Indigestion as 'Fruit-a-tives'.

I was a sufferer from these complaints for five years, and my sedentary occupation, Music, brought about a kind of *Intestinal Paralysis; with nasty Headaches*, belching gas, drowsiness after eating, and pain in the back.

I was induced to try 'Fruit-a-tives' and now for six months I have been entirely well". A. ROSENBURG.

50c. a box, 6 for $2.50, trial size 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

The Bank Change

The amalgamation of the two banks in Paisley went into effect on Tuesday, the Royal taking over the business of the Standard, and on the same arrangement a similar amalgamation was effected at Newcastle, where the Standard took over the business of the Royal branch there. Numerous changes such as these are taking place all over the Dominion. In the month of May, for instance, there were 12 local banks closed up and only four new ones opened in all Canada. As mentioned before, these facts show how our financial institutions are being effected by war conditions, the lack of help being almost altogether responsible for the reduction of local branches. Whatever the financial resources of any of the big banking organizations may be, or how satisfactory their business may be, it is impossible for any of them to maintain all the branches they had prior to the war, and they are consequently making a saw-off with each other at such points as they find it mutually advantageous to do so. Paisley and Newcastle were two of the places where such arrangement could be made, and each village suffers a loss that is felt, but need not seriously interfere with the prosperity and welfare of the people thereof.

County W.C.T.U.

At the county convention in Teeswater last week the following officers were elected: President, Mrs. B. C. Ashcroft, Wiarton; first vice-president, Mrs. F. F. Moore, Teeswater; second vice-president, Mrs. Wm. Halliday, Chesley; recording secretary, Mrs. Ida Stauffer, Walkerton; treasurer, Mrs. H. B. Putnam, Paisley; corresponding secretary, Mrs. J. G. Simpson, Wiarton. The union recommended the election of local unions in all rural school sections. Mrs. John Clark read a paper on "Anti-Narcotics," calling attention to the fact that the farmers of this county are increasing their tobacco acreages and dropping wheat, so great is the demand for the weed and so remunerative the prices. Mrs. Halliday, of Chesley, spoke on "Citizenship," and urged the increasing of woman influence at the ballot box. "Temperance in the Sabbath School," was dealt with by Mrs. (Dr.) Phelps, of Port Elgin, and "Scientific Temperance" by Mrs. Stauffer, of Walkerton. The Bruce County Council gives dollar for dollar to every patriotic society working in the interests of the forces overseas. The W.C.T.U. does not come under that head, but as they are now working in connection with the Y.M.C.A. the union decided to approach the County Council and ask that body to treat them as they do other organizations. Mrs. Stevens, the provincial president, was present.

USE SUBSTITUTES FOR WHEAT FLOUR

The Dominion Food Board has issued orders making the use of substitutes for wheat flour compulsory.

The order defines as substitutes for wheat flour, "pure and wholesome corn, oats, barley, rice, rye, buckwheat, tapioca, or potato flour, bran, shorts, oatmeal, rolled oats, corn meal, corn starch, hominy, corn grits, rye meal, rice, tapioca, or any mixture of same, and potatoes."

Four pounds of potatoes will be considered equivalent to one pound of the other substitutes.

The order provides that on and after July 1, bakers, confectioners and public eating places in making any bakery product in which the use of substitutes in certain definite proportions is not prescribed by previous orders of the Food Board, must use one pound of substitutes to every nine pounds of standard wheat flour.

On and after July 15, this proportion, so far as places east of Port Arthur are concerned, must be increased to one pound of substitutes to every four pounds of white or standard wheat flour.

On and after July 15 every baker must place on each loaf of bread a label or sticker bearing his name and address, and the words "victory bread."

The order makes it an offence for any person to sell or have in his possession any bread, rolls, pastry or any other product in which white or standard flour is used, which does not conform to the requirements of the Food Board. The penalty for violation of the new regulations is a fine of not less than $100 and up to $1000, or imprisonment for a period of three months, or both fine and imprisonment.

—Chesley tax rate is 36 mills on the dollar for this year.

S. F. BALLACHEY

The Store with the Stock

IN OPENING UP under my own name, I do so with the knowledge that I am no stranger to most of you. I have been dealing with you in a business way for many years, and I hope to have the pleasure of doing so for many more.

It is my intention at present to continue in the conservative manner you have been accustomed to, and one which, I think, best serves your interests as well as mine.

Any stocks which have been depleted during out sale are being replenished, and I intend to have whar you want when you want it, and at the price you want to pay.

S. F. BALLACHEY

SOUTH RIDING OF THE COUNTY OF BRUCE

Returns of the Registrations on Saturday, June 22nd

Municipality	Males	Fem.	Total
Elderslie	518	519	1037
Brant	780	754	1534
Carrick	1167	1218	2385
Culross	280	268	548
Kinloss	536	539	1075
Huron	811	817	1628
Greenock	547	552	1099
Chesley	607	742	1349
Walkerton	889	1108	1997
Paisley	282	363	645
Teeswater	476	554	1030
Lucknow	386	489	875
	7276	7923	15199

Unincorporated vaillges, which are included in the above—Muldmay, total, 999; Formosa, 718; Ripley, 755; Elmwood, 348; Cargill, 389.

The following are those who have recorded the highest individual registrations: (1) Albert W. Hinsperger, of Muldmay, 539 registrations; (2) John Farquharson, of Teeswater, 434 registrations; L. A. Brink, of Teeswater, 336 registrations.

Mrs. L. H. McNamara, of Walkerton, recorded 284 registrations, the highest by any lady assistant deputy registrar.

Practically every school teacher in the riding took part in the work. The methods of taking the registration were uniform, and I am glad to say the work was well done. It would be hard to make particular mention of the helpers, but in many cases the thoroughness of the completion of the cards and the beautiful penmanship could not be excelled.

The remuneration allowed to the deputy registrars and their assistants for their services, in most cases, has already been promised to Red Cross or other patriotic causes. In every case the assistance was cheerfully volunteered, and it has been a pleasure to me to have such cordiality and co-operation in the performance of the duties required.

I wish to express my gratification to the several newspaper publishers who have so many demands upon them for free advertising, but who have very kindly responded to my requests for publication of registration information in their newspaper columns.

GEO. D. MacKAY,
Registrar, South Bruce

BRUCE COUNTY RATES FOR 1918

Below is a table giving the county council's assessment upon each municipality for 1918, also for 1917, which shows that the tax rate for county purposes will this year be doubled in nearly every town, village and township. The increase is due largely to the grants for patriotic purposes:

	1917	1918
Albemarle	$ 981 82	$ 1964 50
Amabel	3827 51	7663 00
Arran	8143 44	16330 88

HOW THE LATE PTE. GEORGE SWITZER FELL

The following letter, very much delayed in transmission, was received on Monday by Mr. and Mrs. Switzer:

No. 4 Canadian Gen. Hos.
Basingstoke, Hants, England
May 1st, 1918

Dear Mr. and Mrs. Switzer:

You have my greatest sympathy in your sorrow. George and I were always together, in fact they used to call us the twins. Talking to me of his home one day—it was one of his most favorite subjects—he said, "Jock, if anything should happen to either of us don't you think it would be a good plan to exchange home addresses?" I'll admit that I hemmed and hawed the suggestion at the time, possibly because I am Scotch tions at times. So I said, "Forget it, and inclined to be a little superstitious." But there was no forgetting about it, so he said, "Look here, Jock, you know a fellow's people get very little information if anything happens to him." I gave in then, so that is how I come to have your address. I only hope you will be able to read this alright, for I have to write with my left hand, being hit in the right arm. On the 23rd of March we rode to a part of the line which, though being very thinly held, was being pressed back. We dismounted and were soon up with the infantry and in the thick of it. Our first position was along the edge of a wood through which the Germans were advancing. There was a bit of a field behind us and then more woods, on our left, woods, and on our right a railway cutting. George and I were sent down a twisting old cart track which ran through the wood in front of our left flank so as to guard against the Germans rushing up this cart track, which if they did, and rushed up the railroad cutting at the same time, would mean surrounding us. (The time was then about 10 o'clock in the morning). So old Switz and I crept down the cart track about 300 yards till I should say we weren't 75 yards from the enemy. Then we got in a position so well concealed that the enemy couldn't see us, and just waited and listened. While there some shells landed so close that things looked pretty hot, and in fact the concussion from one knocked us down. It's still a marvel how we didn't get hit then. At last a messenger came and told us to come on quick as the Germans were coming up behind the regiment and they were going to fall back through the wood on the left. So we had to make a run for it. In open country fighting it's the easiest thing in the world to get cut off, as the situation changes with incredible speed. We no sooner got into the wood where the regiment had gone than the Germans simply swarmed up in the broad cutting, shouting and singing "Hoch! hoch! hoch!" and blowing trumpets. (It's the only time any of us ever heard of them doing this). Just as we caught up with the rear of the regiment they caught sight of us through the trees and undergrowth and opened up on us, but there was only one of us hit and he not right. Soon we reached the far side of the wood and took up a position, and old Switz and I settled ourselves in a shell hole glad of a rest, for we were both pretty well out of breath and sweating. You see we had been helping the wounded fellow, he was on a stretcher, and with all our equipment on and stepping over logs it was still going. We had no sooner got settled than up came the sergeant and told me to report to the Major as runner. I was sore at us being separated, but of course had to go. That was the last I saw of him, but I'm glad to be able to tell you what happened. We retreated from this position, but not before we were nearly surrounded. George and three others stayed behind to help carry out a wounded fellow. By this time the Germans were creeping over like a land and some of the boys saw the four coming with the stretcher in plain view of Fritz. Suddenly they all seemed to crumple up and then one was seen to get up and run, clutching his chest, toward the boys. He got within 100 yards of them and fell. Two of them ran out and helped him. They found it was old Switz badly hit by bullets in the stomach and arm. He was conscious, but pretty well played out. They had carried him to a clearing station about two kilometres farther on. He was taken care of there, but I am sorry to say his wounds were fatal. If there is anything else you wish to know I will tell you if I know.

I remain,
Yours sincerely,
938 Pte. Alex Turner

WHAT THE PRESS RECEIVED FOR ADVERTISING THE VICTORY LOAN

Various estimates have been made as to the amount the press received from the Government in connection with the press publicity for the Victory Loan, but the actual figures paid were clearly set forth in audited statements submitted to the annual meeting of Canadian Press Association, Inc., held in Toronto on June 13th and 14th.

The total amount paid by the Government for advertising space was $165,419.81, which was distributed among 1,400 newspapers and other publications. Approximately $5,000 was spent in the preparation and distribution to the press of a large number of special articles, illustrations, cartoons, etc., which were inserted in the press without charge. The setting of type and making of duplicate plates of the advertisements for the various publications used and the fees paid to the five co-operating advertising agencies for their services cost in the neighborhood of $17,000, making the total expenditure $208,166.09.

As the total cost of floating the Loan was approximately $5,000,000, the Government's expenditure on press publicity represents less than five per cent of the total expenditure. It is interesting to note also that the press publicity cost only one-twentieth of one per cent of the total amount subscribed to the Loan.

The press publicity for the Loan was handled by the Canadian Press Association, Inc., one of the objects of the Association and its individual members co-operated splendidly in making the campaign a success. During three months last June most of the time of the President, Mr. J. H. Woods, Calgary Herald, and the office staff, was devoted to the press publicity campaign, and for several weeks the committee of publishers in charge were in almost continuous session. The individual members, on the other hand, contributed without charge space in their newspapers and other publications which, if calculated at their regular commercial rates, would run up to more than the total amount paid for the advertising space.

Neither Canadian Press Association, Inc., as such, nor any of its officers or committees, received any remuneration for their services in connection with the Loan, those services being given voluntarily and in the spirit of national service.

FOOD OFFICERS CAN SEARCH ANY PLACE TO CATCH HOARDERS

It is announced from Ottawa that in order to facilitate the operation of the anti-hoarding law, an order has been passed giving to an authorized representative of the Canada Food Board the right to enter and search any place where it is suspected that food is illegally held, or offence against the Canada Food Board regulations. The order provides that any person duly authorized by the Food Board, who has reason to suspect that any building, vessel, vehicle, receptacle or place contains any food or foodstuffs in excess of the quantities prescribed by law, or who has reason to suspect that any offence against the regulations of the Canada Food Board is being, or has been committed upon, or within such premises, may enter the latter at any time of the day for purposes of examination, search and inspection.

Any justice who is satisfied that there is reasonable ground for believing that food in excess of the legal allowance is held, or that there is anything in such premises which would afford evidence as to the commission of any such offence, may issue a warrant authorizing search and seizure.

Refusal or failure to admit any person authorized by the Canada Food Board, or any constable or other person acting under the search warrant issued by any justice, or any attempt to obstruct the entrance of any duly authorized person, constitutes an offence involving a penalty of not less than $25 and up to $1,000, or imprisonment for three months, or both fine and imprisonment.

When any person is charged with any violation of any of the food regulations the burden of proving that food held by him or under his control is not held contrary to, or in excess of the quantities prescribed by law, shall be upon the person charged. A penalty of from $100 to $1,000, or imprisonment, or both fine and imprisonment, are provided for violation of the new regulations.

Pink Gingham and Blue Chambray

By Mabel McKee

(Concluded from last week).

An hour later the light was still burning and Fanny was not even near the land of sleep. From the first pages of the magazine she had turned to the middle ones and then on toward the back. A daintily clad girl on one of the pages had caught her attention. Now she sat with parted lips, still studying the picture.

"I should like to be as pretty as that," she whispered to herself. "And I'd like to have a dress like that one too. Jane Braddon couldn't make one like that. She couldn't get the skirt to hang like that or the girdle to fit."

She turned to read the directions for making the dress but there were no directions. The printing underneath the picture told her that it was a ready-made garment and gave directions for ordering so that one could get her exact size. It came in different materials and colors from pink gingham to sheer, white organdie.

"Pink gingham!" Fan's voice was ecstatic. "Pink gingham! Why, I could wear that on afternoons right here on the farm and I could be pretty all the time at home too."

On the next page there was another picture. Here the same young woman was clad in a dainty cap and long apron. "Bungalow outfit," Fanny read with eyes that were brilliant. "Why, I'd love to churn my butter if I were dressed in an apron like that. I wouldn't ever mind the old milk house again if I could look like that girl when I was working in it."

On another page was an outdoor outfit; a knitted sweater and cap, a long tweed coat and a broad felt hat. "Oh, they look like the country and town and every place a person could ever go! They are more stylish than anything I ever saw at any place. They're prettier than Cousin Jane's."

Very carefully she counted up their cost. Then she slipped into the next room where her mother was getting the guest's bed ready for the night. "How much money can I have to spend for my new clothes, Mother?" she asked eagerly.

The amount her mother named brought a smothering embrace from Fanny. It was almost twice as large as the total she had counted in the next room.

Fanny's second hug sent the blood racing through Mrs. Warden's body. It was good to have her daughter radiant once more. "Honey girl, why didn't you tell me that you were worrying about your clothes?" she reproved Fan gently. "I wish I had told you before that you were not to be stinted for your wedding things. You can have more than this if you need it—"

Fan was already back in her own room, again poring over the magazine's pictures. "It says the fashion editor of the magazine will help one plan one's trousseau," she murmured to herself. "I'll write her a letter and ask her about it. It won't take long to get an answer. While I am waiting for it, I can begin to make out the list of things I want to buy."

For almost an hour she worked on that letter. Somehow without Fan's realizing it, the longing for the new bungalow, the disappointment of having to stay on in the old farmhouse as well as the need of a trousseau, slipped into the letter. The fact that three rooms would have to take the place of an entire bridal bungalow and the question of how to arrange these rooms so that they "would do" went in too. Taken altogether it was a very personal letter that the rural mail carrier took away from the Warden box the next day.

"It's queer I never thought of these pictures being made for us," she told her mother as she studied one of a dining room in a model country home. "The furniture is old-fashioned like ours but ours is not arranged right and our curtains are all wrong too. I'm going to take some of our pictures down from the wall and may I get a new rug—plain one like that one? The roses in our old one are too large and there are too many colors in it."

The answer to the letter came before Fanny thought it would. And with the answer came radiance to Fan. "A whole trousseau planned. Mumsie!" she rejoiced. "One for me—just the sort I really need but not the kind I would have bought. I was going to have one like Cousin Anne's and it's just as this editor says—here was for a college town and mine will be for the country. And the things, she suggests, are pretty home things—things that will make me pretty at home every day that I live."

As Fan unpacked the boxes which came in response to her order, she tried on the frocks for her mother's inspection. During that inspection Mrs. Warden became enthusiastic. "They fit you just as if they had been made on you—even the bungalow aprons," she said. "That pink gingham makes you look like a queen. Think of wearing it every day! I'm sure butter will taste better when you begin to wear those blue chambray aprons while you churn."

"Dan will think so," Fan smiled shyly. "That's the reason I wanted a wedding trip, Mother, so that I could wear all my wedding clothes and let Dan see me pretty every day. I thought that would make him love me better. I thought that marrying and then just staying on here would be monotony. Instead I'll wear all my pretty things all the time right here and be happy all the time!"

Half an hour later she was at the milk house molding the butter she had churned that morning. "Seven and a quarter pounds," she exulted. "And isn't it beautiful butter!"

She heard big Dan whistling out in the apple orchard. Hastily putting her crock into the trough she rushed down the orchard path. "Everything has come, Danny," she called, "and they're all more beautiful than we dreamed!"

Big Dan dropped his scythe and came over to her. Timidly he slipped his arm around her. "And it's less than a month now until you are a bride, dear."

Fanny put both slender arms around his neck. "Isn't everything beautiful? And won't it be still more beautiful when—" she hid her head on his shoulder and whispered, "when we are —married?"

To a Man "Somewhere in Canada."

Be Noble! No! That word has never yet
Fallen unheard upon a noble ear.
Thou'lt wait? Too long, thou'lt wait,
Till time shall bring anear
Grim footsteps to our poor-locked door.
Then thou shalt feel the sweet, sweet sense
Of Liberty no more.

Up, while the day shines! Afar in France there lies
The field of action for thee, selfish one.
There the dread bullet flies,
But, if thou hide from it,
The chance grows yet more sure that soon
Thy dear Canadian birds will learn
Some unlearnt German tune.

To the rescue! Yes, for the dusk comes fast,
Our sun shall sink if Joshua not his arms
Aloft will hold in faith,
A new sun, our quiet farms,
And towns to drench in its red light
From the red East shall rise. Yes, go!
God keep thee in His sight.

Fire Waste and How to Prevent It.

Conservation of fire waste is one of Canada's greatest problems.

Over $25,000,000 in property values were burned last year.

Neglect of simple precautions was responsible for three-quarters of this loss.

Stove pipes should not pass through wooden partitions.

Electric wiring should be installed by competent men and should be regularly inspected.

Rubbish should not be permitted to accumulate in attics and basements.

Vigilance in regard to these seemingly trivial matters will eliminate one-half of our fires.

Abolish the "strike anywhere" match and hundreds of children's lives will be saved.

Trained fire departments may extinguish fires, but they are helpless to prevent them.

Insurance partially indemnifies individual losses, but cannot restore the property destroyed.

Only individual carefulness can materially reduce Canada's fire waste.

Now is the time for action. Will YOU do your part?

A Mary For His Oliver.

It is told of Dr. Oliver Wendell Holmes that he was one day strolling on the beach near his summer home when he began chatting with a little girl who was playing in the sand. The child soon slipped her hand into his and walked with him. By and by she said:

"I'll have to go home now."

"Good-by, my dear," said Dr. Holmes, "and when mother asks you where you have been, tell her you have been walking with Oliver Wendell Holmes."

"And when your folks ask you where you have been," said the child, "tell them you were walking with Mary Susanna Brown."

For Mending China.

An old and tested recipe for a mending substance for china and glass, which will resist the action of water and heat, is as follows: Mix a cupful of milk with a cupful of vinegar. Separate the curd from the whey with the whites of five eggs, beating the whole thoroughly together. When it is well mixed, sift in a little quicklime and stir until it is a thick paste. This dries quickly and may be used very satisfactorily for broken china and glass.

Constant shallow cultivation keeps the plants growing.

In 1914 about a million and a half cwt. of margarine were imported into Great Britain. In 1916 imports had risen to more than two and a half million cwt., at a cost of nearly £20,000,000.

Soldiers, the eyes of Europe are upon you. You have great destinies to accomplish, battles to fight, dangers and fatigues to overcome. You are about to do more than you have yet done for the prosperity of your country, the happiness of man, and for your own glory.—Napoleon.

Food Control Corner

How About The Harvest.

The shortage of flour and wheat products is so serious between now and next harvest that every effort must be made by this continent to tide it over. Farmers by producing wheat are helping to win the war. By saving flour they and everybody else in the country may also help towards the same end. In this connection it is of interest to note that in the West it is estimated that the three Prairie Provinces this spring have sown an increase of about 2,600,000 acres of which 2,000,000 acres are of wheat. This is the report of Mr. J. D. McGregor, Director of Labor for the Canada Food Board, with offices in Winnipeg. It is based upon estimates received from a large number of points throughout the three Provinces as well as upon the personal observation of Mr. McGregor himself. If the average crop from this increased acreage amounts to only ten bushels of wheat per acre, which is a very low estimate indeed, the average being more like twenty bushels, it would mean 20,000,000 bushels of wheat. The average consumption of wheat in the wheat consuming countries the world over runs about five bushels per capita per year, so that the increased crop which Canada expects to produce this summer would feed 4,000,000 people for twelve months. At a most conservative calculation, that is to say it would feed the bulk of the British army. The probabilities are that this increase will be double that amount and it is to be hoped such indeed will be the case, as there is need of every bushel.

Dr. J. W. Robertson, who made a tour of Eastern Canada, in the production campaign on behalf of the Food Board and the Minister of Agriculture estimates an increased acreage of cultivated crops for the five Provinces, Ontario, Quebec, New Brunswick, Nova Scotia and Prince Edward Island, of 2,000,000 acres. Compared with former years, there will be quite an increase in wheat acreage in these Provinces but what this amounts to it is impossible to say, as the fall wheat did not winter very well in many districts where an attempt was made to grow it. Some of these areas, however, have been replaced by spring wheat.

The Eastern Provinces will grow also increased amounts of fodder for livestock, so that the meat supply will benefit as well as the dairy output.

Canadian farmers are responding magnificently to the call for increased production, despite the many other calls that have been heard and answered. The world is at the greatest crisis in its history and the farmers of Canada have realized the fact and shown the true Canadian spirit. It remains now for the people of the towns and cities to organize and sacrifice personal interests in a wholehearted campaign to save these crops, which have been so successfully planted despite difficulties, so that the harvest will be as great in proportion as the acreage sown. This summer and autumn will mean a long pull and a strong pull for all hands.

RAIDING INFORMATION.

Londoners Stand an Even Chance With German Bombs for 32 Years.

An ingenious person has calculated the chances of the average Londoner being hurt by enemy bombs.

"Taking the area of London as 100 square miles," he says, "with a circle 60 yards in diameter as the area in which a bomb would cause serious inconvenience, and assuming the enemy succeeds in dropping 200 bombs in London every month all the year round, assuming also that there is an equal likelihood of a bomb dropping at any one point as at any other, the war will have to last thirty-two years for it to be likely that a bomb will drop within one's own circle.

"In other words, in thirty-two years of such bombing there would be an even chance for and against such an event happening. Again, the chances would be against a direct hit on one's roof of ten yards square if warfare of this intensity were to continue 894 years."

Great War Loans.

The following are the greatest war loans made by various belligerent nations:

British Victory Loan early in 1917, 5 per cent. Total subscriptions, $5,-000,245,220.

United States Second Liberty Loan, 4 per cent. Total subscriptions, $4,-616,000,000.

Eighth German war loan, 4½ per cent. and 5 ptr cent. Total subscriptions, $8,600,000,000.

French war loan of 1915, 5 per cent. Total subscriptions, $2,261,-834,409.

Austrian seventh war loan, 5 per cent. Total subscriptions, $1,150,000,-000.

Italian fourth war loan, 5 per cent. Total subscriptions, $1,000,000,000.

Hungary seventh war loan, 6 per cent. Total subscriptions, $600,000,-000.

Canadian Victory Loan, November, 1917, 5½ per cent. Total subscriptions, $418,000,000.

Mending an Electric Bulb.

By turning on the current and tapping lightly on the side of the globe you can often make the broken wires vibrate enough to touch one another and become welded together again.

PLANNING YOUR CANNING.

Two big facts face the farm woman. After four years of war, food must be preserved as never before. That is the first fact. But as for extra workers, hired help, labor—call it what you will—well, every farm woman knows "there simply ain't no such animal." That is the second fact.

See that your wash boiler has a well-fitting cover and a false bottom which one of the men can easily make for you from laths.

Tops and rubbers for your jars are of primary importance. Many rubbers last year were of very poor quality, and much spoilage resulted. No rubber should ever be used twice. When a can of fruit or vegetables is opened, the rubber should be discarded and saved for the "rubber man." To test new rubbers pull and jerk them. They should spring back to their original shape.

Valuable tests for the tops of jars are: Screw on the top without the rubber. If the thumb nail can be inserted between the top and the glass, the top is usually defective. Put on a glass top without the rubber. Tap the top edge. The top should not rock. Sometimes jars are defective at the top. This can only be ascertained by running the fingers over the spirals. If they are smooth the jar is probably good.

Just a word here. Don't throw away defective glass jars, those which will not screw tight. Use them to hold cereals, dried beans, peas, and the like; or use them for jelly and jam. Every available piece of glassware should be used this year. Small-necked bottles can be used to hold fruit juices.

It may save time and trouble later to test jars by tempering them, not on the day they are to be used, as is sometimes directed, but before the canning rush begins. To temper jars they are put in cold water, brought to a boiling point, and boiled twenty minutes. If they are imperfect they will probably break in the tempering instead of the canning. It is not a pleasant experience to have the jars break after the hot food has been poured into them. It may happen anyhow, but it is not so likely to do so if this test has been made with success. We will assume that you have tested jars and tops, purchased and tested new rubbers. So much for canning.

You will want to dry—especially vegetables. A special apparatus is very helpful. If this can be got ready before the rush season commences you will bless your foresight many times.

In order to conserve your strength in the most efficient manner, you should plan to do a little of the work each day. It is wise to gather from the garden and the orchard not just the amount of vegetables and fruit which you happen to need for the meal, but rather to take all the tomatoes, beans, peas, etc., which are ready for picking and which will spoil if left on the vines. You can get the surplus ready for the drier or can it in odd minutes while you are getting dinner.

It would be impossible as well as very foolish for one to attempt to preserve all fruits and vegetables in the same way. Drying and the various methods of canning should all be used. One will fit into the other, so that no time need be wasted and more than one thing can be done at once.

It may as well be admitted that, while greens, asparagus, beans, and peas are more desirable canned than dried, the sure canning of these takes considerable time unless you have a pressure canner. Corn is also difficult to can by ordinary methods, but this need bother no one, since dried corn is so delicious.

Preservation by drying is so satisfactory for navy beans, pumpkin, and squash that it would be unwise to use up glass containers by canning them to any great extent. Some fruits dry very well. No woman can be excused for wasting apples when they are so easily dried. Extra peaches, pears, and plums may also be preserved by this method.

In general, canning is most desirable for tomatoes, eggplant, cauliflower, rhubarb, grapes, berries, and the other fruits. Each housewife will have to decide for herself what she is going to do about string beans, lima beans, peas, and asparagus. Certainly they should not be wasted.

The open-kettle method of canning should be used only for tomatoes and fruits. The cold-pack method can be used for all fruits and for most vegetables, provided enough time is given to processing.

The water bath, using the wash boiler with the false bottom, is the most convenient method for the cold-pack, except the pressure canner, but in an emergency the oven may well be made use of by placing the cans on a board bottom in the oven and keeping the heat very moderate during the time of cooking.

The cold pack can easily be done with the fireless cooker by following these steps: Partially cook product or pack cold into clean jars; fill jars with syrup or with brine and other ingredients; pack into fireless cooker kettle and cover with boiling water; place cover on kettles and lock cooker. Leave overnight or until cold; seal cans immediately.

With careful planning a clever housewife can make use of two or more of these methods at the same time, and an afternoon's work may have more to show for it than was formerly the case. For example, if she must can both fruit and vegetables at the same time, it is wise to plan to use the cold pack for the vegetables and the open kettle for the fruit. It will be well to lock the door and devote one's energy to keeping track of the "irons in the fire."

It is well to remember that sterilization is the most important thing in canning. All jars, covers, and rubbers should be thoroughly washed and cleaned. When the open-kettle method is used, the rubbers, covers, and jars should be washed and then put into a large pan on a rack or thick pad to prevent them from resting on the bottom of the pan. They should then be covered with cold water, which is brought slowly to the boiling point and allowed to boil ten minutes.

Scalding and blanching is absolutely necessary in preparing vegetables and some fruits for the cold pack. It consists in immersing the prepared vegetable into boiling water or steam and leaving it there for a few minutes. This process shrinks the material.

The cold-dip process should always immediately follow the scalding and blanching. It consists merely in dipping the blanched material into very cold water. If the sack containing the material to be blanched is fastened on the end of a stick there will be no danger of burning the hands.

Syrups are usually added to fruits and brines to vegetables. When the jar is tightly packed with material, the brine or syrup should be poured into the jar until it is completely full.

Canning syrups are prepared by mixing two cupfuls of sugar and three cupfuls of water and boiling for different lengths of time. Thin syrup is just brought to a boil, medium thin is boiled two or three minutes, medium thick is boiled six to eight minutes, and thick syrup is boiled eight to twelve minutes. With the present sugar shortage, corn syrup should take the place of at least part of the sugar.

Brine for vegetables is made by adding one level teaspoonful of salt to a pint of water. Jars filled for the cold-pack process should be closed lightly—not sealed tight—during the processing. If a wash boiler with a false bottom is to be used for the processing, the jars should be covered with water.

Count time after the water begins to boil and see to it that the water is kept boiling vigorously until the time is up. Directions for operating the pressure cooker come with it. These should be followed carefully.

SHRAPNEL TAKEN FROM HEART.

Remarkable Operation on British Soldier Successful.

A remarkable operation has been performed on a soldier at Leeds Infirmary, says a London despatch. A piece of shrapnel weighing sixty-one grains was extracted from the anterior walls of the heart.

The patient is Private John Britland, who was wounded at Arras on April 11 last year. After receiving treatment in several hospitals he was taken to Leeds Infirmary, where a radiograph established the fact that he had a piece of metal in the wall of the heart itself. He is making steady progress to recovery.

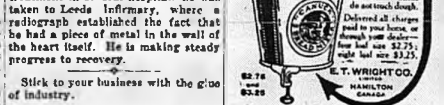
FISH NAMES AFFECT MARKET.



Extent of the Demand Depends on the Popularity of the Name.

"What's in a name?" is a modern question implying a negative answer. There are instances, however, where a name is of prime importance. For example, take such a common product as fish. More than 500 species, including sub-species, of fish are found in Canadian waters, but only a few dozen are used for human food. Some, of course, are not suitable for food, but in many cases only the name that has been given to the species prevents them from being utilized. In such instances, the obvious thing to do is to discard the bad name and apply a good one. Dogfish, for food as dogfish was quite impossible in the United States, but it was re-named "grayfish"-and cleverly advertised and was soon in demand. In Canada, about the only use that is made of these "ocean pests" is to reduce them for their oil and for fertilizer. Such "trade names" have long been applied to other more commonly used fish. Thus, ling are sold as cod, and the bulk of the canned sardines sold in Canada are really not sardines at all, but small herrings.

Again, there are certain fish that have "made names for themselves." This is one reason why such a comparatively small number of species of fish are used as food. Everyone knows that salmon and halibut and flounder have the name of being good fish and so everyone buys them. It would be to the advantage of customers to remember that dogfish or catfish, or other ill-named fish, are not necessarily objectionable as food. At the same time, dealers might profitably apply new and more attractive names to hitherto unused food fish as a step toward making them more attractive to the consumer.

Many women look older than their years largely because they do not take proper care of their complexions. Ingram's Milkweed Cream will keep you looking younger than you are. It keeps the complexion clear and colorful. It keeps the skin soft and in a healthy condition because it has distinctive therapeutic effect. It tones up the cuticle and tissues.

For shrinkage of the nose and forehead try Ingram's Velvola Souveraine Face Powder. It is so fine and delicate in texture that you can scarcely detect it yet it stays on and effectually conceals the minor imperfections of complexion and skin perspiration. A full line of Ingram's toilet products including Zodenta for the teeth, is at your druggists.

For the dainty negligee, this design is particularly attractive. McCall Pattern No. 7821, Ladies' and Misses' Kimono. In 3 sizes, small, medium and large. Price, 20 cents.

These patterns may be obtained from your local McCall dealer, or from the McCall Co., 70 Bond St., Toronto, Dept. W.

SPORTS IN WAR TIME.

Bomb-Throwing Becomes an Event at Athletic Meets.

A new event is being added to the list of athletic contests participated in at college track meets. It is grenade throwing. Dummy grenades have been placed on the market which are exact duplicates in weight and appearance of the deadly hand missiles employed by our men in the trenches. In recognition of the fact that correct throwing may be something more vital than a mere accomplishment for our young men, college coaches are giving it a place along with shot putting and hammer throwing, indicating that even our sports are being affected by the world war.

GIRLS! LEMON JUICE IS SKIN WHITENER.

How to make a creamy beauty lotion for a few cents.

The juice of two fresh lemons strained into a bottle containing three ounces of orchard white makes a whole quarter pint of the most remarkable lemon skin beautifier at about the cost one must pay for a small jar of the ordinary cold creams. Care should be taken to strain the lemon juice through a fine cloth so no lemon pulp gets in, then this lotion will keep fresh for months. Every woman knows that lemon juice is used to bleach and remove such blemishes as freckles, sallowness and tan and is the ideal skin softener, whitener and beautifier.

Just try it! Get three ounces of orchard white at any drug store and two lemons from the grocer and make up a quarter pint of this sweetly fragrant lemon lotion and massage it daily into the face, neck, arms and hands.

HORSES IN WAR.

Certain Work in Modern Warfare Can Be Done Only by Horses.

There seems to be a rapidly increasing opinion that the day of the horse in war has passed. The nearly four years of warfare in Europe has shown this to be an entirely erroneous idea.

On the Western front, where the road system is probably the best in the world, mechanical traction has not been able to displace the horse. In general, it might be said that the line between mechanical and horse traction on a battlefield is the extreme limit of the enemies' artillery fire when any heavy action is going on. The horse is used on the battlefield and the mechanical traction in the rear of it.

Of course, during calm periods, mechanical traction is used along the rear part of the battlefield. There are various reasons for this division. Probably the main one is that batteries frequently must be placed and supplied in positions some distances from a road.

If the army is operating on conquered ground, this ground generally is so cut up with old trenches and shell holes that horse traction, and only horse traction, is practicable. Frequently the mud is so deep that mechanical traction is helpless. In many cases no wheeled carriages of any kind can move. In such cases pack animals have to be used.

So well are these conditions recognized that, in spite of the tremendous weights of heavy artillery material and the slowness and difficulty of moving them by horse traction, it is considered that only half the heavy batteries should have mechanical traction.

An army must still have animals for all its cavalry, the usefulness of which is far from disappearing; it must have horses for all its light field artillery, half its heavy field artillery, and all its regimental and divisional supply trains.

Incidentally, every regiment of infantry must have several hundred horses and mules. The more the question is examined, the more two facts stand out. The first is that certain work in modern warfare can only be done by horses. The second is that the number of horses needed for armies which are counted by the millions must be counted by the hundreds of thousands.

SWISS WATCHMAKERS CLOSE.

Demands of Labor and Expert Conditions Force Action.

Many watch manufacturers have closed the doors of their shops, says a Berne despatch. Organized labor demanded higher wages, giving the higher cost of living as a reason. The manufacturers are unable to pay higher wages, for export facilities are diminishing rapidly and it is almost impossible to obtain certain raw materials. The men employed as watchmakers probably will find remunerative work in munition shops, but it is feared that the Swiss watch industry will be ruined by war conditions and never recover from the blow.

Since soap is soaring, even if you have never done it before be sure now, to put all bits of laundry soap into a wire shaker and all bits of toilet soap tie into a small square of cheese cloth. This enables you to use every atom of soap.

ANY CORN LIFTS OUT, DOESN'T HURT A BIT!

No foolishness! Lift your corns and calluses off with fingers —it's like magic!

Sore corns, hard corns, soft corns or any kind of a corn, can harmlessly be lifted right out with the fingers if you apply upon the corn a few drops of freezone, says a Cincinnati authority.

For little cost one can get a small bottle of freezone at any drug store, which will positively rid one's feet of every corn or callus without pain.

This simple drug dries the moment it is applied and does not even irritate the surrounding skin while applying it or afterwards.

This announcement will interest many of our readers. If your druggist hasn't any freezone tell him to surely get a small bottle for you from his wholesale drug house.

A Field in Flanders.

[Extract from a letter from the front: "I saw a few wind-flowers the other day, and a vast meadow, full of kingcups, and that was enough to make me happy for weeks."]

There is a field in Flanders
Where yellow king-cups stand;
Like fair princesses clad in gold
Their joyous court they proudly hold
In the gay meadow-land.

There is a wood in Flanders,
A little shimmering wood,
Where wind-flowers sway among the grass
And smile upon you as you pass,
As country maidens should.

There is a bank in Flanders
Where celandines a-blow
Lift up their shining heads and peer
To see their lovely image clear
In a bright pool below.

And you who go in English fields,
Oh think not that our days
Are wholly dark or wholly ill,
For there are flowers in Flanders still
And still a God to praise.

—R. F.

Tractors Still Available.

The first thousand Fordson tractors purchasable from Henry Ford and Son by the Canada Food Board have been sold to Canadian farmers. Farmers who wish to secure such tractors in future should place their orders with the Department of Agriculture in their own Province, and until further notice such orders will be handled in the same way as the first thousand.

It is false economy to use cheap, inferior tea, for it yields so poorly in the teapot. Use only the genuine Salada to secure the maximum number of cups to the pound and, in addition, you will enjoy the unique flavor.

French Children Draw Food Posters.

School children in the Paris schools have been invited to submit designs for food restriction posters, says a recent Paris despatch. Among those accepted is one by a little girl representing a group of children gazing at a shop window filled with confectionery and cakes. "We can do without them" is the legend below.

Minard's Liniment Co., Limited.

Dear Sirs,—This fall I got thrown on a fence and hurt my chest very bad, so I could not work and it hurt me to breathe. I tried all kinds of Liniments and they did me no good.

One bottle of MINARD'S LINIMENT, warmed on flannels and applied on my breast, cured me completely.

C. H. COSSABOOM.

Rossway, Digby Co., N.S.

Aunty's Joy.

"I told you last Sunday, children," said the Sunday-school teacher, "that you should all try to make someone happy during the week. How many of you have?"

"I did," answered a boy promptly.

"That's nice, Johnny. What did you do?"

"I went to see my aunt, and she's always happy when I go home again."

Minard's Liniment Cures Diphtheria.

Food Dealers Licensed.

Canada's new system of license control of dealers in foodstuffs involves over 80,000 retail establishments and about 23,000 wholesalers. Of the total number of retailers there are 30,000 grocers, 16,000 butchers, 50,000 public eating places, 5,000 bakers, 2,000 fish dealers, 4,500 fruit and vegetable dealers and 4,000 produce dealers.

HIRST'S PAIN Exterminator

The Good Old Family Friend

For over 60 years Hirst's Pain Exterminator has been taking the pain out of rheumatism, lumbago, lame back, neuralgia, sprains, toothache and similar complaints. Buy a bottle, read the directions on the circular in the package. At dealers, or write us.

AutoStrop SAFETY RAZOR

On Land or Sea

The AutoStrop answers the call efficiently—it is the only razor in the world that automatically sharpens its own blades, therefore, it is the only razor that is always ready for service.

The AutoStrop will give your soldier or sailor lad the same clean, comfortable shave he enjoyed at home, no matter where he is or under what condition he uses it.

Give him an AutoStrop —it's the gift he needs.

AutoStrop Safety Razor Co. Limited

83-87 Duke St. Toronto, Ont.

Food Saving in Hawaiian Islands.

The Red Cross is $1,000 richer as a result of the first reported violation of Food Administration rules and regulations in the Hawaiian Islands. Ah Leong, a Chinese merchant in Honolulu, has been allowed to suspend business for one week, and donate to the Red Cross $1,000 in lieu of further action on a charge of violating the "fifty-fifty" rule in selling flour. On the first offense several weeks ago the Chinese pleaded ignorance of the law and was allowed to continue business. About three weeks later he made another sale of flour without the required amounts of substitutes. J. F. Childs, Federal Food Administrator for Hawaii, reports that action in this case has had a very salutary effect upon other Oriental merchants, and that practically all of them are now lined up solid with the Food Administration.

Minard's Liniment Cures Garget in Cows

Motion Picture Fishing Voyage.

The Canada Food Board is circularizing a film taken on board a Pacific trawler from Prince Rupert, showing how Pacific flat-fish are caught and handled, under the auspices of the Board, for distribution in the Western Provinces, as a reasonably priced substitute for meat.

A Prayer.

Somewhere across the infested sea,
Serving the cause of liberty,
Dear Lord, is my brave son.
I know not how he fares to-night,
But keep him ever in Thy sight,
For I have but the one.

Thou gavest two to bless my life,
But one fell early in the strife—
My first-begotten son.
He with his comrades marched away,
And then a message came one day—
Dear Lord, I have but one.

Then, while so sorrowed and bereft,
Though only he to me was left,
I could not say him nay,
Who urged that duty bade him go—
His country called, he said, and so
How could I bid him stay?

But oh, dear Lord, 'tis hard to bear.
With not another child to share
The hearth when day is done!
I can but kneel to Thee and pray:
Be with him through the hellish fray
And keep Thou safe my son!

I know the cause is good and true,
I know that suffering must ensue
Before the fight is won.
But bear with me, O Lord, this night;
Be Thou my solace in my plight
And guard my only son.

Minard's Liniment Cures Colds, Etc.

Weather Forecaster for Army.

The British Army is to have an official weather forecaster, says a London despatch. Battles may be won or lost owing to the unforeseen atmospheric conditions, and experts will be appointed to make daily reports of probable changes in the weather.

MONEY ORDERS.

Remit by Dominion Express Money Order. If lost or stolen you get your money back.

The acreage in the principal field crops of the United States is officially given at 345,647,000 against 369,625,000 last year.

Minard's Liniment Cures Distemper.

The estimated yield for winter wheat in the United States is 572,000,000 bushels, compared with 418,000,000 last year and a five-year average of 553,000,000.

Fill up your pipe with T & B—rich, mellowed, sun-ripened Virginia.

This genuine Southern-grown leaf has a flavor and aroma all its own.

Full bodied, yet soothing, Mother Nature's best.

No pipe smoker should go through "T & B. Week" without a package.

No word is necessary to old T & B smokers. They smoke it always.

But you—if you have never tried it, smoke T & B this week and realize the satisfaction of using a genuine Virginia tobacco.

Fill up your pipe with "T & B."

SMOKE TUCKETTS **T & B**

Mellow Cut Plug

HOW THIS NERVOUS WOMAN GOT WELL

Told by Herself. Her Sincerity Should Convince Others.

Christopher, Ill.—"For four years I suffered from irregularities, weakness, nervousness, and was in a run down condition. Two of our best doctors failed to do me any good. I heard so much about what Lydia E. Pinkham's Vegetable Compound had done for others, I tried it and was cured. I am no longer nervous, am regular, and in excellent health. I believe the Compound will cure any female trouble."—Mrs. ALICE HELLER, Christopher, Ill.

Nervousness is often a symptom of weakness or some functional derangement, which may be overcome by this famous root and herb remedy, Lydia E. Pinkham's Vegetable Compound, as thousands of women have found by experience.

If complications exist, write Lydia E. Pinkham Medicine Co., Lynn, Mass., for suggestions in regard to your ailment. The result of its long experience is at your service.

CARGILL

Mr. Mrs. and Miss B. Hunstein, Lieut. and Mr. Ed Wittich were in Millgrove on Sunday.

Messrs. Wm. Karl Lew Cliff and Jas. Alexander, of Oshawa, spent over the holiday with their friends here.

Cadet Henry Parker, of the Royal Flying Corps stationed at Beamsville, with a friend, spent over Sunday at Mr. Hor. Parker's.

Miss Allan and Mr. Mathers, teachers at the public school here, left on Saturday to spend the summer vacation at their respective homes in Worcester and Palmerston.

Lieut. Wittich, of London, spent over the First with his brother, Mr. Ed Wittich.

Pte. Lew Bester, of London, spent over Sunday with his friends here.

Five rinks of Walkerton bowlers were out last week and were defeated by the kitty chasers of this burg by a small margin.

Much sympathy is expressed throughout the village for Mrs. Jos. Bailey, who lost her only son through drowning in the Saugeen river at Paisley on Saturday last.

Mesdames Baildon and Fewlie and children are home again after a three weeks' visit at Pickering and Whitby.

Miss Thorne, of London, is visiting her sister, Mrs. Hagger, at the rectory.

Rev. A. Fisher occupied the Anglican pulpit on Sunday night in the interests of the Bible Society. He also gave an illustrated talk in the Presbyterian church on Monday evening.

Mr. Robt. Laurie, a former station agent here, was in the village last week renewing acquaintances.

(Intended for last week)

Mr. Geo. Welsford had a finger badly crushed while rolling logs in the mill yard last week.

Rev. Storey preached his farewell sermon in the Methodist church on Sunday evening, when a goodly number turned out to hear him, the Presbyterian and Anglican brethren joining in the service. Rev. Storey goes to Freelton from this appointment.

After an illness of a couple of months Mr. Freeman Taylor passed to his reward at 7.30 on Saturday morning. Mr. Taylor was a lifelong resident in this vicinity and until a month or so ago lived on the farm now occupied by Mr. Jos. Lang. Although crippled a number of years ago while working on the railroad, this did not hinder him from making his own way and working his farm, besides acting as agent for farm implements. He leaves to mourn his loss, besides a widow and children, his three sisters, Mrs. Martin and Miss Lily Taylor, of Buffalo, and Mrs. Barnes, of Akron, Ohio, to whom we extend our sympathy. The funeral on Tuesday was conducted by the Masonic brethren.

GLAMIS

Mr. Fisher, returned missionary, gave an illustrated address on Friday night in the Baptist church in the interests of the Bible Society.

Mr. and Mrs. Geo. Harrison, Miss Gillian, and Miss Rolston of Chesley, called on friends in the village on Saturday on their way to Invermuron, where they will occupy W. J. McKeeman's cottage for July.

Miss Nettie Gunn has secured the Glamis school for the coming term.

The sale of the household effects of the late Mrs. McDermid held on Wednesday was well attended, and everything went well.

Miss Murdena McSween returned on Saturday from Port Elgin, where she had been spending a few days, accompanied by her sister Mary who will visit a week at her home.

Mr. and Mrs. Neil McFarlane returned on Saturday after spending two weeks with their daughter, Mrs. Peacock, in Meaford.

Mr. Roderick McSween is staying at present with his daughter, Mrs. Jas. Thomson.

The Misses McDermid returned to London, where they both have office positions.

Mr. and Mrs. Albert Pickard, of Wiarton, and Miss Ethel Pickard, of Paisley, called on friends in our village on Friday.

Mr. McCauley has purchased Mr. Jas. McLennan's driver and rubber-tired buggy.

Mrs. McClung and four children left on Friday by motor for Lyndock, where they will visit friends and take in camp meetings to be held near by. Mr. McClung will go to Woodstock to meet his wife who is coming from Michigan, where she visited her parents.

Mrs. McCauley, Mrs. Hendrie and Miss Mary McLean, of Bay City, Mich., called on Mrs. MacIntyre on Wednesday.

The annual union Sunday School picnic will be held at Inverhuron this week.

Mr. Geo. Percy is home on leave from London.

Miss Mary Webb and Miss Mabel Kirkelwen are home for the summer holidays.

Mr. Jos. Cunningham and Mr. Jas. Begg motored to Wingham and Belgrave on Sunday.

Mrs. Chittick, of Stoney Creek, spent a few days with her sister here, Mrs. W. J. McKeeman.

ELORA ROAD NORTH

Mr. and Mrs. Wm. Begg, of Tiverton, visited at Mr. A. Ewing's.

Mr. Geo. Clayton is employed with Mr. Watson McKinnon.

Mr. Roger Darroch is home from Chesley.

Mr. John Rae has a Government job now, cutting timber for shipment to England.

Privates Angus McDougall and Garnet Campbell were up from London for a few days.

The McArthur property on Pettigoat Lane is again reported sold, this time to Mr. Morris Chappel, of Port Elgin.

No. 7 and 8 school section held their annual picnic at Ross' grove at Port Elgin on Saturday. It was a fine day and everyone had an enjoyable time.

Mr. J. S. Campbell is busily engaged in making tile.

Before the close of school the pupils presented their teacher, Miss Jean McKerracher, with an address and a cut glass dish.

WALKERTON

Major Roy Robertson, who recently won the D.S.O. at the front, in a letter to his father, Mr. David Robertson, K.C., on Monday, states that he had been promoted from a company commander to the command of his battalion, the 9th Canadian Engineers. The rank of Lt.-Colonel will be conferred upon him as a result of this promotion. His successive rise on the field of action from a lieutenancy to a colonelcy has been a rather stellar performance.

George Bros., liverymen of Walkerton, laid an information on Thursday last against two circulation managers of the Canadian Home Journal, Toronto, named Allard and Brophy, whom they charged with fraud and for whose arrest warrants were sworn out. The pair, it seems, came into Walkerton with fifteen returned soldiers, and among them hired on Wednesday about all the available autos in town and drove out into the country to solicit subscriptions for the above journal. Owing largely to the general sympathy for returned soldiers a land office business is said to have been done. On returning they neglected to go through the formality of settling for the car they hired from George Bros., and departing from here left the bill unpaid. On a charge being laid against the two heads of the expedition, Chief Ferguson, who heard that they had headed for Palmerston, advised the Chief of Police there to be on the lookout for them, and if he could locate them to nail the pair and he would go down for them. And it was so, the Palmerston sleuth carrying out orders to a queen's taste and corralling the couple after they and their contingent of ex-warriors had returned to Palmerston after doing up the neighboring country in cars for subscriptions. On being arrested, the pair wanted to settle, but Chief Ferguson over the wire advised the Palmerston baton wielder to hold them and that he would be down next day for the prisoners. As the chief, however, was snoring in anticipation of the early morning trip, he was awakened about midnight by pounding on the town hall door and on going down found the captured pair and their captor awaiting, they having hired a car and driven up during the night. Piloting them to Magistrate Toltor's house, the equal justice was routed from his Ostermoor and persuaded to dress himself and open court at 1 a.m. Saturday, the pair pleading guilty to the charge, and being released on settling the bill and paying all costs.—Herald and Times.

TURNER'S

Miss Clark, of Toronto, is spending holidays at the home of her father

Mr. and Mrs. D. Hyde and Mr. and Mrs. S. Hyde, of Dundas, spent a day at the home of Mr. Archie Pollock.

Mr. John and Miss Mary McKechnie drove over to Mr. John Broadfoot's on Sunday. Miss McKechnie staying for a few days.

Mr. Wm. Howe had his hand badly hurt while working with his ditching machine at Archie Pollock's last week.

While working at the McRae sawmill last week Mr. Ernest Miller met with the misfortune of having three fingers of his right hand taken off by a saw on which he was working.

Mrs. Hyde is visiting her old friends on the 4th of Bruce.

ENTH CON. BRUCE

Mr. Cecil McDonald, from London, spent the week end with his father, Mr. Neil McDonald.

Mr. and Mrs. Angus Atkinson and family, from Wingham, Sundayed at Mr. Alex McDonald's.

Mr. and Mrs. Elliot Brown and little girl motored up from Toronto and Sundayed at Mr. W. H. Brown's.

Mr. Bert Atkinson, from Toronto, spent Sunday at Mr. J. Caldwell's.

Mr. Alex H. McGillivray has been busy sawing wood on this line lately.

Miss Gladys Atkinson is visiting in Paisley at the home of her uncle, Mr. P. C. Kennedy.

Quite a number of the young people on this line took in the celebration on Dominion Day in Port Elgin.

BORN

Brown—In Greenock, on June 25th, to Mr. and Mrs. Arthur Brown, a son.

Warder—In Wiarton, on June 18th, to Mr. and Mrs. A. B. Warder (nee Margaret Anstead), a son.

MARRIED

Ward — Crecine — At the Baptist Church, Owen Sound, on June 24th, by Rev. J. McIntosh, Mr. C. J. Ward, of Dauphin, Man., to Et el Edith, daughter of Mr. and Mrs. C. A. Crecine, formerly of Williscroft.

DIED

Parrott—At the home of her parents, on June 29th, Minnie May Majury, beloved wife of Lionel R. Parrott, daughter of Jas. and Mrs. E. Majury, Elderslie, aged 27 years, 3 months and 28 days.

Bailey—Drowned, at Paisley, on June 29th, Gordon Elias Bailey, only son of Mrs. Jos. Bailey, aged 10 years, 8 months and 3 days.

—Everything that is great in life is the product of slow growth. Mushrooms spring up in a night, an oak requires decades. Pods survive only for weeks, philosophy for centuries. Nothing develops quicker than a cabbage.

TENDERS WANTED

TENDERS will be received up to July 15th for the building of a concrete arch through the road known as North Street at Paisley in the tp. of Greenock. Plans and specifications may be seen at Dennis Phelan's. Tenders will be opened at the place the work has to be done.

TENDERS will be received up to July 15th for the building of a retaining wall around the concrete abutments of the steel bridge at Riversdale. Tenders will be opened at the bridge at 4 p.m. on Monday, July 15th. Dennis Phelan, Chepstowe, Ont.

GREENOCK COUNCIL

Veiad's Hotel, Riversdale, June 4th, 1918

Council met as per adjournment, all the members present, the reeve in the chair. The minutes of last meeting and of Court of Revision were read and adopted.

The following accounts were presented for payment: B. Waechter, 95 yds. gravel and roadway, 1917, $11.50; A. Cuskenette, 12 loads stone, $1.20; W. McDonald, 11 lbs. spikes, 27c; Geo. Lippert, repairing bridge on s. l. with plank, $1.50; Geo. Colwell, covering culvert on s. l. Brant to pay half, $1.25; Geo. T. Haines, breaking snow road on con. 10, $1.50; W. Wightman, concrete bridge, s. l. 10, con. 18, 49 7-9 yds. at $8.50 per yd., $423.12, filling approaches, $17.00—$440.12; Thos. Metcalf, insp. Wittmans contract 9 days at $3 per day, $27; N. O'Hagan, widening approach at steel bridge, Riversdale, $40.60; D. Phelan, council meetings $26.70, com. work $17.20—$43.90; Jas. D. Campbell, council meetings, $27.10; Thos. Symon, council meetings $31.30, com. work $10—$41.30; Thos. Sawyer, council meetings $29.50, com. work $10—$39.50; C. W. Gilchrist, council meetings $30.30, com. work $7.50—$37.80; M. M. Schutter, half year salary as treasurer, $50; Thos. H. Purdy, half year salary as clerk, $100, 2 special meetings $5—$105; John Valad, room for council meeting, $3.

Sawyer—Campbell—That the foregoing accounts being found correct, be paid, and that the reeve and clerk be instructed to sign cheques for same.—Carried.

Cheques were issued as follows for last payment of grant to Red Cross workers: Emma White, Kingarf Society, $20; Laura Cunningham, Dennis Society, $20; Annie Barrie, No. 10, Bruce & Greenock Society, $20; Maud McCoy, Cargill Society, $20; Grace McDonald, Riversdale Society, $40; Mrs. A. Pinkerton, Pinkerton Society, $40; Ina Alexander, Narva Women's Institute, $40.

Symon—Sawyer—That this council grant the sum of $40 to be spent on con. 2 opp. lot 25, in grading and gravelling.—Caried.

Symon—Gilchrist—That this council grant the sum of $25 to be expended in cutting brush on side line 25 south of Durham road.—Carried.

Symon—Gilchrist—That this council grant the sum of $20 to the Red Cross Society at Kinloss providing Kinloss Tp. supplements this grant with an equal amount.—Carried.

Campbell—Sawyer—That the clerk be instructed to draft a resolution protesting against the striking off of the 5th side line from the Good Roads System of Bruce County, the same to be forwarded to the Lieutenant-Governor-in-Council, through the Minister of Highways.—Carried.

Campbell — Sawyer — That this council do now adjourn to meet at Pinkerton on the 22nd day of July for general business.—Carried.

Thos. H. Purdy, Clerk

FARMERS ARE LARGEST AUTOMOBILE USERS

The latest figures issued by the Provincial Department of Highways show that the farmer has at last jumped into the forefront as the largest user of the automobile. The figures showing that out of the 78,804 cars owned in the province the farmers come first with 23,409, while merchants and manufacturers come second with 14,825. Perhaps the most striking feature of this is the fact that it has only been since the outbreak of the war that the farmer has become a consistent user of the motor car, further figures issued by the same department showing that in 1913 there were only 966 motors owned by farmers of Ontario. On the total ownership for the province it is also shown that the rural owners far outnumber the city, the comparative figures being 47,357 and 31,098.

The change in the situation has been so marked that Mr. W. A. McLean, Deputy Minister of Highways, has made a statement on the question after being asked as to whether it was an indication that the farmer was spending his money recklessly. "The automobile is now regarded in many communities as an absolute necessity," he states, "and except in isolated cases the farmer is not purchasing the car as a luxury but as a necessity. There are now hundreds of farmers who regard the motor as a part of the regular farm equipment, and who feel that they could not accomplish the work without this as a means to save time and labor."

—Sid Gun and A. N. Hartley, two eating house keepers in Owen Sound, were recently prosecuted for breaches of the Food Board Order. They were found guilty of having served certain foods on days when they were prohibited, and were fined $100 each without costs. The third, who was charged with not having the Food Board notice posted in his dining room, was acquitted. He showed that he had ordered the notices about three weeks before the inspector called on him, but that the printer had delayed in delivering them. The magistrate held that he was not to blame. He did not receive the cards until the day after the inspector was there.

—It was a town girl—and the same sad story that, alas, has often been told, and checkered many a young life which had its beginning in sunshine, surrounded by luxury and the wealth of the world. Her eyes were now wild and staring, her face was flushed and her hands were nervously working. She was a deeply troubled and injured woman, and we hear her saying: "Oh, cruel one, you have injured the very foundation of my being! Day by day you have tortured me, and yet I could not bear to give you up. When we first met, how your ease and polish attracted me! When you became my constant companion, how my friends envied me. But your understanding is too small for my large soul. You are opposed to my advancing self. You have injured my standing in society. If we had never met I might have walked in peace. So now begone! We part forever!" There was a moment's convulsive breathing, a gritting of teeth and a sharp sigh. It was all over. By a supreme effort she pulled off her new shoe.

LT. H. McCONNELL HAS FLOWN OVER MANY COUNTRIES

Owen Sound Sun: On Wednesday night another of Owen Sound's heroes returned from overseas. Flight Lieut. Hillis McConnell, son of Mr. and Mrs. A. J. McConnell, 4th Ave. E., after serving in France, Belgium, Egypt and Italy in the Royal Flying Corps, is home on leave after some of the most exciting experiences one could very well imagine. It was in the early part of 1916 when he went overseas as a private in the mechanical transport, and in August of the same year entered the Flying Corps as a cadet. Four months afterwards he graduated and was sent at once to Egypt where he saw much service during the time the Turks made their foliah attempt to cross the Suez Canal. At the El Arish, his was one of the planes engaged in the battle, and in numerous scouting enterprises he was well over the enemy territory there. Amongst the souvenirs he brought back with him is a fine collection of Mosaic flooring from the ruins of the ancient city of Canopus and numerous plaster casts of various colorings, which still retain their color though submerged for 3,000 years.

From Egypt he was sent to England and then to France and served with the 52nd squadron at the Somme until June, 1917, when he went to Nieuport, Belgium. He was there during some very heavy fighting and it was there that he brought down his first enemy airplane which crashed behind the German lines and was confirmed by the infantry. In October last he was sent to Italy, flying past way and by train the balance. The British airmen were given a magnificent reception there and feted and feasted in a most hospitable manner. His first work was at Grossa where the first time up his observer was able to bring down a German Albatross (D 5), although the machine they were in was not a fighting machine but was used principally for observing and co-operating with artillery. The enemy plane crashed behind the British infantry lines at the northern part of the Piave line. Shortly after he was moved to another part of the front and did bombing and artillery and photograph work, and was very successful. On Boxing Day (Dec. 26) the Austrians bombed the airdrome he was located at and in reprisal a bombing raid was made into the enemy territory. An airdrome was visited but the occupants except the transport had left. This was subjected to a heavy bombardment by the 16 machines and from photograph observation, the damage was great. On his return the machine he was in was badly crippled by enemy shell fire and explosive bullets, the elevation control wires were broken and the adjustable tail plane post was smashed. This left him in the position of not being able to govern the movement of the plane, and as a result his landing was a bad one and he was badly used up otherwise. He was immediately taken to hospital where he has spent all his time since cent work for the Allied cause.

Lieut. McConnell is very far from being in good condition as yet, as his nerves are very badly shaken up, but with a good long rest and quiet he will eventually probably fully recover. His host of friends here are delighted to see him and welcome him home. He has had wonderful experiences on the fighting front in four countries and has done magnificent work for the allied cause.

—If wrinkles must be written upon our brows, let them not be written upon the heart. The spirit should not grow old.

Spring Term from April 2nd

Central Business College Stratford, Ont.

Commercial life offers the great opportunities. Recent lady graduates of this school are earning as high as $840 per annum. The last application we received from an office man with some experience offered initial salary of $1800 per annum. Students may enter our classes at any time. Good machine played to positions. Commercial, Shorthand and Telegraphy departments. Get our free catalogue.

W. J. Elliott, Pres. D. A. McLachlan, Prin.

Killed by Poisons

All scientists agree that poisonous products in the blood are eliminated by the kidneys and liver. The kidneys act as a kind of filter for these products. When the kidneys are clogged or degenerated, by disease or old age, then these poisons are retained in the body. If we wish to prevent old age coming on too soon, or if we want to increase our chances of a long life, Dr. Pierce of Invalids' Hotel, Buffalo, N. Y., says that you should drink plenty of water daily between meals to flush the kidneys. Then procure Anuric at a drug store. This Anuric drives the uric acid out. Scientific men have learned that in gout, also rheumatism, poisonous uric acid crystals are deposited in or about the joints, in the muscles—where inflammation is set up.

If we wish to keep our kidneys in the best condition a diet of milk and vegetables, with only a little meat once a day, is the most suitable. Drink plenty of pure water, take Anuric three times a day for a month.

You can obtain a trial pkg. of Anuric by writing Dr. V. M. Pierce, Buffalo, N. Y., or Bridgeburg, Ont., enclosing 10c.

Mr. Catharines, Ont.—"For sixteen years I have been a sufferer from kidney trouble. I had pains across the small of my back, my limbs and joints were constantly stiff and sore, I have had rheumatic pains in my shoulders, arms and hands, and have suffered and tried every medicine recommended to me, but have never found the relief in anything (no matter how highly spoken of locally) that I have in one small package of Anuric. Anuric is the most powerful kidney remedy I have ever used, and my bladder action is stronger than for years, so that I now get up during at night, where I always had to rise several times during the night, and I hope that many will read this and will try Anuric if they suffer with any kidney trouble." MRS. JACOB LOWERY, 88 Alexander St.

KYANIZE Floor Finish stands kicking, stamping, scuffing. Unequalled inside the house for floors and linoleums—for kitchen, bathroom, stairway, doors, ceiling, woodwork, furniture. Outside the house it's unexcelled for piazza floors and outside doors. A money-back guarantee proves these statements.

D. H. COOPER

Presentation

On Monday evening Mr. F. C. Ryan was summoned in a friendly and informal way to the council chamber, to be rewarded with tokens of esteem which our burgers customarily bestow upon those departing citizens whom they delight to honor. Reeve Steele occupied the chair of state, and conducted the proceedings. The following address was read to Mr. Ryan by Mr. D. Forrester:

Dear Mr. Ryan—

It is with sincere regret that we, your fellow-citizens, learned of your anticipated departure from Paisley, and we felt that we could not let the occasion pass without giving expression to the universal esteem in which you are held. During the nine years you have resided among us we have always found in you a staunch and generous friend, interested in the welfare of the town, and honoring the various positions you have filled with credit to yourself. We are very sorry to lose you, and we will not forget the many happy associations which have surrounded your life in this place. We trust your future may be filled with success and blessings, both for yourself and your esteemed family. As a slight token of our good will and friendship we would ask you to accept of this club bag for yourself, and on behalf of Mrs. Ryan—whose charming personality and goodly influence will long be remembered by us—this umbrella, to Betty this necklace, and when you have occasion to use them may they remind you of the good friends left behind. Signed on behalf of the citizens of Paisley.

The presentation was made by Mr. W. R. Barnett. The recipient responded very neatly, following which eulogistic speeches were made by many of those present, including Messrs. H. McKerracher, D. McArthur, J. B. McBride, F. S. MacLachlan, Dr. Gage, S. F. Ballachey, D. McKenzie, J. R. Laidlaw, G. L. Carter, J. N. Collins, H. B. Putnam, Jas. A. McNeill, W. R. Barnett and Reeve Steele. The singing of "Auld Lang Syne" brought the meeting to a close. Mr. Ryan will be placed in charge of a more important agency of the Standard Bank upon his removal from Paisley, but the management has not yet decided where his location is to be, and the family may remain here for a couple of weeks or a month yet.

A Distinguished Presbyterian

There were large congregations in Knox church on Sunday to hear Rev. Dr. Campbell, the venerable senior clerk of the General Assembly of Canada, who occupied the pulpit at both services. Dr. Campbell is over 82 years of age, but is still strong and vigorous, both physically and mentally. He is not an entire stranger to Paisley, having been here once shortly after the organization of Knox church congregation, and also has some relatives and schoolmates hereabouts, among the latter being our oldest citizen, Mrs. Jos. McDonald. His present visit to Bruce Presbytery is in connection with obtaining future recruits for the ministry, the mission field and the deaconess' work of the church, and his discourse on Sunday evening was addressed to the young people.

—Rev. Mr. Little and family are spending holidays at Southampton Beach, occupying their cottage.

—Fresh Salmon Trout at P. Olaiter's butcher shop.

—At the Bruce County W.C.T.U. convention at Teeswater, Mrs. Geo. Grant, the veteran Supt. of Flower Mission Work, was presented with a county life member's pin from the county organization.

—Mr. and Mrs. A. Barclay and son Reginald were up from Hamilton visiting his mother, Mrs. A. Blue. Mary and Ethel Barclay, two granddaughters of Mrs. Blue, were also here for a few days.

—Mrs. Hull, her son Charlie who recently returned from overseas after being wounded in France, and her daughter Mrs. Harwood, are up from Toronto visiting friends in town and vicinity. Mr. Harwood was up over Sunday.

—Rev. Mr. Neilson will exchange work for several weeks with Rev. Caleb Harris, pastor of the Baptist church at Dundas. Mr. Neilson and family leave for Dundas to-day (Wednesday), and all will reside in that town for the term of exchange.

Died in Minneapolis

The death is reported of Rev. Geo. A. Ray, Anglican minister at Minneapolis, and a former Bruce county boy. The deceased was born in Port Elgin, and was about 40 years of age. He was filling the position of station agent at Cargill about 20 years ago when he was induced to leave railroading and enter the ministry. He had a good charge in the western city where he died. A widow and small family survive.

Died in Winnipeg

Mr. J. B. McBride received a message on Thursday conveying news of the death of his brother-in-law, Mr. Robt. Hay, at Winnipeg. The deceased was the second son of the late Robt. Hay, of Greenock and Paisley. He had been in the west for many years and of late was engaged in the hardware business. He is survived by one daughter. Two brothers and one sister are living—Dr. J. C. Hay, of Laurel, Neb.; Arthur Hay, barrister, of Killarney, Man.; and Mrs. (Dr.) Windel, of Williston, N.D.

Soils and Crops

By Agronomist.

This Department is for the use of our farm readers who want the advice of an expert on any question regarding soil, seed, crops, etc. If your question is of sufficient general interest, it will be answered through this column. If stamped and addressed envelope is enclosed with your letter, a complete answer will be mailed to you. Address Agronomist, care of Wilson Publishing Co., Ltd., 73 Adelaide St. W., Toronto.

Copperas is Not Copper Sulphate.

A very serious mistake in some cases is being made by the farmer and gardener in buying materials for potato spraying. One of the necessaries is blue vitriol. Blue vitriol is copper sulphate. Green vitriol is copperas, or iron sulphate. Copperas costs about 3 to 5c. per lb. Copper sulphate costs in excess of 15c. per pound at the present time. Copperas cannot be substituted for copper sulphate. Its power to kill fungus diseases is very limited. On account of the cheapness of the salt, at times unscrupulous dealers are given to adulterating copper sulphate with copperas. There is a simple test which will determine the presence of the iron salt in the copper. It is as follows: Both copper sulphate and iron sulphate dissolve readily in water. The copper sulphate is blue, the iron sulphate is green in color. In order to make the test for the presence of iron sulphate or green vitriol being found in copper sulphate, dissolve a little of the salt in a glass tumbler, add a crystal of ferrocyanide of potassium. This turns the bottom of the liquid to a reddish brown color if the mixture is strong. If it is weak it will not have any particular effect on it. If sulphate of iron is present the mixture will turn a deep blue color and settle to the bottom. Watch your spray materials and see that you use the right thing. Copperas sounds very much like copper sulphate, but it is an entirely different substance.

Now is the time to spray potatoes and tomatoes to prevent the attacks of Late Blight disease. The spores of this disease, which may be found in the soil and in the garden rubbish, send up their shoots and bear their seeding spores during the warm, damp days of late June and early July. The only method of controlling this disease, which causes rot of both potato and tomato, is by spraying with Bordeaux mixture. Bordeaux mixture is made up of 4 lbs. of copper sulphate, 4 lbs. of lime and 40 gallons of water. If you have a small garden patch, make up the mixture in this proportion. There is no necessity of making up such a large quantity. Dissolve the copper sulphate,—a pound to a gallon of water and the lime in similar quantity. Do not mix them until you are ready to do the spraying, otherwise chemical action will take place between the lime and copper sulphate and spoil the mixture. Spray the growing vegetables thoroughly at least three to five times during the growing season, starting when the potatoes and tomatoes are up about 3 to 5 inches. The copper sulphate attacks the fungus spores and kills them.

QUESTIONS AND ANSWERS

R. H.:—What do you consider the best fertiliser for apple and plum orchards?

Answer:—For apple or plum orchards I would advise from 6 to 10 lbs. per tree of a fertiliser carrying from 3 to 4 per cent. ammonia, 8 to 10 per cent. phosphoric acid and 1 to 2 per cent. potash. When potash becomes obtainable in larger quantities, it would be well to use as high as 5 per cent. potash. This fertiliser should be worked into the soil at about the distance that the branches spread out. The feeding parts of the root are out towards the tips, hence the available plantfood will do more good if worked into the soil in this area rather than close up to the trunk of the tree. Commercial growers are also getting good results from the use of bonemeal, which, however, does not contain any potash. This fertiliser can be applied in the same quantity as advised above.

Farmer:—Will you kindly give fall directions for the preparation of soil for fall wheat? I mean to try it for the first time next autumn.

Answer:—For fall wheat the soil should be plowed as soon as the spring growing crop is harvested. If it is early oats, the ground should be plowed immediately after the crop has been taken off. Some farmers have better success in growing winter wheat on summer-fallowed land. If the piece of land being prepared is sod, it should be plowed as soon as possible and disked and harrowed frequently in order to cut down any weed growth and to make the seedbed as mellow as possible. If you have a supply of stock manure to apply to the wheat field, put it on the plowed ground before the last two diskings and harrowings. By disking and harrowing the field, this manure will be thoroughly worked into the soil. Be sure you get good quality winter wheat seed of a variety that is successfully grown in Ontario. Dawson's Golden Chaff, Imperial Amber, Early Red Clawson, and Abundance, are all good varieties. When seeding the wheat apply 200 to 300 lbs. per acre of fertiliser carrying from 2 to 3 per cent. ammonia, and 8 to 10 per cent. available phosphoric acid. Modern wheat drills have a compartment for sowing the fertiliser at the time the wheat is seeded. This works the plantfood into the soil so that it helps the young growing crop.

GOOD HEALTH QUESTION BOX

By Andrew F. Currier, M.D.

Dr. Currier will answer all signed letters pertaining to Health. If your question is of general interest it will be answered through these columns; if not, it will be answered personally if stamped, addressed envelope is enclosed. Dr. Currier will not prescribe for individual cases or make diagnosis. Address Dr. Andrew F. Currier, care of Wilson Publishing Co., 73 Adelaide St. West, Toronto.

Infant Feeding No. 2.

A baby should be fed every three hours from the first to the sixth month of life, omitting food from 10 p.m. to 3 a.m.

After the sixth month he should be fed only once in four hours. The average quantity for a feeding is three ounces in the first month, four in the second, then increasing one ounce per month until the end of the eighth month.

Cows' milk should be diluted with boiled water, two ounces of water being added for one ounce of milk during the first month, and the quantity of water being then gradually reduced until the tenth month when the milk may be given undiluted.

A teaspoonful of common sugar or milk sugar or maltose may be added to each feeding if it agrees with the child, and it is often desirable to add a pinch of bicarbonate of soda or of table salt.

Instead of using water it is sometimes well to dilute the milk with barley or rice or oatmeal water thoroughly boiled and strained, a tablespoonful of the cereal being boiled an hour or longer in a pint of water.

If the baby's stools contain curds it means the cheese in the milk is not well digested, in which case the milk may be peptonized or predigested with essence of pepsin, letting it stand at ordinary room temperature until it is curdy; it must then be put into the ice box at once to arrest further digestion.

This is important for if you let it stand until it is bitter the baby will refuse to take it.

When the first few teeth have come through, a little clear soup, free from fat may be given and the baby may also have a small piece of toast.

You may also give him whey or milk or weak gelatine water. If he should have diarrhoea give him half a teaspoonful or a teaspoonful of castor oil, thoroughly mixed with an equal quantity or twice the quantity of wintergreen, cinnamon, or peppermint water, lessening the number of feedings or even stopping them altogether for a day.

Also you may wash out the rectum carefully with half a pint of warm starch water, following it up with an injection of half a pint of warm water containing half a teaspoonful of salt.

Be sure and inject very slowly and do not give the baby pain. When a baby's food agrees with him he will increase in weight after the first month and if he weighed seven pounds at birth, he should have gained five pounds when three months old, three and a half pounds more when six months old, three pounds more at nine months, and two and a half more at twelve months.

A well-developed child will therefore weigh about twenty-one pounds at the end of his first year of life.

These are only a few hints, but I have tried to make them plain and free from the complications and mathematics with which many papers on the subject of infant feeding are obscured.

QUESTIONS AND ANSWERS.

L. I. B.—1. What is the cause of obstruction of the bowels? Is it due to external injury, and if so what are its symptoms?

2.—Does this occur usually in the aged or may it happen at any period of life? 3.—Can it be caused by rupture.

Answer:—1.—It may be caused in a great many different ways, by the formation of adhesions in the abdomen, drawing the loops in the intestines together, by telescoping of one portion of the intestine to another, by constipation and in various other ways. I suppose it may be possible by external injury, but I cannot for the moment, see exactly how this could be done.

2.—It may occur in any period of life, from infancy to old age.

3.—It is not infrequently associated with rupture.

HOME-GROWN FERTILIZERS FOR ORCHARDS

The use of cover crops cannot by any stretch of the imagination be classified as a new practice in fruit growing. Orchardists, almost from time immemorial, have used them to advantage, and successful growers are still doing—and as others who wish to successfully tide over the uncertainties of war times, must do. With fertilizers becoming harder to find than a pro-German (not to mention the matter of prices after they are found), the man who would keep up the fertility of his orchard soil is going to find his problem becoming an increasingly baffling one, unless he awakens quickly to the value of cover crops.

"Of all the resources available to the fruit grower at this time, none can be used more effectively in overcoming the fertiliser famine than cover crops," says an expert. "Cover crops, themselves, add neither potash nor phosphoric acid to the soil, but they have the power to make such of these elements as are present in the soil much more readily available to the fruits. What is of equal importance, they do this at a season of the year when these elements are most needed.

"Recent experiments in fertilising commercial orchards have shown that it is possible to derive great benefits from fertilizers which add nitrogen to the soil. Some of the chief advantages of leguminous cover crops lie in the fact that they serve just this purpose, and furnish an element which, if the purchaser had to buy in the form of commercial fertiliser, would be very expensive. Clovers, vetches, beans and peas, when used as cover crops, supply nitrogen to the orchard soils. But cover crops have their greatest value in that they add humus to the soil. This humus tends to maintain the physical condition and increase the water-holding capacity of the orchard land. One of the strongest arguments in favor of cultivation in Ontario orchards is the fact that this practice conserves the moisture. Soils without humus are not capable of holding large quantities of water. The addition of humus makes their capacity in this respect greater.

"The selection of a plant for cover crop purposes depends largely upon the character of the soil and the time at which it can be seeded. On sandy soils, winter vetch is one of the most desirable leguminous cover crops. The must be seeded rather early, that is, some time in July or early August, and it usually is combined with oats or rye, as vetch makes but a slow growth in the fall and early winter. It is able to withstand very dry weather during late summer and fall, as well as the stamping of pickers and packers at harvesting time. If used with oats and seeded with a drill, fifteen pounds to the acre, is sufficient with a bushel of oats; but if spread broadcast, twenty to twenty-five pounds should be used per acre. On the heavier clay loam soils. Mammoth Clover and June Clover are both desirable leguminous cover crops. These crops require a very well prepared seed bed and if the weather conditions are favorable in late summer and fall, a good growth will be secured. Crimson clover is also used sometimes as a cover crop, but its lack of hardiness, especially during severe open winters, makes it less desirable than those first mentioned.

"On orchard lands that have not been previously used for cover crops, where the soil is not in an ideal condition, rye is a desirable crop to use. It brings the soil to a mellow state, so that other cover crops are grown. Rye is also an excellent cover crop to sow if the seeding has been delayed until the fall. It makes a fair growth during the fall, and springs up very early in the spring, so that by the time the orchard is plowed, there is a fairly heavy crop of rye to turn under.

"Of the other crops that may be used oats are probably the most popular. The seed is not expensive, and it is much better than weeds in an orchard. Oats can be sown late, and produce a good cover in the fall. They are also very popular in orchards that are to be disked in the spring, rather than plowed, as there is less difficulty in working them into the soil. Oats also make an excellent crop to sow with winter vetch or peas, but being non-leguminous, they do not themselves add nitrogen to the soil.

"The comparatively high price of seed at the present time makes it important that the soil should be very well prepared, and to obtain the maximum benefit from the amount of seed used, it will often be desirable to drill the seed, rather than to broadcast it. Under the present abnormal conditions fruit growers in Ontario cannot afford to neglect this practice of obtaining the many benefits to be derived from cover crops."

Excellent vegetable broths can be made without any meat at all.

The Dairy

Temperature of the whole milk has a direct effect on the percentage of fat in the cream and the skimmed milk. The temperature of milk being separated should be such that the milk will flow easily, facilitating rapid and thorough separation of the cream and the skimmed milk. It is a wise plan to separate the milk as soon as possible after it comes from the cow. In that case, the temperature is high enough that a thorough separation is effected. If the milk is allowed to cool after being drawn, the temperature needs to be raised to about 85 degrees to 90 degrees to secure the best results when separated.

Many dairymen think that there is an advantage in having the whole milk at a low temperature, because the cream possesses a higher percentage of fat when the temperature is low. However, in these tests the loss of fat in the skimmed milk was greater. It should be noticed that the weight of fat in the whole milk and in all three parts of cream was approximately the same, but that there was a distinct variation in the weight of the cream, and this is the cash end of the dairy business.

The richness of cream, or the percentage of fat, derived from whole milk by use of a separator may be regulated by either the cream screw or skimmed milk screw.

Horse Sense

In the spring of 1916 I began to keep record of the work done by my horses, says a successful farmer. The record consists of a set of cards 5 x 8 inches, which are divided into thirty-one spaces, one space for each day in the month. I use one card a month for each horse. On the left half of each card I enter the cost of feeding, shoeing, medical attention and other expenses, while on the right half I enter the number of hours of work done by that horse, and also credit the value of the manure it produces, the colt, etc.

The figures for last year were quite a surprise to me. Before starting my record I estimated that $5.50 per month would be a fair average cost of keeping my horses, but imagine my surprise when I discovered that each horse was costing me $7.12 per month or $85.44 a year.

After adding up the number of hours, I found that my horse labor had cost me $1.35 a day.

One reason for this large cost was that the work had been unevenly distributed among the horses, and some were idle when they could have been working. I also found that the pastures had not been used as much as it might have been. These errors I intend to remedy during the present year. By distributing the work more evenly I can dispense with the extra horses.

Remember life's paradox—you are no nearer heaven because living is higher.

It do tips for the cow which does not pay, to go to the block, but it is poor economy to butcher profitable producers.

Poultry

The poultryman who aims to keep his hens laying their best during the months of June, July and August, should give careful consideration to what he feeds his flock, avers a poultry expert.

"After a hen has laid heavily during the winter and spring," he says, "she should be fed a food richer in protein, for if she does not receive food containing the elements from which eggs are made, she must draw upon the tissues of her own body to furnish egg-making material.

"To make the summer ration five per cent. of protein should be added to the spring ration. A moist mash should be fed once a day, the moisture being rubbed into the mash with the hands. Do not stir the moisture in with a stick or spoon.

"Plenty of succulent feeds should also be fed, such as lettuce and sprouted oats. It is often worth while to plant a good patch of Swiss chard for summer feeding, for there is no green food during July, August and September that can compare with this green for coloring the yolk and keeping hens healthy. Besides, if the tops of the chard are cut, it will produce second and third crops of leaves.

A grain ration for June and July can be made up of two parts of shrunken wheat (unmillable) and one part of cracked corn (by weight), and one part of soaked oats (by weight).

"A mash ration can be made up of one part by weight of wheat bran, one part by weight of corn meal, one part by weight of gluten meal, one and one-fifths part by weight of meat scrap and one part by weight of ground oats.

GERMAN CRUELTY TO PRISONERS

CAREFUL RECORD BEING KEPT BY GOVERNMENT.

Cases of Gross Inhumanity and Incredible Brutality Being Noted For Day of Reckoning.

It is a great satisfaction to know that the British Government, and, we presume, all the Entente Powers as well, is keeping a careful record of cases of inhumanity and brutality of which its nationals in German prison camps are the victims. There will be an accounting some day, and we can only hope that those made to suffer for the outrages will be the ruffians who inflicted them and not German aristocracy or some other abstraction without a body to be flogged or a soul to be damned.

Some of these prison camp horrors are published in the London Times, the particulars having been collected by a special correspondent in Amsterdam. He relates at least one case of cold-blooded, deliberate murder which occurred on February 27 at Kommando No. 168, Witten 2, which is based on Minden. The murdered soldier was Private J. Desborough, of the Second Battalion of the Suffolk Regiment. This kommando is considered perhaps the worst in Germany, and sends a continual stream of its prisoners into hospital at Minden.

Murdered in Cold Blood.

On the date mentioned Desborough took the part of a French prisoner of war who was being bullied by a German civilian. The German sentry ordered him to go away. He obeyed the order immediately, and as he walked away the sentry shot him in the back, death being instantaneous. A fortnight later he was officially reported to have died in a hospital.

About 50 British prisoners work in this kommando, and it is said that civilian workmen often try to make the prisoners do their work for them, striking them with iron bars when they refuse. The more cultured civilian foremen do not use iron bars, but have provided themselves with rubber piping filled with lead, with which they caress the heads and arms of the British prisoners. These weapons do not leave cuts and gashes as do iron bars, they are lighter, more convenient to carry, and in every respect more suitable to the foremen's station in life.

No Medical Attention.

Another horrible German prison camp is at Langensalza. To this camp last April were brought some 4,000 wounded British officers and men. They were put on the bare floor without anything to cover them. For the first three days they still wore their first field dressings, and naturally there were many cases of septic poisoning. The wounded received no hospital diet, and on the third day were put into a wire-fenced compound at one end of the camp. Nobody was allowed to visit them except one British soldier who was expected to attend to the 4,000 cases needing urgent surgical care. The fish given to the prisoners was putrid, and though the men were ravenous, they could not eat it. For three consecutive days they had no bread.

About the same time, 200 wounded British arrived at Gardelegen. Most of them had broken limbs. Not one of them had been set. Special medicinal chests sent out to the prisoners by Mrs. Bromley Davenport were confiscated by the German Government. One wounded man got hold of one of the bandages for a head wound, but it was immediately taken away from him, and he was given a pad of ordinary newspaper with a paper bandage.

Punishment Camps.

There are certain of these camps which are known as punishment camps. Here are sent not only prisoners of war, but German soldiers undergoing punishment, and presumably German civilian criminals. The German soldiers are in charge of the prisoners, and the more work they get out of them the sooner they expiate their own sentences and are permitted to resume their rank in the army. The brutalities they inflict upon their helpless charges in these circumstances can well be imagined.

The Hameln Kommando is one of these, and is in charge of the notorious Gen. von Hanisch. Here it is said that in June, 1917, a British soldier was stripped to the waist and held by two sentries before an open furnace until his body and face were covered with blisters. It appears from what the Times correspondent writes, that all the camps under the jurisdiction of Gen. von Hanisch, who commands the Tenth Army Corps, famed for its brutality, are simply fields and pens of torture for the allied prisoners who are committed to them.

Parcels Withheld.

There is now no powerful neutral left to see fair play between the prisoners and their captors. Dutch, Swiss, and Spanish inspectors of prison camps undoubtedly try to do their duty, but they have no authority to enforce their demands, and if they became too urgent in their demands for reform they would simply be escorted out of the country, and the lot of the prisoner would be worse than ever.

One form of cruelty which the men find particularly hard to endure is mentioned by the correspondent. He writes that at the end of April, 1918, there had accumulated at Friedrichsfeld about 75,000 parcels, the majority being for British prisoners working behind the German lines. Repeated applications had been made for names of the kommandos in which these men worked, but they could not be ascertained. Many parcels arrived in October, 1917, for unknown men, and not until March, 1918, did a list finally arrive from Berlin which contained 250 names; 85 of the men were stated to have died. About 10,000 parcels have accumulated, for one kommando, known as No. 403, and believed to be situated near Antwerp. All the bread in the parcels had naturally gone bad.

2,000,000 TONS EACH MONTH.

This Amount of Shipping Enters or Leaves the British Ports.

The necessity of keeping an eye upon the importance of sea power in the present conflict, despite the close attention claimed by the land battles, is emphasized by Archibald Hurd, the naval expert, writing in the London Daily Telegraph.

"We have been apt, during the recent offensives on the Western front," Mr. Hurd writes, "to overlook other aspects of the war—notably the fundamental factor, which is sea power. After a period of fifteen months, during which our strength in ships steadily declined, the downward tendency has now been definitely arrested. Not only is our sea power increasing, but our grip on the enemy is firmer than at any previous period of the war.

"Seven million tons of shipping enter or leave our ports monthly. Each ship is the target for enemy submarines, yet there have been days in the present week when the enemy has not secured a single ship.

"Twelve months ago we were with difficulty maintaining one stream of traffic, namely, that which brought us food and raw material. To-day supplies are flowing through this main artery in greater volume than a year ago. At the same time another stream of traffic has started, and merchant shipping has been made available for the greatest transport movement which has ever been carried out.

'For three months past American troops have been coming across the Atlantic by tens of thousands, far faster than at one time was thought possible. That means that the balance between the Allies and the central powers is being adjusted in favor of the former."

A MESSAGE IN VERSE.

British Prisoner Conveys the Information That Huns are Starving.

A British soldier, at present a prisoner of war in Germany, has cleverly defeated the censor by sending home to his parents a letter containing the information that the people in Germany are in dire straits with regard to food. The young soldier wrote his letter in blank verse, a fact which at first caused surprise to the parents, and it was some time before his reason for doing so became apparent.

A sharp young cousin observed that by reading in a downward direction the initial letters to the lines the soldier had succeeded in conveying the reassuring information that "Germany is starving."

The communication, which in itself is interesting reading, is as follows:

"God bless you, my mother,
Every day I am thinking of you.
Recollections of home sustain me.
Memories being so sweet.
Always my thoughts are of you—
Nothing else would console me.

Rub ink spots on linen with half a ripe tomato, and when washed they will disappear entirely.

After a Cup of POSTUM

there's no uncomfortable reaction, but rather a refreshing feeling of health and satisfaction.

It's gratifying, these days, to know that Postum saves sugar and final.

Tunics are very popular and this one of figured material, the same as the waist section, is exceptionally smart. McCall Pattern No. 8046, Misses' Dress. In 3 sizes, 16 to 20 years. Price, 20 cents.

This simple dress has the unique feature of having no fastenings and can be slipped on over the head. It is worn over a dainty waist as illustrated. McCall Pattern No. 8261, Ladies' Waist. In 7 sizes, 34 to 46 bust. No. 8343, Ladies' Jumper Dress. In 6 sizes, 34 to 44 bust. Price, 20 cents each.

These patterns may be obtained from your local McCall dealer, or from the McCall Co., 70 Bond St., Toronto, Dept. W.

YES! MAGICALLY! CORNS LIFT OUT WITH FINGERS

You say to the drug store man, "Give me a small bottle of freezone." This will cost very little but will positively remove every hard or soft corn or callus from one's feet.

A few drops of this new ether compound applied directly upon a tender, aching corn relieves the soreness instantly, and soon the entire corn or callus, root and all, dries up and can be lifted off with the fingers.

This new way to rid one's feet of corns was introduced by a Cincinnati man, who says that freezone dries in a moment, and simply shrivels up the corn or callus without irritating the surrounding skin.

Don't let father die of infection or lockjaw from whittling at his corns, but clip this out and make him try it.

If your druggist hasn't any freezone tell him to order a small bottle from his wholesale drug house for you.

Forty British Prisoners Murdered.

The slow murder of British prisoners sent by the Germans to work under fire on the Russian front is related by a member of the Royal Naval Division who reached England on June 6, after escaping from Germany. It had been decided, he says, that thirty-six should die in consequence of an allegation that thirty-six German prisoners had been murdered by their British sentries. They were taken from working parties at the end of the day, made to mount on a block and then tied to a pole. The block afterwards was kicked away, leaving the man suspended with their feet a little off the ground. In this position they were kept for two and a half hours each night for fourteen nights in intense cold. Forty men died under the treatment.

HUNS PUT BOMBS IN BODIES.

To Kill the Allies While Burying Their Dead.

The following letter was written by a member of the United States Tank Forces in France:

"I have been working from a quarter past six a.m. to eleven p.m., and have had little opportunity to write. Well, I've been through it—a little over two weeks of it at the hottest part of the line, where the Hun is putting on his big show. I was on detached service with the French—as a combatant, not as an observer. Tanks, of course.

"It's like nothing one can describe. Some one said that the most difficult thing he could think of would be to describe an orange to an Eskimo. I can no more describe the front to you. For four nights in one week I did not go to bed. For one week I did not have my clothes off, and at no time could I remove anything but my coat, since the Hun was always shelling us with high explosive or gas—and one has to be ready to move instanter. During my stay I was never out of shell fire and often being shot at with machine guns and rifles. I lived ten years during that fortnight, but beyond my control, so there was no use worrying.

"I ran the gamut of all sensations from fear to hatred, and the latter was what I carried away. Any nation that fills the bodies of the dead with bombs in order to kill the chaps that come out to bury them, has no consideration for me, and that is what the Huns do, among other things.

"I got a rap on my steel hat with a bit of shrapnel, but it was a high burst and did not penetrate.

"Summed up, this show over here is 'kill or be killed.' If a few pacifists could get under fire, live like a hunted rat for weeks, wear gas masks for fourteen hours and have all sorts of fiendish cruelties practised on them they'd stop palavering for peace with a crowd of murderers that understand nothing else. But the Hun is courageous, just the same. I don't see how he stands it. He probably thinks the same about us.

"Now I am back for a long time—and I am not saying it to keep you from worrying—it happens to be true. I lost all my equipment at the front and came back with what I had on—and was lucky to keep that. This is a very expensive war."

Minard's Liniment Co., Limited.

Gents,—I cured a valuable hunting dog of mange with MINARD'S LINIMENT after several veterinaries had treated him without doing him any permanent good.

Yours &c.,
WILFRID GAGNE.
Prop. of Grand Central Hotal,
Drummondville, Aug. 9, '04.

Employers' Responsibility.

In view of the lack of farm labor, managers of factories and industries of all kinds should plan to release all men and women they possibly can who are willing to help with the harvest. The agricultural industry is of prime importance to the world to-day.

Minard's Liniment Cures Garget in Cows

Nearly Five Millions Have Starved.

It has been estimated up to a recent period that 4,790,000 people in Europe have been starved to death since the beginning of the war. Unless the 1918 harvest is saved starvation will become general throughout Europe and the suffering among the civilian populations of our Allies unprecedented in the history of the world.

"When a strong brain is weighed against a true heart, it seems to me like balancing a bubble against a wedge of pure gold."—O. W. Holmes.

FOR GERMAN READING.

British Drop Pictures and Information Over the German Trenches.

A curious part of the war appears in the dropping by balloon or aeroplane by the Germans and the Allies of matter tending to weaken the morale of their enemy. A Toronto man recently received some samples of pictures and matter that the British had dropped over the German lines. The pictures show the effect of the British fire on German trenches when they were taken after British advance and showed the dead Germans in the torn-up dugouts. With the pictures was an article descriptive of the view the German Crown Prince took of the war as a sport, and the German soldier was merely a necessary part to his sport.

LEMONS WHITEN AND BEAUTIFY THE SKIN

Make this beauty lotion cheaply for your face, neck, arms and hands.

At the cost of a small jar of ordinary cold cream one can prepare a full quarter pint of the most wonderful lemon skin softener and complexion beautifier, by squeezing the juice of two fresh lemons into a bottle containing three ounces of orchard white. Care should be taken to strain the juice through a fine cloth so no lemon pulp gets in, then this lotion will keep fresh for months. Every woman knows that lemon juice is used to bleach and remove such blemishes as freckles, sallowness and tan and is the ideal skin softener, whitener and beautifier.

Just try it! Get three ounces of orchard white at any drug store and two lemons from the grocer and make up a quarter pint of this sweetly fragrant lemon lotion and massage it daily into the face, neck, arms and hands. It is marvelous to smoothen rough, red hands.

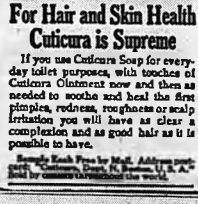
Watch For Egg Clusters.

The same bug that ravages the potato plant often finds its way to the tomato plant and works havoc there. Last year this pest was particularly active and it is quite time to be on the look out for it now. Most people think that if the bugs are taken off, all is well. This is a mistake. Much more dangerous than the well-grown potato bugs are the orange colored egg masses which cling to the leaves on the under side. Hundreds of small bugs are hatched from these clusters. Life should be promptly crushed out of the egg masses whenever they are discovered.

Minard's Liniment Cures Colds, Etc.

When silage corts $3 per ton to raise and store and other feeds are valued at present wholesale market prices 100 pounds total digestible nutrients in corn silage has a net cost of 54 cents, in bran $2.31, corn $4.02, oats $4.29.

MONEY ORDERS.

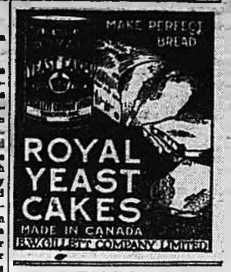


Pay your out-of-town accounts by Dominion Express Money Orders. Five Dollars costs three cents.

In gathering early cabbage from the garden cut off the heads instead of pulling up the roots. New leaves will grow on the stump and these can be boiled for table use and they can also be used for green feed for hens.

Minard's Liniment Cures Diphtheria.

In England seed potatoes are sold by the pound, not by measure.



An American potato-grower says that, according to his observations, blight on potatoes appears only in moist, moderate weather, 65 to 77 degrees being the most favorable temperature. At temperatures lower than 50 degrees and higher than 78 degrees it does not seem to develop.

For Hair and Skin Health Cuticura is Supreme

If you use Cuticura Soap for everyday toilet purposes, with touches of Cuticura Ointment now and then as needed to soothe and heal the first pimples, redness, roughness or scalp irritation you will have as clear a complexion and as good hair as it is possible to have.

Sample Each Free by Mail. Address post-card: Cuticura, Dept. L, Boston, U.S.A. Sold by druggists throughout the world.

Think It Over.

Economy in food means:
1. Support and encouragement for the men at the front.
2. More food for our Allies.

Extravagance in food means:
1. Prolonging the war.
2. Increasing suffering.

Minard's Liniment Cures Distemper.

"BEST MEDICINE FOR WOMEN"

What Lydia E. Pinkham's Vegetable Compound Did For Ohio Woman.

Portsmouth, Ohio.—"I suffered from irregularities, pains in my side and was so weak at times I could hardly get around to do my work, and as I have four in my family and three boarders I hadn't very much for me. Lydia E. Pinkham's Vegetable Compound was recommended to me. I took it and it has restored my health. It is certainly the best medicine for woman's ailments I ever saw."—Mrs. SARA SHAW, R. No. 1, Portsmouth, Ohio.

Mrs. Shaw proved the merit of this medicine and wrote this letter in order that other suffering women may find relief as she did.

Women who are suffering as she was should not drag along from day to day without giving this famous root and herb remedy, Lydia E. Pinkham's Vegetable Compound, a trial. For special advice in regard to such ailments write to Lydia E. Pinkham Medicine Co., Lynn, Mass. The result of its forty years experience is at your service.

SMOKE - TUCKETTS ORINOCO CUT FINE FOR CIGARETTES — CUT COARSE FOR PIPE

The Paisley Advocate

PAISLEY, JULY 10th 1918.

—Temperance people of Canada take the blues when they talk of the lack of success that the prohibition propaganda meets with in Britain. But there is good ground for hopefulness of the results attained by the referendum taken in the seaport city of Hull, England. The city has a population of over 300,000 and gave a majority of 11,512 in favor of shutting off the manufacture and sale of liquor during the war. Numerous test votes similar to this have been taken in England, and all have been favorable. The process of educating the people of Canada and inducing them to support prohibition took time in Canada, but in the end accomplished a complete reform. With continued activity on the part of the opponents of the liquor traffic in the mother country the same results may be attained before the war is ended.

—There are some things being brought about by this war that can be put on the compensating side of the scale to help balance the losses and sacrifices that are talled for. Take for instance the renewal of relationship between Britain and the United States. There was estrangement between the national parent and offspring ever since the Teuton king of England and his henchmen by their stupidity caused the war in which the American colonies broke the family ties and set up government of their own. But since Britain had boldly and effectively gone to the support of freedom against Hun oppression in Europe, and later her American kindred had broken away from Hun influence to enter the struggle for the same world cause, there is a great reconciliation which the progress of the war only makes more sec—e. The old family relationship is being renewed and restored by new bonds stronger than those of infancy or childhood. Ultimately this relationship is bound to be a tremendous factor in establishing an all-embracing brotherhood among the nations more stable than has ever yet existed on this old earth.

OLD AGE AND WIDOWS' PENSIONS

A man died recently leaving a wife and eight children, and as he had served at the front as a soldier in the war, had been invalided home, and discharged, a claim is put in for a war pension for his wife and children. The Pension Board, claiming that there is nothing to show that the ex-soldier's death was due to his service in the war, declares itself unable under the regulations to grant soldier's pension in this case.

Whether this widow and these eight children receive this pension or not is a matter, to them, of the utmost importance. Whether they receive it or not will make every possible kind of difference to them now and throughout their lives.

But just now, while public attention is centered on this and similar cases, we would like to ask people to consider whether it would not be well to adopt a national plan whereby any widow with children under sixteen would receive a sufficient pension to ensure that the mother could maintain a home and keep her family together?

This is a question to which every body should give serious thought. The mother and the home, if they are maintained, will give those children their best chance, and the family, if kept together, will be of most service and credit to the state and society at large. In making these assertions we believe there will be few who will feel inclined to dispute them by advocating any plan, however good, for caring for children in public institutions, and letting the mother fare for herself, having been cut adrift from her natural life, and the maternal service which is the highest duty she can possibly perform in this world.

Some like to say that in a young country like this there is no need for old age pensions, and no need for pensions to widows with children. It is quite proper to think highly of one's country, but it is not right to close one's eyes to the facts of life as they are being spread open to view every day. There is need for such pensions even in this young country, for no matter how young the country may be many of its people are old and many widows with children are left to battle with no fair chance at all. A young country like ours offers fine openings to the hearty and strong and fortunate, but men and women grow old here as elsewhere and husbands die, suddenly sometimes, leaving wives and children capsized.

There is need for such pensions. From facts and figures compiled—not by Socialists, but by the American Bankers' Association—it appears that—

Out of 100 average healthy men 25 years old—when they reach the age of 65—

One will be rich.

Four will be well-to-do.

Six will be earning their own living.

Fifty-four will be dependent upon relatives or charity.

The other thirty-five will not have lived to the age named. Of the hundred only one will be rich, and only another ten self-supporting or better. As for the others who survive to the age of sixty-five, they will be dependent on charity or will be supported by their relatives—most of whom will themselves be marching towards the day when they, too, will be dependent on the support of others.

These are the hard facts of the busy life we see about us. The figures quoted are compiled, as we have said, not by Socialists, but by the American Bankers' Association. The figures apply to the United States, a country nearly as young as our own.

When a generation of men devotes itself to industry with the result that in old age of those who survive not one cent is rich, and 83 per cent. are dependent for support on others there is, of course, something seriously wrong with the distributive system by which the profits of a generation's toil are conserved and apportioned. That is another phase of the subject.

But there ought to be pensions for the old, and there ought to be pensions for the widows with children. Not only in their interest, but in the public interest there ought to be pensions.

It may be that much poverty and want is due to improvidence and lack of prudence in the days when one's earnings are large. But if the individual lacks prudence that is an additional reason why the community should exercise it.—Toronto Daily Star.

WOULD ABOLISH THE ENTRANCE EXAM.

As a veteran teacher of 45 years' experience, Mr. Wm. Houston, of Toronto, who took out his first certificate while a resident of Greenock in the early days, in a letter to the Globe in reply to a communication from the principal of Paris public school, says: I was the principal of a union high and public school when the first entrance examination was held. I remember perfectly the motive of its institution and I have watched closely its operation as an officer of the Education Department, as a member for a dozen years of the former Toronto High School Board, and as a member for half that interval of the present Toronto Board of Education. I have heard repeatedly everything that can be said for and against maintaining it, and in the light of all this experience I state my long-time conviction that it should be absolutely and immediately abolished.

Mr. Bell admits that the entrance examination is "a compromise between its legitimate function and a public school graduation," and that it "serves neither purpose quite well." This is surely condemnation enough, but it is too superficial to reach the root of the matter. The chief objection to this, or any other uniform Province-wide examination, is that it so restricts the freedom of the teacher as to make the best teaching impossible, and merely tolerable teaching needlessly difficult. The greatest sufferers from its inevitable and injurious misdirection are the inexperienced young people who are at present in charge of most of our rural schools. No wonder there are to be found few teachers of long experience, such as used to be abundant two generations ago.

Mr. Bell seems to see no substitute for the entrance examination but "recommendation of candidates by public school principals." There is another alternative—the only legitimate and effective one—which he mentions in his letter, when he says that under the old grammar school law "the examination was to be conducted by the head master of each grammar school and nothing was said as to whether it should be oral or in writing." The right to admit applicants for entrance into a high school should be entrusted to its principal, and the local public school inspector, subject always to the arbitrament of the high school inspector, and the tests applied should be both written and oral.

The philosophical and pedagogical reason for this measure of local freedom is that it would enable the officials specified to ascertain with a degree of certainty amounting almost to infallibility whether the applicant has been so trained as to be able to give thoughtful answers to reasonable questions, and to perform with neatness those exercises that have to be done by hand. The fatal defect of the present entrance examination is that it puts a premium on the memorization of information which lapse of time will make untrustworthy, and that it affords no opportunity to test the entrance candidate's capacity for ratiocinative mental processes. As a means by ascertaining his fitness to profit by a high school course a conversation of five minutes would be worth more than a week of reproduction of memorized information.

ONLY MEDICINE MADE FROM FRUIT

Extraordinary Success which "Fruit-a-tives" Has Achieved

One reason why "Fruit-a-tives" is so extraordinarily successful in giving relief to those suffering with *Constipation, Torpid Liver, Indigestion, Chronic Headaches, Neuralgia, Kidney and Bladder Troubles, Rheumatism, Pain in the Back, Eczema* and other Skin Affections, is, because it is the only medicine in the world made from fruit juices.

It is composed of the medicinal principles found in apples, oranges, figs and prunes, together with the nerve tonics and antiseptics of proven repute.

50c. a box, 6 for $2.50, trial size 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

LOCAL AND DISTRICT NEWS

Picnic Postponed

By Monday evening the Sunday school picnic managers found themselves in a quandary, on account of not being able to secure enough automobiles to transport all the children to Southampton beach, where the afternoon was to be spent. It was decided to postpone the trip for the kiddies, and arrange for a civic holiday picnic in Riverside Park for those who wished to put in the afternoon there. When rain came on, however, and continued all Tuesday forenoon, this plan was also completely disarranged, much to the satisfaction of the majority interested, as another effort will now be made to hold a good outing either at home or to Southampton.

Died in Walkerton Hospital

Mr. John Beaton passed away in Walkerton hospital on Thursday morning last, after having been there for about three weeks, afflicted with pernicious anæmia and dropsy. The deceased was a son of the late Arch. Beaton, of 12th con. Bruce, and was born at Durham. He went west from here when he was quite a young man, and followed lumbering in Wisconsin and Minnesota for the greater part of his life. He was also at Lydiard, Man., for a time. During the last eight years he has made is home with his only remaining brother, Mr. Duncan Beaton, of Lake of Bruce. The funeral took place on Friday last to Lovat cemetery, the services being conducted by Rev. G. C. Little. The deceased was 65 years of age.

Children's Aid Society

Mr. H. W. Elliott, secretary of the County of Bruce Children's Aid Society, and Rev. C. W. Cosens of Walkerton, were in Paisley on Monday evening and attended a local meeting in Putnam's hall at which the Paisley branch of the Society was re-organized with the following officers: President, Dr. Allen; Vice-President, J. S. Dewar; Sec'y-Treas. H. B. Putnam; Committee—J. Shoemaker, F. S. MacLachlan, P. McKinnon, D. McKenzie, Mrs. Geo. Craig, Mrs. S. Dalgleish, Mrs. Geo. Fullerton and the local clergy. Mr. Elliott, the new county secretary, who has been in charge of the work for several months, is devoting his whole time to the welfare of children who are born and living under such conditions that in the interests of society they should be looked after by others than their parents. At present he has quite a group of little ones in the Peninsula to attend to, and will shortly bring them down to the county shelter in Walkerton, from whence they will be distributed to desirable homes that may be found for them. Mr. Elliott will be in Paisley again on Friday, July 19th, when another meeting of all interested in the work will be held in the evening in Putnam's hall.

The Elderslie Picnic

The annual picnic of the Associated Sunday Schools of Elderslie Tp. held in McDermid's bush at Gillies Hill on Thursday last was again a great gathering and a splendid success. We are told that there were over ninety motor cars there, and nearly all belonged to farmers of the township. The programme was a good one, consisting of solos by Miss Kemp, Miss Alice Fraser, Mr. Neil McArthur and Clarence Hammond, duet by Hopper Bros., music by Piper McCaffrey of Owen Sound, and the Hammond-Buchanan-Pearce string band, addresses by Messrs. J. E. Cass and C. J. Halliday. The chair was occupied by Mr. Wm. Pearce, convener of the S. S. Association. Following are the winners in the foot racing events: Boys under 7 years—M. Lloyd, Frank Hammond, C. Collins; girls under 7—Annie Milne, Jean McMurray, Edith Hopper; boys 10 years—John Oswald, Jos. Oswald, Norman Moore; girls 10 years—Jean Burns, Annie Milne, Edna Allen; boys 15 years—Alex Ewart, Jas. Milne, G. Rudolph; girls 15 years—M. Hopper, A. Tanner, Alma McPherson; young ladies—A. Tanner, O. McCannell, E. Rudolph; young teachers—L. Hamilton, J. Halliday, Thos. Powell; fat men's race—J. McDermid, N. McArthur, A. Herron; boys' relay race—D. Lloyd and E. Milne, W. McCannel and R. Forrester; girls' relay race—Aileen Tanner and Isabel McKay, M. Hopper and Janet McCannel. A baseball match between Selem and Dobbinton was won by the former. By selling tags there was $52.30 raised for overseas Y.M.C.A. and Prisoners' Aid Funds. The Ladies' Aid of Salem Presbyterian church realized the sum of $126 for Red Cross work from the sale of a quilt. The ladies wish to thank the bidders who thus contributed to the fund, viz: Jas. Thompson, $18; John Patchell, Adam Henderson and D. Durroch, $10 each; Alex. Anderson, Geo. McKay, F. Legge, H. Davis, J. McDermid, D. Reid, R. Oswald, R. Alexander, Rev. A. H. Wilson, Jas. Lewis, T. Currie, J. Oswald, P. Buchanan, W. Lewis and D. Henderson, $5 each; C. Whippler, $2; J. Graham, $1.

—A platform or grandstand, erected for the Orange 12th of July celebration at Wingham in 1917, collapsed, and Jas. Stacey died of injuries received at the time. Last week a damage action was entered at Osgoode Hall, Toronto, against the members of the Orange demonstration committee of Wingham.

Death of Alex Galbraith

Stricken by paralysis and felled at the steps of his home on Thursday evening last, Mr. Alex Galbraith lapsed into unconsciousness very shortly after and passed peacefully away a few hours later. The sad tidings of Mr. Galbraith's death spread very quickly next morning, and expressions of heartfelt sorrow were heard from every lip, as the deceased had been a life-long resident of this community, and enjoyed the friendship and esteem of all citizens. The deceased had been in a precarious state of health since last February, on the 18th of that month having taken suddenly ill while up town, and was confined pretty much to his home until early this summer. Of late he had been improving very much, however, and was about town daily as he used to be. On Thursday at 6 p.m. he walked home quite briskly, and had gone out to his garden to pull some onions, for the evening meal, and was about to re-enter the door when stricken with the fatal attack of paralysis. He dropped to the ground, and his call for help was heard by Mr. Dan Sutherland, who was the first to reach him. The doctor was summoned immediately, but the stricken one was beyond aid, and the end came, as above stated, shortly after midnight. The funeral, held on Sunday afternoon, was very largely attended by fellow townspeople, and many were present from the surrounding country and neighboring towns, a striking tribute to the popularity and worth of the deparetd. The services were conducted by Rev. Dr. Campbell, of Montreal, who preached in Knox church that day, assisted by Rev. Mr. Diehl. The pall-bearers were Messrs. D. McArthur, H. Irwin, J. B. McBride, Alex C. McGillivray, F. C. Ryan and J. H. Steele. Interment was made in the Paisley cemetery. Among those present from a distance were Mr. and Mrs. A. W. Parrish of Caledonia, Mr. and Mrs. Ed Hay of Toronto, Mr. C. M. Bowman, M.P.P., Mr. Alex. McNeil of Southampton, Mr. R. E. Truax, M. P., Mr. John Rowland, Mr. D. McKeracher, Mr. and Mrs. H. Irwin, of Walkerton; Mr. S. Wright, Mrs. Wright, Mrs. Crowe, of Chesley; Mr. D. C. McMorran, of Lucknow; Mr. J. Coulter, Mr. H. Crowe, of Port Elgin. The deceased was the fourth son of the late Donald Galbraith, and was born on the Elora road north 53 years ago. He had been a resident of the village ever since early manhood. For about twenty years past he was engaged in the live stock business, dealing largely in horses. He was a man of rare good judgment in business and other matters, and was much consulted as an adviser by his friends. Always taking a keen interest in public affairs it is notable that, although frequently urged to serve on the council or other boards, he could not be prevailed upon to do so, but was last year pressed into service as a member of the local military tribunal. He was an active and prominent Liberal in politics, and was for a time president of Centre Bruce Liberal Association. He was married about nineteen years ago to Margaret McArthur, daughter of Mrs. R. M. Hay, who, with one daughter, survives him. One sister is also living—Mrs. Parrish, of Caledonia. To them in their deep bereavement the sympathetic community extends sincere condolence.

S. F. BALLACHEY

The Store with the Stock

IN OPENING UP under my own name, I do so with the knowledge that I am no stranger to most of you. I have been dealing with you in a business way for many years, and I hope to have the pleasure of doing so for many more.

It is my intention at present to continue in the conservative manner you have been accustomed to, and one which, I think, best serves your interests as well as mine.

Any stocks which have been depleted during out sale are being replenished, and I intend to have whar you want when you want it, and at the price you want to pay.

GREAT POTATO WASTE

Can Be Prevented by Thorough Spraying.

Women's Meetings In Full Swing—The Summer Institute Meetings Are of Benefit to Every Woman Who Attends—Topics to Be Discussed and Work Planned.

(Contributed by Ontario Department of Agriculture, Toronto.)

POTATOES are sprayed to prevent such fungus diseases as Early Blight and Late Blight and Rot. These diseases are caused by plants known as fungi Those fungi which derive their nourishment from living plants injure them in so doing in various ways and thus give rise to what are known as fungus diseases.

In combating the great majority of fungus diseases methods of prevention only are practicable. Spraying potatoes is not done to cure but to prevent disease. In other words the object of spraying is to cover the surface of the leaves and stems with a substance, poisonous to the spores of fungi, in which they cannot grow and penetrate the plant. Spraying, therefore, in order to be effective, must be timely and thorough. The spray mixture must be on the plants before the spores reach them and the surface of the leaves and stems must be covered so completely that there is not the smallest space on which a spore can germinate.

Efficient spraying of potatoes depends:

1. Upon the use of the proper fungicide. Bordeaux mixture has so far proved to be the only satisfactory spray mixture for potato diseases.

2. Upon timely and repeated spraying. Spraying should be commenced when the plants are from six to eight inches high and repeated at intervals of from a week to ten days throughout the growing season. From three to seven applications will be required, the number depending upon the weather, the wetter the weather the more frequent the spraying.

3. Upon the liberal use of Bordeaux mixture. From 50 to 150 gallons of Bordeaux mixture should be used per acre at each application.

4. Upon thorough spraying, which means the covering of every portion of the plant with the Bordeaux mixture in the form of a fine mist. This can be done only when the solution is applied with good pressure so as to insure covering every portion of the plant. The best results from spraying are obtained when potato sprayers are used which are fitted with T-joint attachments, so as to insure covering both surfaces of the leaves at each spraying.

5. Upon spraying before rather than after prolonged rainy periods. Infection of the plants takes place during or soon after rain. Therefore it is of the utmost importance to have the spray mixture on the plants when the rain comes. — Prof. J. E. Howett, Ontario Agricultural College.

The Importance of Women's Institute Meetings.

A series of meetings which, to the women of rural Ontario, have always proved worth while, and increasingly so the last year or two, is the Women's Institute meetings. These are important because they are so far-reaching in their nature. They afford the town and country woman, no matter what her denomination may be, a channel through which she can be of all-round service to humanity.

Since the war began Red Cross and other patriotic work has, of course, received first consideration. The alleviation of suffering seems peculiarly woman's work. The need is greater to-day than ever.

The great demand by the Allies for certain foods such a beef, pork, wheat and sugar has caused the housewife to change her methods of pre-war days. She must now learn to substitute and to eliminate various forms of waste. Perishable foods must be more widely used, not only in summer, but also in winter. These must be conserved through proper storage, canning or drying. Such subjects as these may be discussed at the meetings. An expert demonstrator may be secured from the Department to give information or a practical demonstration to assist the housewife. The members may club together and do their canning at one centre with one fire if they so choose, and in addition to the work accomplished may have a sociable time together.

The children in the rural districts must not be forgotten. They must be prepared for the great responsibilities which are too soon to fall upon them. Their education must not be neglected. They must not be handicapped by physical imperfections. Subjects of importance to the child must be discussed and means adopted to improve conditions. The Medical Inspection of rural schools and the clinics held through the Women's Institute are doing much to improve conditions.

The girls also need attention. We are apt to forget the girls in our anxiety for the boys. Their lives and their prospects for the future are being affected by this war. Hence opportunities for study, for amusement, for developing their talents to the full, must be afforded them. Many of these opportunities may be secured through the Institute.

Surely with subjects of such vital importance as the above-mentioned, all meetings should be worth while.

We would call the attention of all to the importance of the summer meeting, held throughout June, when the delegate from the Department is in attendance. She has the latest information on all subjects of importance to the Institutes, and is a specialist on her own particular subjects. — G. A. Putnam, Superintendent Women's Institutes.

Letters from the Soldiers

WAR AND SPORTS, SUNSHINE AND ROSES IN FRANCE

Gnr. Stewart McKenzie, who has been with his battery at the front since last December, has lately been in hospital, at Bologne, suffering from septic poisoning in his foot. His last letter, dated June 19th, was written from the convalescent camp there, where he expected to be for another week before being sent first to the base and then back to the battery. "My foot is all better," he says, "and all I need now is a little work and exercise to put me in good trim again. On account of rain this morning I am trying to put in some of my time writing letters, which is not such an easy job as it might appear, as I have no news to begin with. Though it is raining this morning, this country seems to have been rightly named "Sunny France," as practically ever since spring set in here, with the exception of about a week at one time and a few days here and there, the weather has been the finest I ever saw in spring and early summer. I used to think we had some pretty fine roses at home and still think so—but I just wish I could send you a few from here to add to your collection. Some of our fellows have tried sending the plants to Canada, but I haven't heard whether they arrived there in good condition or not. Up in the neighborhood of our guns nearly every garden had its rose bushes. At the time I left there the buds were just about ready to open, so I expect that before this our dug-out table will be adorned with a pretty fine bunch of roses from the gardens about there. Even the inside of the gun pit is probably well decorated with them, as it was with other kinds of flowers before I left. Even up the line, where the people at home think we do nothing but fight and work, we like to have our homes looking as cheerful and beautiful as we can make them.

Yesterday afternoon field sports and games of all sorts were held on the camp grounds here, No. 3 Canadian putting on most of the program. The Canadian football team was beaten 1-0 by a picked camp team, but the baseball team from the hospital beat a picked team of Americans from the Base by 8—6. The Yanks appeared to be considerably the better team in the earlier stages of the game, but the Canadians made a rousing finish and won out in the last couple of innings. A big crowd of nurses, officers, hospital patients and convalescents watched the game, and though the majority of them didn't know anything about the rules of baseball, many of them went without their suppers to see the finish and were more excited at the outcome of it than those of us who understood the game. In fact, one Britisher who was watching the game from a tree nearly fell off the limb he was perching on when the hit was made that brought in the winning run. Ask a Britisher what he thinks of the American and Canadian game and he will probably say "It's a crazy fool of a game, and I can't see anything exciting about it," but before the game is half over he is yelling like a madman and you couldn't chase him away with a 9.2 howitzer."

PROSECUTED FOR SUNDAY FISHING

The big dam at Eugenia Falls is becoming a very popular fishing resort, and many go there from long distances in search of sport and recreation. Some of the fellows who were too busy to take a day off through the week got there on Sunday. The Markdale Standard tells what happened a couple of bunches of the seventh day sports:

There are still some people in this country whom apparently the war has not touched, who refuse to obey the laws of God and only will they obey the laws of man when force is exerted. Ten men of this class were rounded up on Sunday, June 24, for fishing in the hydro pond on the Lord's day. The prosecutions were instituted under the Lord's Day Act, and Constable Plantt, of Eugenia, was the instrument used to secure the convictions. The details make interesting reading. Mr. Plantt went over on Sunday and found a number of strangers fishing. He made himself friendly with them for some time until a farmer in the district came along and gave the snap away. The lines were then hurriedly withdrawn from the water and hasty departure made, the men refusing to give their names. These were secured later on from a hotel register in Dundalk where the five men had stayed. Another party of four—two Toronto men, one from Dundalk and one from Markdale—were discovered fishing in a boat, and their names all taken. A very crestfallen party they were and it troubled them greatly to know what to do with their boat, as they did not like to be seen carrying it on the side of their car on Sunday! Strange, isn't it? No accounting for tastes, is there? The boat and one long pole was left with a neighboring farmer. Three of these gentlemen were on hand Monday morning to settle up, and paid into court fines of $10 each and costs or $14.50 in all. The gentlemen from Toronto and Hespeler who imagined their names were not known have since been surprised by having summonses handed to them and will no doubt likewise put up the same amounts for ignoring the customs and laws of their country in order to gratify their perverted ideas of sport.

Children Cry
FOR FLETCHER'S
CASTORIA

—Rudolph Misch, a Walkerton carpenter, was helping a neighbor, Mr. Petch, shingle a barn on Friday. In his hurry he slipped off the roof, lighting on his head and causing a concussion. He never recovered consciousness, and died early on Saturday morning. He was 52 years of age.

VILLAGE COUNCIL

Council met 4th July. Absent—Mr. Logie. Minutes of last meeting read and signed.

Communications read: From the R. S. Bickle Co., offering chemical fire engines for sale; from the county clerk, with copy of county equalization by-law and requisitions 1918, county rates, $1945.88; municipal equivalent, $17.89; war tax, $230.97—total $2213.87; from the Paisley Public School Board, requesting an immediate advance of the sum of $250 out of current year's levy, for current expenses, and that the board required a levy of $3400 for the ensuing year; from the presidents of the Canadian War Hospital Fund for Serbia, Montenegro and Macedonia, requesting monetary assistance in its work; from the Assistant Provincial Secretary, stating that a special committee had been appointed by the Legislature to consider amendments to the Assessment Act, and inviting suggestions; from Dr. P. J. F. Houston, notifying council that on 4th June while driving up Queen St. he drove into an open ditch not protected by a light, damaging his auto, later he filed for damages at $21.67; from D. J. McCuaig, master mechanic, G.T.R., re proposed water supply to that company.

Forrester — Skinner — That the clerk procure 12 printed notices warning the public against defacing or destroying any village property, and that penalties provided by law for infractions in such cases will hereafter be enforced.—Carried.

Pearce—Forrester—That the street committee investigate the facts in connection with Dr. Houston's claim for damage to auto and report on same at next meeting—Carried.

Pearce—Skinner—That the clerk be instructed to make application to the county council for $150 as this municipality's share of the County Roads System grant, as the work has been completed.—Carried.

Forrester — Skinner — That the clerk reply to the letter from the G. T.R. that the council is not in a position at the present time to state terms for the supply of water, but will do so at a later date should our proposed change in waterworks system be carried out.—Carried.

Forrester — Skinner — That this council, as representing the citizens of Paisley, would very much appreciate the building of a new station at Paisley, as the same is greatly needed, and that a copy of this resolution be forwarded to the General Manager of the G.T.R.—Carried.

Forrester — Skinner — That this council borrow from the Royal Bank the sum required for the Paisley School Board as per their requisition, and that the reeve and clerk be instructed to sign the necessary note or notes therefor and affix the corporate seal.—Carried.

Pearce—Skinner—That payments be authorized as follows: Murdoch Leitch $62.50, Weighmaster $7.63, J. H. Maurer $35, Paisley Elect. Light Co. $45, Clarence Flood $9, C. Hepburn $7.50, W. Sparrow $40, Thos. Sparrow $20, D. Sutherland $10, D. McKenzie $28, Tp. Elderslie $13.50, the Clerk $18.21, G.T.R. $2.50, Pearce & Stoddart $400.84.

MARRIED

McAndrew—Lamont—At the residence of the bride's parents, on July 2nd, by Rev. Dr. McDougall, Mr. John D. McAndrew, of Grandin, N.D., to Margaret McK., daughter of Mr. and Mrs. Alex Lamont, con. 2, Saugeen.

DIED

Beaton—At Walkerton Hospital, on July 4th, John Beaton, aged 65 years.

Galbraith—At Paisley, on July 5th, Alexander Galbraith, aged 53 years.

IN MEMORIAM

Irwin—In loving memory of our beloved son, Case M. Irwin, died July 9th, 1917.
Thomas and Agnes J. Irwin

High Grade Oils, Gas and Accessories of all kinds.
Repairing at Reasonable Rates. All kinds of Vulcanizing done.
We are equipped to remove carbon by oxygen gas.

G. E. MILLER, Prop.

The Man Who Was Afraid

By Anna S. Ellis

Above the mists of the land, with a whirring sound, passing the air aside as a thing spurned, the great war-bird flew up, up, its pathway cleaving the sky.

Dan Loring was its brain, its eyes, its hands, controlling, guiding with lightning flashes this thing of power whirring, sweeping, swooping curving, lifting, falling, seeking the enemy with a singleness of purpose, carrying human woe into that realm of peace nearer the stars. Dan Loring, who had stoutly declared himself unfit for war! Dan Loring, who had said, "I could never kill a man, even in battle, no matter who he might be." Dan Loring, straight, lean, strong like fine steel, sitting now in his narrow seat, impelled by a single desire, to meet the enemy and silence him forever.

Below circled other ships of war, other birdmen out to win. Dan noted well their shape and course, enemy planes, every one. A slow, grim smile failed to soften his tense face; his keen eyes watched, singled out, the nearest foeman and the firm hands acted. Up, up the sky soared the war-bird, curved, turned and sped downward with a flash of wings.

Somewhere in the back of Dan's brain there came to him as he swept through the air, a kaleidoscopic review of the path that had led him skyward. War had cast its net of steel over his own little home town, and, with others, he had been drawn therein. Then came the day when he had faced fear, when he had known as soul-loathing for the thing he had been asked to do. Back in this strange dust brain of his he remembered, while his real brain was controlling eyes and hands with undeviating purpose. Remembered! Could he ever forget the night just before he left for camp when he went to Mary, his wife, with his trouble?

"I am ready for war," he had told her. "I am ready to do all any man can, save this one thing. I never could deliberately kill a man, no matter who he might be, nor what his motion had done to mine. I know I should show the white feather, Mary; I know it would turn me soul-sick. I am not made for a soldier."

"Kill a man!" Mary had exclaimed. "I could—if he needed killing."

Dan could see her yet, all pink and white, a wee bit of a thing, but the womanliest woman of them all.

"I trust you, Dan," she said at parting, her face white, but her smile brave. "I trust you. You have never failed me yet."

And now above the battlefield her faith strengthened him onward in his race with death. No white feather showed in his plumage; his and his machine were one, a perfect mechanism, with a guiding brain as perfect. The foe below needs watch most sharply.

"Almost a line on him that time," flashed through the brain that guided.

Odd how things long forgotten kept creeping into that hub-brain that acted independently of the tragic things of the hour, remembrances that had no part in to-day. How Mary's brave words rang above the whirring plane!

"I trust you, Dan. You have never failed me yet."

He straightened in his seat; his keen eyes never wavered in their watching.

Quick! A swift dip downward, and —ping! The shot cleft the air, and boomed through great spaces. The enemy plane curved and dropped; righted and flung itself forward. Dan's lips drew a straighter line. A second ping spoke. A reply whistled close by his ear, and the battle was on, up there in the sky, the blue overhead, serene, undisturbed; hell beneath.

Like two great fighting cocks, the planes pranced and sidestepped, bent and reared, seeking, ever seeking the surest way to destroy. Now and then a sharp ping snapped out; ever the whir of the planes filled the air.

Still that queer half-brain repeated its message of the past:

"Like a beastie twa its mither—"

The great plane swept upward, and flung down its ball of death.

"A wee birdie cries its cost—"

Ah! Only a curve missed that shot. He was not the only one out to do battle, to annihilate, to destroy.

"I can never kill a man, never!" ran through this strange sub-brain. Had he ever said that? He, Dan Loring!

"Ha! I'll show you, you beasts! Take that, you devil; and that! That got you, eh? Hipped you bad, did it? Glad to see you staggers! Come on, come on again! I've more for you if you want it. Come on, you curs!

"'I will repay,' saith the Lord.

"Surely, in His own good time; just now I am His right hand man. A-h! Curse you! —That's my shoulder, you coward. If you think you can get me that way, you are one count short. Just you wait. I can bring this old bird nearer; I can talk lead as well as you.

"Put up a good fight—Keep the faith—"

Strange thoughts rushed through his over-active brain. Like wind through the tree tops, but his eyes never wavered, nor did his hand lose its cunning.

Nearer and nearer swirled the plane; keener the watchful eyes; now a dip to dodge a bullet, now a rise to give one. Beneath, above, beside, the two fought for more than life, and the swift moments flew.

Dan's breath came hissing as he sent the last fatal bullet home. Like a wounded bird the enemy plane tipped and dropped to earth, lying but a speck in the distance below.

Dan gave a great sigh that was half a groan.

"One less to fight; one nearer the end and peace," he whispered.

How his shoulder burned! No matter. His brain still spoke, his firm hand guided onward, downward, back to headquarters and safely.

"God!" crept through his fagged brain. "Can I have lived a lifetime in a single hour? What must eternity be?"

Food Control Corner

The farmers of Canada will very shortly have to undertake the harvest work with the help of green labor. In this connection they should remember that we are at war. They should adjust the work throughout the farm to suit the new conditions, and they should begin right in their own minds.

The first adjustment necessary is to change the point of view from one of criticism, discouragement, and fault-finding with labor conditions, to that of the soldier and war worker, and realize that we are going through a crisis, the most serious the world has ever witnessed without any exaggeration whatsoever.

There used to be talk among farmers derogatory to the city man and other inexperienced laborers who sometimes sought employment temporarily on the farm. Such talk is out of place now, with the Germans sixty miles from Paris and every available man in Britain and France fighting to save not only his own country but this country as well. Such Canadian farmers forget that they themselves have been farmers all their lives and in war time they can't expect to secure men volunteering from the cities with an experience in farm work equal to their own. That is an impossibility. But if is not impossible that farm production of this country be increased, despite the shortage of experienced labor. That this is true is proven by the experience of this country in the manufacture of munitions.

When the war started Canada was absolutely inexperienced, unskilled in, and without the machinery for the manufacture of munitions. But the manufacturers set to work. They studied the problem and they solved it.

To-day Canada is turning out millions of dollars worth of shells every month from the largest to the smallest, and the most minute mechanical contrivances in connection with fuses and time charges. Canada's record in the manufacture of munitions is one of the surprises of the war. It was not made by Canada saying "Canada Can't" but by adopting the motto "Canada Can". Canada did not refuse to fry because of the scarcity of labor but set to work to organize and employed men and girls who had never been inside a factory before. They accomplished the impossible! These inexperienced helpers were speedily taught their parts and the result is shown in the products of munitions from Canadian factories now known all over the world—not excepting Germany.

The result of organization and the willing wartime spirit in Great Britain is equally convincing. Great Britain last year, largely with inexperienced labor on the land, increased her cereal production by 850,000 tons, its potato production by 5,000,000 tons. The cultivated area was increased altogether by 1,000,000 acres. When in 1917 220,645 men were taken from industrial organizations and placed in the Army the War Office replaced them with 804,000 women, and yet the production of guns was increased 80 per cent., air craft 250 per cent., while the shipping tonnage amounted to 3,168,000 tons, additional.

The best recent illustration of what can be done in an emergency when only inexperienced men are available is that of the battle of Picardy when the fifth army under General Gough was overwhelmed and out-numbered. It looked inevitable that the Huns would break through and capture the city of Amiens, which would have meant the interruption of railway communication between Channel ports and Paris, cutting off the British from one of their chief bases of supplies. General Carey, however, saved the situation. He called upon all classes of men behind the lines, whether they were soldiers, cooks, camp followers, railway construction men, Chinese laborers, medical service men, transport men or whatever they were and organized them to fill the breach. With these men he succeeded in doing what the 5th Army failed to do—he held the line! With no training in trench warfare, and no fighting organization before that time, General Carey gathered them together, and this nondescript gathering of troops kept the Huns back for six days and nights until re-enforcements arrived. General Carey did not say "I can't use this untrained class of men", but he set to work without a moment's hesitation to make the best of them, and he succeeded in saving the British army and its allies from a desperate crisis.

Similarly, if the Canadian farmer makes up his mind that these are war times and war measures are necessary there is absolutely no doubt he can utilize to a tremendous advantage the man power and the woman power of the towns, where people are only too willing to go to his assistance, if they are organized to do so. He must not expect them to be experienced and to know as much about the details of farm work as he does. It has taken him a life-time to acquire his information. Townspeople have spent their lives at different work, but with his knowledge of farming and his intimate acquaintance with his farm and all its needs he should have the ability to organize inexperienced help and show each helper his or her particular job and how best to accomplish it. A few hours' patient teaching in any one particular line of work will very soon enable a greenhorn to "Carry on", as they say in the Army. By patience and consideration the farmers of Canada can, without question, effect an organization from green but willing help from town that will not only surprise themselves but will also be of tremendous benefit to the Empire by the increased results of their harvest.

LIZARDS SAVE SUGAR CANE.

Reptiles Used in Plantations to Combat Insects.

In Trinidad lizards are being used in large numbers to combat millions of froghoppers that are now infesting the sugar-cane fields. These insects, which work devastation by sucking sap from the roots and leaves, have been known in the island for some time, but of late they have increased so rapidly that scientists have undertaken to find a means of exterminating them. One planter has established a special breeding place for lizards, which feed freely on the froghoppers. Special precautions are taken to prevent the destruction of the reptiles by birds or other creatures that might feed on them.

Stake up the roses and other plants as needed. Cosmos, unless growing along a fence, is likely to blow over and break unless staked up.

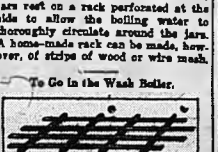
About the House

DIFFERENT IDEAS OF THRIFT.

The war is developing many ideas hitherto unknown to most Canadians, and the greatest of these is thrift. We hear it on every hand, from the kitchen and linen closet, through every branch of home-making—and in the streets it pursues us in the form of placards beseeching us to save for the different funds which the war has made necessary.

Food we must save, and we're doing it gladly and willingly. Linen we can't buy anyway, and wool is almost out of sight. And we are finding that we can get along beautifully with the Japanese lunch cloths for our tables, and that while shoddy isn't so satisfactory as pure wool for garments, we can wear it and be warm, if it is going to help win the war.

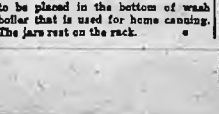
Many women in some way miss just what the food board desires of them, and undernourish their families. It is not thrift, but the worst sort of extravagance to rob the growing children of the foods they need to promote the healthful growth of bone and muscle. Adults may get along for quite a while on diminished rations, but children need certain foods to make the cells which build up the organs and it is nothing short of criminal to deprive them of these things. Milk, which just now is plentiful in Ontario, though there are differences of opinion about its cheapness, is one of the best things for the growing boy and girl. And we are not asked to save on that. On the other hand, we are urged to buy it and save on meat. Few children dislike milk and they should be given it freely—to drink, in custards and puddings, milk gravy and vegetable cream soups. In the soups, especially, it is an ideal dinner or lunch dish. The milk furnishes the protein necessary for growth, and the fat, if the cream is not taken out, while the vegetables give the mineral salts necessary. Any vegetable may be cooked until soft, put through a ricer, and the water in which it is cooked, with the pulp, added to scalded milk, the whole thickened with a little cornstarch, and served piping hot.



Plenty of milk, eggs, vegetables, fruit, and a certain amount of simple sweets may be given the children without interfering with the thrift program. And if the youngsters do not hear some of the old folks say they dislike the barley, potato or oatmeal breads, they will eat them with a relish. Feed the children well, and don't neglect yourself. Only see that your food conforms to the program laid down by the food board, instead of to the program arranged by the finicky notions of the family. This is not a time to humor your stomach.

There is another form of thrift which is mismanned. And that is the mistaken notion which impels a woman to get along without kitchen conveniences when she can afford to have them. I am not speaking now of power washing machines and vacuum cleaners, mangles and acetylene ranges which every woman longs for but which many cannot afford, but the dozens of little things which every woman could have and doesn't buy for the sake of saving a cent. For instance, a carpet sweeper can be bought for $4.50 which will last for years. Brooms are to-day $1.00 apiece and the carpet sweeper will outwear twenty-five or thirty brooms. Yet how many women go on without this very handy article when they might just as well have it. Charcoal and gasoline irons cost no more than a good set of the sort which must be heated on the stove. But how many women sweat through the heat of July and August because they won't invest in a different iron?

And the host of little things which help. Think of getting along without a pancake turner, when you can buy one for a nickle. Or without a tea cent paring knife, or an egg-beater or whip, either of which costs a dime. Strainers, spatulas, wire potato mashers, knobs for covers, dippers, can fillers, can openers, measuring cups, soap shakers, basins of all sizes, market baskets, scoops—why, what can't you buy for ten cents? Turn a woman loose in a ten-cent store with two dollars and she could pick up enough to save herself hundreds of steps a day. Yet how many women keep on saving money and losing time and temper, under the mistaken impression that they are thrifty.



Let us be thrifty, by all means. But be sure that what we practice isn't niggardliness.

Wash Boiler as Canner.

The good old family wash boiler makes a very good home canner. The jars rest on a rack perforated at the ends to allow the boiling water to thoroughly circulate around the jars. A home-made rack can be made, however, of strips of wood or wire mesh.

To Go in the Wash Boiler.

This is a home-made wooden rack to be placed in the bottom of wash boiler that is used for home canning. The jars rest on the rack.

When Wars Are Done.

When wars are done and peace beams like the sun,
When belching cannon, shot and shell's fierce cries
No longer lacerate refulgent skies,
Then shall the triumph ever sin be won.

Man's ghastly race with Death will be contrived;
He shall no soaring as the eagle flies,
Unwearied, and with strength renewed arise;
He shall obscure the sun—when wars are done.

The lion and the ox in calm shall dwell,
The little child shall lead them without harm,
The grey, parched desert's blooms its joys shall tell,
The vineyard's yield, the presses overrun,
When earth is swayed by love's all-potent charm,
Peace shall eclipse the sun—when wars are done!

TELEPHONE DEAFNESS.

May be Avoided by Proper Holding of the Receiver.

Telephone users—and they are all of us—will be interested in the subject of telephone deafness. George Cott, in the Buffalo Medical Journal, calls attention to several cases in which persons when they put the telephone receiver to the ear suddenly hear a loud, high pitched sound, and then could hear nothing more, the deafness persisting for a considerable length of time. His explanation of the cause of this deafness is that any interference to the line while one is listening may jar the auditory nerve suddenly and induce a high pitched sound, followed by prolonged tinnitus with immediate deafness, either partial or total, the symptoms ameliorating after some weeks. This accident can be avoided, because it occurs only when the listener holds the receiver in such contact with the ear that no external sound can enter, a common way to hold the receiver when there is much noise around. If the ear of the telephone applies the receiver in such a way that a space is left for free circulation of air between it and the ear, a shock, cannot be transmitted to the nerve no matter how much disturbance there may be on the line.

DRIVE CAPTIVES TO DEATH.

German Iron and Salt Mines Are Vile Torture Chambers.

Work in German mines is well known to be one of the cruellest forms of torture practised on the unfortunate victims of German ferocity, writes the Amsterdam correspondent of the London Times. Salt and coal mines are among the worst places in which prisoners are forced to labor. One case reported to me is that of a man reduced to a complete wreck after working in a mine called the Kaliwerk Prinz Adalbert. After two months his health broke down and he reported sick and applied to see a doctor. He refused to go down into the mine until he had been examined, and a German Feldwebel replied that if he did not go down he would be thrown down. The Feldwebel made him stand at the edge of the cage, placed a German soldier with fixed bayonet behind him, and told him the bayonet would be run through him if he persisted in refusing.

When pricked by the bayonet the prisoner descended and did his eight hours' work. He was subsequently punished with 14 days in cells, with a diet of bread and water soup, doing his daily eight hours' shift. Eventually he broke down completely and he was seen by a visiting German civilian doctor. He was then sent to Soltau. The change in his appearance was such that an old friend there failed to recognize in this human wreck the fine healthy man he had formerly known.

NICKEL NAMED FOR DEVIL.

Ancient German Miners Called It Kupfernicker or "Devil's Copper."

It was firmly asserted and honestly believed by the ancient German copper miners that Old Nick, alias the devil, worked o' nights making an infernal metal purposely to bother and pester the honest and religious miners. This ore, which to all intents and purposes looked exactly like copper ore, yet no copper could be extracted from it, they called kupfernickel, or devil's copper.

This Old Nick material, nicknamed nickel, was discovered by Cronstadt in 1761, and it was comparatively scarce in the metal world until a New York assayer found a few pounds of it in a shipment of copper ore from Sudbury, Canada.

He assayed the metal and stated its value in his return account. The astonished shipper immediately instituted a systematic search and quickly discovered immense deposits of nickel ores.

Finance never ruined a country, nor an individual either, if he had pluck. —Disraeli.

Dahlias do well in poor soil, without fertiliser, if the soil is loosened up to a good depth and kept cultivated.

"The worst sorrows in life are not its losses and misfortunes, but its fears."—A. C. Benson.

An envelope closed with the white of an egg cannot be opened by the steam of boiling water, as the steam only adds to its firmness.

WIRE FENCE

2,000 Rods, from 32 cents per rod, up. Shipped promptly from stock.

SWEET OR CHURNING CREAM

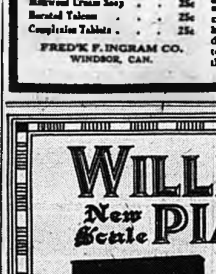
We want cream, pay express charged and remit promptly.

Mutual Dairy and Creamery Co. 742-3 King St. West Toronto

Keep celery plants growing by frequent cultivation.

The addition of a scant spoonful of cornstarch in making fudge will prevent its being hard and grainy.

On account of certain substances which they contain that make them poisonous to many persons, rhubarb leaves should not be used for greens.



It has been calculated that cattle require two ounces of salt per head per day to replenish the system in view of the amount of the food discharged during the 24 hours.

Vegetable oil margarine, made largely from peanut oil, was manufactured in the United States to the extent of 6,208,000 lbs. in January, as compared with 600,000 lbs. for same month last year.

See that stacks of hay, especially clover and alfalfa hay, are safe from fire. Spontaneous combustion causes great loss annually. The first cutting of alfalfa is most dangerous. If hay has rain or dew on it or if the hay in the stack is not cured thoroughly the moisture will cause fermentation which may produce sufficient heat to start a fire.

Ingram's Velvola Souveraine Face Powder.

The daintiness of a complexion always free from oiliness and shininess is the desire of every woman. Best of all powders is Ingram's Velvola Souveraine Face Powder. It keeps the skin smooth and attractive. Hides minor blemishes, the little wrinkles, and blends so marvelously with the complexion that it is scarcely visible. It adheres even to the skin in a warm and moist, and it has a refined and gentle fragrance.

Milkweed Cream	50c and $1.00
Velvola Souveraine Face Powder	50c
Rouge (3 shades)	50c
Lodonta	25c
Milkweed Cream Soap	25c
Scented Talcum	25c
Complexion Tablets	25c

FRED'K F. INGRAM CO. WINDSOR, CAN.

For the sake of youthful charm use Ingram's Milkweed Cream. Its daily use enables you to retain the charm and color of girlhood. It is curative and healthful for the skin tissues. Your druggist has a complete line of Ingram's toilet products including Zodenta for the teeth. (9a)

WILLIAMS New Scale PIANOS

THE outward beauty that distinguishes a Williams New Scale Piano is an index of its intrinsic worth. Ideals are built into every one of these famous instruments—ideals of craftsmanship that make for the most enduring quality.

Bungalow Model, $450.00

THE WILLIAMS PIANO CO., LIMITED, OSHAWA, ONT.

Canada's Oldest and Largest Piano Makers

The Younger Brothers.

"Too young to volunteer," you said;
and chaffed
When they left us out entirely from
the draft.
What you told us,—(sort o' kind)
That we'd help, who stayed behind,—
Seemed like mocking us. We choked
(it hurt!) and laughed.

But the most of us by now have seen
a light.
We are facing things, and starting in
to fight.
Every muscle we make strong
Means more help in righting wrong;
And we're backing you with all our
growing might!

It's for you, in camp and trenches over
there,
That we save each single penny we
can spare.
You shall know us in the field
Of the Nation's Harvest Field;
And the lift you gave at home we're
learned to share.

We are drilling—as we tramp along to
school,
Gripping facts—and seeing sense in
every rule.
It's some battle—to obey—
But it is the only way,
For the Second Line can't halt for
dunce or fool!

So, we've braced ourselves, and mean
to see it through.
It's no children's work you've left with
us to do.
Brothers, over there in France,
You are giving us our chance,
And we're taking it—and making men
—like you!

Patty and Her Problems.

Patty sat on the porch, chewing the end of a pencil. There was a frown on her face. It was really a pretty face, but you would never have guessed it, because it was hidden behind that ugly frown.

The morning-glories above Patty's head leaned nearer. They kissed the corners of her mouth, and brushed the tip of her nose, and tickled the tiny wrinkles that did not belong there between her eyes. So the morning-glories tried to drive them away.

An old daddy longlegs hobbled up the steps and stopped in front of Patty. To see him walk you would have thought that he was at least a hundred years old. He did not say what was the matter, but probably it was rheumatism. At any rate, he needed a crutch for every one of his eight legs. He stood, waving first one pair of legs and then another, and pointing them at Patty.

A big mosquito rose out of the pansy bed, where he had slept all night. He came tip-toeing and mosquitoing to Patty's head.

"E-e-e-e-e!" said he in the most disagreeable tone, right in her ear. "You don't look a bit sweet, but I'll bite you just the same."

And with that the mosquito bit her in the middle of her forehead—and of course straight in the middle of her frown. And the bite did not help the frown any.

The breeze came drifting down from the big maple tree—a pleasant breeze, smelling of blossoms and dew. It ruffled Patty's hair the right way, to try to drive away that horrid frown. Then it ruffled her hair the wrong way; but the frown was still there.

Then the sun, which had been playing hide and seek with the morning-glories, came over to rest on Patty's book. It danced up and down over the pages, and laughed in Patty's face, and tried to make her laugh, too; but she could not laugh, because the frown would not let her.

Now, the book that Patty was holding was an everyday sort of book on the outside, and on the inside it was just figures, but the figures were made up into problems, and it was the problems that made Patty frown.

"They're too hard," she said, with a pout.

"Nonsense!" said the sun. "Nothing's too hard, if you make up your mind to it. If they were my problems, I should do them in a minute."

"So should I," chimed in the breeze. "And I shouldn't waste time thinking about it. I should begin at once."

"Goodness, yes!" said the mosquito. "Never put off till the next minute the nose that you can bite this minute. That is my motto."

"If you want a real problem," said the daddy longlegs, "just try walking with eight legs."

"The idea of finding anything hard on such a glorious morning!" said the breeze.

"We'll all help!" cried the morning-glories and the daddy longlegs and the mosquito and the breeze and the sun together.

"To please you," said Patty, "I'd better do my problems and have done with them."

So Patty stopped chewing her pencil and spread out her paper. The sun shone on her book so that she could see. The breeze blew softly to keep her cool. The mosquito read out the numbers in a fine, loud voice as the daddy longlegs ran over the page and pointed to each one in turn. The morning-glories looked over Patty's shoulder to admire her work. And the pencil went back and forth, this way and that, over the paper, and put down the figures exactly as the sun and the breeze and the mosquito and the daddy longlegs and the morning-glories and Patty said. And everyone was so pleased and so well that before Patty knew it the problems were done.

As for the frown, you could not find it anywhere, because Patty's face was all smiles; and it was really a pretty face when the smiles had taken the place of the frown and pout.

HOW THE SUEZ CANAL WAS SAVED

THE FRUSTRATING OF A WELL-LAID GERMAN PLOT.

A Brave Indian Sergeant and Six Men Defeated 500 Turks Led by Hun Officers.

During the first year of the war, owing to calls on the British and Indian armies in France, East Africa and Mesopotamia, only a very thin cordon of troops could be spared to guard the Suez Canal, one of the main arteries of the British Empire. The canal is 92 miles long, and the troops available were only sufficient to hold small redoubts a few miles apart and to send slender patrols backwards and forwards between them. During the daytime the task was comparatively easy, for a flat, sandy desert some ten miles in width spreads eastwards and the high bank gives a good view over this.

But at nighttime and especially when there was no moon the work of guarding the canal was both anxious and strenuous. It was quite possible for the Germans to bring small raiding parties furnished with heavy mines unseen up to the edge of the sandy strip, and then directly it was dark to march straight for any point on the canal. So slender were the British forces that only very weak patrols could be furnished to patrol between the redoubts; they consisted therefore at the most of one non-commissioned officer and two men, but generally only two men, without an N.C.O. could be spared.

An Army of Six.

One morning just as the first faint dawn of the East was clearing, and the night's watch and ward seemed to be over, an Indian sergeant with two of his men, was patrolling along when he met a patrol of two men coming from the other direction. To these he said "The night is now over; lets my party and we will return together." A little farther on this party of one N.C.O. and four men met the next patrol of two men; and to them he said the same, "Follow me." The whole proceeding was accidental, and, perhaps, not quite regular, but a little bird up aloft was apparently guilding the unconscious sergeant.

Barely had the little party of seven gone half a mile when one of the two who were out as scouts in front came running back. "Lie down quick," he said. "I am perfectly certain I saw some Ewer hats (the head dress of the Turks, which has replaced the historic fez) peeping over yonder mound. And I think also I saw one or two Germans." "If that is so," said the sergeant, "we will at once attack them."

Forming his six men into a line of skirmishers, he ordered a cautious advance, taking advantage of every scrap of cover. They had not progressed far when a regular hail of bullets fell on them, and the sergeant got one through the knee, whilst one of his little army was killed.

Held Turks Back.

"The enemy is evidently in strong force," remarked the sergeant as he sat and bound up his leg. "Therefore, Sher Shingr, you will run back along the bank and shout across to the Frenchman at the next Gare to stop the shipping both ways. Then you will run on and tell Colonel Sahib what has happened. It is two miles you have to run, but be of good courage; I will remain here with these men and hold the enemy."

At that moment appeared three ships round a bend in the canal followed at a little distance by two more, all running swiftly into the ambush set by the Germans. The sergeant was in an agony, but with his four remaining men opened rapid fire on the enemy, hoping thus to warn the ships in time. To his immense relief he saw the leading ship suddenly turn her engines full steam astern and gradually warp into the far bank out of immediate danger; and the ships behind noticing that something was amiss, though they could neither see nor hear anything, immediately followed suit.

The Turks, now finding they had only a small patrol in front of them, began advancing in large numbers, so as to brush them aside and get at the ships. The sergeant, however, was a brave fellow, and knowing the importance of holding the Turks back, fought a fine rearguard action, disputing every yard of the ground. As the fight went on he lost two more men; so that, himself badly wounded, he had only two men left; and one of these was also wounded. Things looked desperate; but it is always darkest before dawn, and so surely enough at this critical moment the Turkish fire ceased.

The Colonel to the Rescue.

The sergeant was peering about anxiously to see what this meant, and what new plan of attack the Germans were preparing, when the man at his right, a few yards off and higher up, suddenly gave an exclamation of joy. "See there, by the grace of God, we are saved! I can see the Colonel Sahib with some men, a company at the least, issuing from the fort to cut off the Turks—may they perish in Hell."

His sight was keen and true, and the Turks had seen also and were in full flight. Improved afterwards that this brave Indian sergeant and his six men had achieved a very notable success. The German force consisted of 500 Turks with three guns, led by German officers, and commanded by a German general. Their intention was to sink by gun fire the first ship that came along, hoping the next might foul her, or also be sunk by gun fire, and that thus the canal would be blocked for weeks.

BRITISH WOMEN IN THE WAR.

What the Women of the Old Land are Doing to Help Win the War.

According to official announcement there are, at the present time, 4,538,000 women and girls employed in classified trades that are under the jurisdiction of the British Board of Trade. These figures are exclusive of women employed in small trades and on the land. Domestic servants are also excluded. All hospital helpers, Red Cross and other nurses are not counted. Taking all classes of British women war workers the total is considerably over 5,000,000.

Less than 200,000 women were employed in Great Britain before the war began and these were mostly in textile mills. The report for 1917 gives 199,000 in government offices exclusive of civil service and local government. The latter two employed 146,000. Munition workers numbered over 800,000; workers in chemical and engineering plants, 200,000; land workers, 100,000 (with an additional 30,000 called for this summer) and thousands as mechanics, motor drivers, ambulance drivers, street car and omnibus operators, cab drivers, every sort of railway work, letter carriers, bank clerks and office workers of every kind. Recruiting goes on steadily in all these lines and the response has been to the tune of 15,000 a week.

The spirit of these women is wonderful. Difficult work and dangerous work is not shunned but taken up cheerfully. Extra hours are taken as a matter of course. "We're not tired!" is their motto and when holidays are mentioned the reply is: "What will our men at the front do if we go holiday-making?" Girls who never tied their own shoes nor stuck to anything continuously for thirty minutes, work cheerfully through a long day for weeks and months side by side with their former maids or women from the fields.

Skilled workmen have been glad to teach these brave and plucky women the secrets of trade efficiency. Excavating for factories, actually laying the bricks and doing the carpentering is being done every day in order to release men for the front.

"Farmerettes" is a name which carries a pleasant suggestion of picturesque employments but too often it stands for such unlovely tasks as cleaning pigsties or such nerve-racking work as tending horses when one is actually afraid of the creatures. "Make the most of yourself and be worthy of the trust that has been placed in you," was the British Government's advice to applicants for service in the Woman's Land Army. Not one of the more than 5,000,000 women engaged in war work has failed to heed the message.

Train Colts Early.

A colt should always be broken to the halter before it is weaned, while one has a good opportunity of approaching it. Indeed, it should be taught to lead and to stand tied when only a week or two old, and thereafter it should be handled a great deal so that it will be gentle, rather than to let it grow up into a wild young thing that will let no one approach it. After weaning, before the close stabling season arrives, it pays to go to the pasture field occasionally with a halter for the purpose of leading the colt up to water.

A farm work-shop with a place for everything and everything in its place will pay big interest on the investment.

The man who can meet despair and defeat
With a cheer—there's the man of God's choosing;
The man who can fight to Heaven's own height
Is the man who can fight when he's losing.

—Service.

Health

High Blood Pressure.

The heart constantly works against resistance and this is the primary cause of the blood pressure. The amount of pressure is determined by means of an instrument called the sphygmomanometer. Examinations made with this instrument show great variation in the blood pressure in various diseased conditions. In fevers and in many other conditions in which great bodily weakness exists, the blood pressure is often found very low. In cases of Bright's disease with arteriosclerosis, the blood pressure sometimes rises to three times the normal, or more than 300 millimeters, or twelve inches of mercury. In shock, the blood pressure falls far below the normal.

A persistent high blood pressure compels the heart to do an enormous amount of extra work and wears it out, thus leading to dilatation of the heart and heart failure. With a blood pressure of 200 the heart does more than double the work required at 100. The extra labor wears the heart out rapidly. It is a very common thing to find the heart, blood vessels and kidneys simultaneously diseased, so-called cardio-vascular-renal disease. These grave cases require prompt and persistent attention.

The rise of the blood pressure through hardening of the arteries is one of the early symptoms of approaching old age. It is also one of the premonitory symptoms of Bright's disease.

Every person over forty years of age should have the blood pressure taken at least once a year. When this diseased condition is discovered in the early stages, much can be done by change of habits and by the application of proper treatment toward the arrest of the disease and improvement of the patient's condition. A fall of twenty-five to fifty points, often more, is the usual result of a proper regimen and rational treatment in cases of high blood pressure.

WHERE ENGLAND GETS HER PAPER

NORTHERN AFRICA PRODUCES A FIBROUS PLANT.

Since 1862 England Has Been Manufacturing Paper of Excellent Quality From Alfa.

Foreign publications are suffering acutely from the shortage in the various grades of paper which are used for news print and magazines. Prices for the inferior grades are so high that many papers and magazines of small circulation have been forced to discontinue publication.

France and Italy have been affected in this respect more than any other country of the Allied powers. A great number of magazines in the United States have been forced to raise the price during the past year, and others have adopted the other expedient of printing on cheaper stock.

There is so great a demand for paper made from wood pulp that reduction in the size of newspapers in the United States is being urged. At the time it is of pertinent interest that a new source of supply—at least so far as the United States is concerned might be developed in the arid lands of the West to meet this shortage, if Americans are prompted to take a hint from Europe.

A Valuable African Plant.

England has been manufacturing paper from alfa, a fibrous plant growing in Northern Africa, since 1862. This paper is of excellent quality, snowy white and has been extensively used in England in the printing of books and magazines.

It has never been used in any quantity in America, while importations by the European countries have been very small in volume. La Nature (Paris, April 27, 1918), publishes some facts concerning the ease with which importations of alfa pulp could be increased and thus add to the supply. It is pointed out that American and Scandinavian paper is at such a high level that the African pulp can be purchased at a greatly reduced price.

Alfa grows in Algeria, Tunis, Morocco and Triplol. It is planted like grass and matures in tufts which come up from year to year like alfalfa. It is not difficult to secure a good stand and to harvest it. All of the tuft except the roots are cut and the whole blade is available for conversion into pulp. The fiber is short and fine and while giving the paper a good body it is light and takes ink and colors splendidly.

British ships with coal cargoes consigned to Algeria make the return trip with cargoes of alfa which is regarded as ballast, hence the expenses are very light. As the actual pulp yield from alfa is only about 45 per cent., it is necessary to ship a volume of about 2,200 kilos of the raw material to obtain 1,000 kilos of pulp. The plan is being advocated to construct indigenous factories and prepare the paste in Africa, pressing it into blocks for shipment.

THE WEEKLY SERMON

"As his part is that goeth down to the battle, so shall his part be that tarrieth by the stuff: they shall part alike."—I. Sam. 30, 24.

King David returning from battle to Ziklag, found that misfortune had overtaken the place in his absence. A remnant of the Amalekites, whom he had harried so terribly the year before, had taken advantage of his absence, had burned the place to the ground, and had carried off all the women and children.

A wild scene of grief and passion followed; David and his strung men "lifting up their voices and weeping" like true Orientals, "till they had no more power to weep." But grief soon gave way to action.

David with 600 men started in pursuit. So rapid was their advance that 200 were forced to drop out. They were left in charge of the baggage. David, with the remaining 400, pressed rapidly forward, surprised and conquered the enemy and brought back the women and children and an enormous quantity of spoil.

When it came to the point of dividing up this booty, the 400 who had gone forward with David, objected to sharing with those who had been left behind. Then it was that David laid down the principle that later on became part of the Statute law of Israel, that all should share alike.

There are two kinds of service that are rendered in every battle, whether it be the battle for the establishment of the Kingdom of God, or the physical struggle of two opposing nations. We shall speak of them, not as active and passive, but rather as direct and indirect forms of service.

There is the work to be done abroad, and the work to be done at home; the work with the rifle and the machine gun and the work with the needle and the plough; the work of the soldier, and the work of the civilian; the work of those who go down to the battle and the work of those who stay by the stuff. The one is quite as indispensable as the other.

David's men were able to travel rapidly, because their heavy luggage was left behind. So our soldiers have gone, and are going to the Front, care-free, because they have confidence that we who remain at home will make all necessary provision for them. The necessity for a strong home base is greater to-day than in any previous war in history. It is so, because this war, unlike all previous wars, is in reality a war of nations.

Each of the warring nations is being organized into a tremendous arsenal. All our activities are being linked up to one great purpose. We are endeavoring to strike a blow as one man. All our energies at home are being directed to the various forms of necessary production, in order that our soldiers may have everything necessary for battle.

The principle, therefore, that David laid down for his men, is equally applicable to our present position. "As his part is that goeth down to the battle, so shall his share be that tarrieth by the stuff, they shall part alike." And it is only right that they should do so. In the struggle in which we are engaged, it cannot possibly be otherwise.

It is not for gold or treasure or territory that we are fighting, but for freedom and justice and righteousness and brotherly love and a lasting peace; and these things, like God's sunshine, are shared in alike by the just and the unjust, the slacker and the profiteer, as well as by the soldier and the patriot.

And this fact ought to bring home to every one of us the tremendous responsibilities that rest upon us. If there is to be equality of privileges, then there must also be equality of responsibility. If we expect to share alike in the booty, then we must be prepared to share alike also in the effort.

During the past few years we have heard a good deal about "slackers." It is a term that carries with it not a little of odium. No man of spirit or self-respect would care to think of it as applicable to him. But we need sometimes to be reminded that the term "slacker" has a much wider application than is usually accorded to it.

The willing man in any community, who is to accept all its privileges and shirk its responsibilities, whether they be the casting of a ballot, the paying of taxes, or any other civic duty, is a "slacker."

A man in the Kingdom of God or the parish who is willing to accept all the spiritual privileges and leaves its support to depend on a few conscientious and generous souls, or upon the legacies of the faithful departed, is a slacker.

The man or the woman who under existing conditions ignores the regulations that are to-day being made for the purpose of saving beef, bacon and flour for the use of the men who are fighting at the front, is a slacker and a mighty bad slacker.

"No one is exempt in this war. Some are outside the draft for military service, but there is none outside the draft of Duty, for service of whatever form he may be capable.

Are we at home going to be worthy of the sacrifice that the men in the trenches are making for us? That is the all important question for you and for me. They are giving their all. Are we going to grumble because we are asked to exercise trifling self-denial in order that they and the starving mothers and children of Europe may have food to eat?

Our duty is to stay by the stuff, to take care of things at home as well as supply their needs.

We are not to tarry by the stuff for the purpose of profiteering nor are we to tarry in ease and idleness. It ought to be an everlasting disgrace, for any man to grow rich as a result of this war, a war in which so many millions are being impoverished physically and financially.

We are not to tarry in ease and comfort by the stuff, simply keeping it in safety until they come back. David's men were able to go forward with free minds and swift feet, because they knew those who were left behind would care for the baggage. So, too, our boys ought to go, and have gone, with free minds into the battle, because they trust and believe to the uttermost that those at home will do their part.

And it is splendid how the vast majority are responding to the demands made upon them. Right and left, people who never thought they could do certain things, are doing them, surprising themselves and surprising others. They are not asking themselves if they are overtaxed or overtired. They are not consulting their nerves or feeling their pulses. There is no room for hypochondriacs. The need for instant energetic action is opening many doors and windows and sweeping out many a cob-webbed chamber.

All of us, in a time which calls for whatever anyone can do, are taking stock of what we have to contribute to the common fund; not simply of money but of sensible well-directed effort, of patriotism with brains behind the sentiment, of cool tranquility which faces the future and its great constructive work, of faith that sees beyond the present hour to God's eternity.

We are on our mettle. The war did not ask us if we were ready for the struggle; it came. Whether our lamps were burning or not, the importunate message rang in our ears. We have had to show the world the temper and fibre of our nation as a whole, and of our being, separately. We have learned that there are some things that cannot be deferred, that cannot be thrown off for other shoulders to assume, nor overlooked in foolish security on the assumption that they would take care of themselves.

It is a time when every man is called upon to do better than the best. There is no leisure to admire ourselves, to invite applause, to receive engrossed complimentary resolutions. There are doings afoot that requires every ounce of devotion and ability that we possess. Let the respite come after the battle has been fought and won.

And I know of nothing finer in life than the way in which many are responding to the greatness of the call that is made upon them. How the supposedly thoughtless are emerging from butterflyhood! How the "futile and fatuous" as one writer puts it, "are achieving the sublime"! Each day there come stories of the incredible doings whether at the Front or behind the lines, of those from whom nothing but the trivial or craven thing was expected. The coward doffs the mask he wore and discloses a hero. The mere buffoon is transformed into the saint or the martyr. —Of a sudden the immature becomes adult, and those not thought to be fit for responsibility, take up their burden and "carry on" without faltering, like the veriest veterans.

War suddenly discloses not merely the varying beastliness of brutes, but the singular and shining nobleness of humankind that in the long run vastly outweighs and outcounts the evil. We dwell so close to horror that we do not see this other side. The glory is hidden by the black cloud of misery and suffering, but it is only in the narrow valley of the shadow, it is only for this brief term, that we call years. "This too will pass." It is still God's will and we are His children. It is for us to prove who and whose we are.—Rev. Canon J. M. Snowdon.

Fix Fruit Prices in Britain.

In order to assure the supply of jam for the Army and Navy, following the comparative failure of the fruit crop in the United Kingdom, the British Ministry of Food has been forced to take emergency measures and also to fix the prices of these fruits. The information is contained in a cable just received by the Canada Food Board from Lord Rhondda, 'British Food Controller.' The latter again emphasizes the shortage of cheese in Great Britain.

Never iron lingerie ribbons. Wash and wind about a bottle until dry and they are ready for use.

Food Situation in Britain.

To-day, as was the case a century ago before wheat was imported (says a bulletin from the British Ministry of Food), there are no cereals available for cattle. There are not even any offals, for barley and corn are so milled for bread that there is practically nothing left over for cattle food. Food for humans takes precedence over food for the beasts of the fields.

"The art of life, says Trist, is to show your hand. There is no diplomacy like candor. You may lose by it now and then, but it will be a loss well gained if you do. Nothing is so boring as having to keep up a deception.'

EBENEZER

The heavy rain of last week is helping to make the hay an average crop. The grain crop is looking splendid, and with a little warmer weather to help the corn, prospects are good for a plenteous harvest.

Councillor C. E. Thomas is inspector of the new bridge which is being constructed on the B line. Mr. Hugh Watt is contractor.

Mr. and Mrs. Geo. Fleming, of Owen Sound, visited at Mr. Sam Fleming's on Sunday.

Ivan and Richard Grant, Russell Fleming and Gertrude McFadden attende the northern summer school held at Wiarton last week.

Mr. Will Grant and Miss Mabel visited friends in Chesley on Sunday.

A large number of Orangemen from here attended the service for their lodge held at Williscroft on Sunday, when Rev. M. Neilson delivered the sermon.

Miss Lina Grant visited friends in Owen Sound last week.

Mr. and Mrs. Pike, of Miller Lake, visited at Mr. John Hanbidge's last Sunday.

McKelvey Bros., John and Earle Grant put a new roof on Mr. A. Robb's new barn, 12th con.

B. M. Taylor, of the Canadian Men's Christian Federation occupied the pulpit here on Sunday, making an appeal in aid of the Belgian relief work, and his hearers certainly showed their sympathy for the Belgians by a splendid contribution. As several families were absent a thorough canvass was impossible, but when all have contributed it is expected that the sum will be over $100.

The new flag poles which have been erected on the church lawn are both beauties. This addition to the church property makes things look real Canadian like.

The Sunday school picnic held on June 29th was a great success.

Miss Marie Thomas is visiting friends in Tara.

Mr. and Mrs. Geo. Dickson, of Toronto, are visiting at Mr. J. H. McFadden's.

CARGILL

Miss Edna Ross, of Vinemount, visited friends in the village last week.

Mrs. Gordon Young and children, of Norwich, are here for the summer.

Rev. Geo. Mason, of Harriston, a former pastor of St. Andrew's church, was renewing acquaintances here last week.

Mr. Elliott, of Walkerton, occupied the Methodist pulpit very acceptably on Sunday evening.

Rev. Mr. Tylor, the new Methodist minister, is expected here this week, and will occupy the pulpit on Sunday evening.

Rev. R. M. Gale preached a very appropriate sermon to the Orange brethren on Sunday afternoon. A male choir led the singing.

Mrs. Vansickle, who has been visiting her sister, Mrs. Bell has returned to her home in Galt.

Mrs. Weisman and children, of Ayton, visited at Mr. J. H. Brown's last week.

Mrs. Thornton and babe of Toronto, are here on a visit to Mrs. A. Keyes.

Mrs. Whaley, of Harriston, visited at Mr. Wm. Russell's last week. Mr. Whaley was also here on Sunday.

Mr. and Mrs. Himmer and Miss Fink, of Mildmay, and Mr. Knechtel, of Hanover, visited at Mr. Hunstein's on Sunday.

Mr. Leisimer, of Buffalo, N.Y., and Messrs. Leisemer and Kalbfleisch, of Mildmay, were in the village on Sunday.

Five rinks of bowlers were in Walkerton on Monday night playing with the kitty chasers of that town.

PINKERTON

The local Red Cross packed and shipped the following articles last week: Red Cross supplies—30 towels, 22 suits pyjamas, 1 pillow, 2 pillow covers, 1 quilt, 1 pd. old linen. Soldiers' comforts—24 towels, 89 prs. socks, 72 personal property bags, 50 flannel shirts.

Mr. and Mrs. Ruby and family, of Kitchener, spent over the holiday at Mr. Jas. Clark's.

The ladies of the Red Cross Society wish to thank Mr. Wm. Taylor for his generous donation of $25.

Mr. and Mrs. W. J. Moffatt, of Edmonton, are visiting the former's parents, Mr. and Mrs. W. H. Moffatt.

Mr. Tom Reid, who has been confined to bed by a severe hemorrhage, is greatly improved in health. His daughter, Miss Adeline Reid, of Kentucky, is visiting at her home.

CANTIRE

Haying operations will be general this week.

Mr. John Eason had a new Toronto windmill erected at his house and is having a water system installed in his stable.

Miss Mary Gillies, of Toronto, is visiting at Mr. D. Reid's.

Mr. Kerr, Mr. and Mrs. Neil Taylor, Mrs. Arch. Watson and Miss Margaret, of Owen Sound, were Sunday visitors at Mr. Angus Taylor's.

The Pringle family, of Shallow Lake, spent Sunday at Mr. Jack Eason's. They came by auto.

Pte. Sylvester Gowanlock, who is training at Carling Heights, London, spent the week end at his home here.

GILLIES HILL

About $100 was taken in at the garden party under the auspices of the Presbyterian church, on Thursday evening, June 27th. A slight rain drove the people to the township hall where the supper, or balance of it, for part was served on John Eason's lawn, was eaten. The threatening rain kept down what would otherwise have been a very large attendance. The programme consisted of addresses by the pastor, Rev. A. H. Wilson, and ex-Reeve Cass of Elderslie; song by S. C. Cooper, of Owen Sound; recitations by Harry Stevens; solo by Miss McInnis, of Paisley, and duet by Miss McInnis and Miss Buchanan.

SECOND CON. ELDERSLIE

Mrs. C. Smellie has been laid up for a couple of weeks with blood poisoning in two fingers.

Miss McNaughton of Drew is the new teacher engaged for S. S. No. 2.

Mr. and Mrs. Minto Jackson visited Paisley friends on Sunday week.

Mrs. S. Gordon of Greenock visited for a week with Mrs. H. McKindless.

Miss Jess Kelth has gone to Woodstock to train for a nurse.

Messrs. D. C. Lillico of Guelph and Arthur of Toronto visited over the holiday at their home here.

Miss Mabel of the Canadian Soo is also spending the vacation with her parents.

Mr. and Mrs. Stewart and child of Brantford visited last week at the home of their uncle, Mr. A. Dawson.

Mrs. D. Allen, accompanied by her sister, Miss Flora Bell of Saubie Falls, are visiting Toronto friends for a couple of weeks.

Mr. and Mrs. Dalton, also Mrs. (Pte.) Dalton, of Toronto, motored up on Saturday and visited till Tuesday at the home of Mrs. Dalton's brother, Mr. Henry McKindless.

Owing to the severe wind storm on Monday, Mr. J. B. Allen's barn raising was postponed until Tuesday, when a good gang of men soon had all the timers put in place.

The teachers and pupils of S.S. No. 2 held a picnic on the closing day of school. Miss Laton, who has been a very efficient teacher for the past four years, was presented with a nicely worded address and beautiful cameo ring as a small token of the esteem in which she is held by the parents and scholars.

Mrs. R. J. Lillico and little son Douglas, of Toronto, visited recently with Mrs. A. Lillico of this con.

Mr. and Mrs. J. B. Allen, Miss M. Burrell, Mr. Jas. Allen, Elizabeth and Edna Allen motored to Bervie and Kincardine and spent a day with friends there.

The 2nd con. S. S. will be closed until the first Sunday in September.

Pte. Hugh Campbell, in training in London camp, is spending a few days with friends in this vicinity.

A large number from this concession attended the Gillies Hill picnic last Thursday and all came home feeling that an enjoyable afternoon had been spent.

Mrs. D. Walks is able to be out again after a very severe attack of la grippe.

Wilson Patterson, jr., is the latest ford driver on this line.

Mrs. A. Campbell, Mrs. J. D. Allen, and Miss M. Burrell were calling on Paisley friends last week.

WALKERTON

Over 600 autos were counted at the Carrick camp meeting near Deemerton on Sunday afternoon, as against 160 horses and rigs present. As nearly all the cars belonged to farmers, the way times have changed since the days when the agricultural slogan was "keep the autos off the road," shows how contradictory life is in this particular stretch of our country.

Mr. Moses Filsinger, reeve of Carrick, will appear before Magistrate Jas. Hinton in Walkerton this Thursday afternoon at 2 o'clock to answer to a complaint laid by a Dominion policeman, and in which Moses is accused of having made some disloyal and seditious statements.

Since the revelations in Toronto when one doctor was fined $1200 for prescribing liquor too freely and certain other physicians were found to be as reckless with booze as a bartender, License Inspector White of Walkerton has been instructed by the Department to draw the attention of the medical fraternity in this riding that prescriptions for booze must be the very minimum that the patient requires. For instance, a Walkertonian with a cramp in his stomach couldn't have a barrel of suds prescribed for his ailment when a thimbleful of the moisture would do. As a record is kept of all such prescriptions any pill-man making a run on booze is liable to do some high financing in court.

An echo from the big German offensive of March last has reached town in the form of a letter from Nursing Sister Marion Heughan, who was on duty at a base hospital in France when Fritz sprung his big surprise attack and made his most sensational advance of the year. The town in which her hospital was located was captured by the Huns, who haven't shown any too nice regard for Red Cross or hospital works. The fact that Marion and the other nurses assisted to get their patients away safely before vacating themselves, demonstrates that she had to show some speed in getting away before the Boches came in. She seems to have won by a neck, as she was able only to rescue merely the clothes she had on, the rest of her belongings falling into the hands of the foe when they cleaned it up in the town. After tramping twenty miles she and some other nurses concealed themselves in an old cattle shed and here they remained until picked up some hours later by a Red Cross wagon and conveyed far back of the lines to the safety zone.—Herald and Times.

INVERHURON

There are only a few cottages occupied at Inverhuron yet, but more are coming in each week.

Mrs. Geo. Harrison and daughter Lillian of Chesley, Mrs Shepherd and four children of Guelph are occupying "Cosy Nook Cottage."

Mr. and Mrs. Oliver of Hamilton will spend the summer at their cottage, "Bide a Wee."

Misses McIntyre and Cunningham, of Glamis, and Master Donald C. McIntyre, of Toronto, are occupying the McIntyre cottage.

Mrs. Chittick, of Stoney Creek, is the guest of Mrs. J. B. Campbell.

Miss Jessie Oliver, of Hamilton, was a week end visitor at "Lynewood Cottage."

Two picnics were held here last week—a union Sunday school picnic from Glamis, also one from the 4th of Bruce.

ELDERSLIE COUNCIL

Gillies Hill, July 1st, 1918

Council met on above date, all members being present.

A communication was received from the county clerk intimating that the amount required for county purposes was as follows: General county rate, $14,694; municipal equivalent, $135.10; war tax, $1,896; total, $16,725.10.

Mr. H. J. Daley asked the council to have some trees on roadway east of 30 sideroad, con. 10, cut down as they held the snow in winter and obstructed the road. On motion of Messrs. Fraser and Allen, the reeve and councillors Oswald and Clement were appointed to investigate.

Clement—Oswald—That orders be issued for the following accounts.—Carried.

W. E. Barnfather, gravelling lot 6, con. 2, $42.75; W. J. Allen, 50 yds. gravel per W. E. Barnfather, pathmaster, $5; Earl Grant, 7 yds. per H. Walpole, 70c; Thos. Dinsmore, 56 yds. per H. Walpole, $5.60; Paul Ditcher, 90 yds. per Jas. Sheepy, $9; H. Wilson, 85 yds. per Wm. Calhoun, $8.50; N. Scarrow, 44 yds. per Thos. Ferris, $4.40; A. McKinnon, 43½ yds. per H. Rudolph, $4.35; A. McKinnon, 132 yds. per A. Mitchell, $13.20; J. Palmer, 45 yds. per A. Rushton, $4.50; Jas. Thomson, 37 yds. per A. McCannel, $3.70; A. Watson, 82 yds. per Thos. O. Brown, $4.20; J. Palmer, 40 yds. per A. Strong, $4; J. Walpole, 12 yds. per J. J. Thompson, $1.20; Jas. Thomson, 8 yds. per J. J. Thompson, 80c; Thos. Collins, 28 yds. per J. J. Thompson, $2.60; A. L. McKinnon, 32 yds. per J. H. Turner, $3.20; Earl Grant, 72 yds. per D. H. Sparrow, $7.20; Thos. Dinsmore, 48 yds. per D. H. Sparrow, $4.80; Thos. Dinsmore, 56 yds. per Geo. Daniel, $3.60; Arthur Slomski, 56 yds. per John Shaw, $5.60; Harry Wilson, 81 yds. per John Thomson, $8.10; C. Hickey, 8 yds. per John Thomson, $3; Harry Wilson, 140 yds. per W. T. Cruickshank, $14; Edward Bone, 85 yds. per H. J. Daley, $8.50; Edward Bone, 62 yds. per Jas. Hammel, $6.20; I. T. Buchanan, 128 yds. per J. T. Buchanan, $12.80; Henry Schmids, 66 yds. per Andrew Green, $6.60; John Ickler, 27 yds. per Wm. Pepper, $2.70; Henry Schmidt, 36 yds. per And. Young, $3.60; W. J. Allen, 34 yds. per And. Young, $3.40; Jas. Thomson, 91 yds. per John F. Crooks, $9.10; W. J. Allen, 93 yds. per J. C. Blue, $9.50; Jas. Thomson, 3 yds. per J. C. Blue, 30c; Henry Pegelo, 78 yds. per J. McCullough, $7.80; F. Lawrie, 80 yds. per F. Lawrie, $8; Jas. Vancise, 136 yds. per Jas. Vancise, $13; W. J. Allen, 75 yds. per J. Stoddart, $7.50; Arch. Thomson, 55 yds. per D. Ruthven, $5.50; Henry Schmidt, 9 yds. per J. Prudz, 90c; Jas. Sheepy, performing arrears statute labor, $9.75; A. Mitchell, performing arrears, $11.25; H. Rudolph, performing arrears, $2.25; J. J. Thompson, performing arrears, $16.90; W. T. Cruickshanks, performing arrears, $22; Wm. Pepper, performing arrears, $9.25; Angus Taylor, removing ash from bridge, 5 sideroad, $1.50; R. C. Pearce, 6 mos. salary as clerk, $92.50; D. McArthur, postage for clerk's office, $2.50; D. Sparrow, gravelling Walkerton this Thurs. David Connor, gravelling 25 sideroad, con. 9, $45; Jas. Mair, building stone wall, filling and gravelling, lot 30, con. 7, $35; H. Walpole, grading, gravelling and repairing culvert, con. B, $30; Cedric Calhoun, drawing tile and gravelling contract, 25 sideroad, $47.80; Wm. Calhoun, gravelling and repairing culvert, 25 sideroad, $36.30; I. T. Buchanan, gravelling lot 11, con. 9, $2; August Gobert, building culvert, Dobbiston, $1571; John McAllister, caretaking at nomination and half year's salary as caretaker of Tp. hall, $8.50; J. Shoemaker, rings for soldiers, $60.50; E. J. Cohean, rings for soldiers, $60.50; Wm. McDonald, part payment printing contract, $50; And. Green, gravelling, lot 25, con. 2, and fill at bridge, $66.44; Gray & Ewart, spikes, etc., $18; S. K. Ewart, spikes, etc., $6; grader, $42.05; Jos. Stoddart, gravelling, 5 sideroad, con. 4, $67.50; Jas. C. Blue, gravelling and repairing culvert, 15 sideroad, $6; Jos. Stoddart, removing jam, bridge 10 sideroad, $4.

Oswald—Allen—That this board do now adjourn to meet again at the call of the reeve.—Carried.

School boards are requested to have their requisitions in the hands of the clerk by August 1st.

R. C. Pearce, Clerk

GLAMIS

Miss Flossie McLennan, who has been teaching at the Soo for the last year, returned last week for the summer holidays.

Miss Muir, of Toronto, is visiting at Rev. J. Reith's.

Miss Tessie Patterson left last week for North Dakota, where she goes to be united in marriage to a Mr. McDonald, formerly of Paisley.

The picnic to Inverhuron on Tuesday, July 2nd, was a success. All three Sunday schools were represented—Presbyterian, Baptist and the Congregational on the 10th.

Rev. J. F. McLennan, of Perth, is visiting friends. He took the service in the Baptist church on Sunday evening.

Miss Pearl Francis, of Toronto, is visiting at Mr. Angus Campbell's and at Mr. Murdoch McK—y's.

Mr. McCauley drove to Tara on Wednesday to see his mother, returning on Saturday.

Miss Hendrie's sale on Wednesday went well. Everything was disposed of.

An accident that might have had serious results happened to Mr. McNabb, of Chepstowe, on the boundary below Glamis on July 2nd. While motoring his car turned turtle. He was alone in the car and fortunately escaped injury.

Misses MacIntyre and Cunningham and Master Campbell MacIntyre are spending a short time in their cottage at Inverhuron.

Mrs. Patterson motored to Ripley last week to visit friends.

Sudden Death at Underwood

Mrs. H. Murray, postmistress at Underwood, was missed from her home on Sunday evening by a neighbor who called, and her body was found in the back yard, where she had apparently dropped dead.

SAUGEEN COUNCIL

All the members of Saugeen council were present at their meeting on June 29th. The clerk was instructed to advertise for a tax collector, and on motion of councillors Webster and Greatbead it was carried that soon 6de residents of Saugeen enlisting and accepted for overseas be given a five dollar gold piece as a slight recognition of the services they are being called to.

The following accounts were passed: John Wallace, road in spring, $5; John Scott, road in spring, $5; T. Stanton, road in spring, $5; cedar $2.97; The Advocate, advertising contracts, $1.60; Wm. Hogg, supplies for M. Gibbons, $9.90; John Cook, 60 hours grading, $66; J. G. Scott, 4 sheep killed by dogs, $80; J. A. Roech, sheep valuator, $2; Geo. Osborne, 111 yds. gravel at $1.14 (less ½ inspecting 56), $120.54; Jas. McEwing, 6 days inspecting, $12; D. Cairns, fixing two culverts, $11; Jas. Currie, 20 hours, 2 men and team, $15; D. A. Campbell, repairing washout, $205; A. Dier, two men and team, 3 hours, $2.25; F. W. Elliott, 3 months' salary and postage, $57.50; W. Steele, part contract, Kolb bridge, $75; N. A. McGillivray, part culvert, con. 4, $230; M. Black, filling washout, $1; Council meeting No. 5, $14.95.

Stratford, Ont.

Commercial life offers the great opportunities. Recent lady graduates of this school are earning as high as $1,000 per annum. The last young man we received from an office man with some experience offered initial salary of $1200, per annum. Students may enter one day any time. Graduates placed in position. Commercial, Shorthand and Penmanship departments. Get our free catalogue.

W. J. Elliott Pres. D. A. McLachlan, Prin.

MOTHERS OF CANADA
PREPARE FOR TROUBLE

When a girl becomes a woman, when a woman becomes a mother, and when a woman passes through the changes of middle life, are the three periods of life when health and strength seems most needed to withstand the pain and distress often caused by severe organic disturbances. Many thousands in this section would testify as do the following:

St. Catharines, Ont.—"Over forty years ago I was restored to health by taking Dr. Pierce's Favorite Prescription. It was after medicine and doctors had failed to help me or give relief. I was through overwork, become all run-down in health. I was weak and finally became a nervous wreck. The 'Prescription' was recommended to me and at the time I started to take it I had not been able to do anything for over a year. I took the "Favorite Prescription" and the 'Golden Medical Discovery' as well. It took several bottles, but I was completely restored to good health and since that time when I have felt the need of these medicines I have taken them and always with perfect satisfaction."—Mrs. Wm. Hagen, 23 Page St.

Stratford, Ont.—I was all run-down, weak, nervous. I also suffered with severe pains through my back. I was very miserable when a friend advised me to try Dr. Pierce's Favorite Prescription and one bottle seemed to give renewed strength. It stopped the pain in my back, also helped my nervous condition. It is surely a good tonic for women.—Mrs. Florence Cullum, 100 Milton St.

—Mrs. (Rev.) Diehl has been visiting in Clinton.

—Miss Agnes Gibson is home from Guelph to spend holidays.

—Myrtle McKenzie, of Toronto, is a visitor at Mrs. A. McKenzie's.

—Mrs. Hynes and Miss Hynes, of Renfrew, are guests of Mrs. (Dr.) Allen.

—Mrs. John Hargreaves, of Toronto, was in town for a few days last week.

—Mr. Wm. McQueen, city clerk of Vancouver, visited Mrs. Cheves one day last week.

—Ola Irving is up from Toronto, visiting at the home of her aunt, Mrs. G. B. Irwin.

—Miss Nettie McIntyre, of Regina, arrived last week on a visit to Paisley and Elderslie friends.

—Miss Beth McGillivray, of Inkerman St., has gone to visit friends at Huntsville for a couple of months.

—Mr. Duncan Livingston, of Durham, was a visitor at Mr. Alex McGillivray's, 12th Bruce, for a few days.

—The regular meeting of the Women's Patriotic League will be held in Putnam's hall on Friday, July 19, at 3.30.

—Miss Agnes Pearce, who has completed a course at the Northern Business College, Owen Sound, is home for holidays.

—Miss Annie McLaren, of the post office staff, is spending a two weeks' vacation visiting friends at Fort Stewart, in eastern Ontario.

—Mr. Colin Cameron and Mr. Norman Somerville, of Woodbridge, were visitors at the home of their cousins, the Misses Cameron, last week.

—Bruce Presbytery met in Knox church on Thursday last. One item of business dealt with was the call from Underwood and Centre Bruce to Rev. Mr. McLachlan, which was assented to.

—Would those who bought pie or cake on plates at the garden party please return the plates to McArthur's bookstore, as some of these belonged to sets.

—Misses Bessie Laidlaw, Beulah Rudolph, Edna Cumming and Eva Somerville are among the Normal students who have successfully passed the exams.

—Mr. Dan McInnis, of Spokane, Wash., is at the home of his brother, Mr. J. S. McInnis, 2nd Bruce, having come when he learned of the serious illness of his mother, who passed away on the 10th inst.

—The Methodist and Anglican Sunday schools held their picnics at home on Wednesday last, and the Baptists went to Goble's Grove, Port Elgin, on Tuesday.

—Mr. and Mrs. Dan McNeill, who were visiting in Paisley last week, hurried home to Owen Sound on Thursday last upon learning through the daily papers that their son, Pte. Arch. McNeill, had landed from overseas and would likely reach Owen Sound in a day or two. Archie enlisted with the First Contingent, and was wounded at St. Julien. After coming out of hospital he was in the army postoffice at Shornclife.

—Bruce telephone rentals due July 1st, and payable now. R. Fullerton, agent, Paisley central.

—Have you tried Domestic Shortening, in 1-lb. blocks? Cheaper and more economical than lard. S. F. Ballachey.

Oddfellows Attention!

Special business at Shiram Lodge meeting next Tuesday night. A large attendance requested.

—Stop! Look! Don't forget the Methodist church garden party, to be held on the Methodist church lawn on July 26th. Admission and tea—children 15c, adults 35c. Tea served from 6 to 8.

—A garden party will be held on the manse grounds, Queen Hill, on Monday, July 22nd, under auspices of the Young People's Guild. A good programme has been provided for. Speeches by Rev. W. McGillivray, of Chin, Rev. J. C. Robinson of Tiverton, Messrs. C. M. Bowman, M.P.P., I. J. Hunter and E. R. Savics. Music by Rayner's Orchestra of Southampton, etc. Tea served from 5.30 to 8.0. Admission—adults 35c, children 15c. Proceeds in aid of Red Cross and Missions.

Keep a Smart Appearance

You can be smartly dressed without being extravagant if you will leave your next order with us. We have a good assortment of the very newest patterns in fancy suitings. Look them over before buying. Also in Ladies' Suitings we have a full line to choose from of the newest patterns and styles.

I. S. CRUICKSHANK, the Tailor

—Mrs. M. Blue and daughter, Miss Gladys, were visiting friends in Toronto for a few days.

—Mr. and Mrs. R. Johnston, Misses Hazel Fieldhouse and Anna Howson motored up from Toronto and spent the week end at Mr. T. Johnston's.

—Mrs. Geo. Hoath and family have returned home after spending three weeks with her sister at Eugenia Falls. She was accompanied by her niece, Miss Martha Fenwick, who will visit friends here during the holidays.

—A Cargill rink of bowlers motored up on Thursday evening and played a game with Paisley trundlers on the old green. The home men won by 5 shots. The rinks were: Cargill—Sirrs, Garland, Kyle and Fowlie (sk). Paisley—McGill, Rae, Jack and Shoemaker (sk).

—Mr. F. C. Ryan, who has been director of the Methodist choir for some time, giving his time and services without remuneration, was presented with a handsome easy chair on Thursday evening last when the members met in the church for their regular practice. A nicely worded address accompanied the gift.

—Mr. Beaton Wells, of Pinkerton, ex-councillor of Greenock, is working in one of the big shipbuilding yards at Toronto. He was for several months on the construction of the big ocean freighter, War Ontario, which was launched last week. Mr. Wells, who was home for a few days the past week, says he likes the work and the wages are nigh.

—Printing Invitations is part of THE ADVOCATE'S business.

VILLAGE PROPERTY FOR SALE OR RENT

GOOD frame dwelling, stable and outbuildings, with five acres of land—formerly the George property—near Stark's mill. Will be sold on reasonable terms or rented. Also a 6-yr-old driving mare for sale. Apply to D. DUNLOP, Prop.

CARD OF THANKS

The family of the late Mrs. Jos. Hyde desire to thank the friends for their kindness and sympathy extended at the death of their mother, and for the beautiful floral offerings.

CARD OF THANKS

Mr. and Mrs. J. N. McInnis desire to thank neighbors and friends for the kindness shown the late Mrs. McInnis, sr., during her illness, and the sympathy extended since her death.

Had to Pay

The County Court case of McGlynn vs. Hastie was before Judge Dickson at Goderich recently. The defendant, W. R. Hastie, of Gorrie, in October last bought six hogs from the plaintiff, Thomas McGlynn, a farmer of Howick township, and gave in payment a cheque of Chas. C. Munro, of Wingham, for whom he was buying the hogs. When Munro's cheque was presented there were no funds, and Munro subsequently made an assignment. McGlynn entered action against Hastie, and although the defendant entered the plea that he was simply Munro's agent in the transaction, judgment was given against him for the amount involved, $200.10 and costs.

More's Drug Store

This is the place to get all requisites to fight the summer pest, such as **Paris Green, Arsenate of Lead** (in paste form), **Bug Death** (the great bug destroyer and fertilizer), **Bug Finish**, also a fertilizer, **Insect Powder** in packages and bulk, **Mosquito Oil** to keep the mosquitos away, and **Larkspur Lotion** for the boos. **Fly Skoot** for flies on stock, **Limestone, Copperas, Hellebore, Crude Carbolic Acid, Formaldehide** and **Creolin.**

OUT WITH THE FISHING CRAFT

AROUND THE COASTS OF THE British Isles.

Death Often Lies in Wait For the Deep-Sea Fishermen in the Perilous Waters of Wartime.

From the pierhead a tiny flicker of flame dances in and out at regular intervals, then a stentorian voice bawls into the darkness, "All ready?"

One by one the little craft leave the harbor, with oil-engines humming and sails idly flapping. Then once clear of the mouth, the canvas bellies to a brisk nor'-west breeze, and out the fishermen go to the grounds.

Each little vessel carries a crew of five, and they are either men well over military age, or else youths in their teens. Some of the men are old—very old—but night after night they sail out with their smack and return heavily laden on the morning's tide.

It is ten o'clock as the boats leave port. For hours the crews have been busily baiting their lines. Choice bits of mackerel or portions of whelks—"bickies," as the fishermen call them, are arrayed neatly on each shining hook, and the whole is carefully arranged in a special low basket.

Stores of oil and coal are taken on, as well as provisions, for the weather may turn out nasty, and then the fishing craft would perchance seek shelter on the other side of the water.

The Grounds.

The night is pitch dark. No stars glimmer in the sky, no lights are visible from the sea-front. The harbor lamps are masked, only in the distance flashes the arm-like ray of the one undarkened lighthouse on the coast.

They left the harbor in line, but now the fishing-smacks separate, and soon all they see of their companions is the bright light marking the low cabin of the boat.

The little seaport is left many miles to the east, but still the bobbing craft go on, their engines droning and their sails humming in the stiffening breeze. The fishing-ground is at last reached. It is nothing but a shallow, sandy stretch of water, many miles in length, and the home of myriads of fluke, gurnard, and other fish.

Every man is at his post in our smack. Gradually the line is let down into the water. Black, pig-like objects filled with air, known as "mollegs," go down as markers buoys, and soon the whole line is paid out and left. This is the process known as a "shoot."

Harvest of the Sea.

Again the smack goes on and shoots her other lines. Then begins the weary patrol up and down. Sails are taut in the breeze; the engine is silent.

The time is slipping by. The fishing-boat ceases her running up and down, and glides away to visit her first line. All is bustle aboard. By the glare of a flickering oil-lamp the shining line is drawn in. Over the side stands an old man with a "gaff" to spear the fish as they appear. Skate, fluke, gurnard, and shimmering cod come floundering up, and soon the deck is a mass of slime and blood.

As the line comes dancing in, strange shapes hurl past our boat. Huge passenger steamers with eerie designs on their hulls flash past; slow-moving coasting craft with a Vickers' quick-firer churn across your bows; motor-launches, high-pooped trawlers, all pass with lights out. Only the absence of these light remind you that a war is really on.

Out on the eastern horizon appears the first flush of dawn. The fishermen troop down below, and by their little coal fire warm themselves or drink coffee. All their work is finished for the present.

Making It Worth While.

At last, with the turning of the tide, the engine is started, the sail reefed, and away the little boat bobs merrily towards home. But the eyes of the crew are ever peeled for the lurking U-boat.

One after one our fellow-craft loom up in the distance, a good-natured race for port begins, for it is a matter of "first come first served," and before long the whole line is making rapidly for home.

The harbor mouth is gained. Thankfully, be it noted, for these are dangerous times for the fishermen, and anxious times for the womenfolk at the pier-head. Poor souls, they have suffered! Many is the gallant son and husband lost in the past four years. Each little boat ties up for a short rest. The fish are laid neatly on the concrete slabs of the old quay, and before long are disappearing rapidly under the hammer of the auctioneer.

The fishermen betake themselves to bed for some hours, or perhaps discuss the market with their brother workers over a well-won pipe. And then begins the baiting.

But this life, though hard and strenuous, fraught with danger, is one which brings handsome remuneration to the hardy fishermen. Often enough he goes home at the end of a hard week with perhaps £150 in his pocket.

CRADLE OF MODERN WARFARE

LIES IN THE VALLEY OF THE OISNE RIVER

There The First Dugouts were Excavated and Fence Wire and Rabbit Netting Used As Obstacles

The Aisne looms large in the history of the war. After the battle of the Marne and the stopping of the first German rush, the enemy fell back towards the Aisne. On September 12, 1914, the Boches were cleared out of the valley of the Vesle. The historic story of the next days is graphically told by Captain C. A. L. Brownlow, D.S.O., R.F.A., in his "The Breaking of the Storm."

"On September 13 and for the ensuing three or four days the British army crossed the Aisne and fought fiercely to advance further, but without success. Gradually the front crystallised into immobility, and here our troops remained for three weeks. During this period one can trace the beginnings and growth of the methods of trench warfare which are now familiar to so many.

How the Trenches Grew

"The trenches, first begun by the individuals of the firing lines scooping each for himself a hole in the ground, grew apace into a network of excavations, while away behind the firing line there appeared systems of reserve trenches, sited and dug under the directions of G.H.Q.

"With the ever-increasing ramifications of the trenches began the first dugouts, which were small caves burrowed into banks, or widenings of the normal trench, roofed in with such material as was to hand and covered by a layer of earth sufficient to give protection against splinters. With the propinquity of the opposing lines it was necessary to get accurate artillery fire close in front of our firing trench. This necessitated most accurate observation, and this in turn necessitated forward observation officers and telephone wires laid from the batteries to the infantry.

"And now began the allotment of a definite section of the front for each battery to cover with its fire, which developed in time to the barrage or curtain of fire, the basis of present tactics.

The First Wire Guards

"To prevent a sudden rush of the enemy, obstacles such as wire cut from fences and rabbit netting from the neighboring woods were erected, fore-runners of the vast barbed wire entanglements which now stretch from Switzerland to the sea.

"On the Aisne also began for the first time the direction of artillery fire from aeroplanes, which was done occasionally by wireless, but mostly by the use of colored lights. Here, too, appeared the first observation balloon; needless to say, it was the enemy who had it.

"It was on the Aisne, too, in those September days that British forces received from the Kaiser the immortal title of the 'contemptible little army.'"

Increasing Acreage in the West.

Mr. J. D. McGregor, in a report to the Minister of Agriculture, cites the following figures as his estimate of the increased acreage under grain crop in the three Prairie Provinces: Wheat, 2,010,567 acres; oats, 554,625 acres; barley, 93,320 acres. The total acreage for the three Provinces in grain crops as compared with 1917 shows an increase of 11%, according to Mr. McGregor's figures. These are: 1917, 24,038,900 acres; 1918, 26,687,412 acres; increase, 2,658,512 acres.

The supply of borlap is nearly exhausted, and mill feeds may have to be shipped in bulk ere winter.

"GETTING THERE" IN FRANCE

DESCRIBED BY ONE WHO HAS HAD EXPERIENCE.

Travelling Behind the Front is an Adventurous and Erratic Matter Which Needs Grim Resolution.

When at the Front your battalion is resting, and an afternoon off offers possibilities of a joy ride to visit a friend or dine at a neighboring town, the choice of means of transit is large. If you are an extra A.D.C., of course, all you have to do is to push a button, and the next moment the general's Rolls-Royce glides up to the door to await your pleasure, says a British officer. If you are, as I was, a humble subaltern of the foot-sloggers, you can rarely aspire so high. Various modes of locomotion are, however, still at your service. There are horses, "hairies," bicycles, motor-lorries, motor ambulances, your two feet, or perhaps a train. I put the train last, because, though it sometimes happens that a battalion goes into reserve at a place which boasts a railway-station, I have never heard of one being close to a station from which trains started for any place worth going to.

"Dark Horses"

I have made a distinction between horses and "hairies," not because they are different animals, but because a "hairy"—in other words, a transport horse, is unlike any example of the equine species that one ever saw at home in England. You must picture a shaggy, wild-eyed brute with a mouth of iron and a back like an ironing board, as capricious as a prima donna, and as full of tricks as a waggon-load of monkeys. When you saunter down to the transport lines to pick your hairy for your joy-ride, you are apt to be bitterly deceived by appearances. A gentle, wild-eyed beast, with "fed up" writ large upon its expressive countenance, which the transport officer will warrant as quiet as a mouse, will probably behave like an unbroken broncho, once he tastes the liberty of the high road.

There are also bicycles. Every battalion has a certain number of cycles for the use of the signallers. Please disabuse yourself of the idea that an Army cycle is anything like one of those glistening, black-enamel and nickel-rimmed machines you see in the shop windows. Even as these, it has two wheels, a like number of pedals, and handle-bars and saddle, but there the resemblance ends.

Taking What Comes.

Still, the old Army "bog-wheel" is the subaltern's great stand-by in France. I have gone a-hiking on it, I have ridden to many a joyous dinner-party, and wobbled perilously homeward after a gay evening. I have been to combats at divisional or brigade headquarters on it, and I have always come back alive. Sometimes, it is true—when the country has been hilly—I have wished I had walked both ways!

But, to my mind, the most delightful way of getting about in France is to sally forth and take your chance of a conveyance. What sensation could be more delightful, I ask you, than to walk out on one of the great main roads of France, the map of your route pretty clear in your head, ready to stop the first conveyance which seems likely to give you a lift? You have to be a little careful, however. It might be awkward to hold up a car conveying a riverish brigadier, who has just been "told off" by his divisional general.

It is always safe to stop one of those long trains of motor-lorries which are the commonest sights on the roads of the Army zone to-day. Any driver will gladly make room for you by his side at the driving-wheel, but you cannot depend on him for a knowledge of the geography of the country. The British soldier knows where he has come from and very often where he is bound for; but beyond that—napoo! Therefore, it is necessary to find out from the driver his destination, and contrive that he will set you down at some frequenid point, whence you may travel your next stage. And so by motor-lorry, ambulance, staff-car, or even a "G. S." horse-waggon, you at length reach your destination, having had a delightfully varied time, and collected a pack or so of more or less veracious rumours of doings at the Front.

One blazing July afternoon I was stranded at a large town, with the prospect of a four-mile walk—after a heavy lunch—to get me back to camp. I set forth alone to trudge my weary way campwards. I had got clear of the town, when I saw a car coming towards me in a cloud of dust. Sir Douglas Haig himself might have been in that car; but the discomfort of the heat and the dust gave me courage. I stepped out into the middle of the road, and stopped that car.

Besides the chauffeur, its only occupant was an angel, disguised, it is true, in a brass hat, but a seraphic personage for all that. For, without waiting for me to speak, he expressed his conviction that I wanted a lift; and, what is more, he turned the car round and drove me back to camp. And then I found he was the O.C. staff cars, or whatever the position is called in that part of the world.

A Risky Proceeding.

Sometimes the position is reversed. When I was driving in a staff car once near St. Pol a British cavalryman rode out into the centre of the road, his hand raised above his head. We slowed down. Approaching the car, the horseman, who was a simple trooper, announced very simply that if he could get a lift to a certain railhead—which, as a matter of fact, was some miles out of the way—he would be able to get twelve hours more leave in England. From a disciplinary standpoint, this stopping of a staff car by a private soldier was rather an audacious proceeding. But the colonel at my side, bade the man jump in, which the trooper, having handed his horse to another man with him, did with alacrity.

"That lad will go far," the colonel said to me, "if he always asks for a thing when he wants it badly enough."

Food Production in France.

More than 1,000,000 Frenchmen have been killed in war and 1,500,000 are physically unfitted by their injuries to carry on farm work. The women are managing the farms and doing most of the work. In battle zones, such as the Champagne district, women dd not forsake their work in the fields even when German shells were bursting around them. When the cannonading was heavy they lay flat on the ground and as soon as there was a lull they would be up attending to their grape-vines. The wives of the French farmers have always helped their husbands in the fields. They now do double duty, rising earlier and working later. Horses were conscripted for he army and French women have taken their place to draw the plows and harrows. Food production in France, despite the efforts of women, children, od men and cripples, has dropped to one-third.

The Dead Wife.

When she belonged to me
And day and night
Dwelt in my house
For my delight,
She thought of God
And saw Him plain
In storm and cloud
And singing rain.

Now she is God's
And dwells at length
Where He can serve her
With His strength.
Does she not see
In His land's grace
Of fields and hills
And skies my face?

Measure.

In a tiny pool
You could jump over
I saw reflected
All of the sky.

I wondered: How
Should one rightly measure
This lovely water,
By the earth that holds it?
By the heaven it holds?

Volunteer Farm Workers.

Hundreds of thousands of volunteer workers will be needed to save the crop of the United States and they are coming forward from every walk of life. At a recent convention of bankers, a question was asked, "How many of you grew up on a farm?" The count showed 80%. Everyone present agreed to leave his bank and work on the farm for periods from ten days to two weeks.

Substitution in Flour.

In England and France from 15 to 20 per cent. of wheat substitution, chiefly corn, barley and rice, are required by the food scarcity in the milling of flour. The people of Great Britain are not now making or consuming white bread.

The AUTOMOBILE

Care of the Muffler.

"Why is a muffler used on a car? is a common question among motorists," says a motor expert, and they sometimes add, "what care does it need and to what troubles it is subject?"

"The purpose of the muffler is to diminish the noise of the exhaust. The gas escapes from the exhaust valve at high pressure and strikes the ear with disagreeable force unless it is silenced. It is necessary to reduce the pressure from each explosion and to allow the gas to escape so that a great deal of its force is dissipated and its disjointed nature completely changed. The gas then passes out quietly with only a slight pulsation or throbbing.

"The methods by which this is brought about are very simple. A gas passing along an ordinary pipe would be slowed down and spread out. But this arrangement would require too long a pipe. So baffle-plates are used to make the gas turn corners and force its way through small holes in the plates. In some mufflers the gas enters an expansion chamber. All this time it is losing heat and so contracting and thus it slows down more and more. The final effect is, as stated, to have the gas issue from the muffler in a steady, quiet manner.

"The care of the muffler is to leave it alone until it becomes clogged. It does its work without any attention and requires nothing from the driver. The only time we think of it is when we wish to find out if the engine is missing explosions. Then we cut out the muffler and listen to the sound of the exhaust. Do this cautiously on the road, as there are laws against it in many localities. If the sound of the exhaust is not sufficiently loud it may be increased by retarding the spark and opening the throttle part way. The sound of each cylinder will then be brought out distinctly and any weakness will be noticed immediately.

"About the only trouble to which the muffler is subject is that it becomes clogged with soot. This may be caused by too rich a mixture from the carburetor, indicated by black smoke from the exhaust, or it may be caused by oil working up on top of the pistons, giving the bluish white smoke characteristic of too much lubricant. Another cause is where the carbon has been scraped loose from the cylinders, but allowed to fall on the piston. This is carried into the muffler, and so helps to clog. In order to clean it, it must be taken apart and all the carbon deposits removed. If the small holes are closed with soot they must be reamed out with a three cornered file or bearing scraper. The parts are then reassembled carefully and replaced on the car.

"It is easy to tell if the muffler is clogged where there is a cut out. Run the machine up a fairly steep hill. If the car speeds up with the cut out open it shows that the muffler is clogged. A well designed silencer should not cut down the power of the engine more than three per cent. This difference will hardly be noticeable on an ordinary hill. So the fact that the car slows down would indicate back pressure due to clogging."

TASKS OF THE MODERN AIRMEN

MILITARY AVIATORS MUST BE VERSATILE YOUTHS.

On Them Rests the Responsibility of Preparing For and Directing An Attack.

The vast responsibilities which devolve upon the youthful airman before a successful infantry attack can be made on the western front are thus set forth by an experienced French aviator:

"The time has passed when one could make an improvised attack upon the enemy, relying simply upon superior numbers and the morale of the attacking troops to gain the victory.

"To search out in all their details the defensive works of the enemy (barbed-wire entanglements, trenches, block-houses), the position of all his batteries, to locate the trails, railways, munition and supply depots, and headquarters of the commanders—such is the work to be performed by the scout plane before every offensive operation.

"To direct the firing of all the artillery, whose task is to destroy the barbed-wire entanglements and the trenches; to bombard the batteries and destroy the larger part of them; to set on fire the munition depots within its range; to prevent or render perilous any passing along the roads and railways; to delay traffic in the supporting railway stations; to control the destruction of objectives and the efficacy of long-range firing—such are the principal tasks of the scout planes during the preparatory period of an attack.

Enormous Responsibilities.

"Moreover, they assume the enormous responsibility of the faithful execution of this program, which is carried out entirely through the intermediation of their eyes.

"Finally, on the day of attack, it is they who, flying at a low altitude over the assaulting waves of the infantry, signal its progress to the superior command; it is they who discover the active batteries and reduce them to silence by causing them to come under destructive fire; it is they who cause the dispersion of wagon trains and troop columns venturing along the roads and trains near the battlefield; it is they who watch for the possible launching of a counter-attack, always to be feared, and which they must announce at the right moment to the infantry and to the commander in charge.

"Thanks to the promptness of their reports, sent by radio, the commander is enabled to make his authority felt during the progress of the operation. When in the midst of the hazards of battle the energies of the combatants become scattered, causing confusion and disorder, the scout planes, by the accuracy of their reports, permit the harmonizing and coordinating of effort necessary to the final victory.

"Evidently it is the observer who must have charge of the mission of reconnaissance of photography, of artillery adjustment or of infantry communications; but he is greatly assisted by the pilot, whose skill and decision contribute in no small measure to the successful accomplishment of the aerial task."

Pigs and People.

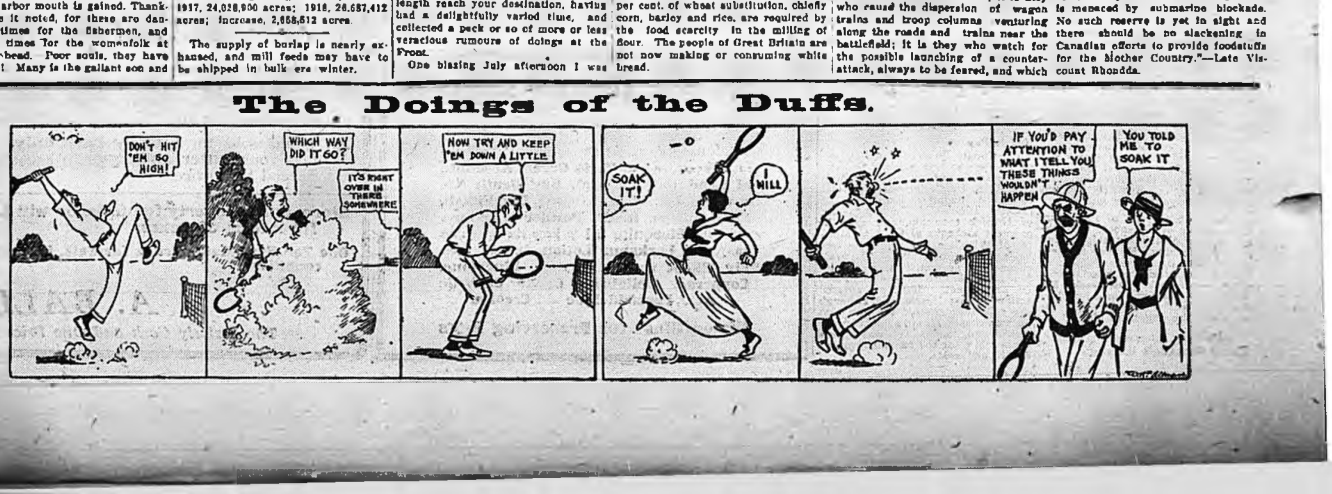
So like is the pig's eye to the human eye that fledgling oculists learning their trade, practice all sorts of operations upon eyes of freshly killed swine, which are easily obtained from the market.

Even the skilled and highly trained ophthalmogist, when he wants to try out an idea—for instance, a new kind of operation for cataract (which means the removal of the crystalline lens)—will get a pig's eye and see how it works. If it succeeds, he tries it on a patient.

All the wonderful muscle-cutting operations, by which squint and other irregularities are so successfully remedied, were worked out originally by experiments with pigs' eyes.

At Twilight.

Far in the west the sun's rays die;
'Tis the close of a weary day.
Far in the woods the night birds cry,
And the moon in the lift holds away.



Clear, on the soft, warm summer breeze
A bugle sounds in the night;
A cool wind stirs in the bare black trees,
And a war-note tells of the fight.

Firm and martial, low and sweet,
The notes of "The Last Post" fall;
The guns belch forth, and 'tis but meet
That a hero obeys the call.

No Food Reserve in Britain.

"It is obviously an elementary precaution to build up as large a reserve of food as possible in an island which is menaced by submarine blockade. No such reserve is yet in sight and there should be no slackening in Canadian efforts to provide foodstuffs for the Mother Country."—Late Viscount Rhondda.

The Doings of the Duffs.

The Home Bank of Canada Makes Steady Progress

Steady progress and expansion is reported by the Home Bank of Canada in its statement for the fiscal year, ending May 31st.

Under conservative and energetic direction the Home Bank has been forging ahead and improving its financial position.

Right along the Management has carried out a number of thrift campaigns and these have resulted in a very considerable increase in the number of savings accounts at the various branches.

With its larger resources the Bank, in turn, has been able to handle a larger amount of general business throughout the country.

One of the outstanding features of the report is the gain of almost $1,000,000 in total deposits. During the Victory Loan campaign the Bank lent every assistance to its customers and depositors, with the result that large sums were withdrawn by depositors for investment in Victory Bonds—in all some to $2,000,000. If this campaign had not developed the increase in deposits for the twelve months period would have been close to $3,000,000.

The marked gains made by the Home Bank during the past few years must be regarded as the best indication of the further strides it is likely to make with its organization strengthened in different parts of the country.

The total assets have increased almost $3,000,000 and now stand at $23,675,755, compared with $18,745,-239 a year ago. Of this amount liquid assets amount to $11,612,112, holdings of Dominion Notes amount to $1,112,010, Canadian municipal and British, foreign and colonial public securities amount to $3,751,-112 as compared with $1,214,450 last year.

The success of the thrift campaigns carried out by the Bank has steadily reflected in gains in savings deposits, these now standing at $11,-610,648 up from $10,212,552, while deposits not bearing interest now stand at $6,142,564 up from $2,894,-111.

WOMEN FIRST TO GREET KING.

War Workers Congratulated Their Majesties on Silver Wedding Anniversary.

Three thousand women engaged in war work, representing twenty-two organizations, presented King George and Queen Mary with an address on June 29, expressing loyalty and extending congratulations upon the silver wedding anniversary of the royal couple, which was celebrated on July 6. It was the first time any British ruler had received such a deputation of women. There were no precedents, therefore, to serve as a guide for marshalling the parade and for the reception.

Among the organizations represented were those of the nurses, the munition workers, the workers on farms and those more actively connected with the operations in the field. An address was made by Mrs. F. H. Dersham, chief woman inspector in the Ministry of Labor. King George replied with an address to the women.

The King spoke as follows:

"We are touched by the thought that the first expression of loyalty and devotion on the occasion of our silver wedding should come from this representative body of women who, by their services, have assisted the State in the full mobilization of its manpower.

"In our visits to various centres we have had opportunities of seeing and appreciating the great part which all the women of our land are taking in all the branches of war service, and everywhere we have been filled with admiration at their achievements, an admiration which we believe to be shared by the whole nation. When the history of the war is written, no chapter will be more remarkable than that relating to this service. The range and extent of the women's participation in this service has been rendered only at the cost of much self-sacrifice and endurance.

"I trust this procession to-day will bring home to those who have not yet realized it the country's need of their help. Sure in the hope that your labors soon may have their reward in that decisive victory and enduring peace toward which we, with all our brave allies, are ever striving, I wish you god-speed. In that happy day it will be your proud satisfaction to feel that you have nobly shared in securing these priceless results."

Keep all gates closed and all gaps up. It will save steps.

When You Eat Grape-Nuts

you get the solid nourishment of whole wheat, malted barley and other grains in more pleasing, easily digestible form than in any other way.

This great, ready-cooked cereal is very economical—requires no sugar, less milk, yet is probably the richest of all prepared cereals.

NORWAY SUFFERS FROM WAR TURMOIL

ECONOMIC SITUATION BRISTLES WITH DIFFICULTIES.

Necessity of Increasing Imports Grows Steadily More and More Imperative.

Never since the memorable war between England and Norway 110 years ago has the Norwegian nation been confronted with a situation so full of difficulties as the present one, says a despatch from Christiania. Until the United States entered the war the difficulties, although great, did not impress themselves so strongly on the public mind as they do now, owing to the fact that, even if other European sources of supply dried up, here was still something to be had from the United States.

When the United States finally ranked herself on the side of the allies the question gradually arose how Norway, dependent as she is on her imports for the most important necessities, would manage to get on in the long run under these altered conditions.

It was obvious that an arrangement ought to be made, and in order to settle the question a delegation to Washington was appointed under the leadership of Professor Nansen. The pinch of the rationing system has now begun to make itself felt, and stricter rules are officially announced. Norwegian trade and industry are handicapped for want of regular supplies, the coast traffic is disorganized and Norwegian resources in general are diminishing at an alarming rate. Travelers fresh from Germany are surprised at Norway's scanty rations of bread, which they say are even smaller than they are there.

Imports a National Necessity.

It is a matter of the highest importance to Norway to procure at the earliest possible date as many imports as possible. The supply of foodstuffs and raw materials needed by the population has, from a statistical point of view, been much misunderstood abroad. Owing to the fact that several countries from which, in time of peace, Norway was drawing rather heavy imports, have been virtually closed—for example, Russia and Prussia as cereal exporting countries—Norway has been bound to draw more heavily on America and other overseas countries.

This fact has been overlooked and too willingly it has been believed in the Allied countries that the greater part of these imports were destined for Germany. Nor has it been realized either by the authorities or the general public of the Allied countries that the economic expansion of Norway during the last few years has necessitated a larger supply of raw materials.

The vast majority of Norwegians expect nothing from Germany. Her disgraceful submarine war, which during the last year has inflicted upon us a loss of 435 vessels and 700 lives, speaks volumes. It also is a public secret that her own means are very scanty.

On the other hand, it is no use to deny that Norway is largely dependent on England, while at the same time Norwegians feel entitled to say that in view of the services rendered to England and her allies through the courage and intrepidity of the Norwegian seamen and the energetic straightforwardness of the shipowners they have a reasonable claim upon their gratitude.

Thinks England Ungrateful.

Norwegians regret that this fact is far less understood in England than it ought to be, and express the opinion that this state of things not only impairs Norwegian friendship for England, but is detrimental to British commercial interests.

Through their cruel treatment of defenceless Norwegian seamen, the Germans have gradually lost all sympathy in this country. England's executheon is untarnished, but Norwegians consider it their duty to tell her that the treatment to which they have often been subjected by British officials has created a painful impression in this country. Norwegians regard it as unreasonable that their authorities and the Norwegian business community should be measured by the standard applied to Germans. When they pledge their word, they mean no less than the British to keep it. They do not regard their treaties as "scraps of paper," but as obligations. They claim to be considered as gentlemen, and are not willing to stand the pinpricks of suspicion.

Over and over again prominent men of business have told me of their experiences. They describe the suspicious attitude of the British authorities as entirely unfounded, and say that it would be ridiculous were it not so detrimental to important interests. A leading shipowner in conversation with me said:

"If England had been less suspicious toward us we should have had considerably more supplies in this country at the present time, and England a considerably heavier Norwegian tonnage at her disposal, to her own benefit and those of her allies."

These words express the general opinion of all Norwegians entitled to speak with authority in these matters. They consider it a matter of importance that the two kindred nations should never cease to meet one another in a friendly and businesslike spirit of mutual confidence.

The Latest Models.

Girlishly simple is this attractive little dress. McCall Pattern No. 8432, Misses' Dress. In 4 sizes, 14 to 20 years. Price, 20 cents.

The cape's the thing, this year, at any rate! McCall Pattern No. 8421, Ladies' Cape. In 1 size. No. 8415, Ladies' Two or Three-Piece Skirt. In 6 sizes, 22 to 32 waist. Price, 20 cents each.

These patterns may be obtained from your local McCall dealer, or from the McCall Co., 70 Bond St., Toronto, Dept. W.

YES! LIFT A CORN OFF WITHOUT PAIN

Cincinnati man tells how to dry up a corn or callus so it lifts off with fingers.

You corn-pestered men and women need suffer no longer. Wear the shoes that nearly killed you before, says this Cincinnati authority, because a few drops of freezone applied directly on a tender, aching corn or callus, stops soreness at once and soon the corn or hardened callus loosens so it can be lifted off, root and all, without pain.

A small bottle of freezone costs very little at any drug store, but will positively take off every hard or soft corn or callus. This should be tried, as it is inexpensive and is said not to irritate the surrounding skin.

If your druggist hasn't any freezone tell him to get a small bottle for you from his wholesale drug house. It is fine stuff and acts like a charm every time.

Use Your Fresh Vegetables.

Now is the time to use the fresh vegetables which the war gardeners have been so assiduously striving to cultivate. We must never forget that the use of these short-lived greens results in the liberation of the more concentrated and staple foods for overseas.

Usually there is great waste where garden stuff is concerned. It seems so abundant that we do not value it sufficiently. As a matter of fact, by the judicious use of vegetables many meatless meals can be prepared, and the housewife should regard them during the hot weather, when appetites are jaded.

The French people are now reduced to three meatless days a week of necessity. We in Canada might get down to that by choice, at least for as long as our war gardens flourish. It will mean all the more meat for the people of France, who need it so badly.

The use of canned goods at the present time is anything but patriotic. Most families have a garden of their own. For those who have not, the stores are selling plenty of fresh vegetables and they are about as cheap as anything we can buy.

RE-MODEL YOUR Winter Coat

Our Mail Order Department will assist you with Dyeing and Remodelling. Dyeing is our specialty, the most delicate fabrics and finest furs can be dyed to your own color without injury. Remodelling is done by our skilled workmen in the latest styles. Write us for further information. Our prices are moderate. We will reply at once with suitable suggestions and prices. We shall be pleased to have your inquiries for this advice. You can then instruct us to do the work or return your coat to you at our expense. Dyeing over 250 colors and shades. Guaranteed not to fade. Prices for dyeing ladies' coats, $2.50 and upwards. Dyeing gentlemen's suits, $2.50 and upwards. Dyeing feathers, 25c per gram. Send for price list. Parcels returned by parcel post or express. Established 40 years. Write us to-day and we will send you our booklet. Dyeing Instructions and Price List. We do this work for Merchants or Private Homes.

ROSE-SYKES CO. 71 Bay St., Toronto

Somehow.

Somehow I never thought that you would go,
Not even when red war swept through the land;
I somehow thought, because I loved you so,
That you would stay. I did not understand
That something stronger than my love could come,
To draw you, half reluctant, from my heart;
I never thought the call of fife and drum
Would rend our cloak of happiness apart!

And yet you went. . . . And I—I did not weep;
I smiled instead and brushed the tears aside.
And yet, when night time comes, I cannot sleep.
But silent lie, while longing fights with pride—
You are my man, the foe you fight my foe,
And yet—I never thought that you would go!

Western Crop Conditions.

A need of rain over considerable sections of the grain growing areas in Manitoba, Saskatchewan and Alberta is indicated in the weekly crop report of Canadian Northern Agents to the general offices of the company. There are, however, a large number of agents who report that as yet the drought had not affected any damage, and that rain would entirely relieve the situation. Moreover, advices received show that rain has already fallen over a considerable section.

The presence of cut-worms is reported in a small section to the north on both sides of the border of Manitoba and Saskatchewan, the damage however appearing to be but slight.

To Kill Potato Bugs.

The potato bugs should be poisoned before they get too much of a start. Paris green used at the rate of one-half pound to fifty gallons of water is satisfactory. If a pound or two of lime is added it will prevent any leaf burning that might otherwise occur. Arsenate of lead is a good poison and sticks on the leaves for a long time. It does not burn the leaves. Of the dry use one and a half pounds to fifty gallons of water, and of the paste three pounds.

I fell from a building and received what the doctor called a very bad sprained ankle, and told me I must not walk on it for three weeks. I got MINARD'S LINIMENT and in six days I was out to work again. I think it the best Liniment made.

ARCHIE E. LAUNDRY.

Edmonton.

Horse Sense.

In the mines of Hainault horses that travel back and forth over a certain road exactly thirty times each day go to the stables of their own accord after their last trip, and refuse to take another step. In Montaigne's Essays we read that the oxen employed in the royal gardens of Susa for turning the wheels to which the water pails were attached refused to make more than the hundred rounds that constituted their daily task.

Minard's Liniment Cures Garget in Cows

Catch Hold of the Golden Bird.

There are two ways of saving money: Some man get hold of the golden goose and proceed to pull all her feathers out. Then they squeeze her so she will never be good for anything more. What is left they put in their socks or hide in a crevice in the wall. Other men get hold of a golden goose, promptly put some eggs under her, and in a short while there are more golden eggs—and so on. Then the surplus is put into thrift stamps, thus allowing others in need to supply their wants.

The useful dollar is the one that continues to serve its owner and his Country year in and year out.

Minard's Liniment Cures Colds, Etc.

When a man is eager to show you how to do something, it means that he doesn't know a thing about it himself but wants to experiment.

In the Balance.

What can we do
To match those men who stand to-day
—a wall of pulsing blood; of fearless hearts—between the savage lust of brutes unleashed and
All that we hold dear?
What can we do?

How can we help
To match these men who severed ties of home and outstretched arms—treasures of the years of peace—and bravely placed their gift of priceless youth between a race gone mad and
All that we hold dear?
How can we help?

What can we give
To match those men who gave and gave, and gladly gave, until at length they offered up their lives at Freedom's shrine? They had no more to give. And this they did for us and
All that we hold dear.
What can we give?

LEMON JUICE IS FRECKLE REMOVER

Girls! Make this cheap beauty lotion to clear and whiten your skin.

Squeeze the juice of two lemons into a bottle containing three ounces of orchard white, shake well, and you have a quarter pint of the best freckle and tan lotion, and complexion beautifier, at very, very small cost.

Your grocer has the lemons and any drug store or toilet counter will supply three ounces of orchard white for a few cents. Massage this sweetly fragrant lotion into the face, neck, arms and hands each day and see how freckles and blemishes disappear and how clear, soft and white the skin becomes. Yes! It is harmless.

Valuable Australian Wood.

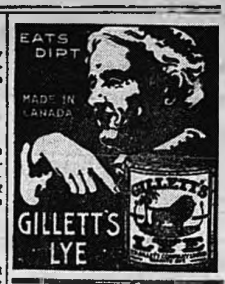
Figured blackwood is mentioned by a consular report as perhaps the most beautiful of Australia's many ornamental hardwoods. The "fiddleback" and "mottled" grains are most sought, the grain of the former being not unlike that of the North American curly maple. The color, however, is different, being a rich golden brown. The panel effects are obtained by combining the figure with the plain blackwood.

MONEY ORDERS.

It is always safe to send a Dominion Express Money Order. Five Dollars costs three cents.

The Real Proof.

From idle bragging stay aloof:
You'll find that this is true:
Your work is taken as the proof
Of things that you can do.



Minard's Liniment Cures Diphtheria.

New Air Raid Alarms.

For the suburbs a new system of air raid alarms has been devised to supplement the sirens and the firemen's signals, says a Paris despatch. The new device is the use of a sort of rocket, which, when lighted, produces two explosions, one as it leaves the ground, the other at a considerable height in the air.

Tests showed the noise was distinctive, that it could be heard at a considerable distance and could not be confused with the noise of the anti-aircraft guns.

The shortest answer is doing it.

Mares with foals may be given some light work, but the real heavy work should be left for the other horses. The proper development of the foal depends very largely on the quality of the milk the mare gives, so that every precaution should be taken that the foal is not allowed to suck when the mare is at all overheated.

Pinard's Liniment Cures Distemper.

The poorest fish alive are the selfish.

DOCTOR URGED AN OPERATION

Instead I took Lydia E. Pinkham's Vegetable Compound and Was Cured.

Baltimore, Md.—"Nearly four years I suffered from organic troubles, nervousness and headaches and every month would have to stay in bed most of the time. Treatments would relieve me for a time but my doctor was always urging me to have an operation. My sister asked me to try Lydia E. Pinkham's Vegetable Compound before consenting to an operation. I took five bottles of it and it has completely cured me and my work is a pleasure. I tell all my friends who have any trouble of this kind what Lydia E. Pinkham's Vegetable Compound has done for me."—NELLIE B. BRITTINGHAM, 809 Calvarton Rd., Baltimore, Md.

It is only natural for any woman to dread the thought of an operation. So many women have been restored to health by this famous remedy, Lydia E. Pinkham's Vegetable Compound, after an operation has been advised that it will pay any woman who suffers from such ailments to consider trying it before submitting to such a trying ordeal.

SMOKE TUCKETTS T&B CUT PLUG

The Paisley Advocate

PAISLEY, JULY 17th, 1918

LOCAL AND DISTRICT NEWS

Prepare for Patriotic Shower

Owing to the great need for supplies, we are going to ask for a shower of all kinds of work the last Saturday in August. So come to the town hall on Saturday, July 20, and get your supply of work for the shower. An abundance of cut work and yarn ready for July 20.

Died at Leamington

Mr. John Leonard, who was one of the early residents of the 2nd of Arran, and for some years later a citizen of Paisley, died at his home in Leamington on July 10th, at the age of 85 years. The deceased was well known here, and his demise will be regretted by many old friends. He is survived by his widow (nee Mary Harper), two sons and one daughter.

Died in Michigan

William Collisen, who passed away at his home in Cheboyan, Mich., on June 25th, was born in Osborne Tp., Ont., and lived in Bruce Tp. from childhood until he was married, when he went to Michigan. For 26 years he was a cripple, unable to walk, having sustained the disabling injury when he was struck on the head by the limb of a tree while working in the lumber woods. He is survived by a widow and two sons. Two sisters in Ontario are Mrs. R. Hyde of Dundas, and Mrs. L. Shipley of Shallow Lake. The deceased was 62 years of age.

Predict Gasoline Shortage

Although at the present time the gasoline supply throughout western Ontario is sufficient to meet ordinary demands, garage men and oil dealers of Windsor agree that before the year is out a real shortage will be experienced. Tank cars which have been conveying oil to all parts of the country, and a majority of which are owned by American railroads, are being rapidly called in by the United States railroad administration, as they are needed to carry fuel to the seaboard, and this will mean that many interior points far from the main arteries of railroad travel will be left without facilities for obtaining gasoline.

An Old Pioneer Gone

Mrs. Margaret McInnis, widow of the late Donald McInnis, and one of the early settlers on the 2nd of Bruce, departed this life on July 10th, at the ripe old age of 89 years, after an illness of three weeks. The deceased, whose maiden name was Margaret McDonald, was a native of Tiree, Scotland, and after coming to Canada in 1852 lived with her parents at Fergus until her marriage in 1855. Her husband predeceased her by seventeen years. The surviving members of their family are: Mrs. Jas. Beaton, of Paisley; Malcolm and Dan., of Spokane, Wash.; Alexander, Hugh and John, of Harrington, Wash.; and J. Neil, on the homestead. The funeral took place on Friday to Purdy's cemetery, Rev. P. Reith conducting the services.

Has an Arm Broken

Mrs. I. Johnson, of the town plot east, met with an accident one night last week by which she had an arm broken near the shoulder, and the fact since been in a rather serious condition. Mrs. Johnson had not been in very good health lately. On the night mentioned she felt faint while in bed, and arose to get a breath of fresh air by going to the door. She apparently did faint away and fell out of the doorway, and must have lain there for a little time, as she did not realize where she was when she became conscious. Thinking she was still in bed but feeling cold, she made a movement to pull the clothes over herself. Finding nothing but damp grass about her she screamed for help and was heard by her son, and was thus rescued from her cold, open air berth.

A Lively Runaway

Mrs. Brick, of Greenock, whose husband is employed on Senator Donnelly's farm, had a miraculous escape from serious injury or death while driving into Paisley on Saturday afternoon. She was coming up the hill at the railway bridge when overtaken by a runaway team which collided with her buggy and made a total wreck of the rig, while she only had part of her clothing torn off in the mishap. The team was owned by Mr. John Robinson, of 7th Elderslie, who had left them at Mr. D. Dunlop's gate while he went inside to get some hee hoxes. Following the collision all three horses galloped down Interman St., and were caught near the fair grounds, none the worse of their flight. Mr. Robinson has, we understand, agreed to pay $40 for damage to the rig driven by Mrs. Brick, and it will cost something to repair his own outfit.

Protection for Motorists

The motorist whose car has not been more than a few miles away from home, but nevertheless gets a polite invitation to appear before a magistrate several hundred miles away, in the other end of the province, can in future afford to smile at it. An inconspicuous amendment of last session to which the Highways Department is drawing the attention of the motoring public, removes the necessity for a motorist travelling to answer a speeding charge of which he is obviously not guilty. In future where the defence of the motorist is that his car was not in the municipality from which the summons comes, and that there is evidently an error in taking the number, he may appear before a local justice of the peace with two witnesses and prove his contention. If the local J. P. is satisfied, he must issue a certificate which when sent to the J.P. or magistrate issuing the summons, will be that official's justification for dismissing the charge, provided he has no reason to doubt the truth of the testimony on which the certificate was based. The certificate will cost the motorist $1.25.

The Bruce County Highways System

The Plans and Aims of the Committee in Charge

Everyone is interested in the good roads project. To give our readers a proper idea of what is being accomplished by those in charge of the Bruce County System under the organized efforts to make improvements, we print below an extract from the June County Council proceedings that did not appear in the newspaper report published a couple of weeks ago. This is part of the report made by Reeve Whicher, chairman of the Highways Committee:

I have the honor to present herewith the First Report of the Bruce County Highways Committee. In doing so we are much impressed with the importance of the work with which we have been entrusted, fully realizing the greatness of the task, to create and bring into operation an organization for the satisfactory care and maintenance of our County Highways. Such a system, with the co-operation and help of Road Supt. Izzard (who has a very extended knowledge of the County), we have endeavored to establish, but without any equipment or road machinery. Owing to the unusual difficulty in getting delivery of such purchases, together with the scarcity of labor, we have not been able to make the progress we desired. However, we are making advancement and hope to soon show increasing progress.

The following is a brief outline of the System we are endeavoring to organize, viz: To establish on or about every seven miles of the System a responsible man, or overseer, fully equipped with road drag, pick and shovel, whose duty will be to care for that particular section of the road, dragging it from time to time, and especially early in the spring; to make minor repairs as approved by the Road Superintendent, also reporting to him from time to time other needed work, or machinery required for the needs of the road, such as grader, &c.

With a complete organization of this kind your Committee believe the entire staff of overseers with their helpers could be placed in operation almost simultaneously throughout the County, thereby having the entire System repaired in the course of a few days. This would be very important, as the value of drags and graders largely consists in the work being done at the right time.

Your Committee and Superintendent found it necessary to secure at least a small equipment of road machinery in order to make a start in caring for the System, the chief purchases being a tractor costing $1700; grader, $595, both hitches; some 30 road drags at $12 each; and a Chevrolet car, practically as good as new, at $350. The car we consider exceptional value and of absolute necessity to enable the Superintendent to do his work.

Your Committee, Superintendent and Government Engineer Huber went practically over the whole System, viewing bridges, culverts and needed repairs to the roads and extension of the System as asked for at last session of Council. The work was done with the County car, and a good knowledge of the System obtained at a comparatively small cost.

We also attended, on the invitation of the Deputy Minister of Highways, a meeting of the Good Roads Association at Toronto, and thereby gained further knowledge of the work. Your Committee when in the city, with the courtesy of our member for North Bruce, secured an interview with the Minister of Highways, in which we placed before him the substance of Resolution No. 99 of the January Session, 1918, in which was set forth that the portion of the County Highways north of Wiarton where, on account of there being no railway facilities, it had to sustain an unusual amount of traffic and should therefore be named a Provincial County Highway and thereby be entitled to 60 per cent. for construction and 40 per cent. for maintenance instead of 40 per cent. and 20 per cent., respectively, as at present. The Minister was impressed with these views and gave us assurance that this would be accepted by the Department as soon as our Council would pass a resolution... ming this portion of the road entitled as above stated.

Owing to the unusual severe conditions of the past winter a considerable expenditure was required to keep the System in passable condition, and in order to reduce this expenditure we believe the erection of wire fences should be encouraged by bringing the bonus of 25c per rod offered by this Council more into public notice.

Highest marks in East Bruce obtained by Marion McAsh, Tara public school.

—Hundreds of thousands of volunteer workers will be needed to save the crop of the United States, and they are coming forward from every walk of life. At a recent convention of bankers a question was asked, "How many of you grew up on a farm?" The count showed 90 per cent. Everyone present agreed to leave his bank and work on the farm for periods from ten days to two weeks.

THE LATE ROBERT F. HAY

The Winnipeg Free Press had the following reference to this former Paisleyite, whose death was briefly mentioned in our last issue:

One of the best known business men of Western Canada passed away last night at his residence, 16 Elsmore Apartments, in the person of Robert F. Hay, at the age of 62 years.

The deceased was born at Paisley, Bruce County, Ont., and came west in 1882, settling in the Virden district, where he was for many years agent for Massie-Harris Company. He afterwards was transferred by the company to Carberry.

Following the death of his wife in 1899, the deceased moved into Winnipeg, and in 1903, along with J. A. Thompson, formed the Moose Mountain Lumber and Hardware Co., with many branches throughout the west. He was president of this concern up until the time of his death. He was also a director of the National Paving Co. Along with Mr. Thompson he also owned the Happy Farmers' Traction Co., with warehouses and offices at Winnipeg and Regina.

He has been in failing health for over a month, the cause of death being angina pectoris, aggravated by pneumonia.

He is survived by one daughter, Gladys, at home; two brothers, Dr. Jas. C. Hay, of Laurel, Neb., who was present at the deathbed; and Arthur G., barrister, of Killarney, Man.; also one sister, Mrs. (Dr.) H. C. Winddell, of Williston, N.D.

The late Mr. Hay was a member of the Masonic Lodge at Carberry. The funeral will be held from Thomson's undertaking parlors on Friday at 2 p. m.

—A certain man with his little dog was driving a Ford car along the road when it became stalled, and not able to make it go, he tied a cord to the car and fastened it to the dog's tail who pulled it into the nearest garage for repairs. On entering the place a constable stepped up and arrested the man, who was taken by surprise and asked for an explanation as to his arrest, when he was informed that it was against the law to tie a tin can to a dog's tail.

"WHO WILL WIN THIS BATTLE?"

Your kidneys are the filters of the body. If they become inactive and fail to eliminate the waste matter, they are apt to throw the whole mechanism of the body out of order, thus toxic poisons can accumulate in the system and be as deadly as snake venom.

Besides causing the minor ailments of rheumatism, sciatica, lumbago and backache, neglect of the kidneys is apt to develop into more serious diseases, such as diabetes or stone in the bladder.

Rid the body of toxic poisons—clean the bladder and kidneys and cure the twinges of rheumatism with Anuric and you win the battle of life.

Anuric was first discovered by Dr. Pierce, and has benefited thousands of sufferers as well as appeased and eliminated the ravages of the more serious kidney diseases. Now procurable at any good drug store, or send Dr. V. M. Pierce, Invalids' Hotel, Buffalo, N. Y., or branch office, Bridgeburg, Ont., 10 cents for trial package.

Thoroid, Ont.—"I was wonderfully helped by taking 'Anuric.' For about three years I had kidney trouble and rheumatism. I also had backache. My limbs would swell and I had rheumatism in my arms and hands. My hands would swell and joints would be so sore and stiff I could scarcely do my work. They would pain me something awful. I doctored but without relief. At last I saw 'Anuric' advertised. I began its use and two bottles completely cured me of all my rheumatism, and I think it was permanent for that was a year ago and I have never had any return of this ailment. I have never found a medicine as good as 'Anuric'."—Mrs. R. H. Berry.

MAKING FARMERS WORK THEIR LAND FOR THE NATION

A recently arrived English newspaper records the fact that at Buckingham a day or so before publication, Farmer John Robert Gough, of College Farm, Maidmerston, was summoned by the board of agriculture for neglecting cultivation. He was ordered to give up possession of the farm in fourteen days, and to pay a fine of $50, and $250 in costs. Gough had occupied the farm, which comprised 200 acres, for over thirty years. The above is a remarkable illustration of the way in which the British Government is seeing to it that every available acre of land in the British Isles is set to work to do its share in producing food. Evidently it matters little what a man's position may be. If he is an owner of land it is up to him to see that all of it is enlisted in the national food-raising campaign, and furthermore, it is necessary for him to be able to show that the land is producing an amount of food as near as is reasonably possible to its maximum power of production.

Beauty and Utility

Though worn as a necessity, a beautiful eye glass artistically fitted is a facial ornament.

—"Advertising is the education of the public as to what you are, where you are, and what you have to offer in the way of skill, talent and commodity. The only man who should not advertise is the man who has nothing to offer the world in the way of commodity or service." Elbert Hubbard.

AFTER THE WAR—WHAT?

"The war has merely hastened the settlement of a host of problems that would have led to all sorts of trouble, if not revolution, in some of our so-called democratic countries. It is an open secret that not long before the war broke out there were serious fears of a revolution in Great Britain; and in the United States business men ten years ago shook their heads and spoke in bated breath over the fear of nation-wide trouble.

"The fact is that this old world, and even new America, and newer Canada, were ripe—in some cases almost rotten—for radical changes in attitude, thought and action in relation to may subjects. The basis of society was wrong, unjust, wasteful. Even the United States business, as a whole, was being run on a shop efficiency of only five per cent.—and this in spite of all the preaching and teaching and training that had been done in that country. This means that ninety-five per cent. of possible capacity was wasted; yet enormous private fortunes were being made, because of unfair distribution. Surely a more fruitful source of revolution could not be imagined.

"Waste; increasing taxes on food and other necessaries of life; high cost of living combined with wages not raised to meet these costs; display and extravagance of the newly-rich; increase in luxuries and comforts of the few while the many live in hovels, tenements or cramped apartments, always on the verge of starvation and uncertainty from lack of full employment; to say nothing of the increasing frivolity, sensuality, materialism and Godlessness—all these causes combined to make the foundations of society most unstable. The same causes which brought about the terrible French Revolution were at work in our midst, and if long continued would have brought about a similar result.

"The newspapers of Canada indicate the various forms of reconstruction that are called for in this country. At church and other assemblies there are calls for reforms of all kinds—for the protection of girls, by raising the age of consent; for the saving, by proper housing, sanitation, fresh air, pure water, pure milk and other food at prices within the reach of the poor—of the annual "slaughter of the innocents" 15000 children under five years of age (as large as Canada's losses in battle in the world's greatest war); for the prohibition of manufacture of intoxicating liquor; and shipping it into 'dry areas'; for preventing labor on the rest-day; for the recognition of women in church councils; for church federation; for greater production; for better distributing or utilization of labor; for curbing extravagance in dress and the display of wealth; for higher wages for workers; for conscription of loafers; for political, social and moral reform. In short, there are demands for drastic changes in everything, including the distribution of honors and titles, and entire abolition of hereditary titles.

"The war alters our point of view, and makes us agree to changes that would otherwise have shocked us. This habit of accommodating ourselves to changes is one of the best things that could happen us, war or no war; for mankind is naturally conservative, stand-pat, let-well-enough-alone, and all that. This is why radical reformers always have such a hard time; and why institutions that fall in with the general smugness and self-satisfaction of humanity are fat and flourishing.

"We must prepare for many fundamental changes, not only in our families, in our Provincial and Dominion relations, but in our national affiliations with the outer world.

It would not be amiss to look at the key-word of all the proposed "reconstruction" problems—the word Democracy. It is a new word in Canada. We have never had Democrats here—at least nobody called them by that name. In the United States the two great political parties are called Democratic and Republican, though both words mean practically the same thing, the latter meaning back to the people (from not to a king), while Democrat is made up of two Greek roots—Demos, the people, and crat, rule or government. So Democracy—the rule of the people—is what we are fighting for, as opposed to Auto-cracy, the rule of one man, such as the Kaiser, who plays the 'crazy' part (some Democrats think it should be spelled with a 'z').

"Now if we are to be true, real, simon-pure Democrats we must trust the people; laws must be enacted by the people of the people, for the people, through representatives of the people:—the people in preference to kings, governors, prelates and all rulers. As for titled gentry—what the farmers' convention in Toronto called 'mock aristocrats'—these will vanish as Democracy is understood and applied. Democracy must deal with all phases of the life of the community, and must understand how to regulate trusts, combines, mergers and other forms of combination which tend to affect the people by hampering, even if they do not oppress and repress, their activities.

Democracy must always consider the great masses of the people, especially the producers. This means not only that workers should be properly paid, should be kept in constant work, should be provided for when unable to work through sickness, accident or old age, but it means a great deal more. It implies that workers should be properly trained, first at ordinary schools, then at special trade-schools, later-wards at classes and lectures, by reading, by demonstrations and other methods after leaving school and while at work. It means also that there should be in every part of the country, methods and means for guiding young people into occupations in which they can do their best work for the community and themselves. It means, further, that tramps, hoboes, loafers, must be set to work, must earn their own honest livings. There must be service for service. It means, moreover, that the whole community shall be classified, controlled, guided and managed so that the greatest good to the greatest number may result. Men who now make their living as "speculators," "exploiters," and as "professionalists," "exploiters" and as "professionalists," whose methods are based on grabbing property and public rights (franchises) which belong to the community, and which should be controlled by and for the people for the public benefit—such men must be either controlled or eliminated.

Is Democracy Safe for the World?

Could the world be run on a purely democratic basis—leaving everything to the people, the masses, as they are called? Are the masses of the people able to carry on the business, the industries, the commerce, the banking, the legislation, the education, the religious institutions, the medical, scientific, and all the other necessary departments of and adjuncts to such civilization as ours?

"There must be trained leaders in every department. The trouble in Canada to-day is that we have not sufficient trained leaders. We have leaders, but most of them do not lead, for they are not only put in the position of leaders by accident or a poor political system that does not bring really able men to the top, but pushes up those who can best play the political game—which is very different from being trained for leadership. One of the changes we must make in our political system is to make sure that we will train leaders to manage national, provincial, municipal and local affairs, and then that we shall see that they are placed in those positions for which they have been trained. But in order to bring about such a change as that we must first train our people in the principles of democratic government.

"A real democracy would be thinking all the time of the people—the masses about whom Abraham Lincoln said, 'The Lord must have loved the common people, he made so many of them.' Our common people must themselves be made intelligent, so that they will not only do their duties faithfully in their own sphere, but will see to it that trained leaders are elected to fill the important duties in the community for which they have been specially trained. If the common people were intelligent they would not stand for the present order of things. As Hon. Dr. Cody told the Canadian Press Association, the people must be made 'intelligent and honest' in order to make Democracy safe as a governing plan.

Independent Thinking Wanted

"We would take a great step forward if we could get our Canadian people to think for themselves—to think problems through to their logical conclusions.

"The men's organizations of Canada, such as the trades unions, fraternal orders, various clubs, young people's associations connected with churches, and small groups of neighbors, should be studying and discussing the problems of this country and trying to learn the meaning of them. Set speakers can easily be had everywhere, who have made special study of particular problems, and who are usually glad to give their views and lead off in discussions. The Canadian Problems Club has been organized in Toronto for the special purpose of guiding and helping small groups in any part of the country who want to study any particular problem.

"Women, now that they are voters, should be keen on the study of this young nation's problems, and anxious to lend a hand in their solution. Now is the time to help mould the new order of things in Canada. The women can become potent factors in this work. Through the Women's Institutes, particularly, they could give voice to the sentiments of the plain-living, high-thinking, sensibly-dressed, sane and healthful part of femininity. (There is not much hope of clear thinking from the short-skirted, high-heeled, diaphanously-dressed females who think more of corns than of corn, and of feet than wheat).

"The tremendous task before Canadians after the war will be to reorganize society so that this country will be an outstanding example of pure and prosperous democracy; when production will be developed to the utmost; when the development of our unlimited natural resources will be scientifically managed so that our financial position will be safe and strong; when co-operation will be encouraged, so that 'team-work'—the happy name given by Hon. Mr. Balfour for Democracy—will be fully developed and utilized; and when, as the result, the proceeds from the united labor of all our people will be so distributed that there shall be no abject poor, no starving children, no slums, no dangerous tenements, no tramps, no loafers, no non-producers; so that there will be plenty to provide for the care and comfort of the helpless and the aged; so that hours of labor shall be reduced so as to provide for improvement and pleasure outside of working hours; so that the best facilities for education, music, art, and all the uplifting and enlightening agencies shall be afforded to all.—Canadian Home Journal.

Nellie MacGillivray, Teacher

No Risks for Him

At a Scottish watering place one summer, Macpherson was found stretched in a contested match on the sands, puffing his pipe. "Come on, Mac," said his companion, who had just come from golf, "it's a fine day for a game." "Hoots, mon," Macpherson slowly shaking his head, "I've had a guid dinner an' I'm no' fond o' thirsts and sairpents, an' I'm takin' no risks."

GROW YOUR OWN SEED

Every Gardener his own Seed Grower while there is Danger of a Shortage of Vegetable Seeds

While rigid selection from year to year is necessary for most kinds of vegetables when grown for seed, and while to keep them pure the different varieties have to be grown some distance apart, yet most of the seed grown in the home garden is likely to give almost or quite as satisfactory results or even better than that which is bought, and, as some seed may be difficult to obtain next year, it is recommended for each person who has a garden to let a few plants or specimens ripen, from which seed can be saved.

It is better to mark the best plants and save the seed from them rather than to save the seed after the plants have been cropped.

The following minimum number of feet, plants or specimens to be saved is suggested as being sufficient to supply enough seed for the home garden in 1919: Beans, 5 ft.; corn, 1 ear; cucumbers, 1; lettuce, 1; muskmelons, 1; peas, 5 ft.; radishes, 3 plants; spinach, 3 plants; squash, 1; tomatoes, 3.

Either reserve a few feet of the row of beans, or better still, mark a few productive plants free from disease.

The seed stalks of lettuce are thrown up after the heads are full grown. The seed ripens rather unevenly, and in order not to lose any of it, each head should be picked over as it shows white, it being necessary to go over the plants every few days. The plants can, however, be pulled and hung up to dry.

If some radishes are left unpulled after being ready for use, they will soon throw up stalks and good seed will develop. For best results the plants should be at least six inches apart.

Spinach, if thinned to six inches, will produce an abundance of seed.

In saving home-grown seeds, it is important to dry them as soon as possible after they are ripe, then clean them, and keep them dry until needed the following spring.

Peas and beans will soon be spoiled for seed if they do not dry rapidly in the pod after being harvested.

As corn sometimes has to be pulled before it is quite hard, it is desirable to see that there is a good circulation of air around each ear. A good plan is to husk the ears and then stick each one separately on nails driven into a board and far enough apart so that the ears will not touch.

The seed of tomatoes for home use should be saved from the plant bearing the largest crop of early and best fruit. Where a quantity of seed is saved, the tomatoes may be cut in half and the pulp pressed out into some vessel, adding about one-third this volume in water. Put in a dark room until fermentation sets in, which will be in about two days, when the seed will separate readily from the pulp. Wash and dry where the sun does not shine on it.

Following are the quantities of seed which one might expect: Beans 1 or more oz. per plant; corn, 300 to 600 kernels per ear; cucumbers, ½ to ¾ oz. per specimen; lettuce, ½ oz. per plant; muskmelon, 1 to 1½ oz. per specimen; onion, ½ oz. per plant; pea, 4 oz. per 3 ft. or row; pepper, 1-16 to ⅛ oz. per specimen; radish, 1 oz. per plant; spinach, 1½ oz. per plant; squash, small seeded, 2½ oz. each; squash, large seeded, 3 oz. each; tomato, 50 to 100 each; watermelon, 2 to 3 oz. each.

BRITAIN MENACED BY RATS

Among the internal enemies of Britain not the least formidable is the rat. The yearly damage to food by this prolific rodent is estimated at $300,000,000, according to a caution and warning just issued to British farmers by a government committee that urges the opening of a ruthless offensive against the pest. The circular tells the farmers that in their buildings, granaries and barns they have an undreamed enemy that destroys their food supply almost as much as does the submarine. The nation, it says, cannot afford to keep rats at a moment when every sack of wheat is urgently needed. Ten rats, the farmers are informed, will eat, apart from what they spoil, as much grain as a farmer and his wife will consume.

At a moderate estimate, the English countryside is feeding one rat per head of the total population of the British Isles. Their increase is attributed mainly to neglect, owing to the rush of work on the farms, and the fact that rats breed faster than any other vermin. Farmers are advised to keep their grain protected, and to make the fullest possible use of traps, snares, ferrets and dog. Barn owls, they are told, are among their best friends. They are also advised to organize rat hunts and encourage rat catching by the offer of small rewards. Other devices and methods are mentioned with an earnestness that shows the committee to be deeply impressed with the gravity of the rat menace. In Australia also the question of wheat in store has led to an enormous increase in rats and in their depredations.

A Plasterer's Evidence

An old plasterer was called upon to give evidence in a law case. The opposing counsel tried to bully him. "Your name is John Dobbs?" "Yes." "Are you the same John Dobbs who was sentenced to a couple of years hard labor for theft?" "No, that wasn't me, either." "Then you have never been in prison?" "Yes, twice." "Ah, and how long the first time?" "One whole afternoon." "What, and the second time?" Only one hour." "And pray what offence had you committed to deserve so small a punishment?" "I'm a house decorator, and I was sent to whitewash a cell to accommodate a lawyer who had cheated one of his clients."

The Thrift Car Overland

The Spirit of Thrift will help win the war—

Model 90 coincides with the vital necessity for efficient, economical, personal transportation.

It is a quality car selling at a popular price and backed by a real Canadian institution, prepared to take care of all service and parts requirements now and later.

G. E. MILLER, Prop.

Unfeeling

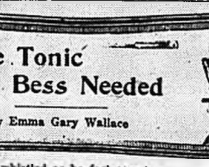
The doctor and the lawyer had a difference one evening.

"I tell you," the lawyer later told a clergyman, "doctors are callous brutes, with not a spark of human feeling within them."

"Come, come," replied the clergyman, trying to calm his friend, "that is rather a sweeping statement, you know."

"Not a bit of it," declared the lawyer. "Why, when I was ill a few weks ago and suffering untold agonies, I sent for the doctor ("Doctor," I moaned, "I'm suffering the torments of hell." "What! Already?' was his unfeeling retort."

The Original Baptist



A negro minister of the Baptist church, in order to strengthen and confirm the faith of his congregation, took as his text: "In those days came John the Baptist, preaching in the wilderness of Judea." "Oh," said he, "how I like to read these precious words in the blessed Bible! You don't read anywhere about John the Presbyterian, or John the Methodist, or John the Episcopalian. No, brethren, it is John the Baptist."

The Tonic Bess Needed

By Emma Gary Wallace

Robert Barton whistled as he fastened the barn door for the night. Bess would be pleased with what he had to tell her. Of late she had not been her own cheery self, and he was distressed to recall the weary droop of her shoulders and the dark shadows which had been painting themselves beneath her eyes.

He picked his way carefully to the side stoop, where he always entered the house. Some day he would put in some sort of a walk and a big, flat stone or a cement block at the foot of the steps. It would save the tracking in of a lot of mud.

Suddenly he stopped and looked about him. Yes, a narrow, substantial walk out to the hennery, and to the pump as well, would make things more convenient and save work, too. The side stoop sloped uncomfortably toward the front; the posts needed replacing, and the house was crying for a coat of paint!

Robert went slowly up the three steps to the piazza floor, and as he did so it dawned upon him that they were unnecessarily steep. Five shallow steps would be much easier to climb and more attractive to look at. A moment later he was singing out gaily, "Good news for you, Honey. You can't guess what has happened!"

Bess Barton stopped wiping the kitchen table. "Why, what has happened, Bob?" she inquired with a smile.

"Table's sort of low, isn't it, Bess?" he asked kindly. "If it were two inches higher, or even three, you wouldn't have to stoop so. I never noticed before how low it is for you."

His wife loked reflectively at the table over which she had been bending. "Yes," she replied, "it would be a help to have my work-table and sink the right height; some days when I have a lot to do in the kitchen, I get a frightful backache, but I suppose women get used to those things after a while."

"Nonsense," retorted Robert. "There is no sense in putting up with a condition which can be remedied. You ought to have told me. But aren't you curious about the news I've got for you?"

"Of course I am! Did you sell the white heifer, or have you found a new horse to match up with Nell?"

"Neither I don't believe you'd guess if I went without my supper for another hour! I'm almost starved, so I might as well tell you first as last. See here!"

Rob Barton drew a stained leather wallet from his inside pocket and turned over the contents until he found a narrow slip of paper. "See!" he commanded triumphantly.

Bess was leaning against his arm by this time. "Why, Rob," she cried, "a check for $300! Where in the world did you get it, what is it for, and what are you going to do with it?"

"Not so fast," laughed her husband. "Let's take your questions one at a time; but while I am answering them, suppose you set my supper right here on the kitchen table. I see you've kept something warm for me in the oven." It took but a moment to set out the generous meal which Bess Barton had saved.

"It's this way," Robert explained after he had taken a few mouthfuls and dulled the edge of his appetite. "I haven't told you about it, for I didn't want to disappoint you. The Electric Light and Power Company has been dickering with me for the right of way across my land for their poles and transformers. They own the Telephone Company, you know, and they've wanted the privileges for that, too. Well, to make a long story short, I've had Lawyer Brown looking after my interests, for I realize that it's his business and not mine to be on technicalities. He has handled the case mighty well, for after taking his fee there is $300 left for me. Besides that, I am properly protected in every way. Don't you call that good news?"

"Well, I should say so," Bess returned enthusiastically. "You can have the colt you want, pay cash for it and have something left over besides. Why, Bob, you might even start that special job of fencing on your corner lot!"

Rob Barton laid down his knife and fork and frowned heavily. "Now, see here, Bess," he remonstrated "I don't like that—not a little bit. Why not say 'our' corner lot? Aren't we partners for life in the farming deal and everything else?"

"Didn't you say only a minute ago that the Light and Power Company had been dickering for certain rights over 'my' lands?" said Bess.

"That was a slip, and I want to tell you that I shall not buy the colt with it nor start the fencing job," and Rob Barton eyed his wife meditatively as he finished his cup of coffee.

"I've been doing some thinking lately, and while it's all right for me to have a bank account, I think it would be well for you to have one, too. Every woman ought to have a little training in business, learn how to get a check, balance up, and keep track of her finances. Of course, we might arrange a joint account so that either of us could draw upon it, but as I have the help to pay and farm expenses to meet from time to time, there mightn't be much left for you. So what do you say to starting a little account of your own with $300 as a beginning?"

Bess eyes were sparkling and her cheeks glowing. She looked more like the girl he had wooed and won a few years earlier.

"I was thinking," said Robert, "that it wouldn't cost much to put a cement curb around the pump, and to lay a walk from that to the side door and down to the hennery. You know how muddy it is when it rains. We could raise the cement walk a little bit where the path is low, and you could skip back and forth without getting your feet wet."

"Wouldn't it be fine, Rob, to have a big cement block at the foot of the piazza steps!"

"Sure thing," her husband replied. "Tom Hale can do it in between times, and I can help him. It wouldn't cost very much, and while he's here, he might cement the cellar bottom as well. We've got a dandy cellar, but it isn't so comfortable to use as it would be if a drain were laid and the floor cemented."

Bess was looking at him eagerly. "Rob," she exclaimed, "I believe that's one thing that gave your mother so much rheumatism. The cellar was damp and that made the house damp, and she couldn't have gone back and forth for her supplies without having a damp feet many times. I know just how it has been with me. If you put that $300 into the bank to my account, it won't stay there long, for there are so many places where it can be used."

"Blow yourself as hard as you like," Rob laughed, "and I'll help you get the value received."

Bess was moving about clearing away the remains of her husband's supper with new energy. "Hurry up, Bonbaby," she called as her husband started out with a pail toward the pump. "I'm just through, and we must plan all the other things we are going to do."

Robert Barton smiled as he went out the door. "I reckon," he said to himself, "that this is just the tonic that Bess needed!"

WHAT IS A CALORIE?

People Have Asked If it is a New Breakfast Food.

Since food conservation has become a vital factor in carrying on the war against Germany, the layman has encountered in his reading the new word calorie. This word, which formerly appeared only in scientific journals, now jumps at once from the daily papers, from the magazines, agricultural and trade press. In a way, the Food Board is partly responsible for the increased use of the word, and as a result has received letters from all parts of the country asking: "What is a calorie?" Some people have gone so far as to suggest that it is the name of a new breakfast food, while in one instance the enquirer stated he had heard that it was a new type of explosive discovered by the War Department and wanted to know what the Food Board had to do with it.

When fuel is thrown on a fire under a boiler heat is produced. This heat is required in order that the engine may perform its work. To do work of any kind requires energy. Food used or burned in the human machine produces energy to maintain the normal heat of the body and to do its work. Work done by the body comprises not only that which requires muscular or mental exertion, but also involuntary exertion, such as the beating of the heart, the expansion of the lungs, etc. The chemical process within the body which transforms our food into energy is similar in nature to the process which takes place when fuel is burned over fire—though, in the body, the burning takes place very slowly and in every tissue, instead of in one central place. The value of food is determined by the amount of energy it yields to the body; and it also has a building and regulation function.

It was necessary that a unit be established for measuring the amount of heat produced when food was completely burned. The unit chosen or universally adopted as the unit for measuring fuel value or energy value for any kind of food is called the calorie. It represents the same principle in measuring as the inch or foot, the units of measuring length; the pint, or gallon, the unit of volume, and the ounce or pound, that of weight.

The calorie is the amount of heat required to raise the temperature of one kilogram of water 1 degree Centigrade, or one pound of water approximately 4 degrees Fahrenheit. Our requirements of food, so far as the amount is concerned, can therefore be expressed in the number of calories needed for each person a day. It must not be forgotten that the calories must be derived from the proper kinds of food.

WAR'S INSISTENT CALL TO THE WOMEN OF CANADA

Canada Appeals to Her Daughters to Rally to Her Aid in This the Greatest Crisis in History—Enlist For Food Saving and Food Production.

With the insistent note of a clarion call to service, the message has gone forth: "To the farms!"

For months past it has wavered across the country, and the echo has been caught up and thrown back from time to time. But now it comes with a direct challenge that is as irresistible as the soldier's bugle call.

It sounds from end to end of the country. Men and women are hearkening. They are thinking about it; talking about it. But there is no time to play battledore and shuttlecock with such an issue. There must be action—immediate, clear-cut, whole-hearted action.

The challenge is to men and women alike. Equality of service is demanded of them. Employer and employee are asked to help; the rich and the poor; the busy and the idle. There is no intention that any industry be put out of joint or business disorganized. There is every intention that all the resources of the country be judiciously used in making the most of Canada's harvest this year. The need is imperative. Nothing can offset this fact.

What the women of Europe have done to save the crops is an old tale; yet ever new in the wonder of it. What the women of Canada have done in this line is negligible yet, although there has been some brave pioneering in Eastern Ontario, and for years past in the West, when no other labor was obtainable, the farmer in desperation enlisted his wife's help in the outdoors.

Not even the deeds of the thousands of men who are daily sacrificing themselves on the battlefields of Europe have eclipsed the heroism, the endurance, the patience of the women of France, Belgium and Great Britain. They have known the extremity of suffering. They have tasted the dregs of war. They have lacked the stimulus of the excitement of war. Yet they have nobly "carried on." Even as their men have fought, they have worked.

What they did in the fields of Europe temporarily staved off the wolf of starvation from the doors of the people. What they did in the munition shops kept the guns supplied with shells. What they did in office, in factory, in work-shop, in every phase of industrial life, kept the wheels of commerce turning and steadied the fluctuating pulse of an over-wrought nation.

It was in those early days when the men were suddenly called to arms and the crops would have rotted had they not harvested them that the women first showed their mettle and rose to the occasion voluntarily. As Lloyd George said of them:

"They know their country is in the grip of grim tragedy. In Flanders, girls harnessed themselves to heavy harrows and plod along the towpath, thanking God they've released—not a man, but a horse to help in the war."

In Russia and Italy the women plow, sow and reap. Even on the beautiful Riviera the shadow of war has fallen, and the young girls in the work of transportation stagger under bags of wine or water weighing eighty pounds.

In Scotland, girls single turnips, plant potatoes, drive horses and carts in the fields, and help in every kind of farm work. In Britain to-day, there are 5,000,000 women taking the places of men in various forms of work. There are 300,000 engaged in agricultural work alone.

The women of Canada can do these things. They have been spared the suffering and the humiliation of the women of invaded countries. They have had few material privations, even in three and a half years of war.

They have worked splendidly, and time and again they have reiterated their desire to do everything asked of them by the Government. Indeed, they have pleaded for a wider field of activity.

They have had the answer now. The way has been clearly indicated.

The greatest need of the hour is for labor on the farms. Mr. Henry B. Thomson, chairman of the Food Board, has put it up to the men and women of Canada in no equivocal terms.

The women can answer this call to arms in one of two ways. Either they can go out on the land themselves, or they can release a man for the period of the harvest.

The farmers have done their share. They are working like slaves, and their wives are doing no less. They responded splendidly to the appeal for increased production earlier in the year, with the result that it is estimated that there are now 2,600,000 acres more than last year under the principal grain crops in Western Canada.

It stands to reason that if labor was scarce before the war, the greatly increased acreage, coupled with the exodus of young men from the farms to the cities, makes the situation infinitely more serious. It has been estimated that over 100,000 men are needed to gather in this year's harvest.

The teen-age boys have been called upon, and have responded gallantly. Some thirty thousand Soldiers of the Soil will help the farmers through the arduous period ahead of them.

How about the women?

Canada needs her daughters to rally now. She needs the help and the inspiration of every one of them. There is none so weak that she cannot do something, and surely none so craven that she WOULD not do something.

No true Canadian woman would let the grain spoil on the stalk were she actually to see it wasting before her eyes—the grain that is now more precious than gold or rubles.

But when it begins to rot would be too late.

The time to act is now!

It does not matter a scrap what a woman is or ever will be; what her social status, her occupation or her share of this world's goods. There is a new democracy abroad—a wonderful levelling of grades. Usefulness and service are the things that count.

Every woman must search her soul and ask herself how she can best help in taking care of the harvest of 1918. She does not need to be a trained farmerette, though if she is, it's all the better.

If she is a city girl who was brought up on the farm, she should be useful right out on the land.

If she is a good housekeeper, she can volunteer to help the farmer's wife for a time.

If she knows of any male loafers, she can report them and have them sent to "pasture new" to pitch hay.

If she can take a man's place temporarily in the city, then by all means let her do it and add one man to relieve the labor situation.

If she can give up her holidays this year to work on the farm, she will be doing a plucky and patriotic thing.

If she is a girl of leisure, it is up to her to go out on the land or send a man from the city while she fills his shoes.

In short—every woman and every teen-age girl can do SOMETHING during July and August towards assuring the country of the full benefit of those crops which Nature so bountifully yields, war or no war. It is one of the biggest things ever asked of a woman. It is for the sake of our Allies. But most of all—for our men "over there." They provide the irresistible argument why every woman should turn her hand to food conservation, to food production, or to both.

Men Must Fight—and Women Must Reap.

Food Control Corner

Bolsheviki doctrines have brought Russia down from one of the greatest food producing countries on the globe to a condition of starvation. Drunk with liberty, which they did not understand, filled with idealistic notions about the equality of man, and lacking individual initiative, production in Russia has practically ceased, according to the evidences reaching the outside world. Transportation and distribution is so disorganized that even were the peasants of the land producing their usual amount of foodstuffs, the people in the manufacturing population would still be without the necessary food supplies to sustain them in safety and comfort. Unless the people of Russia steady down and organize themselves or allow other authorities to organize them, there is the possibility of one of the most stupendous disasters to a nation and a great people that ever occurred in history. Without authority for whom they have fear and respect, the Russian peasant seems to be without motive or initiative. We read of peasants in their anger against the property holding class of the late aristocrat regime, destroying not only the personal effects of the nobility and the owning class, but the very crops which they had themselves under the former social organization produced for the nation at large. In their re-action against property owning, they have destroyed the goose that laid the golden eggs. We read of peasants in certain villages having gone to such extremes as to seize the cattle of the local land owner, now deposed, flay them alive and turn them loose. Without the old motive of compulsion to cultivate the land for the land-owner, now that the land has reverted to the peasants and they themselves are the owners, they have neglected to work and to produce the necessaries of life. To such a pass is the nation drifting that recent dispatches have reported that the so-called Government of present-day Russia are sending plenipotentiaries to China, the formerly despised and so-called decadent neighbor to the east, to make arrangements for provisions to tide them over next winter. It is difficult to imagine China, one of the most densely populated areas in the world, living largely on rice and very meagre fare, having sufficient surplus to feed 150,000,000 people in starving Russia.

Bolshevism is sometimes quoted in this country as an ideal, worthy of imitation. The pass to which Russia has drifted is a warning that Bolshevism and insanity are not very far apart. The nation that will weather the storm of this war the best, is the nation that organizes most efficiently and disciplines itself most strictly. Production must be carried on to a limit of our power. Destructive criticism and petty fault-finding are weaknesses and dangers. Unity of purpose and constituted leadership is essential. It is a case of a strong pull, a long pull and a pull altogether. Men must be found for the army, for munition making and for food production. Non-essential industries must provide men for essential industries. Women in this country must take the places of men to the limit of their power when called upon. Farmers must recognize the necessities of war and the public in general must unite to save the harvest of 1918.

Garden crops will not give good results unless the soil is kept well cultivated.

No need of your screen doors or windows rusting if you will paint them as soon as purchased, with good paint and oil.

UNEASY LIES THE HEAD—

The Army Bed is Really a Serious Subject at First Acquaintance.

A mere civilian does not know what a bed is. To him it is something soft and yielding, something the body can snuggle in and the soul can dream in.

What a delusion! I speak from experience when I say that a bed is no such thing. There is only one kind of bed nowadays—one kind, at least, worth reckoning. It consists of three boards, a couple of low trussels, a mattress more or less stuffed with straw, and three blankets.

"No 'ot-water bottles this trip," says the red-cheeked sergeant.

You grin, to show your appreciation of the point. If the sergeant says so, it is so. And then you examine the structure which is going to turn you from a flabby, namby-pamby, puny molly-coddle (the sergeant's phraseology, this) into a real live man.

The boards, you discover, are really boards. There is nothing yielding or elastic about them. To look at them, you might take them for innocent deal boards in need of a scrubbing. But when you have spent one night on them you have a fairly vivid notion of how the ancient martyrs felt after a course on the rack.

And the mattress! It is a snare and a delusion! It has lumps in it. There are some big lumps and small lumps, and there are also spaces where the top and bottom meet through lack of straw.

Still, with luck, you occasionally fall asleep on the lumps, and dream that your ear is on Mount Everest, your shoulder in the Thames Valley, and your legs on an escalator.

But you need not worry. The dream won't last for ever. There are various ways of waking up. One is by suddenly striking the ground with your hands, for the trussels raise you only a few inches above it. Another is the collapse of the trussels themselves.

Well, never mind! You have three blankets.

The civilian idea of a blanket is something white and fluffy and soft and warm. The Army blanket was not designed to fulfil these requirements.

A little disinfectant sprinkled on the straw litter in the coop will keep down vermin.

It is fine for cleaning cans—says the dairyman

Soils and Crops

By Agronomist.

This Department is for the use of our farm readers who want the advice of an expert on any question regarding soil, seed, crops, etc. If your question is of sufficient general interest, it will be answered through this column. If stamped and addressed envelope is enclosed with your letter, a complete answer will be mailed to you. Address Agronomist, care of Wilson Publishing Co., Ltd., 73 Adelaide St. W., Toronto.

Freshening the Cows.

A short while ago I went into the stable of a farmer friend who lived about a mile or so from me. He was just feeding his cows. I noticed that he measured out the grain ration for the different ones and also each one the hay that was needed. There was one cow that only received hay for her fed. I asked him why he did not give her any grain.

"Oh! That one, why she is dry. I expect that she'll come in' in about a month or so. After one of my cows stop giving any milk, I do not give them any more grain," he told me.

"But, in her case," I asked him, "don't you think that she is so near freshening time that it might pay?"

"I do not see where there'd be any profit," he answered. "How can any cow that is dry be worth giving anything but hay to?" And he laughed as he thought that it was quite a joke to feed anything but hay to his cows that were dry.

As I looked at the cow that was getting only hay, the one that he had told me he expected would have a calf in a few weeks, I was surprised. She was very thin. To look at her I would not have known that she was to freshen soon. I felt that the joke was really on him. I know that there are quite a few farmers that feel as he does. They do not think that a cow that is not giving any milk needs much to eat.

But a cow that is to have her calf ought to be fed quite liberal. While she is not giving milk perhaps, she is using feed to grow the new calf to be born soon. She needs food to bring her into moderately high condition, without too much fatness. Excessive fat is apt to make difficulty at time of calving. But if the cow has a liberal quantity of it with good flesh she is ready to start immediately to make a large quantity of milk. Fat that has been stored up, is ready as a reserve to be drawn upon to help at the time that she is to make the largest quantity of milk.

While there are farmers that do not dry off their cows for any length of time before they freshen, most farmers agree that cows should have from six weeks to two months rest from milking, before they have their calf.

Cows should have exercise in moderation during pregnancy, as with these that are kept in too close confinement, there is sometimes difficulty during calving time. Of course, too much and violent exercise or conditions which might lead to slipping or jumping is bad, as such may cause abortion. Cow yards where they get their exercise should be free from ice and be even and smooth. Cows that are kept in the stable a large part of the time should have the platform or floor under them level; floors that slope towards the rear cause an unnatural pressure to be brought to bear on the generative organs which makes a tendency to lose the calf, develop.

When the time draws near for the cow to have the calf, she should be placed in a separate pen or box stall, large enough so that she can move around easily. The bowels should be kept free by the use of laxative feeds. Roots are valuable. A good feed for a cow some time before and after she has her calf, is whole oats that have been swelled by having boiling water poured over them. Three pounds of these, three pounds of bran, and one-half pound of linseed oil meal mixed with warm water and a little salt, makes a good feed and has the tendency to prevent the retaining of the afterbirth. Of course, hay is to be given. After calving give this feed for a week or so, increasing one-half a pound a day as the cow increases in her milk flow, and gradually change to the regular ration. For at least ten days before the cow calves she should have water with the chill taken off; also for two weeks after.

While, as a rule, cows have their calves born without much trouble, they should be watched carefully as the time draws near, and if there are any signs of difficulty, help should be gotten quickly, if it is to be of use. After the calf is born the danger from milk-fever should be guarded. While perhaps it may not be necessary for every farm to have a milk-fever outfit, there ought to be one at least in every neighborhood and every farmer that has many cows should understand how to use it. It is very simple; in fact, many times a common bicycle-pump with a small tube attached to it that is small enough to be inserted into a cow's teat, has been successfully used. After filling with air, the teat is tied with strips of cloth to hold it in for an hour or so, and the process repeated until recovery takes place. Particular directions come with every outfit.

The capacity to give milk is developed in cows by breeding early. While a heifer is not fully grown at two years of age, it seems to be the rule among most breeders that that is about the right age for a heifer to have her first calf, providing she is in no way stunted in her growth. To fix the habit of persistent milking, a cow is not bred so that her second calf comes within a year and a half. Of course, the best of care at this time is required so that the future cow may have a chance to develop as much as possible.

While cows are bred until they are twenty years old sometimes, the best period is from four to five or six, up to twelve years old.

To get the best from any cow, good care is important at all times, and even though she is not giving milk, she should have a properly balanced ration to prepare her for the work that is to come to her as soon as she freshens.

Realizing the War.

Margaret Deland, the noted American author, writes from Paris: "Over in America we thought we knew something about the war and the conditions in France, but when you get here the difference is as the difference between studying the laws of electricity and being struck by lightning. I have been struck by lightning. The only way in which I can keep sane and steady is to look very, very closely at my own immediate little trivial, foolish job—writing or working in the canteen—for if I dare to lift my eyes to the black horizons I lose my balance."

You may not be the best farmer in your neighborhood, but you can at least strive not to be the worst.

Topics in Season

Feeding high-priced fertilizer to weeds indicates the slacker at his worst.

Why spoil a fifty-dollar mower for the sake of two cents' worth of machine-oil?

The bug that takes the biggest toll is the bug of carelessness.

A good way to get rid of poisonivy is to spray it with kerosene and set fire to it.

Burying the water jug in the furrow will keep the water cooler. But have a big jug.

Beware of so-called headache pills, tablets or powders. Practically all of them contain a coal-tar, heart-depressant drug which is often dangerous.

One of the most popular utensils on the farm is the dinner-bell.

The greatest achievement in harvesting is beating bad weather to it.

Many folks have forgotten how to stack hay. This rule is a good one: Keep the middle full and drive around or every side to unload.

Women ought to be good farmers, seeing that they are deeply interested in husbandry.

Now that so many farmers are hauling produce on auto trucks, the necessity of having better roads is being realized as never before. We must have them.

There is only one right way to sharpen a hoe and that is by filing or grinding the blade on the under side of the edge as you hold it ready to use. A sharp hoe is a fine cure for the backache.

That which we acquire with most difficulty we retain the longest.

Poultry

This year it would seem patriotic to grow the broilers to a large size before marketing them, but reach a weight of about two pounds. The small broilers should bring a fair price and when turned into cash they will furnish available funds for properly feeding the pullets.

At the present price of grain it does not seem that capons and roasting chickens can be very profitable this year. The present indications seem to predict that it will be safer to market young broilers and raise high-class and well-fed pullets to produce eggs next fall and winter.

When there is time for marketing small orders to private customers it pays better than selling to the local dealers or the commission men. However, every farmer has to figure out most of his own marketing problems for himself. Some find it takes too much time to dress and market poultry to private consumers and they make more money by giving their time to production problems. This practically means that the farmer hires the local dealer to be his agent or poultry salesman. There is a lot to learn about poultry marketing problems. Most farmers know that they have not yet found out the best method. A little more instruction along that line from the experimental farms will be appreciated.

There will be little time on the farms this year to listen to agents.

A corn crop kept thoroughly cultivated is, as a cleaning crop, almost equal to a summer-fallow.

GOOD HEALTH QUESTION BOX

By Andrew F. Currier, M.D

Dr. Currier will answer all signed question is of general interest it will be answered personally. If not, it will be answered through these columns; if stamped, addressed envelope is enclosed. Dr. Currier will not prescribe for individual cases or make diagnosis. Address Dr. Andrew F. Currier, care of Wilson Publishing Co., 73 Adelaide St. West, Toronto.

HEADACHE REMEDIES.

The frequency and variety of headaches have stimulated the medicine manufacturers to devise means for their relief, and the market has been flooded with their products.

Headache is a very compschensive term. It may be a simple neuralgia due to disturbance of the nerves on one side of the head, the forehead, or the top or back of the head.

The blood current of the head may be unaffected in such cases, or there may be less blood than usual with resulting pallor of the face.

Or the face may be red, the head hot and throbbing,—with a painful sense of fullness and congestion.

Again, there may be dizziness in addition to the head pain, and perhaps nausea and vomiting, these symptoms being due to some trouble in the digestive apparatus.

Yet other headaches are due to some trouble in the eyes, the ears, the kidneys, to growths within the skull, or a thousand other causes.

Is it reasonable to imagine that all these different kinds of headaches can be cured by the same medicine, and is it not expecting too much of any powder or tablet that it will be equally useful for all of them?

It is safe to say, therefore, that any medicine which promises to cure all kinds of headache, is a fraud.

Furthermore, headache may be merely one of the noteworthy symptoms in a more or less important disease, and a headache powder, no matter how good it may be, may only mask and obscure other symptoms, unless it goes to the cause of the disease, which so far as I know no headache powder can do.

What, for instance, could such a medicine do in headache proceeding from tumor of the brain?

It would be unlikely to produce any impression upon the tumor; it might not even relieve the pain, and if a considerable quantity were taken, it might cause weakness and faintness from its depressing action on the heart and make the patient worse instead of better.

If any of the headache powders does not have such a depressing action, I do not know which it is; and if all of them have this quality, none should be given unless we know at the time what the condition of the patient's heart really is.

Even with people whose hearts are apparently sound, some are extremely sensitive to the action of such drugs as headache powders are composed of, even in small doses.

This is especially true with children, hence we cannot be too particular in recommending them to others, or in taking them ourselves, for there is an element of possible danger in them, which must not be overlooked.

A popular combination is a coal-tar product of some kind, in connection with a stimulant like camphor or caffein; and when such a combination is used, the possibility of harm will be diminished.

One of the worst features of headache powders, is the danger of forming the drug habit, of using them when there is no real excuse for taking medicine.

We must also remember that the quantity of medicine which will relieve a headache to-day, may make little impression on the changed bodily condition of to-morrow, and by increasing the quantity we may have crossed the border line of safety.

I do not imagine that these words of caution will have much effect in preventing the use of headache powders; but it is proper to present the facts and suggest that the physician is the one to decide whether such a medicine ought to be used.

Moreover, physicians also should realize their responsibility in prescribing them, and give them with the same precautions which they are supposed to use in giving other drugs which are commonly admitted to be dangerous.

Over 45 Municipalities

in the Eastern Townships and vicinity are now being served with light and power by the Southern Canada Power Company, Limited.

This territory is a good industrial district, and is growing rapidly, thus insuring increased demand for power and light.

We recommend the 6% Bonds of this Company, which we are offering with a bonus of common stock, thus giving investors an opportunity to participate in the future success of the Company.

Send for circular, and map showing territory served.

WOOL

Farmers who ship their wool direct to us get better prices than farmers who sell to the general store.

ASK ANY FARMER! who has sold his wool both ways, and note what he says—or, better still, write us for our prices; they will show you how much you lose by selling to the General Store.

We pay the highest prices of any firm in this country and are the largest wool dealers in Canada. Payment is remitted the same day wool is received. Ship us your wool to-day—you will be more than pleased if you do, and are assured of a square deal from us.

THE NINTH ANNUAL
TORONTO FAT STOCK SHOW
Union Stock Yards, Toronto
December 5 & 6, 1918

The management of the Show wish to announce the following changes over previous shows:

There will be no classes for female cattle.

All stock entered must be owned by exhibitor at least ninety days before opening date of show.

In addition to single cattle classes there will be classes for three animals.

Premium list will be ready for distribution August 1st.

Facts About Fall Wheat

ONTARIO Fall wheat growers from many localities claim that fertilizers saved their 1917-18 wheat crop. How did they do it?

Fertilizers are carriers of available plant food. This suitable food is to the young wheat crop what new milk is to the calf.

Last fall the fertilized wheat made stronger top growth and wider, deeper root growth than the unfertilized wheat.

Last winter the fertilized crop stood the severe weather while much unfertilized wheat was killed.

Last spring the fertilized wheat started growing earlier and stronger than the unfertilized wheat.

That is why fertilized wheat will yield much heavier this summer than unfertilized wheat. It pays to fertilize Fall wheat.

New Free Bulletin on Fall Wheat Production now ready. Write

HOW IS YOUR BERRY PATCH?

I was surprised to find how few berries are grown by farmers for their own use. I had always imagined every farm would have the fruit garden as certainly as they had the vegetable garden, as I had grown blackberries, strawberries, and grapes and found them so little expense or trouble, and the fresh fruit so much superior to the crushed, half mouldy, and otherwise unsalvable fruits purchased at the grocery. Of course, nice home-grown fruit from the store is all right, but that is what you can hardly find unless there is a regular fruit farm in the vicinity, for farmers that do not grow for their own use will not grow for others. Considering the value of these fruits and the pleasure we get from their use I can see no possible reason why they should not be more generally planted. Let's see what the farmers say.

A Patch that Didn't Bear

One farmer told me he had a patch of strawberries that never bore and he just plowed them up. He told of several patches in his neighborhood that had run out in a few years and, while they bloomed every year bore no fruit. Now I had some experience with just such a patch years ago. There was a big patch of berries on the place when we moved there, but we were told it bore none at all. We plowed two furrows together, then left a strip six inches wide, plowed two more furrows together, and continued this until the patch was made into a six-inch hedge. We pulverized the middles and set out rows of new plants, setting alternate rows of staminate plants and young plants from the old patch, buying the staminates. We figured that the old patch had been allowed to go and the stronger growing infertile flowered variety had killed out the weaker growing staminate variety, if there had been such planted in the first place. Our supposition was seemingly correct, for we got a fair crop that year and a good crop the next, after which we removed all the traces of the old rows and kept the new rows from crossing the middles, thus preventing the plantlets from crowding out the staminate. If you have a patch that is not bearing, nine chances out of ten this is the trouble. If you do not want to clear up the whole patch and renew, just clear room for a row through the middle and plant it thickly with a fertile variety, setting the plants so early in the spring that they will bloom in season and fairly freely, and you will get berries the first year, for a few staminate plants will fertilize quite a patch of berries, especially if you have plenty of bees around.

Easy Way to Care for Blackberries

A farmer complained that taking care of blackberries was too much trouble. He had planted a patch but the sod and weeds had taken it and he wouldn't keep it clean for the fruit. Now I saw that patch, and it was a case of planting and letting it go. Of course, nothing could be expected, and nothing was received. It does take some attention to keep a blackberry patch in condition, but it is worth it, and few fruits will give a better account of themselves. If the farmer is too busy or not interested enough to give good culture let them haul out a load of manure and mulch the patch fairly deep and this will keep down the weeds and give the fruit a chance; for blackberries are very hardy in plant, and not easily discouraged. If the mulching is done at once after planting there is less likelihood of the vines sprouting so much, for the roots will not be disturbed.

Grapes Are Easy to Grow

Grapes can be grown anywhere, over arbors, along fences, over windows, or in vineyards on hillsides that are fit for nothing else, and these can be mulched to advantage, also. Have grapes anyway, for this is one of the finest fruits grown and the very easiest to have, and sure to produce almost every season. Care is necessary for best results but fruit will be borne without much attention. Pruning will give finer fruit, but I have seen large quantities of very good fruit grown on vines running along a fence without having been touched in any way for several years. If you want to have something for nothing, just stick a grape vine in an odd corner and eat the fruit thereof.

This is not advocating planting and then leaving to grow without care, but it is saying that if care cannot be given plant anyway and do the best you fruits anyway. Care for your fruit in can for them and you will have some the most approved style if you will, but if you won't plant it and care for it the best you feel you can, and then take what you get, and you will get more than you have earned, you may be sure of that.

Growing is Cheaper than Buying

I have seen farmers buying and carrying home crates of these fruits to put up for winter use and pay out more for a very limited supply than it would have taken to plant and care for a patch of their own. A friend of mine picked as much as three dollars worth of strawberries from five rows sixty feet long, and did this at every picking during the height of the season. That patch cost about a dollar and a half for plants, took about fifteen minutes after every rain the first season to run through it with the wheel hoe, and probably an hour or two during the summer to cut runners and pull weeds that escaped the hoe. After the first year it was mulched in the fall, the mulch stirred in in the spring after the fruiting season, when a good hoeing was given all the space between the rows. After the first heavy rain another mulch was given, manure from the barn being used for this mulch. Not much work, but a fine lot of fruit you must concede.—J. A. Kent.

The Dairy

In the stable, the best way to break a calf-sucking cow is to tie her both ways in the stall so that she cannot get her head back to her udder. If you are persistent in this, after a while she forgets the habit.

But in the pasture lot a different plan must be used. The cow can be tied then by having a surcingle around her body and a rope extending from the surcingle to either side of the head so that she cannot get her head to her udder. This, however, prevents her from fighting flies and is really quite a punishment.

I think the best way probably is to get at almost any hardware store what is known as a calf-weaner. This is an arrangement that is fastened in the nose like a bull ring and extending all around on this ring are long, sharp spikes so that when she goes to suck herself these spikes are prodded into the udder and flank and she soon gives it up. Cows can eat fairly well out of a manger with an arrangement of this kind in the nose. They seem to get along on pasture all right. After a reasonable length of time if this don't break the cow of the habit, I would dispose of her for beef because it is a nuisance to have to keep this thing up every year.

A Lettuce Tip.

Lettuce should be sown three times during July, and the young seedlings must be kept well watered. In fact, all lettuce should be kept very moist to prevent it from running to seed too quickly.

Good, crisp lettuce is something that all war gardeners are keen to have, and frequently it is a disappointment to them to find it going to seed, and coarsening in the process.

If you have not planted your lettuce in a shaded place, you might build a cheesecloth frame over the plants that are beginning to head up, and spray them night and morning during the warm weather. This is the real secret of good, crisp lettuce.

Farmers are buying and using more two-row cultivators this year.

SMOKE DOCKETT'S
ORINOCO
CUT PLUG FOR CIGARETTES

FOURTH CON. BRUCE

Mrs. Jos. Hyde, sr., passed away very suddenly on Friday last, having been ill only half an hour from heart trouble. The deceased had been an invalid since about five and a half years ago, when she took a stroke of paralysis. She was 81 years of age, and was born in Lincolnshire, England. Her maiden name was Elisabeth Beat. She was married in England and came to Canada with her husband 48 years ago, and in the intervening period had lived on the 4th of Bruce, except the past few years when she made her home with her daughter at Aberdour. Mrs. Hyde was a member of the U. E. church, and a very active worker in the congregation. Her husband died nine years ago. The family surviving are five sons and one daughter—William, of Rocanville, Sask.; Fred, of Didsbury, Alta.; James, of St. Helens, Ont.; Harry, of Monteith; Jos. W., 4th Bruce; Mrs. Arch. Pollock, of Aberdour. The funeral on Sunday afternoon was a very large one. Rev. Mr. Hallman, of Port Elgin, conducted the services. Interment was made in Wrightson's cemetery, 4th con.

GRESHAM

(Intended for last week)

Miss Bessie M. Young, of Wesley Memorial Hospital, Chicago, who was spending vacation at home, returned to her duties last week.

Messrs. Alex Wood and Jas. McKenzie were the two elders in charge for the signing of the call to the Rev. Mr. McLaughlin.

Miss Gertrude Megraw is visiting at Mr. Shipley's.

Mr. Aitchison and family, of Clifford, visited at the home of Mr. A. Woods last week.

Mr. and Mrs. Robt. Reed Sundayed at Mr. Leonard Shipley's.

Many of the old friends of the late Mrs. Murray, of Underwood, regret her sudden death. She was one of the first residents of Underwood.

We are sorry to report Mr. Nelldige Struthers ill at present.

Miss Isabel Cameron, teacher near Chalk River, is home for summer vacation.

Mr. Henry Dent, of Underwood, visited under the parental roof recently.

Mr. and Mrs. Angus Anness visited friends on the 2nd lately.

SIXTH CON. BRUCE

Mr. Joe Reptke from Guelph, and Pte. W. F. Wendt from Mildmay, Mrs. Bruce Keyes and son from Toronto, and Miss Reta Schmallbach from Owen Sound, visited for a few days at Mr. John Reptke's.

Mrs. Miller and son, from Port Elgin, spent a few days at Mr. Menno Roppel's.

Pte. J. D. McGillivray is home from London camp on leave.

Mr. and Mrs. Everett Westman went to Owen Sound for the 12th.

Mr. and Mrs John McGillivray, Misses Bessie and Mabel Nelson made a trip to London a few days ago.

Mr. Irvine and Mis Pearl Reptke spent a few days in Owen Sound.

Miss Margaret Mills, 10th con., spent a few days at Mr. Wm. Foster's.

Misses Margaret and Jennie Russell are visiting their sister, Mrs. Wm Baptist, near Teeswater.

Mr. and Mrs Robt. McKay were in Walkerton on Thursday.

EBENEZER

Miss Annie Hambidge is visiting friends in Orangeville.

Milburn and Florence Fleming are spending holidays at Owen Sound.

Mrs. George Grant received word on Monday that her father, who lives at Lakefield, Ont., was seriously ill, and Mrs. Grant left on Tuesday for that place.

Mr. Reggie Lipsett, of Chesley, is visiting friends here.

A large number from here attended the 12th of July celebration held at Arkwright. Baseball was the chief attraction, and the Dunblane boys brought home the honors of the day. They first defeated the Tara nine in a very interesting game by the score of 5 to 3. After Allenford had defeated the Dobbinton team, the two champions came together and the boys in blue and white proved to be too fast for Allenford. The score was 27 to 11 in favor of Dunblane.

INVERHURON

The weather has been rather cool for camping out these two weeks, but now it seems more settled and warmer. There were a good many spent Sunday at the lake. Week end visitors at the different cottages were: Mr. Geo. Harrison of Chesley, Mr. Sheppard, Mrs Yeiman and little boy of Guelph, at "Cosy Nook;" Mr. and Mrs. Chittick, Guthrie and Miss Chittick of of Stoney Creek, Mrs. Cross and young Jack and Hardy Sanderson of Chesley, at J. B. Campbell's; Miss Nina Cunningham at McIntyre's.

Others who have moved in are Mr. Blair's family from London, and Mr. Blackwells. Mr. and Mrs. Murdoch McDonald and Mrs. Henderson, of Toronto, are occupying Mr. Gam McArthur's cottage.

CASTORIA.

Bears the Signature of *Chas. H. Fletcher* The Kind You Have Always Bought

TENTH CON. BRUCE

(Intended for last week)

Pte. Norman McLeod was up for a couple of days from London last week visiting his mother.

Mrs. Harry Wade and little boy, of Regina, are visiting at Mr. Alex Shipley's.

Mr. Jas. Bradley, from Ashfield, and Mr. T. Bradley, from Tiverton, Sundayed at Mr. W. H. Brown's.

Mr. and Mrs. Will Cole, of Underwood, Sundayed at Mr. C. Walmsley's.

Mr. Dan Sinclair and Mr. Campbell, of Hamilton, spent the week end with friends on this line.

Mrs. McLeod is in very poor health at present.

HEPWORTH HAS NEW SUPPLY OF NATURAL GAS

Drillers Find a Pressure of 450 lbs. at Depth of 1415 Feet

A good flow of gas was struck by the drillers at Hepworth on Tuesday of last week, after operations occupying twenty-four days. The new well is six inches in diameter and 1415 feet in depth. The new well is only 900 feet west of the old wells sunk sixteen years ago, and there is only about three feet difference in the depth. The main difficulty with the old wells was that there was salt water flowing into them, but there is none in the new hole. The Hepworth people are naturally jubilant, says the Owen Sound Sun. The discovery places them within easy reach of a great supply of fuel, which in these days of coal scarcity, is a matter of no small importance. But it is not only Hepworth that is interested. Owen Sound has been watching the operations, hopeful that a sufficient quantity could be procured to warrant a pipe line to that town, thereby affording some relief to the fuel situation. The discovery at Hepworth is of the utmost importance to Owen Sound, Shallow Lake, Wiarton and other points.

There are hundreds of wells in Southern Ontario not nearly so valuable and which have been yielding for years. But more than anything else, it proves that gas in paying quantities exists in this field.

The company will proceed with another well at once. The discovery so far is such as would indicate the presence of large quantities of gas in the district and drilling will start again in a location not far distant. It is understood that the company has quite a stretch of land under lease and it is their intention to fully develop the field.

It is the intention to supply the village of Hepworth, but this will not be undertaken until fall. For the present the company will confine itself to drilling new wells. The pressure of 450 lbs. is more than sufficient to force the gas to Owen Sound were a pipe line available.

THE LATE MRS. HUGH MURRAY

The death of Mrs. Murray aged 69 years, relict of the late Hugh Murray, occurred at her home, Underwood, suddenly on Sunday, July 7th. The late Mrs. Murray was a woman of exceptionally fine Christian character, and in her passing the township of Bruce loses a pioneer resident whose life has been an inspiring example to those about her. She was a lifelong member of the Underwood Presbyterian church. Her maiden name was Catherine McDougall, she being a daughter of the late Hugh McDougall, of the 5th of Bruce. She was born in Ontario County and came to Bruce with her parents when a child four years of age. Her late husband was postmaster at Underwood, and on his death several years ago she was appointed to the position which she ably and conscientiously filled until the time of her demise. In church work ever active, and gave of her limited time much assistance to all worthy objects. The family left to mourn her are: Mrs. J. Savage, New York; James, New York; Dr. D. A. Murray, who has been serving in one of the hospitals in England since shortly after the outbreak of war; Roy, who joined the American army at Phoenix, Arizona, and has just safely landed in England; Hugh, manager of Union Bank, Calgary; John, sailing on the lakes, and William, of Toronto. The following brothers and sisters also survive: Hugh and Colin McDougall, 5th Bruce; Mrs. N. McLean, Glamis; Malcolm, Phoenix, Arizona; John, Seattle. To those the sympathy of a large circle of friends is extended in their bereavement. The funeral took place to Baie-de-dore cemetery on Wednesday, the services being conducted by Rev. J. C. Robinson, pastor of Knox church, Tiverton. The only member of the family able to be present at the last sad rites was her son, William, of Toronto.—Reporter.

ARRAN COUNCIL

Council met July 6th, all present. On motion of Scarrow and Thomas it was decided to instruct those who are overseeing the expenditure on roads to see to the cutting of weeds on the highways. The question of altering the Ash ditch as proposed was discussed and C. E. Start's opinion in the matter was read which went to show that the council should pass a by-law making the change further south from the centre of the highway, as in the proposed site it would be dangerous to have such a large ditch near the travelled part of the road. The council acted on this opinion and passed by-law No. 13 making the change. Treas rer's statement showed $3854 to the credit of the township. On motion of George and Miller, Wm. Baux was appointed pound keeper instead of T. W. Foster, who declined to act. The reeve gave a synopsis of the doings at County Council. He stated the intentions of the County Council to withdraw the portion of the 30th sideroad of Arran from the north gravel road to the village of Tara from the good roads system, and that he and Reeve Grant of Tara, and Craig of Amabel, with Wm. McDonald, M.P.P., interviewed the Deputy Minister of Public Works protesting against the change intended. They were assured that it would require the best of reasons before the change would be made. Moved by Samuel Miller, seconded by Fred George, that whereas this council has been informed that it is the intention of the County Council of Bruce to withdraw from the Good Roads By-law that portion thereof adopting the 30th sideroad of Arran from the northern boundary of said township to the village of Tara as one of the roads to be improved; and whereas that by-law was adopted in good faith and with the belief that it would be faithfully carried out, and was supported on that understanding; we, therefore, the council of the township of Arran, do earnestly register our protest against the intended action of the said County Council of Bruce, and we would appeal to the Hon. the Minister of Public Works, to intervene in the matter, as the Government contributes largely to the highways improvement, and will it is hoped insist that fair play will be meted out to all alike. And we instruct the clerk to forward a copy of this resolution to the Public Works Department.—Carried. A large amount of money was paid out for work on the roads and also $200 advanced on contract of Saar's bridge. Council then adjourned until the 10th of August next.

H. T. Potts, Clerk

TO BE TRIED FOR SEDITION

Reeve Filsinger, of Carrick, Committed—Out on $500 Bail

Reeve Moses Filsinger, of Carrick, received a summons to appear at Walkerton Police Court to answer a charge of having made treasonable and seditious utterances before a number of individuals in the village of Mildmay. The information was laid by Dominion Police J. E. Grieves and T. A. Muxworthy, of London.

Court was held at the town hall on Thursday, before Magistrate Tolton, County Crown Attorney Dixon appearing for the Crown. Four witnesses were examined.

Mrs. Jacob Schmidt, of Mildmay, gave evidence that Reeve Filsinger had talked to her at the home of her mother, Mrs. Susan Kloepfer, at Mildmay, last December and was settling up with her brother Mike. He said: "We won't fight for the Catholics in France," and also "They are shipping the women over there by the carload for the use of the men."

Filsinger was permitted by the magistrate to question the witness. In doing so he denied having made the statements, saying that as he had known Mrs. Schmidt all her life to be a Catholic, he was hardly likely to make any such statement to her.

Mr. Ed. Kalbfleisch, hardware merchant and garage owner of Mildmay, said that at the beginning of June he, Jack Harper and two others had a conversation with Reeve Filsinger at his garage. Filsinger was in town to take the train to Toronto with the farmers' delegation. He quoted the defendant as saying, "The boys now being sent across are sold like little pigs at $8 a head. Perhaps the Government was using the money for clothing or transportation."

The defendant, on being allowed to question the witness, asked: "Did I not say that I heard what you say about the boys being sold? Did I not say "You hear so many things that you can't believe anything!" The witness answered "yes" to both questions.

John Harper, farmer, of Carrick, corroborated Mr. Kalbfleisch's testimony. Asked by Magistrate Tolton whether he made any comment at the time in reply to Filsinger's remark, Harper said, "I told Filsinger I would not like to make that statement."

Filsinger, on taking the box for examination, said he had been down to Ottawa with the Farmers' Delegation and was going to Toronto on the day referred to by the witnesses. A meeting of the ratepayers of the township had been called without consulting him. He was made chairman and asked if farmer boys ought to go and fight. He replied that he thought one man had as much right to go as another and that the military authorities certainly knew more about it than we did. He asked them to choose somebody else as a delegate but the meeting elected him into it. He heard so many matters discussed by the farmers at Ottawa. One of them was: "Is it true that the boys are sent over that way at $8 a head?" When I got back to Mildmay, said Filsinger, we were talking about this matter. I told them I heard it, but you hear so much you don't believe anything. I think, said the defendant, I have done as much as any white man. He stated he had given the casting vote at the council to give $1,000 to the Y.M.C.A. He produced statements signed by Mr. J. C. Thompson, president of the Carrick Preparedness League, stating that Filsinger had been largely instrumental in securing patriotic grants from the Carrick council and had been active in patriotic work on many occasions. A statement from the township clerk, J. A. Johnston, said that Filsinger had devoted a great deal of time and energy to patriotic movements. In concluding his statement, Filsinger said that the trouble had been made for him through spite by people who never contributed anything nor did anything.

Asked by the two Dominion Police present if he didn't try to settle the case with W. J. McNally, the defendant said he had asked him to drop it as there was nothing in it and he didn't want a great splurge in the papers.

Philip Gress, farmer, of Carrick, was permitted to make a statement on behalf of Filsinger. He said, "As regards the statement with reference to soldiers being sent at $8 to $10 a head, we heard them at Ottawa and on the train both going and coming. They were heard at Toronto. The reason for those statements may be due possibly to the temper the farmers were in. I can corroborate Mr. Filsinger's statements about this talk going on about the soldiers. Where it was originated nobody knows, but it was there and circulated quite freely, so it is altogether likely that Mr. Filsinger just gave that talk as he had heard it."

At the conclusion of the hearing, the magistrate, at the suggestion of the Crown Attorney, decided to send the defendant up for trial.

He was allowed to go on his own bail for $500.—Telescope.

FRIENDS THOUGHT HE WOULD DIE

"FRUIT-A-TIVES" Conquered Dyspepsia and Restored His Health.

MR. ROBERT NEWTON,
Little Bras d'Or, C. B.

"I was a terrible sufferer from *Dyspepsia and Constipation* for years. I had pain after eating, belching gas, constant headaches, and did not sleep well at night. I lost so much weight—going from 185 pounds to 146 pounds—that I became alarmed and saw several doctors who, however, did me no good. Finally, a friend told me to try '*Fruit-a-tives*'.

In a week, there was improvement. The constipation was corrected; and soon I was free of pain, headaches and that miserable feeling that accompanies Dyspepsia. I continued to take this splendid fruit medicine and now I am well, strong and vigorous". ROBERT NEWTON.

50c. a box, 6 for $2.50, trial size 25c. At all dealers or sent postpaid on receipt of price by Fruit-a-tives Limited, Ottawa.

Clerk's Notice of First Posting of Voters' List

Municipality of Elderslie

NOTICE is hereby given that I have transmitted or delivered to the persons mentioned in section 8 of the Ontario Voters' List Act, the copies required by said sections to be so transmitted or delivered of the list, made pursuant to said Act, of all persons appearing by the last revised assessment roll of the said municipality to be entitled to vote in the said municipality at elections for members of the Legislative Assembly and at Municipal Elections and that the said list was first posted up at my office on the 5th day of July, 1918, and remains there for inspection.

And I hereby call upon all voters to take immediate proceedings to have any errors or omissions corrected according to law.

Dated this 8th day of July, 1918.

R. C. PEARCE, Clerk, Elderslie

VILLAGE PROPERTY FOR SALE OR RENT

GOOD frame dwelling, stable and outbuildings, with five acres of land—formerly the George property—near Stark's mill. Will be sold on reasonable terms or rented. Also a 6-yr-old driving mare for sale. Apply to D. DUNLOP, Prop.

TEACHER WANTED

FOR S. S. No. 8, Elderslie. Second-class Normal certificate. Salary $600 to $650 according to qualifications. Applications received up to August 10th. J. J. Sparrow, Sec'y, Dobbinton P. O.

—Among those who have recently fallen in France is Dr. McKinnon, a son of Prof. McKinnon, of Edinburg, who has a number of relatives and friends in this part of Canada, and was here on a visit about eight years ago.

—Mr. and Mrs. A. J. McDougall and children, of Hamilton, were up visiting his parents, Mr. and Mrs. Alex McDougall, 8th Bruce. A. J. is manager of the Standard Business College, Hamilton, an institution at which numerous Bruce Tp. young people have received a good business training. An adv. for the college appears in this issue.

—No paper next week.

—Mrs Rowley, sr., went to Peterboro last week.

—Miss Edna Rose is home from Chicago on holidays.

—Mrs. T. Kerr is visiting her brother at Rockwood.

—Miss Nellie Grant, of New York City, is visiting Mrs. Geo. Grant

—Miss Meta Allen was home from Toronto for a few days last week.

—Mrs. Adams, of Toronto, is visiting her sister, Mrs. H. McKerracher.

—L.-Corp Neilson Stark was home from London camp on a few days' leave.

—Mr. and Mrs. Geo. Nicol, of Greenock, spent a few days in Toronto.

—Miss Elizabeth Gibson was visiting her brother in Kitchener last week.

—Miss Ethel Kennedy, of Orillia public school staff, is home for the holidays.

—Mrs. E. Bain and grandson, Glen Sinclair, are up from Hamilton for the holidays.

—Rev. A. H. McGillivray, of Hamilton, will occupy the pulpit of Knox church on Sunday next.

—Miss Mollie Carter is home from Toronto on vacation, accompanied by her friend, Miss Johnson.

—Mr. and Mrs. Wm. W. Gibson, of Toronto, are visiting their respective homes and friends in town.

—Misses Bessie and Mary Laidlaw have gone to Grimsby to work on a fruit farm during the holidays.

—Don't forget to come to Methodist church garden party, on Methodist church lawn on Friday night.

—Rev W. A. Mulligan, M.A., LL.B., B.D., has declined the call extended to him by Geneva church, Chesley.

—Mrs. R. Lovelace and daughter Bernice, of Baltimore, Md., are visiting the former's uncle, Mr. Alex Bird.

—Misses Jean, Eva and Bess Flegg, of Tiverton, spent the week end at the home of their aunt, Mrs. Alex Rose.

—Knox church, Walkerton, has given a unanimous call to Rev. W. H. Burgess, a young minister from Chatham.

—Miss Helen Kemp, of Toronto, has been visiting at the home of Mr. and Mrs. John Buchanan, 9th con, Elderslie.

—Come and have tea and enjoy a good programme on Friday evening on Methodist lawn.

—Rev. J. L. Guinn, M.A., of Ancaster, Mrs. Guinn and children, are visiting at the home of his sister, Mrs. J. A. Logie.

—Mr. Alex McKeeman, late of Eden Grove, has taken a position in Brantford, and moved with his family to that city.

—Mr. and Mrs. R. H Muir, of Yellow Grass, Sask., are here on a visit at the home of the latter's parents, Mr. and Mrs. John Bryce.

—Hugh Watt has the contract of erecting a cement bridge on the townline of Saugeen and Bruce, for $335. Other tenders received by Reeves Christie and Dobson were Thos. Brigden at $343, and Neil McCallivray at $336.

—Mr. Jas. McLelland, of Ethel, is renewing acquaintances in town and vicinity, a guest at Mr. A. McRae's. His son George, who has been serving in France with the signal corps, was severely wounded in the head on June 21st, and is at Bologne Hospital.

Keep a Smart Appearance

You can be smartly dressed without being extravagant if you will leave your next order with us. We have a good assortment of the very newest patterns in fancy suitings. Look them over before buying. Also in Ladies' Suitings we have a full line to choose from of the newest patterns and styles,

I. S. CRUICKSHANK, the Tailor

Soils and Crops

By Agronomist.

This Department is for the use of our farm readers who want the advice of an expert on any question regarding soil, seed, crops, etc. If your question is of sufficient general interest, it will be answered through this column. If stamped and addressed envelope is enclosed with your letter, a complete answer will be mailed to you. Address Agronomist, care of Wilson Publishing Co., Ltd., 73 Adelaide St. W., Toronto.

HANDLING FARM MANURE IN RUSH SEASONS.

Almost everyone who has made a study of the matter would agree that the only way to conserve all of the fertilizing elements in farm manure is to place it on the land as soon as it is available. There are some conditions, however, which preclude such disposition of the manure supply and it becomes necessary therefore, to so arrange the materials and appliances at hand that the greatest amount of fertilizing constituents in the manure shall be saved and made available for future use. At the same time it is agreed manure should be put on the land as soon as made, it is just as well agreed that it should not be placed upon hilly or rolling land, but a short while before that land is to be plowed or worked up. Freshets and showers when falling upon manure so placed on rolling or hilly land carry away a very large amount of the fertilising ingredients and for this reason it is not wise to make such a risk.

The other condition which makes it impossible to spread manure as soon as it is made is in the rush season. If there was some way of getting at the exact amount of loss that takes place while the manure is being stored under ordinary conditions for three or four weeks until the work lightens sufficiently to put it on the soil, we probably would find that there is no season too rushing nor no work that pays better than putting the manure directly onto the soil as soon as it is made. However, since we have been accustomed to think this job can not be done during these rush seasons, it becomes necessary to provide some suitable storage place for the manure.

Taking all the farm manures, by and large, it comes about as close to the truth as we can get to say that sixty per cent. of all the fertilising elements lie in the liquid part of the manure, while forty per cent. lie in the solid part. If we wish to put it in another way, we might say that eighty-five per cent. of the available fertilizing elements are in the liquid manure while fifteen per cent. are in the solid portion. In other words, the liquid portion is much more valuable than the solid, and where manure is placed out in piles under the eaves of the barn or wheeled out to the side of the hill with the expectation that the rain will wash out portions of it that are too heavy to haul to the field, it will readily be seen that any manure supply so handled might as well be dumped into the river in its entirety since the solid portions of the manure that remain are very inert and it takes a long time before they are decomposed sufficiently to be used by the growing plants.

There are some facts concerning manure that should be kept in mind whenever any system for its handling is mapped out. One of the first is that the liquid portion of the manure is much more valuable than the solid; the next one is that under normal conditions the nitrogen of the manure is the most valuable part of it. When the small boy goes out to the barn to clean out the stable that he neglected the morning before, he usually gets an eye full of foul smelling gas. This gas is nothing other than ammonia, a combination of nitrogen and hydrogen, and for this reason every bit of ammonia gas should be saved since it contains the nitrogen which is so costly when bought as a fertilizer. The commercial ammonia, so-called, which is bought on the market for use so wash day is nothing more nor less than ammonia gas dissolved in water. Ammonia gas dissolves very readily in water and is somewhat heavier than air and when ammonia is dissolved in water this gas may be driven off very quickly by an application of heat so in both the liquid and solid portions of manure there is a large amount of ammonia gas. It is a well known fact that when horse manure or any other dry manure, is thrown out in a heap, there is bound to be some heat with further decomposition of the solid or woody portions.

Sometimes in the morning we approach the barn and if we had not seen the sight many times before, we would believe the manure to be on fire, with danger of burning up since there seems to be much smoke and gas coming out of the top of the pile. However, the gas that is passing off is the most valuable part of the manure. The fact that the manure heats, of-itself, does no particular harm, but the coincidence that the manure in heating drives off the ammonia gas which is dissolved in the moisture of the manure is the fact which makes it dangerous to allow this thing to occur.

And so in any system of manure storage, it is absolutely imperative to have the bottom of the pit tightly closed so that the liquid portion of the manure will be saved and to have the eaves of the storage house so arranged that rain water can be put in from time to time when needed to cool down the decomposing pile of manure and to re-dissolve the ammonia that may have been partially expelled by the heating.

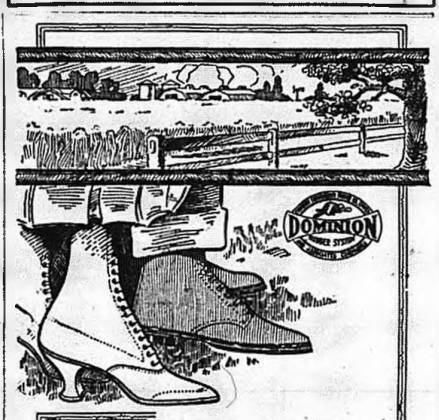
This year when the various fertilising elements are so costly, it behooves us even more than any other year, to save all that is available in the supply of farm manure on every farm. To do this requires some sort of a storage house. An old shed may be used and the manure dumped into this. With a little cement and time, it will be possible to hollow out the floor of the shed so that the liquid portion of the manure will neither be wasted nor allowed to leech away. Then too, the roof of the shed should be arranged with eave spouts so at any time surplus water may be run on the pile of manure. If there is enough cow manure mixed with the horse manure, however, it is not necessary to run in extra amounts of water. Added to this, there is another precaution which should be taken and that is to keep the flies out. The manure pile is the place where flies breed, with all the consequent damage which an army of flies can do, and if there are any windows in this manure shed, they should by all means be screened. The door, however, should be solid and fly-tight. In this way the flies will gather on the screens at the windows whereas if a screen door is used, flies would gather on the door and as soon as it is opened they flock directly inside.

It is necessary to have some sort of a manure storage plan and this plan should have in mind not only the saving of the greatest amount of the fertilizer value of the manure, but also the bettering of sanitary conditions about the farm. There is no one nuisance that causes so much trouble as the fly and since he and his like may be "nipped in the bud" by screening in their breeding places, or the manure piles, it would seem that any manure shed should profitably conserve the liquid portion of the manure as well as providing some means whereby the escaping ammonia gas caused in heating may be retained and redissolved in water. If in addition to this, this shed is by some means or other kept free from flies, we shall have a manure storage that is directly in line with the spirit of the times—embodying both conservation and sanitation.

Over 7,200 Customers

Are being supplied with Light and Power by the Southern Canada Power Co., Limited, in over 45 Municipalities in the Province of Quebec, and the number is growing daily.

In order to supply the increasing demand for Power, and also to enable more manufacturers to locate in this territory, the Company has commenced the development of one of its large water powers on the St. Francis River at Drummond ville. This plant will have an ultimate capacity of 17,000 H.P. to 20,000 H.P.



The development of water-powers is a patriotic duty as well as a commercial advantage, as it saves the importation of coal.

We recommend the 6% Bonds of the Southern Canada Power Company, Limited, which we are offering with a bonus of common stock, thus giving investors an opportunity of participating in the future success of the Company.

Send for circular and map showing territory served.

FLEET FOOT

comes as a welcome comfort as well as a summer economy to the farmer, his wife, his son and daughter.

FLEET FOOT SHOES will make farm work easier because they are light and springy, and so staunch that they stand up to any farm work.

Their sturdy wear and low price make them the most economical shoes you can put on this summer, for you can have two or three pairs of FLEET FOOT for the price of one pair of leather shoes.

None genuine without the name FLEET FOOT stamped on the sole. Look for it.

The best Shoe Stores sell FLEET FOOT

GOOD HEALTH QUESTION BOX

By Andrew F. Currier, M.D.

Dr. Currier will answer all signed question is of general interest it will be act, it will be answered personally if stamped, addressed envelope is enclosed. Dr. Currier will not prescribe for individual cases or make diagnosis. Address Dr. Andrew F. Currier, care of Wilson Publishing Co., 73 Adelaide St. West, Toronto.

Movable or Floating Kidney.

Mrs. S. McE.—Please write an article on floating kidney, from which I have suffered three years. Was told it would return to its place if I got stouter and wore an abdominal belt. Have suffered severely, of late, particularly in connection with an attack of grippe. I desire to avoid an operation, if possible, as I have a weak heart and barely pulled through another kind of operation. Is there danger that floating kidney may lead to something serious like Bright's disease? Could the condition be due to strain or injury. Would exercise be beneficial? And what would happen if it got twisted?

Not so much is heard about this condition, as was heard a few years ago, when it was a novelty.

The kidney is embedded in a thick layer of fat which is a very yielding tissue and varies in quantity from time to time.

If this envelope becomes thin and weak, or is subjected to strains, the kidney may become loose and mobile and the envelope stretched, so that it will wander more and more from its proper site.

It may move very little, or it may move as far down as the pelvis, but almost invariably remains extra-abdominal, away from the abdominal organs. This is called movable kidney, in distinction from floating kidney, which is within the abdominal cavity at birth and swings upon its pedicle of peritoneum like a polyp upon its stalk.

The latter is a rare condition and need not receive further consideration at this time.

Movable kidney is much more common in women than in men, more often on the right side than on the left.

As it is produced and accentuated by strains and injuries, it often follows the severe efforts of childbirth, prolonged constipation, sudden and violent muscular effort, or injuries in the region of the loins.

It may be free from symptoms, many people being unaware that they have it until their attention is called to it in the course of a physical examination; or it may produce discomfort or pain severe in character or dull, aching and dragging and intensified by exertion.

If the kidney is very loose and movable, it may possibly be twisted on its axis, which would be a serious matter for its pedicle containing the ureter, renal artery and renal vein, would be greatly compressed, great pain or colic would ensure, its blood circulation would be interrupted, the urine could not pass down to the bladder and the result might be a fatal one.

Fortunately this accident is not of common occurrence. In addition to pain, this condition is often associated with constipation, indigestion, dizziness, palpitation and more or less intense nervousness.

It is not a particularly difficult condition to determine, especially if one is accustomed to the interrogation of the organs of the body.

In the majority of cases the symptoms may be relieved by a well-fitting abdominal belt; but if this does not give relief, an operation may be required.

It used to be the fashion to operate upon every case that came along, but since it was shown by Treves, the distinguished English surgeon who has done more than anybody else to inform us in regard to displacements of the kidney, that operation was seldom necessary or desirable, the craze for operating has subsided.

Operations are sometimes very desirable, but one should know when, as well as how, to do them.

C

QUESTIONS AND ANSWERS

Mrs. S. M.—1—Is there danger that a floating kidney will develop into anything serious? Was told by my doctor that if I gained weight and wore an abdominal supporter, the kidney would return to its place.

2—Would playing ball cause the kidney to be misplaced?

Answer—1—You are evidently under good advice. Continue to wear your belt and do as your doctor tells you, and you will probably get good results.

2—The kidney might be detached by violent exercise while playing ball. I can see how that could be possible.

In Paddock and Pasture.

This is a good time to rediscover the value of farm manure. Manure reinforced with acid phosphate is the most effective fertilizer known. More of it is needed.

The fertilizer shortage is real—not imaginary. Even at advanced prices, its use is warranted. Get the fertilizer if you can. If it is not to be had, keep up the fertility of the land by raising more stock and feeding more crops to animals.

An acre of alfalfa furnishes twice as much protein as a ton of bran, four times as much as a ton of cornmeal, and nine times as much as an acre of timothy, and it can be grown successfully.

In twenty-four hours the sweat-glands of the horse eliminate waste material equal to that passed through the lungs. Never allow the sweat-glands to become clogged with dirt and sweat particles for lack of grooming.

Tankage, which is composed of the scraps and refuse from packing houses, has received a great deal of attention from hog feeders the last few years. Its composition makes a good source of protein for use with corn in feeding shotes.

Cows may have a pedigree a foot long and not have a sixteenth part of an inch in cream on their milk. It pays to find out about that before putting good, hard-earned money into a pure-bred cow. What we want is cream, not simply a big name. Cream pays the bills.

Often when a cow freshens the udder is milked dry, stimulating the flow of milk. Soon the udder gets sore, and milk fever may result. To prevent this trouble, take only a few quarts of milk the first time, and gradually increase the amount. In a few days it will be safe to milk her dry.

Rape seeded at the last cultivation of corn will furnish abundant nitrogenous feed for hogs when corn is "hogged" down. By suspending a tin can with a small hole in it, on each side of the cultivator, rape seed may be distributed in the corn-field without extra labor. From one to two pounds of seed to the acre is the usual rate.

Thousands of horses will suffer with tender or scalded shoulders this summer, and galls will develop later. To prevent the galls, get a can of talcum powder and dust the shoulders well before putting on the collars. Your druggist will sell you a pound for about fifty cents, which is very cheap. This will save many times its cost later.

Devices for mixing milk with butter to make the latter "go further" should be regarded with caution. Such a product soon becomes sour in warm weather and wastes the butter it contains.

To make a shabby-looking wicker chair look new again, dust well, and scrub well with soapy water. When the chair is quite dry again, apply stain with a fine brush.

Poultry

Sweep down the cobwebs and clean up the house generally, for July is a hot month, and heat and filth make a strong combination favorable to disease and vermin. The work should be done thoroughly, and the premises sprayed with a good disinfectant.

If summer hatching is not done, the male birds should be removed from the flock and placed in separate quarters until after moulting. Males that are not to be kept for next season had best be marketed now to save the feed and to prevent fertile eggs, for infertile eggs are better keepers during hot weather.

As soon as the cockerels start to crow they should be separated from the pullets and fed all they will eat up clean. Those that are not to be kept over for breeding should be sold to make room for the others. All surplus stock should be gotten rid of, for there is no profit in feeding birds that are not needed.

July is an excellent month for the sale of roasting fowls and spring chickens. It is the best season to sell spring chickens.

The drinking vessels should be put in the coolest possible place, and the houses should be well ventilated at night.

There is still a good profit in the sale of dressed ducklings.

When all things are equal, summer hatches can be grown at less cost of money, labor and worry than those brought out during the winter and early spring. If chicks are provided with a cool range they will grow with surprising rapidity.

The greatest cost in growing chicks is for the first two pounds weight; after that each additional pound will average about half the cost of the first. This makes it more profitable to grow the youngsters up to roaster size than to sell them as broilers—at least it is so in very many sections where roasters are preferred.

A soft roaster should not weigh more than four pounds when dressed, and should be finely developed in four to six months. These are usually hatched in early spring and sold during the summer. Roasting fowls hatched in summer are classified as "large roasters" and must weigh from four to six pounds.

Two objections have been raised against summer hatches: First, there is too much danger from the depredations of lice; second, the chicks are weakened and die from the effects of the hot sun. These objections apply when no care is given the youngsters, and would apply equally well in early spring when the days and nights are likely to become suddenly cold.

The secret of raising summer chicks is to keep them comfortable and contented, and to see that they do not lack anything that is for their good. Over-crowding must be avoided, and the houses well ventilated so the chicks keep cool at night. Fresh air is a great tonic; along with range and shade, green food and sound grain, it does wonders.

"Much of our time is spent in warring over our own influence and turning others' belief in us into a widely concluding unbelief, which they call knowledge of the world, while it is really disappointment in you or me."—George Eliot.

Horse Sense

Many people who use three-horse teams seldom give a thought to the strain on the middle horse. His position is the hardest in pulling, backing and turning, especially if he is a free worker, for many three-horse teams are improperly reined, so that poor control is exercised over the willing worker, and the drones are not made to work into their collars or against their breechings and do their share.

Another great strain on the middle horse, especially in summer, is the heat thrown off by the horses on either side of him. This is severe where heavy hauling is being done by free-sweating horses. Much of this injustice to the middle horse can be overcome. Teams should be so handled by their drivers that "turn and turn about" is the order of the day's work, and the middle horse to-day is the outside horse to-morrow. In this way each horse will have his turn, and the general efficiency of the team will be greatly increased, for too many horses get so used to working on one side of the pole that they are almost useless on the other.

THE BATTLE OF THE "MIDDIES"

MIDSHIPMEN ARE PLAYING A GALLANT PART IN WAR.

Big Share in the Operations That Led to the Blocking of the Channels at Zeebrugge and Ostend.

Middies (or "Scottles," as the Navy alternately calls them) were not asked to volunteer for Zeebrugge—and the middies didn't like it, says a British naval officer. But a good many bore a hand in this important venture because they had the good fortune to be serving in coastal motor-boats, or "scooters."

"Scooters" are little more than a shell filled with high-powered engines. They slip through the water at tremendous speed, standing almost bolt upright on their sterns amidst a moving cloud of spray. Where nothing else can go the "scooter" slides daringly in, and there's no possible place where their young officers—one of whom is frequently a middy—will not take them.

Its Future Admirals.

Both at Ostend and Zeebrugge they did splendid work. At the former place one of them put down the Brussels, Captain Fryatt's old ship, which the Huns were using as a training school. Zeebrugge, in fact, was the "scooters'" first great opportunity, and they pulled it to the limit. To their credit, it should be remembered that middies are, so far as years go, only lads who are doing men's work at an age which finds most other boys still at school—and doing it remarkably well. Over thirty of them have already won special decorations for bravery. These awards were made for such diverse reasons as "whilst in charge of steamboats behaving with exemplary courage, skill, and coolness under heavy fire," for "showing great ability and resource in important duties whilst assisting the naval observation officer," for "valuable services in aircraft," and for "services in the destruction of an enemy submarine." This catalogue of honors shows that the Navy believes in giving its future admirals the earliest possible training in the art of real war, and teaches them the job all round

Lion-Hearted Boys.

During the Gallipoli operations several middies were mentioned in despatches. Here it was that Midshipman Drewry won the V.C. for gallantry in the famous landing from the River Clyde. An example of what these boys in years, but men in heart and training, which counts for much, can do, is furnished by the achievement of Midshipman H. R. Anderson. He was in charge of a launch reconnoitring towards Jabani (Cameroons). The Huns were firing at him from both banks of the river, when his Maxim jammed. "Mr. Anderson not only handled his boat well," says the official report, "but personally cleared his gun under a continuously heavy fire, and then swept both banks with it, the enemy suffering heavily." Midshipman H. Dixon, whilst in command of the Queen Elizabeth's picket boat, saved several officers and men from the irresistible under heavy fire. Equally courageous was the action of Midshipman H. W. D'Arcy-Evans, who, during the fight between H.M.S. Alcantara and the German raider Greif, swam about in the water helping men who were in difficulties to keep afloat.

The Right Stuff.

And who will have forgotten the heroism of Midshipman Donald Gyles in the great fight at night in the Straits of Dover between the first and German destroyers, just over a year ago?

Although wounded in the eye, Gyles, when nearly all others went down, took charge, and gave the foe a very bad beating.

Such deeds as these are clear proof of the fine stuff our midshipmen are made of.

A NIGHT TORPEDO ATTACK

DESCRIBED BY A BRITISH NAVAL OFFICER.

How One Destroyer Made a Dash That Brought About Painful Results For the Germans.

Slowly, silently, the long, low shape of the torpedo-boat-destroyer stole round the breakwater, not a single light showing, her length camouflaged by her sable paint.

On her deck men crouched at gun and torpedo-tube, ready and waiting, hands and faces blackened with soot so that no gleam of white in the darkness should betray them and their desperate enterprise.

Down below, in the dimly-lit stokeholds, stokers fed the ever-hungry fires with the greatest of care lest all-revealing sparks should stream from a funnel.

And silence—a deep, palpable silence, hung over all.

Then, from the fore-bridge, a sibilant whisper cuts into the night.

"Stand by both tubes!" commands the young officer on the bridge, who, peering ahead, hopes, almost against hope, that the enemy will not discover him at this eleventh hour, and frustrate utterly his well-laid plans.

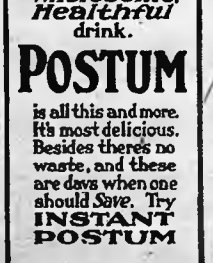
"Into the Jaws of Death."

He has brought his craft, at immense risk, through the enemy's patrols and minefields, and now, at long last, he has achieved a point almost within striking distance of the great Hun Fleet which has believed itself secure behind its elaborate defences. "Half-speed on both engines!" he orders now, and the low hum of the turbines assumes even a more minor note as his order is obeyed.

Then, suddenly, the blackness ahead assumes a deeper tinge, another and another—the black shapes of battleships dimly silhouetted against the black sky. The boat is in the very jaws of hell.

And then comes disaster. A belated picket-boat, containing a captain who has dined with a brother commander, crosses the unseen destroyer's bows. There is a crash and yell that is heard all over the harbor, and the picket-boat that gave the alarm sinks in two pieces as the destroyer picks up her heels and dashes onwards—determined to make the best of things, even if she dies in the attempt.

"Foremost tube—Fire!" No whisper now, but a deep-voiced call, full of urgency. "After tube—fire!"



Two sharp cracks as the powder-impulses drive the torpedoes from their seating, two gleaming, silvery shapes leaping the short distance from the destroyer's deck to the water, a churning of foam, and then a parallel pair of tracks of broken water showing where the unseen messengers of death are speeding towards their targets.

"Death Cometh Soon or Late."

Instantly a glaring arm of light stabs into the darkness, hovers for a moment, and then sweeps round till it rests full on the form of the destroyer.

And now the guns commence to bellow, and the myriad shells to tear the ocean to shreds all around the fleeing boat. And, almost in the pandemonium of their first discharge, comes a long, shuddering, thunderous explosion, and two German cruisers, great holes rent in them, just where their hulls kiss the water, easily reel over.

And the German guns take toll, until, with a sudden blast of death, a gigantic eleven-inch shell finds the exact centre of the boat, and under its monstrous tearing force she breaks clean in halves and sinks into the loving embrace of her mother and mistress—the age-old ocean.

© McCall

The collarless waist is very smart and attractive, and the draped skirt is proving to be quite popular. McCall Pattern No. 8423, Ladies' Waist. In 6 sizes, 34 to 44 bust. No. 8403, Ladies' two-Piece Draped Skirt. In 7 sizes, 22 to 34 waist. Price, 20 cents each.

These patterns may be obtained from your local dealer, or from the McCall Co., 70 Bond St., Toronto, Dept. W.

Vancouver Women Pledged.

At a mass meeting of nearly two thousand women the pledge was made to conform exactly to the requirements of the Canada Food Board and to apply the restaurant regulations in their own homes. Futhermore it was "especially resolved to discountenance any social functions which promote the consumption of wheat products, pork, sugar and fats."

"Worry is interest paid on trouble before it falls due."—Harry A. Thompson.

Several carloads of tractors have been sent into the Grande Prairie district this year.

If poultry houses are cleaned thoroughly and kept clean there will be little trouble from mites.

The stability of agriculture in any country depends a good deal on the live-stock industry. Selling grain and hay may be most profitable for a time, but marketing these crops through high-quality live stock not only brings in a remunerative revenue, but aids in maintaining soil fertility.

PAIN? NOT A BIT! LIFT YOUR CORNS OR CALLUSES OFF

No humbug! Apply a few drops then just lift them away with fingers.

This new drug is an other compound discovered by a Cincinnati chemist. It is called freezone, and can now be obtained in tiny bottles as here shown at very little cost from any drug store. Just ask for freezone. Apply a drop or two directly upon a tender corn or callus and instantly the soreness disappears. Shortly you will find the corn or callus so loose that you can lift it off, root and all, with the fingers.

Not a twinge of pain, soreness or irritation; not even the slightest smarting, either when applying freezone or afterwards.

This drug doesn't eat up the corn or callus, but shrivels them so they loosen and come right out. It is no humbug! It works like a charm. For a few cents you can get rid of every hard corn, soft corn or corn between the toes, as well as painful calluses on bottom of your feet. It never disappoints and never burns, bites or inflames. If your druggist hasn't any freezone yet, tell him to get a small bottle for you from his wholesale drug house.

NO FOUNDATION FOR TRAVEL RESTRICTION RUMORS

The volume of tourist traffic from the United States this year has been considerably lessened by misleading press despatches appearing in American and Canadian papers regarding the Canadian Registration Act. It was unwarrantably stated that visitors to Canada from the United States would be compelled to register at a post office before they could secure accommodation at a hotel, that passports were absolutely necessary, and more recently the absurd rumour was widely circulated that women from the United States would not be allowed to return home. This latter ridiculous report is specifically denied by Mr. W. D. Scott, Superintendent of Immigration, who officially designated it as "absolutely without any foundation in fact." Senator Gideon Robertson, a member of the Dominion Cabinet, and Chairman of the Registration Board, is equally positive in his denials of the other mischievous reports. The actual facts are, according to the official statement of the Registration Board, that the Registration Act applies only to people permanently resident in Canada and does not affect even remotely anyone living in the United States; that no registration at a post office is necessary, and that no passports are required. The possession of papers showing the holders to be American citizens is all that is necessary to cross into Canada. At the International boundary line the holders of these papers are given an identification card by the Canadian Immigration Officials, which enables the visitors to travel freely where they wish without any interference on the part of Canadian officials.

Senator Robertson, Chairman of the Registration Board, has announced that "neither in the instructions issued, nor the regulations for Canadian registration, is there anything that would indicate desire or intention to impose restrictions upon Americans or aliens, entering, travelling in, or leaving Canada."

The experience of these American visitors who have already come to Canada verifies Senator Robertson's statement, but unfortunately there are many across the border who have not read this announcement, and may still be influenced by the false reports to stay at home, spoil their vacation, and cause a mutual loss to themselves and to Canada.

His Generosity.

A "Tommy," lying in hospital, had beside him a watch of curious and foreign design. The attending doctor was interested.

"Where did your watch come from?" he asked.

"A German give it me," he answered.

A little piqued, the doctor inquired how the foe had come to convey his token of esteem and affection.

"E 'ad to," was the laconic reply.

Minard's Liniment Cures Garget in Cows

During hot weather never permit the drinking pans to go dry. Lack of water will greatly reduce the egg yield and stunt the development of young stock.

DRY YOUR VEGETABLES.

Various Methods Suggested by Canada Food Board.

Try drying your vegetables this year. It's a profitable business any way you look at it. The advantages over canning are the economy in space, the lower cost of jars and diminished risk of injury from frost or heat. There is the old-fashioned method of "sun drying" which is inexpensive, simple and satisfactory where there is enough sun. The most modern and the quickest method is that of using an electric fan, either with or without artificial heat. Vegetables dried by this method are not so likely to discolor. The third method, known as "artificial heat," consists of utilizing the heat of the stove or of the oven. For the majority of town and farm homes this method is the most practicable.

Germany has made a fine art of drying. Indeed, at the present time, the total capacity of the potato-drying factories in the enemy country is 37,000,000 hundredweight. There are about 700 potato drying factories, 250 drying cylinders, 400 open drying plants, 150 corn-drying plants and 250 vegetable-drying factories.

The war gardeners of Canada might give the Hun a little of his own medicine by pitting their vegetable forces against his.

Allies Lack Meat.

The Allies' livestock has been decreased to such an extent as to mean 27.7% of home resources in meat. The percentages for the different countries range as follows: England, 12.5; Belgium, 82.0; France, 21.4; Italy, 17.8; Germany, 36.3; European Neutral Countries, 0.9.

GIRLS! WHITEN SKIN WITH LEMON JUICE

Make a beauty lotion for a few cents to remove tan, freckles, sallowness.

Your grocer has the lemons and any drug store or toilet counter will supply you with three ounces of orchard white for a few cents. Squeeze the juice of two fresh lemons into a bottle, then put in the orchard white and shake well. This makes a quarter pint of the very best lemon skin whitener and complexion beautifier known. Massage this fragrant, creamy lotion daily into the face, neck, arms and hands and just see how freckles, tan, sallowness, redness and roughness disappear and how smooth, soft and clear the skin becomes. Yes! it is harmless, and the beautiful results will surprise you.

World's Wheat Reserves Exhausted.

"Even if the greatest expectations of the 1918 harvest are realized, the fact remains that the world's reserves of wheat are exhausted and it will be absolutely necessary to continue conservation and substitution until the 1919 crop situation is known. Canada is daily increasing the manufacture of substitutes for wheat and consumers are urgently requested to make use of these substitutes to the limit of their ability."—Henry B. Thompson, Chairman of the Canada Food Board.

This is to certify that fourteen years ago I got the cords of my left wrist nearly severed, and was for about nine months that I had no use of my hand, and tried other Liniments, also doctors, and was receiving no benefit. By a persuasion from a friend I got MINARD'S LINIMENT and used one bottle which completely cured me, and have been using MINARD'S LINIMENT in my family ever since and find it the same as when I first used it, and would never be without it.

ISAAC E. MANN,
Metapedia, P.Q.

Aug. 31, 1908.

The Woman of France.

In France recently figures showed that there are now 475,000 women at work in munition factories at $2.00 per day plus 50 cents from the Government, with 25c. additional for each child, if the head of the house is in the army. Thrift is so strong a principle with French women that French banks are carrying larger deposits than ever before, despite the fact that $18,000,000,000 towards the finances of the war came from popular subscriptions.

Minard's Liniment Cures Distemper.

Soldiers-of-the-Soil At Work.

Nearly twelve thousand Soldiers of the Soil boys are hard at work on the farm already, helping in the campaign for greater wartime production. In addition to those who arrange for their own employment independent of the Soldiers of the Soil organization. The Soldiers of the Soil are divided as follows: British Columbia, 669; Alberta, 616; Saskatchewan, 1,405; Manitoba, 1,006; Ontario, 4,521; Quebec, 670; New Brunswick, 677; Nova Scotia, 1,788; Prince Edward Island, 500. Reports indicate that the boys are thoroughly enjoying farm work.

Minard's Liniment Cures Diphtheria.

MAGIC BAKING POWDER
CONTAINS NO ALUM
MADE IN CANADA

Licenses Now Operative.

The Canada Food Board licenses are now operative in the following classes of dealers in foodstuffs in Canada: Grocers (wholesale and retail), bakers, (manufacturing and retail), manufacturers of breakfast foods and cereals, retail butchers, fish dealers (wholesale and retail), flour and feed dealers (wholesale and retail), produce dealers (wholesale and retail), canners, packers, manufacturing confectioners, proprietors of public eating places.

Minard's Liniment Cures Colds, Etc.

Canadians eat three pounds of cheese a year on an average normally. The English eat eleven, French, Belgians and Germans thirty pounds, or ten times as much as Canadians. Cheese is a good meat substitute. More cheese and less meat might be better for us.

MONEY ORDERS.

Send a Dominion Express Money Order. They are payable everywhere.

Bread is the staff of life, but very few Canadians need a staff.

The Paisley Advocate

PAISLEY, JULY 24th, 1918

No Paper Next Week

To give the staff a chance to take a holiday, and at the same time catch up with the job work on hand, The Advocate will take a week off. The office will be open every day, but our next issue will not appear until Aug. 7th. Keep this in mind.

LOCAL AND DISTRICT NEWS

—Tea served on Methodist church lawn on Friday night, also good programme.

Goes to Parkhill

Mr. F. C. Ryan has been notified that he is to report for duty as manager of the Standard Bank branch at Parkhill, and left with his family for that town on Wednesday.

Red Cross Shipment from Paisley W. P. L., July 18th

152 prs. socks, 38 flannel shirts, 3 suits pyjamas, 24 trench towels, 20 Turkish towels, 15 pillow covers, 1 sheet. Five prs. socks and five housewives to Paisley soldiers.

100 Per Cent. Entrance Results

Paisley public school, as well as several of the rural sections in surrounding townships, were successful in passing all their entrance candidates this year. Of the ten in Paisley four took honors. Miss Ina Galbraith was in charge of this department during the past year, and is being congratulated upon the success of her work.

The Keystone Trophy in Paisley

Thos. Muir, A. Jack, J. H. Glover and I. Shoemaker (sk) comprised a team of bowlers who made a daylight raid upon Chesley green on Friday last and for the first time brought the Keystone trophy to Paisley. The handsome piece of silverware is on view in Shoemaker's jewellery window. A Port Elgin rink came after the trophy on Tuesday evening, but the defenders won the game by a good margin.

Would Assist in Farm Work

According to the returns of registration made on June 22nd, there are 1304 men in South Bruce not actually engaged in farming who are willing to assist in farm work, and have had more or less experience in same: Registered at Chesley 272, Walkerton 255, Lucknow 155, Paisley 111, in Elderslie 91, Bruce 105, Carrick 84, Culross 11, Kinloss 31, Greenock 34, Huron 68. The names of these men are in the hands of Mr. N. C. MacKay, Ag. representative at Walkerton.

Boys Will Get Medals

A public meeting will be held in the Town Hall, Paisley, this (Wednesday) evening, for the presentation of S.O.S. boys' medals to lads who have been working on farms in this district for three months this summer. Addresses will be given by Mr. Wm. McDonald, M.P.P., (who is to present the medals), Mr. T. W. Brock, of the Organization of Resources Committee, Mr. D. R. Cowan, Supt. of S.O.S. work, and others. Meeting at 8.30 sharp. Collection taken to defray expenses. These medals are issued by the Dominion Government through the Canada Food Board.

Johnson—Brown

A quiet but pretty wedding was solemnized at the home of Mr. and Mrs. T. W. Brown, Dundas St., when their youngest daughter, Grace Alice, became the bride of George W. Johnson, son of Mrs. Isaac Johnson, all of Paisley. To the strains of Mendelssohn's wedding march played by Miss Mary Buchan, the bride entered the room leaning on the arm of her brother, Mr. A. J. Brown, and took her place beside the groom under an arch decorated with wedding bells and Union Jacks. The bride's dress was of white voile with touches of old rose, and she wore the usual bridal veil caught with orange blossoms, and also the groom's gift, a gold brooch. She carried a bouquet of roses and maiden hair ferns. The ceremony was performed by Rev. L. W. Biehl, of the Church of the Ascension, in the presence of immediate relatives and friends of the contracting parties. After the ceremony and congratulations were over the young couple led the way to the dining room, where a sumptuous repast was served. The rest of the evening was spent in music and singing, after which the young couple drove to the groom's farm. Their many friends wish them a happy and successful voyage through life. The presents were numerous and useful, showing the esteem in which the young couple are held.

Letter "B" on Oat Straw

We have been shown that natural curiosity, the letter "B" which is to be found on the leaf blade of oat straw growing this year. The peculiar marking is deciphered across the under side of the blade, just at the point where the blade bends over, and is probably due to the continuous motion of the straw in the wind. To many people this phenomena is something to worry over, particularly if they happen to be superstitious. The marking is probably present every year. It is said to have been first noticed in Australia in 1917, and there it was said that the "B" stood for "blood," meaning that the war would continue on for at least the balance of the year. According to another story the leaves on oat stalks were marked by the letter "C" in 1902, meaning that the war in South Africa would cease that year. And of course it did. For several years previous, during the course of the South African war, the letter "B" was on the leaves. It is very peculiar marking and would at be noticed at first glance, but it there on the samples brought in and they were garnered at random. The Advocate entertains no superstitious idea as to the "B" on oats, considering it a harmless, lifeless thing compared with the "U" (light) and "B" (ug) on potatoes, the "W" (eevil) on peas, the "G" (rub) on cabbages, or numerous other pests and conditions that are a menace to other crops.

ADVERTISING RATES

Subscription Price—$1.50 per annum in advance. To United States subscribers $2.00 per year in advance.

Advertising Rates—Local and other casual advertisements 10c per nonpariel line for first insertion, 3c per line for each subsequent insertion.

Chesley's Big Chautauqua Week

Chesley's big six day Win the War Chautauqua, Aug. 8th to 14th, promises to bring many motor parties from Paisley. It will be a veritable travelling university course and concert combined. The huge tent in which the lectures and concerts take place, will hold two thousand people. See programme about the big allied pageant. Preparations have been made in Chesley for the proper accommodation of the crowds and the parking of the cars. Come to Chesley and bring the family, Aug. 8th to 14th. Change of entertainers every night.

—Pte. Norman McLeod, returned soldier, who has been under treatment at a Toronto military hospital since his return, is up on fourteen days' furlough. The doctors found it necessary to remove as much of the stump of his right arm, which was shot away, that it will not be possible to replace the limb with an artificial one. He has also had a piece of shrapnel the size of a one-cent coin removed from his lung, and feels very much the better of that. When he becomes sufficiently recovered from his wounds Norman intends to take up a course in wireless telegraphy, for which he is not handicapped by the loss of his arm. He speaks very highly of the treatment soldiers are being given at the hospital.

Successful Students

Form II Normal Entrance

The following candidates from Bruce County have passed the lower school examinations for entrance into the Normal Schools and Faculty of Education. In addition they require to pass the middle school examination before they can be admitted to the Normal Schools, and the upper school examination before they can be admitted to the Faculty of Education. Names in black type are from Paisley school.

M. M. Armstrong, M. A. Bloin, H. C. F. Bloin, Inez B. Bell, M. E. Barber, F. M. Brockelbank, A. W. Cameron, B. V. Clarkson, L. M. Delong, E. D. Durrant, Vera Ridt, M. J. Finlayson, C. C. E. Feick, S. —On Wednesday afternoon of last week, says the Arthur Enterprise, one of a party of returned soldiers who were soliciting newspaper subscriptions, entered the home of Mrs. Fred Langdon at Kenilworth and helped himself to her diamond ring and gold pendant which she had left on her dresser in her bedroom. Mr. Langdon, who was at work in a field near the house saw the man and told him that Mrs. Langdon was not at home and thought no more about it until on his wife's return she discovered that the theft had been made. She also found that a box in which trinkets had been kept was dumped out on the dresser and some money which it contained was taken. Constable Green, of Drayton, was notified and the man who committed the theft was arrested in Palmerston on the following morning as an hotel there. He was wearing Mrs. Langdon's ring at the time. He was taken to Drayton where he appeared before Police Magistrate Woodman and pleaded guilty to the charge of theft. The magistrate sent him to Guelph for sentence. On Monday he appeared before Judge Hayes. He informed the judge that he had served in France and was wounded and gassed at the Somme. He blamed his physical and nervous condition for his being yielded to the crime. He was allowed to go on suspended sentence.

CASTORIA

For Infants and Children

In Use For Over 30 Years

Always bears the Signature of Chas. H. Fletcher

—A disease known as the black leg is working havoc among the cattle herds of Cargill district. A peculiar germ on the grass this season is said to be the direct cause of it. One drover in that vicinity had no less than 28 fine grass cattle succumb to the disease within the past few days, says a despatch to the daily press.

A Woman's Burdens

are lightened when she turns to the right medicine. If her existence is made gloomy by the chronic weaknesses, delicate derangements, and painful disorders that afflict womankind she will find relief and emancipation from her troubles in Dr. Pierce's Favorite Prescription. If she's overworked, nervous, or "run-down," she finds new life and strength. It's a powerful, invigorating tonic and nervine which was discovered and used by an eminent physician for many years, in his large medical practice among women. For young girls just entering womanhood; for women in middle life, the "Favorite Prescription" is the only medicine put up without alcohol, and can be had in tablet or wall as liquid form. It's not a secret prescription for its ingredients are printed on wrapper. Send 10c for trial package to Dr. V. M. Pierce, Invalids' Hotel, Surgical Institute, Buffalo, N. Y., or branch in Bridgeburg, Ont.

Hamilton, Ont. — "When passing through middle life, as in most cases of this kind, I began to fall in health. I had severe pains in my head, dizzy spells, my back ached and I had pains in my side. I became very weak and nervous. I took medicine without getting relief until I took Dr. Pierce's Favorite Prescription and this medicine built me up in health and strength and I owe through this critical period in a good healthy state. Women will find Dr. Pierce's Favorite Prescription very helpful during this trying time."—Mrs. Sarah Capes, 100 Robert Ave.

PUBLIC NOTICE

IS HEREBY GIVEN that any person or persons who may injure, destroy, damage, break or destroy any village property will be prosecuted and liable to the penalties in such cases made and provided by statute. By order of council.

—The season has arrived when babies begin to drink fly poison and roll in sticky fly paper, in intervals of falling into carelessly placed tubs of water. Families with babies have no business using fly poison. Little legs are active, little hands reach for everything and little mouths think the world was made to taste. Fly traps and sticky paper are safe, and they will do as much as poison in eradicating flies. The baby who knocks down a fly trap does no damage, if he experiments with sticky paper he is only fit for the bathtub. But the baby who drinks fly poison seldom lives to profit by the experience.

—Major A. McLean Moffat and Paymaster Farquhar Shaw, who crossed overseas with the 160th Batt., have arrived back in Canada.

Letters from the Soldiers

The soldier who wrote the following letter in acknowledgement of a parcel is a son of Mr and Mrs Geo. Brown, 8th Bruce:

France, June 18th, 1918

Dear Friend—I received the box and letter dated April 22nd, and thanks very much for the same. The box was a daisy and the contents were in splendid condition. The socks arrived at a very appropriate time and I was glad to get them. We need more socks out here in summer than in winter, as they seem to wear out so much easier on account of the heat and increased marching. The cookies were very good and were certainly a dainty relish when compared to the coarse army food. Glad to hear you had nice weather over there for seeding. The farmers here had it splendid, and like you had daylight saving since early last spring. The daylight saving works fine in the army, but I don't know how the civilians take it. This morning we were up at 3.30 or 2.30 by the old time, as we had to go on a long march. It was breaking day then so you can imagine how early dawn appears in this country. There is about six hours darkness during the night, and that is often all moonlight, a thing very much dreaded owing to bombing excursions from Germany. At that, though, I think the German people will dread these moonlight nights even worse than we do, and I have seen a few German bombing planes brought down, while ours seldom fail to return home. Everything is going well with us lately. We have plenty of sport and recreation when off parade while out of the line, and Fritz has not bothered us directly a great deal this summer. He has caused a lot of hard fighting nevertheless, and seems to be a great distance from his goal yet, but almost as near as he will ever get. I have a big hunch that the time is soon coming when he is going to get the hardest slam he has ever got, and I think by that time the German people will have awakened to the fact that they cannot depend on their army to save their country, and will call for peace at any cost. The Austrians evidently went up against a strong defence when they met the Italians. I believe that front is secure against the enemy, and he will have to content himself with trying to knock this one. Well, I think I will bring this wandering epistle to a conclusion. Thanking you again for the parcel.

Yours very truly,
Jim Brown.

THE HABEAS CORPUS FINDING

The legal lights of Canada who were prepared to drive a coach-and-four through a technical opening in the Military Service Act and bring out from the training camp all those men who had been first exempted from duty and then called to serve, did not make a very popular move. We have yet to find a newspaper that expressed approval of the proceedings that threatened to check the movement of Canadian soldiers into France. Even the London Advertiser, the most outspoken opposition organ, does not utter any commendation, as the following from that paper shows:

The finding of the supreme court of Canada in the habeas corpus appeal on behalf of Pte. Grey may or may not mean that the case has come to a close. The decision may be carried to the Privy Council of Great Britain, and this possibility is likely to necessitate a special session of the Canadian Parliament at an early date. But it will be gratifying to the country as a whole to realize that the large number of men called up after having been exempted just prior to the election contest will remain in the service. Practically, although not legally, the Alberta and Quebec court decisions have been reversed by the supreme court decision, and before a hearing could be secured in England the men involved would be overseas, in the trenches, perhaps in their graves. The case will not be permitted to hold up the sending forward of reinforcements.

While many people are skeptical about the probable action of the men now enrolled in the army in the event that they had been given their freedom because the law had shown the Government illegally to have conscripted them, The Advertiser has felt that a large majority of the men now in training would have stuck with the ship. The only thing inclined to have driven them out was the constantly repeated intimation by certain newspapers to them that they were in one sense in the "slacker" class and must be held by force of law because no force of patriotism would hold them. But they are soldiers to-day going forward to the war, and in the hearts of many the conviction of positive service to their country, their willingness to transfer their bodies from the fields of Canada, where they were first told they were needed, to the fields of France, where they have since been told they were required, has already been made manifest in the spirit they have shown in their training and will be made further apparent when the supreme test has come.

Whatever the merits of the case, however much the Government may have resorted to subterfuge and subverted the rights of the people, it must be said that to have disorganized Canada's new army would have been a fatal development. Mistakenly or not the world would have regarded such a development as a tragic anti-climax to the glorious drama of Canada's war service. We are not a nation of lickspittles who must close our eyes to the blunders and crooked ways of political parties. We shall never be content to suffer indignities to the inherent rights we maintain. But at the same time we shall regard the issues of the day in the broad spirit of the country first, last and always. This country has been invaded by the spirit of the Huns who are being fought back in France by a mighty galaxy of free nations. Only the ocean, millions of men, thousands of ships, keep the Germans from setting foot upon our shores. What part Canada can best play has been debated and become the subject of political gaming. The judges of that part are the men who sit at Ottawa. When the courts uphold these men, it is the duty of every Canadian to recognize that decision as the voice of his country. We shall not permit wrong to be perpetuated in the name of right, but in the vast cause of right we must merge our effort and make it a strong effort even though we smart under the methods employed. The cause of the Allied nations is the first cause.

SAVING THE FARMERS FROM BECOMING PROFITEERS

(Stratford Herald

Nothing else that has happened in the course of the war has demonstrated more clearly the drawing of the United States out of itself and into the world of nations than President Wilson's veto of $2.40 wheat. Probably the most weighty consideration inducing the president to impose his veto was not a desire to save American farmers from the perils of profiteering, but a wholesome wish to save the peoples of those countries that are fighting with the United States for the salvation of the world from German militarism, from the tremendous burden which the increased price would have imposed.

There was no sound economic reason why the price of wheat should have been advanced in the first place. The touching solicitude of the United States Senate for the welfare of the American farmer was explainable in the approach of the November senatorial elections. With "an election on" the plutocrats would make an alliance with the plebians. They have shown their "good intentions," and the President has saved the Allied world numberless millions that would have had to be paid had the added 20 cents per bushel for wheat gone through.

It is not to the point that other interests are piling up profits out of the war. The fact it is not to be denied. We have had evidence of it in Canada. Nor is the Dominion yet wholly free from depredations of the war profiteer. The United States, too, has only recently exposed war profiteering on a scale beyond the dreams of anything accomplished here. It does not follow, therefore, that the American farmer should be given opportunity to indulge in profiteering to the modest extent of 20 cents per bushel on his wheat. The answer to the argument that others are making undue profits out of the war, is that the government should not hesitate to take the excess profits by way of heavy taxation.

President Wilson's veto is not without interest to the Canadian farmer. Two dollar and forty cent wheat in the United States would have compelled an advance to $2.40 for every bushel of Canadian wheat sold to the Motherland. Britain would have had no way of escape. She must have our wheat, or her people and her soldiers must suffer, if not starve. How many Canadian farmers would have welcomed an added 20 cents a bushel for their wheat, paid in blood-stained money?

Farm labor costs greatly more than it did in pre-war days. All that enters into the business of farming has advanced in price. Even at that, would the Canadian farmer deny that he is making a fair profit out of the production of $2.20 wheat? The farmer is nevertheless deserving of the thanks of the people that he has accepted his position with as little complaint as has been heard. It is a stating of but one side of the case to say that the farmer is guaranteed a paying price for his wheat. It must not be forgotten that the price of his wheat is limited. He cannot sell a bushel of it above that price. No other interest or industry of similar magnitude has been asked to submit to the fixing of its prices.

BRUCE TP. COUNCIL

Underwood, June 29th, 1918

Bruce Tp. council met as per adjournment, members all present. Minutes of previous meeting read, adopted and signed.

Large number of communications and accounts were read and dealt with.

Clerk was instructed to notify D. Keyes to have his bridge contract completed by a certain date or committee would call for tenders and have bridge completed at Keyes expense.

Clerk was also instructed to bill telephone system for special meeting of council made necessary for telephone purposes.

The following accounts were ordered paid: J. W. Hyde, repairing bridge, 12-6, $8.50; drawing steel for bridge, $2.50—$11; H. McKinnon, repairing bridge, s.-l. 25-5, $2; A. & A. Brown, work on bill E-6, $8.50; Sawyer-Massey Co., grader boxings and nuts, $6.07; A. G. MacKay, express and cartage, 85c; Arch Brown, s.-l. refund, div. 28, 1917, $3; Ed Smith, s.-l. refund, div. 44, $7.50; Wm. Nelson, s. l. refund, div. 45, $18; J. A. McKinnon, s. l. refund, div. 43, $13.50; D. McKinnon, s. l. refund, div. 34, $9; Chas. McKinnon, rep. bridge and fill, s. l. 15-10, $30; Len Schell, culvert, con. 10, and railing, 1-10, $15.50; Thede & Brill, acct. $1.85; Geo. McFarlane, covering bridge, con. 2, $1.50; Dan McKay, clay on Inv. road, $26.95; Jas. McKenzie, inspecting, $8, rep. culvert and digging ditch, Inv., $10—$18; Alex Brown, fill, S. Alma St., Inv., $5.75, cleaning ditch, con. 4, $11.25—$17; W. J. Farrell, cedar, $3.62; N. A. McGillivray, on bridge, $5.90; H. McLennan, s. l. refund, div. 26, 1917, $10.50; Wm. Johnson, telephone 80c; Mrs. Baker, grant S. S. 9 Red Cross, $50; Miss Barrie U.S.S. 10 Red Cross, $50; Mrs. Cluley con. 14 w. Red Cross (Saugeen to supplement), $25; Jas. Johnson, reeve and special meeting, $7.90; P. Dolson, dep. reeve and special meeting, $5.20; Geo. Baker, com. and special meeting, $5.50; Jas. McKenzie, com. and special meeting, $5.50; M. McNeil, com. and special meeting, $3.40; J. Coleman, caretaking, $1.25; J. G. MacKay, clerk and treasurer, $25, special meeting, $5.10—$30.10.

Council then sat as a Court of Revision to complete the revision of the roll.

Council adjourned to meet on Saturday, July 27th, 1918.

J. G. MacKay, Clerk

MAKING OF ICE CREAM

Food Control Board Permits But 10 Per Cent. Fat.

A Recipe That Has Proven Successful —Stake Vines and Trim Leaves to Grow High-Colored Tomatoes.

(Contributed by Ontario Department of Agriculture, Toronto.)

A GREAT many inquiries have recently come to the Dairy Department of the Ontario Agricultural College regarding the new regulation from the Canada Food Board with reference to the manufacture of ice-cream, and also, as to methods of testing ice-cream for fat.

Order No. 34, section 8, issued by the Canada Food Board reads: "On and after May 1st, 1918, no person in Canada shall use in the manufacture of ice-cream more than 10 per centum of fats, whether of animal or of vegetable origin; or more than six pounds of cane sugar, to eight gallons of ice-cream."

As a result of recent investigations made in the Dairy Department of the O. A. College, by Messrs. McMillan, Purdit, and Miss Miller, of the Dairy Staff, we can recommend the following formula or recipe, for a batch or mix which will produce about eight gallons of plain ice-cream of good quality and which will come within the regulations as laid down by the Food Board:

44½ lbs. (4½ gallons) cream testing 13% fat.
1½ lbs. skim milk powder.
6 lbs. cane sugar—1½ lbs. sugar may be replaced with 2 lbs. corn syrup.
4 ounces vanilla extract.
6 ounces gelatin dissolved in 6 lbs. (½ gallon) skim milk.

The cost of the ingredients in this formula will range from 53 to 67 cents buying in small quantities. If bought wholesale, the cost would be less.

If whole milk and cream are used, mixing equal quantities of these will produce an ice-cream testing not over ten per cent. fat, assuming that the milk and cream are of average fat content—3.5 and 18 to 20% fat respectively.

Three Methods of Testing Ice-Cream for Fat.

It is necessary for the ice-cream maker to test his ice-cream occasionally, and the following methods will give satisfactory results if carefully carried out:

1.—The Glacial Acetic and Hydrochloric Acid Test.

A representative sample of the ice-cream is taken and melted and thoroughly mixed; a 9-gramme sample is weighed into an 18-gramme Babcock cream test bottle. A mixture is prepared using equal parts of glacial acetic acid and concentrated hydrochloric acid. Twenty cubic centimeters of this acid mixture is added to the 9-gramme sample of ice-cream in the test bottle, and is then all well shaken. The bottle is then placed in a water bath of 120 to 130 deg. F., and shaken at intervals until a brown color appears. It is then placed in the Babcock centrifuge and the test completed in the same way as for testing cream and the reading multiplied by two.

2.—The Sulphuric Acid Test.

To make the test with sulphuric acid, a 9-gramme sample is weighed into an 18-gramme test bottle. About 9 cubic centimeters of luke-warm water is then added to dilute the sample, in order to have about 18 cubic centimeters of mixture in the bottle. The sulphuric acid is then added slowly—a little at a time, at minute intervals, shaking well after each addition until a chocolate brown color appears in the bottle. No definite amount of acid can be stated, as the quantity will vary with different ice-creams. As soon as the chocolate brown color appears in the ice-cream a little cold water may be added to check the action of the acid. The bottle is then placed in the centrifuge and the test completed in the usual way. The reading is multiplied by two.

3.—Acetic and Sulphuric Acids.

Weigh a 9-gramme sample of ice-cream that has been thoroughly mixed. About 9 cubic centimeters of water is then added to dilute the sample. Add 6 cubic centimeters of acetic acid and then add carefully 6 to 8 cubic centimeters sulphuric acid. Centrifuge, and then add water the same as in other tests. If using an 18-gramme bottle multiply the reading by two, to obtain the per cent. fat in the ice-cream. A 9-gramme bottle which is graduated to give the percentage of fat directly needs no correction when reading.

—Prof. H. H. Dean, Ontario Agricultural College, Guelph.

To Grow Tomatoes Most Successfully.

If you are growing tomatoes to a single stem, be sure to remove all side shoots before they become of any size. All the extra food which is used in their growth is wasted and the breaking off of large shoots injures the plants. When August 15th comes it is well to nip off all growing ends so that the fruit will finish ripening, also open out the plant, if very thick, to allow the sunlight in.

When first fruits begin to ripen, apply nitrate of soda,—a teaspoonful in a watering can, full of water,—to the plants twice a week to make a liquid manure and use it instead. These are more especially valuable after the growth has been stopped.

Keep a dust mulch around the plants. If the weather is very dry, soak the ground around them thoroughly in the evening, then make a new mulch in the morning.

When the first fruits is staked tomatoes are beginning to color, remove one-half of each leaf. This will hasten the ripening. Sunlight is necessary for rapid ripening.

Leave only growth enough on your plants to carry what fruit will ripen before frost. There is no use in allowing more to set than will be of use to you and the fruits you leave will be larger. — A. H. MacLennan, Ontario Vegetable Specialist.

and possibly you will not detect this imitation until the tea-pot reveals it. Demand always the genuine "Salada" in the sealed aluminum packet, and see that you get it, if you want that unique flavour of fresh, clean leaves properly prepared and packed.

HOW TO KEEP BABY WELL IN SUMMER.

The Chinese show their progressive spirit by paying their physicians as long as they are in health and ceasing to pay them as soon as they become ill. This is not such a bad idea, after all, for prevention of disease is much more important than curing it.

The mother of the young child dreads the heated summertime, knowing that this is a trying period. A few simple rules persistently followed will do much to keep baby well.

Give plenty of cool, boiled, drinking water. This should be offered at least once every hour when baby is awake. Be regular with the morning bath. If the day is very warm, give a sponge bath also at bedtime. Do not dress too warmly. Avoid drafts, sudden changes of temperature and chills by having a light wrap or jacket which may be put on if the weather changes or it becomes otherwise necessary.

See that baby's bowels are in good condition. It is very important that the little one have at least one complete movement every day. If there is any sign of digestive disturbance, feed more lightly than usual and try to discover just what article of diet is to blame. Perhaps the milk is not modified right or the feed in the pastures is short and the cows are being fed on ensilage. This makes a gassy, indigestible milk. Possibly the food is too rich or not nourishing enough, or something is being given unsuited to the child's age.

If dysentery attacks the baby, withhold milk. Feed upon rice or barley water and whey. Give a dose of castor oil to clear away the offending material and summon a physician at once. There is little use calling him unless you follow his advice to the letter.

One mother whose child had an attack of diarrhea realized the danger of this disease and summoned a physician. He forbade the giving of any milk until his return twenty-four hours later. The baby began to show marked improvement when managed according to his directions. The next morning the mother felt so sorry for the little one because he could only have barley water that she ventured to give him half a bottle of milk. The child was not restless without it, but who was sure he must need it. The child took the milk with apparent satisfaction, however, and the mother was sure she had done the right thing.

Half an hour later the whole family was thrown into sudden consternation by the distressing sight of the child in a terrible convulsion. Fortunately the doctor lived near, and his prompt answer to the call saved the day. When the little one had been taken out of its bath of warm water and its stomach emptied of the mass of curds which had caused the trouble, the doctor turned accusingly to the mother and said:

"I am sorry, but you are to blame for this."

Do as the doctor tells you. You pay him to know. If you have not confidence that he does know, call some one else who merits your confidence.

Be sure that any food supplies are fresh and pure. Gruel used as a diluent should be made fresh every day and kept on ice. Milk should not be allowed to stand about in a doorway or a kitchen, but placed in cold storage at once. See that bottles and nipples are washed and scalded between usings. Throw away any food left over from a feeding. Do not store baby's milk next to fish or other foods which will contaminate it. Do not leave the cleaning of the milk utensils to any one else. See to it yourself. Turn the nipples wrong side out. If the holes in the nipples become so large that the milk flows too rapidly, either throw the nipple away or close up the opening with a red-hot needle and make a new one.

Avoid excitement for children, especially in warm weather, and see that their naps are regular and adequate. Do not wean baby during the heat of summer. Pasteurize the milk as an element of safety unless you are absolutely certain as to its purity and freshness. Know for a certainty where baby's milk comes from—whether the barn or stable is clean and the condition under which it is milked, bottled and delivered. If you cannot make this investigation personally, an inquiry to the proper authorities should bring you the necessary information. The milk of Jersey cows is likely to be overrich and to need more dilution than usual.

Use a glass graduate with the ounces marked on the side in preparing artificial food. Do not depend upon guesswork. See that baby's clothing, and especially the napkins, are carefully rinsed free of all soap, or chafing will result. Do not use napkins the second time without washing. Air and sun bedding and clothing. Do not let a little child lie with its clothing wet. This is likely to cause irritation and encourages the habit of bed wetting.

Be regular with a child in all its habits. Do not offer attention or continual amusement if the little one can be contented without them. Remember that flies and insects are a menace, as they carry dangerous disease germs from place to place. Simple, soft, fresh clothing makes baby much more comfortable than fussy garments, stiffly starched or soiled ones. Avoid the possible contagion of crowds.

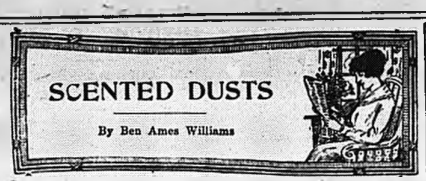
After Meal-Time.

Prepare your dishes carefully for their cleansing. It pays. The experienced housekeeper, of course, washes her cooking utensils as she goes along so that not many are left to be taken care of after the meal. These should be piled next to the dish-pan. Greasy pans may be wiped out with soft paper, which then makes good fuel. All other dishes, plates, cups and saucers, and silver should be put together in neat stacks in the order in which they are to be washed. Cups should be rinsed and plates scraped and rinsed before they are piled together. All bowls and other utensils, which have held starchy foods, should be filled promptly with cold water. Those which have had in them sugary foods or sticky ones, like gelatine, should be filled with hot water. As soon as a milk jar or can is emptied it should promptly be filled with cold water. The preferred order in which to wash the dishes is to dispose first of pots and pans. Then, in fresh water, wash the glass, then the silver, and then the china. This order is best, because it gets the worst part of the work out of the way first, and decreases the danger of breakage for the finer dishes. It is also best for the hands.

Keep Your Kitchen Cool.

The farmhouse kitchen should, if possible, face the direction from which the summer winds come. Such an exposure is not always possible, but an opening through another room sometimes allows the air to enter from that quarter. Doors and windows should be well screened; outside blinds will either temper the sun's rays or [illegible] the rain.

Paint or oil the floor if it is hard and smooth. If it is not, cover it with linoleum. Small rugs or rubber mats placed before the stove, sink and table prevent strain on the muscles and rest the feet. Painted walls, or those covered with washable paper, together with well painted woodwork, look and feel cool.



A sink with running water keeps the housewife's temperature down, and so does a fireless cooker. The cool or wood stove should be supplemented by one burning gas or oil. Of the latter type, the blue-flame stove is highly satisfactory.

A kitchen cabinet is invaluable for saving steps and space. No family within reach of ice should attempt to get through the summer without a refrigerator. Where expense must be considered, a well-made ice-chest of good dimensions is preferable to a poor refrigerator or one which is too small to give good service.

The kitchen should open out to a porch so that the busy housewife may be tempted to spend more time in the open air, while he using it, much of the clutter and dirt can be kept out of the kitchen. Air, space, sanitary surroundings and proper equipment are conducive to health at all times, but never more so than during the summer.

A pasture run will greatly reduce the cost of making pork.

There are many things that ought to be handled in no other way than with tongs. Keep your eyes on the the things that come in the mail—letters, circulars and periodicals. Some of the story magazines, for instance, are nowadays unfit to come into the home.

By Ben Ames Williams

Part I.

The shears of Miss Mary Doncaster snipped and snipped and the great bouquet of sweet peas in the crook of her arm grew and grew. She chose only those just emerging from bud into flower. Drops of dew trembled and shimmered like jewels in the sunlight and the fragrance of the old garden filled the air. The little spinster, in an irreproachable morning dress of starched white linen, with a starched white sunbonnet shading her face from the sun and spotless white cloth gloves protecting her hands, snipped and snipped and snipped.

The trowel of Miss Betsy Doncaster dug and dug and the soft earth tumbled richly and heaped itself about the roots of the flowers. She crumbled an occasional obstinate lump between her white fingers; and she laughed when an angleworm lifted an inch of its length from a hole under a clod then retreated to safety again. The moist soil clouded about the head of Miss Betsy Doncaster and she snuffed it hungrily. Her cheeks were rosy, her eyes were bright, there was dirt on her fingers, mold on her gown and a smudge on the tip of her straight little nose. The lovely young person, in a dress of blue-checked gingham, with a blue-checked sunbonnet perched upon her soft brown hair, dug and dug and dug.

"Child!" called Miss Mary Doncaster sternly. "You will ruin your hands! You should wear gloves! And just see your dress!"

Little Betsy Doncaster sat back on her heels and pushed her sunbonnet out of the way till she could feel the sun warm upon her rosy young countenance. "But Aunt Mary!" she cried. "That's half the fun of it!" She laughed happily at the disapproval in the countenance of Miss Mary Doncaster and added, "I'll promise to be spick-and-span for lunch, Aunt Mary!"

Her voice was so sweetly persuasive that Miss Mary Doncaster smiled in spite of herself; and Betsy Doncaster laughed aloud startling a robin which had followed her with an eye to the worms she disturbed. The bird, with an exclamation of alarm, flew up into the gnarled old apple tree at one side of the garden; and little Betsy Doncaster apologized to him very contritely and dug up a particularly fat worm to lure him down to earth again.

The garden was humming and singing in the sun. It was almost possible to hear the flowers grow; there was a stir and movement everywhere and many little sounds like whispering voices behind one's back but it was impossible to catch the blossoms at these pranks for when one looked directly at them, they preserved the utmost dignity, their gay petals yearning upward toward the sun and the sky, their stalks nodding with graceful pride, like composed and lovely maidens.

On a stone pedestal in the middle of the garden there was a bird-trough now empty; and a sleek gray cat was curled up in the dry basin, licking his lips at thought of the many little feathered bodies that had fluttered there. The robin which little Betsy Doncaster had frightened was not the only one in the old garden, by any means; a humming bird followed Miss Mary along the row of sweet peas and perched once upon the low twig of a cherry tree, looking like nothing so much as a fat and dignified little gentleman in a long-tailed coat. Furthermore, the wrens which were nesting in the same old box at one end of the kitchen were investigating every nook and cranny and making considerable fuss and commotion about it.

Miss Mary Doncaster's scissors at length ceased their snipping. "I'm going to put these in a bowl and send them to the house," she remarked, stopping beside Betsy to display the great armful of blossoms.

"She will love them," the girl agreed, dropping her trowel and bending above flowers. She would have stroked them with her grimy hands if Miss Mary had not drawn the bouquet quickly back.

When Miss Mary had departed, Betsy took up the trowel again and attacked the soft earth with no mercy for sprouting weedlings.

She worked industriously and now and then sang during soft little snatches under her breath.

A young man passed by.

That is to say, a young man almost passed by. He came along the shady street, swinging and strong, and he reached a corner of the garden and saw the girl with the trowel. Her sunbonnet shadowed her face so that he could not be sure whether she had seen him or not. He hesitated, started forward again, paused, stood irresolute and at length leaned over the stiff hedge that ran around the garden on three sides and called: "Hello there!"

Betsy Doncaster looked up with a great start of surprise. She was still kneeling and she brushed very busily at the earthy spots on her dress and rubbed at her hands and forgot about the smudge on her nose.

"Why Dick!" she cried. "I didn't hear you!"

Dick Sotheron laughed. "Did I scare you?"

"Dreadfully!"

"You don't look frightened."

"I'm not, now that I know it's only you."

No man likes to be called "only you!" "Oh yes, it's only me!" he echoed spitefully.

Betsy laughed and poked her trowel into the earth again. "I'm awfully busy, Dick."

"So'm I."

"I haven't time to talk to you."

"I've no time for anything else." The young man was grinning pleasantly.

"But this bed must be weeded."

"I'll come in and help you."

"You would dig up all the flowers."

"Then I'll come in and watch you."

"But I'm almost through."

"Well, when you've finished, you'll have time to talk to me."

Dick found the gate through the hedge and was coming toward her. In the way such things happen, she found herself sitting beside him on the rough bench under the apple tree, their tongues racing, their laughter ringing in a way that disturbed even the busy little wrens.

Miss Mary Doncaster was arranging the living room of the little house among the maples when she caught the sound of Dick Sotheron's laughter. She had laid aside her sunbonnet and her cloth gloves. She was as exquisite as a clean counterpane, all in white, her soft brown hair coiled smoothly at the back of her head.

Miss Mary might have passed for twenty-five or thirty-five. No one would have believed her if she had told her real age unless she had supported the assertion with documentary proof. She was a straight little woman with clear blue eyes and a complexion as fresh and soft as Betsy Doncaster's.

(To be continued.)

FLYER BAGS 6 OF FOE IN DAY

RECORD SET BY AN ENGLISH YOUTH OF TWENTY.

Captain Trollope of the Royal Air Force Has Brought Down More Than 50 Enemy Machines.

Here is a British boy airman's bag of German aeroplanes in a single day and incidentally a world's record:

Morning.

Shot to pieces a two-seater.

Brought down in flames a two-seater.

Brought down in a spin and crashed a single seater.

Afternoon.

Exploded in midair a two-seater.

Crashed a two-seater very low down.

Crashed another two-seater, also at a low altitude.

Even Richthofen had nothing to show like this and Bell never totalled more than two German machines in a single day, says a London despatch.

Vice-Commander and Capt. John L. Trollope, Royal Air Force, at only 20 years of age, has flown in France for about six months and during that time has brought down more than fifty enemy machines and three balloons.

His first record day's bag was to bring down four German aeroplanes in ten hours. On another occasion he and another airman brought down seven enemy machines before breakfast, Trollope accounting for three of them. Up to the middle of last October the squadron to which he belongs had brought down 200 enemy machines, and their number now stands at about 250.

Goggles Shot Away.

This is how he describes another fight of his on March 13: "I had a bullet through both my tanks and had to glide for the lines. I turned upside down, landing at some old trenches." He came out O. K., he added.

"I was up in a scrap, but before I was disabled I had a Hun in flames, so that was all right. I never saw anything like it in my life, as the machine absolutely blew up and fell to pieces. I was rather sorry, as we were having a glorious time."

He had a narrow escape when fighting a German two-seater, his goggles being shot away from his eyes. The Verey lights in his machine caught fire, and set the woodwork of the aeroplane alight, but he managed to get his burning machine back to the British lines. Capt. Trollope respects the fighting capacity of the Boche airmen and considers they are good in a tight corner. After emerging scathless from many a tight corner in air fights he broke one leg six weeks ago playing football at an aerodrome.

In March, 1917, Capt. Trollope was sent home, and while acting as an instructor also assisted in home defence. Getting his captaincy in 1917, he was out in France again in January of this year, and between then and March 28, the day he was missing, he destroyed eighteen enemy machines, six of which he brought down in one day.

This was on Sunday, March 24, the third day of the great battle. Of the six machines he brought down three in the morning.

He was still unsatisfied, and, looking about, saw a fellow airman in difficulties with twelve Huns. Capt. Trollope at once went to his assistance and helped him to get safely away. When last seen he was fighting hard with enemy machines, early on the morning of the 28th. His parents later learned he was in the hands of the Germans and wounded.

The Old "Vindictive"

R. I. P.

Grey and grim, she took the tides and served in the old sea ways,
And ever the banner of Freedom flew thro' unregarded days,
And England, happy in peace secure, rested in quiet ease,
While wakeful watch and ward she kept along the heaving seas.
She watched unsleeping where the far tides sweep
And the nearer waters roar,
And her spirit called across the deep,
"Here for Freedom my tryst I keep
Evermore."

Twisted and torn with shot and shell and patterned with marks of pride,
She summoned her strength for a last long call and staggered away on the tide;
No fury of fire could stay her course; she went her destined way,
And sank to rest in her ocean grave, crowned with the salt sea spray.
Her hulk is sleeping where the far tides sweep
And swirl by an alien shore,
But her spirit calls across the deep,
"Here for Freedom my tryst I keep
Evermore."

Ordered His Own Death.

Some British engineers, says M. Andre Tudesq, in the Paris Journal, were surprised by an advance guard of shock troops when blowing up the last of the canal bridges at Merville. The captain in command of the sappers leaped upon the grenades piled in the middle of the bridge and kept the enemy at bay, but his men, seeing that to fire the pile would kill their officer, hesitated. "Fire, boys," shouted the captain, without turning his head, and he died there with the Germans.

Europe's loss in meat animals since the beginning of the war is estimated at equal to one-half the total holdings in like animals in the United States.

Living is becoming so expensive that it will soon be placed on the luxury list.

Keep the chicks growing; if there are any with drooping wings, and sitting around, they are usually troubled with lice. Equal parts of sulphur and lard mixed well and a very little rubbed on the back of the head and the vent under each wing will do the business.

Ingram's Milkweed Cream

Two Sizes—50c and $1

You are young but once, but you can be youthful always if you care for your complexion properly. Daily use of Ingram's Milkweed Cream prevents blemishes, overcomes pimples and other eruptions. Since 1885 its distinctive therapeutic quality has been giving health to the skin and youthful color to the complexion. It keeps your skin toned up, soft and clean.

The refined way to banish oiliness and shininess of nose and forehead induced by perspiration, is to apply a light touch of Ingram's Velvola Souveraine Face Powder, 50c. It also conceals the minor blemishes. Included in the complete line of Ingram's toilet products at your druggist's is Ingram's Zodenta for the teeth, 25c.

A Picture with Each Purchase

Each time you buy a package of Ingram's Toilet Aids or Perfume your druggist will give you, without charge, a large portrait of a world-famed motion picture actress. Each time you get a different portrait as you make a collection for your home. Ask your druggist.

CANADIANS IN PERILOUS VOYAGE

SAW THE "ORISSA" OF THEIR CONVOY TORPEDOED.

Shell Was Meant For Them—Destroyers Sunk the U-Boats With Depth Charges.

Back from the perils of the sea, saved miraculously from the fate that befell the Llandovery Castle on the same day in the same deadly Irish waters, a number of Canadians, including a contingent of Torontonians, have the events of their recent trans-Atlantic voyage stamped indelibly upon their memories.

The coast of Ireland had faded into the horizon as the convoy steamed westward over a pleasant summer sea. The ocean was not as tranquil as the proverbial mill-pond, but though the long, low-lying torpedo-boat destroyers which guarded the flanks of the convoy of some eight ships, pitched and tossed as they plowed through the waters, the bigger vessels glided smoothly along. A crowd of women and children returning to Canada, a sprinkling of invalided Canadian officers and a party of discharged Canadian men, invalids and cripples, going home, comprised the passenger list of our ship. We were practically a hospital ship of convalescent cases. It was about 4.30 in the afternoon of Tuesday, 25th June, and many, following English custom, were sitting in the saloon enjoying a cup of tea and a biscuit. The writer was standing on deck in conversation with a Toronto lady, who has lost two splendid sons in the war. We were about the only passengers on that side of the deck just then, and we leaned over the rail gazing out across the sunlit sea watching the "Orissa," a small freighter of over 5,000 tons, which was plowing along right abreast of us, and some 600 yards away.

Torpedo Shook Ship.

Suddenly a metallic clang sounded, and a violent tremor shook our ship.

"What is that?" exclaimed my neighbor in a startled voice.

Then, even as she uttered the words, a dull roar came over the water, and from the stern of the "Orissa" a geyser of water and white smoke shot up. Almost immediately the stricken vessel began to droop at the stern and to drop behind. She had been hit by a torpedo. And that torpedo had been aimed at us, the largest vessel in the convoy, and placed in the centre of the convoy for safety. By a strange chance, the "Orissa" had just quickened her pace and moved up abreast of us a few minutes before the Hun hit her.

In less than three minutes' time the torpedoed vessel had stopped completely and slewed around, and lay there with her exhaust blowing off and momentarily settling deeper at the stern. By this time her life-boats were in the water and bobbing around like corks on the slight sea, with the crews rowing hard for the nearest destroyer. The whole happening had been inconceivably rapid—from steaming ship to sinking wreck.

Women Very Brave.

Meantime things were astir aboard our vessel, though not the slightest panic prevailed. Everyone, excepting a few stragglers who were sipping tea and playing bridge in the saloon, had at first actually not known what was taking place, trooped in orderly fashion to the life-boat stations which had been assigned to them but a short time before.

It was, indeed, a pathetic sight to see those groups of women and children thus exposed to the violence of the U-boat murderers. Not a man aboard but whose blood boiled at sight of it. The plight of these women and children, and how to help them should it have been necessary to take to the boats, was the sole anxiety of every man.

Grey-haired mothers there were with grown-up fighting sons and with grandchildren, mothers with little children who hugged Teddy bears as they sat waiting for the worst, mothers with tiny babies. One major's wife sat in a corner of the deck with her little family of four. Every one of these tots was under five. Two were twins of six months, sitting there without a whimper in their big wicker basket. The other two were a flaxen-haired boy and girl, "Sonny" and "Clarie," cute kiddies in bare legs and pink sweaters. These last two, like a dozen other youngsters of their own age on the boat, came scampering along the deck clad in the big, down-filled adult-sized life-belts, which they like all the grown-up passengers, had been obliged to wear continuously since the vessel started on her perilous voyage.

Trying Time of Waiting.

One baby girl of three, who had cut a droll figure the first day of the voyage, running about the deck crying and trying to pull off her unwelcome life-preserver, now toddled along quite resigned to the unwieldly apparatus, tugging on the leather leading strings to which her mother kept her harnessed. Near them sat a mother whose husband was one of the Canadian doctors killed in France as he was operating. She was taking her little daughter home.

Rugs, shawls and wraps and cups of tea were brought out to the anxious waiting groups of women and children. Everyone realized the peril of our position. Everyone momentarily expected to hear the crash, to feel the shudder as a torpedo struck our own ship. It was a trying time for the strongest men—but everyone smiled, and the women—their behaviour was beyond all praise. Though agonies of anxiety must have tortured those mothers, not a whimper did they utter, not an exclamation of fear. With their arms about their little ones they sat there awaiting the worst, calmly, bravely, heroic kinswomen of the Canadians at the Front.

All this time those congregated on deck had been witnessing a terrific performance of the sea close by. A moment after the torpedo hit, our neighbors, the destroyers, whisked around like live things and, putting on full speed, rushed through the seas in the direction of the hidden U-boat, of which we on our vessel caught not the slightest glimpse.

Drop Depth Charges.

A series of heavy explosions sounded as the warships dropped their depth charges into the sea right and left a mile or more away. At each explosion of these fearsome under-water bombs, even at that distance, the stout steel plates of our ship rang as though from the blows of a giant's sledge-hammer. Geysers of black smoke and spray shot skyward at each thunderous detonation.

Two oily periscopes, almost invisible in the choppy great sea, were busy trying to spot more victims among the convoy, but though the Huns fired six torpedoes all told, five went wide of the mark.

The clang of our ship's plates at every blast was rather trying to the nerves of the passengers, who felt in each impact the blow of a torpedo itself, though for that matter the explosion of the missile made actually less noise than the depth-charges. The effect at close quarters upon the fragile plates of a U-boat can well be imagined. If within a certain radius, the U-boat's plates are dented by the shock, and water pours in along the started rivets. Even if too far off for this, and the undersea boat escapes, her delicate interior machinery is liable to serious damage from the jarring.

Just after our unfortunate escort had disappeared bow-up into the sea amid a cloud of steam, some 24 minutes after she had been hit, a destroyer wirelessed us the joyful news that they had got the U-boat. A certain black volcano we had seen upheaved from the ocean's depths had been her funeral. Some time later her sister U-boat, whose presence had been detected before she had done any harm, met with a similar fate.

Gallant Ship's Officers.

The finest traditions of the British merchant service were lived up to all through the voyage by the ship's officers. For days the gallant old white-bearded Scotch captain never left the bridge. Never known to swear, the skipper broke his record this time. The first officer, a splendid type of British seaman, told the writer that the old skipper paced the bridge all through the submarine attack, heartily cursing "these d—— dirty dogs of Huns." As for the Canadian military officers in charge of the civilians and invalided soldiers, too much cannot be said for the manner in which they managed things all through the voyage. Major (Soldier Bill) Grant, formerly sergeant major of the 15th, was O.C.; Lieut. H. Anderson, a Toronto lawyer, and formerly secretary to Sir William Meredith, was adjutant, and Capt. W. Marsden, of the P.P.C.L.I., who holds the proud position of being No 1 in the C.E.F., was O.C. civilians.

It is no exaggeration to say that every passenger sighted the coast of North America, not only with a feeling of profound thankfulness to Providence, but with a true sense of the magnificent work of the British navy, whose swift ships and gallant sailormen outwitted the Hun, sent him to the bottom, and conveyed them safely through the dire peril to the dear home land.

Successful Camouflage.

It is well known that the Germans compel prisoners of war to praise the treatment they receive and permit no letters to pass which contain complaints, but one prisoner evaded their vigilance when he wrote to his parents in Toronto the following apparently laudatory letter:—

"We are having the very best treatment. The Germans provide us with the best of everything. We could not be better treated if we were with our own people. There is only one thing we could wish for, and that is to be at Mount Pleasant."

For the enlightenment of our readers, it may be added that Mount Pleasant is a cemetery.

It Was Correct.

This teacher was having some trouble with a certain pupil in grammar.

"Now, little girl, would it be proper to say, 'You can't learn me nothing?'"

"Yes'm, it would," replied the girl. "Oh! Perhaps you'll tell me why!"

"'Cause you can't!"

No Arguments.

A returned missionary tells the story of how in Darkest Africa two natives were watching a leopard chasing a very large and very fat white man.

Said one native to the other: "Can you spot the winner?"

"The winner is spotted," replied the other African.

OUR SPLENDID ARMY DOCTORS

THE MEN WHOSE MISSION IS TO SAVE.

There Is a Big Debt Owing to the Medical Men in France, Who "Carry On" Unfalteringly.

Few women—and not all men—will ever realize what they owe to the unfaltering courage and the calm skill of those who mend our Army.

Among the ranks of those whose business is to destroy work the men whose mission it is to save. While the bayonet, rifle, and gun do their deadly work, the delicate instrument of the doctor is there also, saving the shattered ones.

All the skill, all the nerve, all the strength of the Army doctor is tried to the uttermost in days like these. He must work on with clear brain and unfaltering hand, hour after hour, operating under fire in cramped dugouts, making quick decisions, wasting on the dead no second that can be given to the living, seeing nothing but broken manhood and the anguish of the newly wounded, with death ever hovering near and raging outside, whilst he steadily, methodically, swiftly works for life within.

Seventy-two Hours at a Stretch.

The valor of those surgeons of the line who man the advanced aid-posts, the dressing-stations, and the casualty clearing-stations is magnificent, the strain on them terrific. Subject to shell-fire and bombing-raids—and exposed to the whole gamut of war—they themselves often pay the supreme price for those they seek to save.

These men in the midst of the clamor of war know little of how the the battle goes; they are there to save, and it is only the result they see. Sometimes there is a hurried exit from their temporary hospital, quick orders and directions are swiftly obeyed, and the great work of reparation is coolly carried on in healthier quarters.

Tommy himself often has a very hazy idea of what happens to him before he reaches the base, or is entrained for Blighty.

One drowsily opened his eyes in an an advanced aid-post. He found himself lying on a trestle, his wounds comfortably dressed. With the slow stare of returning consciousness he made out another bandaged man on a stretcher near by, and then his eyes fell on a figure that lay on the floor between them—a man in a scarlet-stained overall, who had worked through the rush for seventy-two hours without a "break"—seventy-two sleepless hours of blood, noise, and pain—had dressed his last two cases, and then collapsed.

Only the doctor himself knows the pride of victory that comes to him when moments have snatched a man from the gathering shadows.

One wounded Tommy was brought in, pallid as death, having lain two days in a rain-filled shell-hole—pulse gone, heart beating so faintly as to be hardly discernible, life ebbing away every second. Such a case—and they come frequently—is a matter of minutes. Doctor and orderly cut away mud-soaked clothing and boots, the man is rolled in hot blankets, saline is injected, hot water-bottles placed round him, and then the two of them work over the almost lifeless body, massaging, rubbing untiringly, while a machine-gun splutters its defiant staccato bullets outside. Neither men pay any heed; their concern is the fight they are putting up within. And every little while the doctor steals a searching glance at the grey face of the man from the shell-hole.

His Vigorous Offensive.

And at last, bringing with it the mystery and wonder of that moment when the tide turns, comes a long, drawn, shuddering sigh of absolute weariness, a violent perspiration, and then sleep—heavy, healing sleep. Into the doctor's face, as he catches the orderly's eye, flashes a gleam of contented triumph. Old Man Death beaten again! Another life saved for Britain!

A gassed man at this base spoke to me of a medical officer, whose name he doesn't even know, but whose deed will be a life-long memory.

Seven of them were blinded and choked with a tear-shell one pitch black night. Only a doctor and his orderly were in the advanced aid-post in the line, the dressing-station being some three miles behind. To have kept the blind, suffering men in the post till daybreak was impossible, as by that time the fumes from their clothing would have gassed the others. To leave them outside was equally impossible.

Quiet Heroism.

The doctor took the lead. The first sightless man placed his hands on the "doc's" shoulders, the others followed suit, the orderly bringing up the rear, and in single file the nine started their ghastly three-miles walk in that inky, shell-strewn area.

At times the duck-boarding had been blown away, yet one dare not risk a gleam of light for guidance. Stumbling in mud and darkness, it took this tragic little party an hour to crawl round one shell-hole, seven of them crying, choking, blinded men, clinging to each other for dear life, trusting to the man who led.

They started at ten at night. It was three o'clock next morning when the doctor staggered back, soaked with rain and mud, to his "pill-box" in the line.

Dispose of Old Hens and Breeding Stock Early.

As soon as the breeding season is over, get rid of all male birds used in the breeding pens. When the egg yield drops in the early summer, or when the egg yield does not pay for the feed, sell off all hens over two years old and even the year-olds cull pretty well. Poultry at this time of the year will bring a better price than later and feed and space will be saved for the best of the year-olds and the growing chicks. Old hens, as a rule, especially of the heavier varieties do not pay for their feed in late summer eggs.

Sell the young cockerels whenever they are ready throughout the summer. Don't keep everything till the fall. Whenever the price is good, sell the cockerels as broilers or as small roasters.

In an experiment carried on at the Experimental Farm in the spring of 1917 with Leghorn chickens, the sale of the cockerels paid all expenses for incubation, brooding and feed for themselves and pullets up until the first of September. When the pullets went into winter quarters on November 1st, they had cost over and above what had been paid by the sale of the cockerels just 3.9 cents each. This experiment showed not only that it paid to sell the cockerels early, but it also demonstrated that pullets could be raised much cheaper than they could be bought in the fall.

THE RETURN OF THE FLOTILLA

PEN PICTURE OF THE GRIM REALITY OF WAR.

Scene at a Naval Base in the British Isles When His Majesty's Ships Come Home.

Far up in the north of Britain nestles a tiny town consisting of some fifty cottages, two inns, and a tin-roofed church. Its streets are narrow and cobbled, and all lead, sooner or later, to the great harbor which is the key of the village's prosperity—for X—— is a naval base.

Its two inns—Harbor View and the Mariner's Haven—and every room of the fifty cottages, hold as many of the mothers and helpmeets of the officers of his Majesty's Grand Fleet as their grey-stone walls can be compelled to accommodate—and criminally great is the profit of the canny landlords and proprietors thereof.

One day a whisper passed through the town—always on the qui vive for such intelligence—"the Fleet is coming in this afternoon," and soon a breathless atmosphere of expectancy prevailed throughout the busy community, for had not a rumor also stolen abroad that there had been an "action" in the North Sea, and that the "Yth" Flotilla was bringing in its dead and wounded?

Ask any ship's censor (whose own letters home contain little more than the information that he is still in existence) which of the members of ward-room or gun-room has let fall the most ambiguous of hints as to the flotilla's destination, and he will indignantly inform you that these gallant gentlemen "have some ordinary horse-sense," and will add that no letters could be more guileless than those it is his reluctant duty to examine. Yet the wife of every one of the numerous N.O.'s in the "Yth" Flotilla knew, mysteriously, that "her" ship was coming to X—— very soon.

Tattered and Torn.

By noon the streets were full of people hurrying to share the mingled joy and apprehension—and, incidentally, a meal and a window—with some friends, and by two o'clock every window held its crowded group, having as central figure someone kneeling on the window-sill, field-glass in hand.

Towards three o'clock a light mist hung, like the smoke of some superb bonfire, over the leaden waters of the harbor; and at four o'clock an excited exclamation from little Mrs. Dunstan, the wife of the lieutenant of the Buttercup, who occupied the window of the front bed-room of Harbor View Inn, hailed the appearance of the first dark hull sliding ghostily through the mist. From every house came the sound of windows hastily flung up, and heads were craned eagerly forward. As the ship drew nearer, the veracity of the rumor re the "action" was dramatically confirmed. Never one would imagine, had such a battered, disreputable craft managed to crawl into harbor under her own steam—until the next, her wireless dismantled and one funnel leaning at an angle of fifty degrees, loomed out of the mist. Faces grew white with apprehension as ship after ship, each bearing fearful tokens of recent strife, drew slowly in to the harbor. On the deck of each crowded the members of ward-room and gun-room, and anxious eyes were strained to search for beloved faces; till, on seeing a handkerchief somewhat ostentatiously drawn from a breast pocket here, or an almost imperceptible movement of the hand there, the tense faces relaxed and the color flowed back to pale cheeks.

The Late-Comer.

At length the waves of cheering which had greeted the advent of each ship from the gathered crowd died away, and the ever-thickening barrier of mist was unbroken by black hulls. Then the young bride of the Primrose's first-lieutenant turned from the windows to her friends with a queer little gasp. Her eyes sought theirs piteously for some reassuring look. For her ship alone of them all had not come in.

One of them stretched out quick arms, and murmured some brave explanation of its absence which deceived no one, and silence fell upon the group. The less intimate quietly slipped away, leaving two only with the girl. Quarter of an hour passed; then one of them, who still stood by the window, raised her field-glass hurriedly. Surely—surely that was something moving through the fog! For a moment she stood, tense; then, with an incoherent cry, turned and gesticulated wildly. The other, who had her arms round the young wife, looked up quickly, dragged her to her feet, and thrust the field-glasses into her hand.

War Cloud's Silver Lining.

Dazedly she looked where she was directed—and then a great burst of cheering ran through the town, for there, staggering valiantly in, with one funnel clean blown away, and a heavy list to starboard, came the Primrose. With every nerve stretched to the limit of endurance, the first-lieutenant's wife waited till her ship drew near enough for her to distinguish the little group on the bridge. One of them lifted a hand with a quick gesture, and, with a glad cry, she fainted in her friend's arms.

Thus was the fashion of the coming in of the "Yth" Flotilla, covered with laurels, and with an incredibly short list of casualties; and happy were the faces, and joyful the hearts of the little community whose anxious time of waiting is lightened by the expectation of such a day as this.

THIRTY YEARS A KAISER.

Three Decades Last Month Since German Emperor Came to the Throne.

On the fifteenth of June, 1888, thirty years ago, the present Kaiser ascended the throne of his ancestors—that is, so far as the Brandenburg and Prussian portion is concerned. The Imperial distinction was then only of seventeen years' standing.

Kaiser Wilhelm the Second assumed the power immediately on the death of his father, the Emperor Frederick, who reigned only three months. William, the Imperial Wangler, had previous to that exercised considerable power, for, during his grandfather's last illness and while his father was at San Remo, struggling against the incurable disease which carried him off, the then Prince William acted as Regent, and was "run" by Bismarck as a promising pupil, who little dreamed that less than two years later—March 18th, 1890—he, the Chancellor and Man of Blood and Iron, the "Pilot," would be "outed" by his imperial and headstrong master, the young ruler who is to go down to posterity as the prime mischief maker of all time.

The Kaiser succeeded to a fine property, so far as size is concerned. The Empire has been widened by acts of brigandage. It is a pity if the theft of half Denmark and the seizure of Hanover are overlooked when the day of final reckoning comes along.

William opened his first Parliament on June 25th, 1888. He made a vain effort to forget which somewhat overlooked his father's brief reign.

Thirty years has brought a complete change in the method of German education. The Education Bill of 1890 effectually shackled the German people and put the present generation into leading strings.

William was known as the Reise Kaiser, the traveller, early on. He was ever on the move. He found a real pleasure in garrison-ma'ams. He was as proficient at this as he was at Socialist-muzzling. Murdoch was ridiculing him in the nineties.

His eye was on the British Empire as a future suburb of Germany many years ago. His journeyings brought him to England in 1891. On July 10th in that year he reviewed twenty-five thousand Volunteers at Wimbledon.

One way and another a glance at the three decades is very illuminating. In 1890 Heligoland became a part of the German Empire. In 1892 William was busy lecturing his more or less faithful Brandenburgers on the duty of not grumbling at his wishes. On March 3rd, 1892, several newspapers were confiscated in Berlin for daring to quote what "The Times" said of the Emperor's speech. About this period Potsdam fell foul of "Punch."

The foundation was laid. The German State became a Secret Society a year after the death of the old Emperor. The advantage of the Junkers was worked for the benefit of the dishonest and corrupt camarilla in Berlin—see the Eulenberg and Liebenberg Castle revelations of ten years since.

The Fifteenth of June was a date of promise. William's inheritance was in a fairly flourishing condition when he took it over on June 15th, 1888. He has brought the property to—well, those whose business it will be to look into the accounts and inquire into the balance-sheet can be left to do the work.

Thrift is only bridge over the wheat crisis.

ENEMY BLINDED BY HIS OWN GAS

AFTER RESULTS OF GAS SHELL BOMBARDMENT.

New Weapon So Subtle in Its Effects That It Does Inventors Greater Injury.

German ingenuity in producing gas with which to overwhelm the enemy has not always worked out as intended or wholly to the advantage of those employing it. In the recent offensive the intensive gas shell bombardment with which the German precedes his attacks has had occasionally unforeseen after effects upon the Germans themselves.

For the purpose of the offensive the enemy employs a shell containing a double purpose chemical, affecting first the eyes and then the skin. It is a modification of the normal "tear gas" shell, and the usual distinctive odor is very much reduced, so that the gas is not so easy to detect. Men who suffer from its effects are temporarily blinded, and close contact with the fumes produces an unpleasant skin irritation. For the average case eight or ten days' hospital treatment is necessary, but the gas is neither fatal nor does it inflict permanent injuries, for our men are not exposed to it long. So much for our side of the question.

New Weapon Two Edged.

From the German point of view the weapon has proved decidedly double edged. This was especially the case on the Somme during the last offensive. The chemist was so concentrated that it was markedly less volatile than the usual gas content, and wherever a shell exploded a considerable proportion of the charge impregnated the surrounding ground. The fumes suspended in the air dispersed fairly rapidly, but the actual site of the explosion remained virulently poisonous. In the usual way the spot where a gas shell has burst is dangerous for forty-eight hours or so, but this concentrated chemical remained active for a much longer period.

The result was decidedly comic, for it was evidently one of the many little things that the "Grosser General Stab" omitted in its calculations. The German artillery lathered the Allied positions with gas shells in the most lavish manner. Every redoubt, support line, ruined village and road centre was plastered with the stuff. The great assault was launched and the allied line yielded ground. The Germans moved up and occupied it. Their bombardment had been too deep; their advance was in proportion.

Poisoned by Their Own Gas.

Thousands of German troops poured up into the gas infected area, sat down for cover in virulently poisoned shell holes, billeted themselves in abandoned hutments sprayed with their own gas—and only began to notice the effect about six hours later. During the action our men had been exposed to the fumes for a short period, but the Germans came and in their ignorance literally steeped themselves in it.

Exhausted men lay down in the dusk on dew wet ground where the stuff had burst; they woke later on to find the venom actually corroding their bodies through their clothes. Forward machine gun units dug emplacements in innocent looking shell holes. Two hours later the men were wandering about blind and screaming in their pain and terror.

A day or two of wet weather seemed to clear the infected areas; new troops were marched up, the remnants of the old divisions withdrawn and the terror of their own gas hushed up and forgotten. Then came the blazing sun drying up the clay and loam, heating the earth surface inches deep. The latent poison awoke again and for no apparent reason shelters and dugouts that that been safe and habitable for days became deadly as gulf eddies. The unsuspecting troops were overwhelmed.

The Germans are sorry that they ever started gas; still sorrier that they improved it. But one can feel no pity for them. The effect on their morale is bad, for no man can tell now what terror of their own sowing lurks in the ground that they occupy at the cost of thousands of lives.

It Was Worth a Try.

The small boy stood at the garden gate and howled and howled and howled. An old lady paused beside him.

"What's the matter, little man?" she asked in a kindly voice.

"O-o-oh!" wailed the youngster, "Pa and ma won't take me to the pictures to-night!"

"But don't make such a noise," said the dame, admonishingly. "Do they ever take you when you cry like that?"

"S-sometimes they do, and—and sometimes they d-i-don't!" bellowed the boy. "But it ain't any trouble to yell!"

Keep the young animals growing. A calf, pig or colt will never wholly recover from stunting in youth.

It was estimated in 1907, after a full inquiry, that the annual average loss caused in Great Britain by each rat was $1.80, in France, $4, and in Denmark, $1.20.

GLAMIS

Mrs. (Rev.) Reith received word a few days ago of the drowning of a brother who has been living in the U. S. The remains were brought to Toronto for burial, and Mrs. Reith and daughter went down for the funeral.

Master Murray Finlayson, of Port Elgin, is holidaying here.

Miss Jessie Imrig of Kitchener, and Miss Holmes of Owen Sound, are the guests of the Misses Webb.

Miss Pearl Francis has returned to her home in Toronto.

Mrs. Angus McLean accompanied by her daughters of Toronto, have gone to visit relatives at Schreiber, Ont., and points in Saskatchewan.

Mr. Jos. Cunningham is undergoing special treatment in Walkerton.

Pte. Frank Robinson was home from London on a few days' leave.

Nurse Ida McAfee, of Rochester, N. Y., is over on vacation, visiting her mother, Mrs. H. McAfee.

Miss Reta McKinnon is visiting her sisters near Lucknow.

The B.Y.P.U. held a social evening at the home of Mr. Geo. Webb recently. A very enjoyable time was spent.

Miss May Ferris has been visiting friends in Paisley.

Dan Montgomery, of Detroit, is home on a visit.

Mrs. J. P. MacPherson has returned from a visit with relatives at the Soo and Sylvan Valley. She was accompanied by Mrs. Baldenby and Miss Gunn. All are visiting at J. Gunn's.

Mrs. Roy Kennedy and son arrived home from Markdale last week.

Miss Jennie Carr is home from Guelph.

CARGILL

Mrs. Thos. Grice spent the week end with her daughter, Mrs E. Dietrich, in Chesley.

Mr. F. L. Martin spent over Sunday with friends in Guelph.

Rev. Mr. Tyler, the new pastor of the Methodist church, arrived on Saturday, and occupied the pulpit on Sunday evening, preaching an excellent sermon and impressing the congregation very favorably.

Mine Host Tony Rosecaus threatens to close his town if people who use the accommodation when they come to town do not cough up some filthy lucre. All he looks for is a measley little fifteen cents, yet some like out without even saying it is a fine day. No wonder Tony is sore, for surely it is worth something to have a good barn to put your drawer in when you are here, and it costs money to keep up a barn as well as anything else that is worth anything, so dinna forget to cash up before you leave the barn or it is hard to say what will happen.

Mrs. John Thornton returned to her home in Toronto last week after a short visit with her mother here.

The Cargill correspondent to the Free Press had an item in last week referring to the girls here not being farmerettes. We wish to correct him. There are quite a number who are doing a man's work in the fields these days, and the farmers are glad to have their help, too.

SECOND CON. ELDERSLIE

Messrs. Jas Walks and Jas. Allen motored to Eugenia Falls on Sunday week and spent the day there.

Elizabeth Allen and Leila McCullough were successful candidates at the recent exam. Congratulations.

Haying is the order of the day, and farmers in this section have a much heavier crop than was expected a few weeks ago.

Mr. A. Dawson, Misses Mabel and Maude Dawson, also Mr. and Mrs. W. Pepper and little Thelma spent an afternoon at Southampton beach recently.

Mrs. (Rev.) Paidy and children, of the Canadian Soo, are visiting friends here.

Messrs. D. C. Lillico of Guelph, R. J. and A. C. of Toronto, all spent Sunday at the home of their parents here, Mr. and Mrs. A. Lillico.

Mrs. T. Brighty and daughter Miss Jennie Brighty, of Toronto, are spending a few weeks at the home of Mr. and Mrs. J. B. Allen.

Mrs. Beaton, of Winnipeg, visited last week at the home of her daughter, Mrs. Wm. Young.

UNDERWOOD

Rev. Mr. Ferguson, of Stratford, occupied the Presbyterian pulpit in the intercsts of the Dominion Alliance on Sunday evening. Rev. Mr. Robinson of Tiverton preached in the morning.

Mr. D. C. Murray is in charge of the post office here until a new postmaster is appointed.

Miss Pritchard and Master Pritchard, of Toronto, are visiting friends here.

Mr. and Mrs. Gillies McKay have returned to their home at Orono after spending two weeks holidays at the home of his father.

Mrs. (Dr.) Logan, of Niagara Falls, is visiting her brothers, Wat and Geo McKay.

Quite a number took in the garden party at Queen Hill on Monday evening.

Pte. Mac McKay, of London, was home on leave over Sunday.

We are pleased to see that Mr. Albert Inkster is able to be around again after an operation.

CASTORIA.

Bears the signature of Chas. H. Fletcher. The Kind You Have Always Bought

NARVA

Mrs. Geo. Fletcher returned from Markham last week where she has been undergoing treatment.

Mr. John and Miss Polly Bell motored to Harriston last week with Mr. and Mrs. Wallace Esplen.

Mr Willie Keyes made a business trip to Chesley on Saturday.

Nat Pitsimmons returned home last week on furlough after a year and a half in the British navy.

Sunday visitors in the burg were Mr. and Mrs. Geo. Young at Mrs. John Keyes', Horace and Irene Moffatt, Harry and Carlotta Murrie at Mr. Alexander's.

WALKERTON

A strange swarm of bees which struck town on Thursday last and clustered on the top branch of a large maple tree in front of Mrs. Jas. Watts' home on Victoria street, caused much suffering to some local youths who were present when Paul Jones attempted a spectacular capture stunt. A lad in the tree who was holding a basket while Paul shook the limb, swayed slightly in the excitement, and missed the bunch of stings with the basket, allowing them to speed by and drop in a mass onto the urchins below, who announced the arrival of the bees in an uproarious chorus of startled yelps, and began pawing the air with their flappers in a vain effort to stay the onslaught and stop, as it were, hostilities at the start. The humming hoard, however, broke through their guard and opened a spirited offensive on the exposed parts of their anatomy, even tripping down their necks and carrying on a secret warfare by stabbing them in the back. Recalling that "pain is our portion here," the boys started to beat it elsewhere, but it took some hard sprinting before they shook the last bee out of their clothes. When seen later the lads appeared "puffed up" by their experience and, to use a society term, look like perfect "swells."

An impromptu aerial demonstration was pulled off in Walkerton on Monday evening last that sent many citizens into a cold sweat and caused others to turn their faces in horror away, as overhead an aviator appeared for over an hour to be courting with death and threatening every moment to furnish the remains for a coroner's inquest. A young cadet, having got lost while making the return trip from Collingwood to Camp Borden, after taking some aerial photographs, ran out of gasoline and alighted on Bobbie Simpson's field east of Walkerton. The gas in town being too coarse, he had to send to camp for the fluid, and in response the military authorities detached the liquid here in a plane driven by Flight Lieut. Randall, the dare-devil of the camp and one of the most expert fliers on the continent. When Randall landed with the gas he found that the Walkertonians had deluged the stranded flier with oranges, cake and all kinds of delicacies and that a royal feast was also spread out awaiting him. In gratitude he decided to give this town a few stunts that wouldn't soon be forgotten in local history. Mounting once into the clouds he looped the loop, and with the machine turning over and over seemed to be tumbling down to earth. When people were almost listening for the crash, he avoided the shock by righting the machine a short distance from the gravel and started up again. Then turning from the dizzy he dove like an arrow to the earth, causing many to seek cover lest he light on them. When he seemed about to strike the clay belt, he swerved and missed by a few feet, and flew like a bird down the main street. Chasing crowds off the hills by almost knocking off their hats was another favorite stunt with him. After "carrying on" in this manner for over an hour, he and his chum turned their machines again towards Camp Borden, which is 76 miles distant, and which they expected to reach in less than half an hour.—Herald and Times.

PINKERTON

Miss Mary McKee, of Stratford, is spending holidays at her home here.

Lieut Harold Pinkerton, of Toronto, is spending a few days at his home.

We extend congratulations to the three successful candidates for the entrance examination—Alberta Pinkerton, Gladys Gale and Arthur Donnelly, and also to Miss Diehl, their teacher, who, we are sorry to say, has resigned as teacher here.

Pres. Harry Mottie and Melville Reid returned home from London last week on leave of absence until further orders.

Pte. Elmer Reid spent Sunday and Monday at his home here.

Miss Aileen Pinkerton is among the successful candidates at the Normal examinations. Congratulations.

Messrs. Wm. Garland, Harvey Garland and John Mottie all secured Ford cars last week.

Miss Jennie McMillan and her cousin, Mrs. McKay of Toronto, are visiting the former's sister, Mrs. Adam Reid.

INVERHURON

On account of the heat on Sunday a great many spent the day at the lake. Bathers enjoyed the coolness of the water. Auto loads came from Pinkerton, Kincardine, Glamis and surrounding country.

Week end visitors were Mr. J. B. Campbell, Mr. Geo. Harrison, Mrs. Watson and Miss B. Rolston, of Chesley.

Visitors from a distance who called on friends on Sunday were Mr. and Mrs. Hugh MacIntyre of Brandon, Man., Mr. and Mrs. Campbell and daughter of Montreal, Mr. Sam Smythe of Strathroy, also some from Durham.

New arrivals are Mr and Mrs. Martin, the latter's sister and two children of London, who came by motor and pitched their tent here.

Mrs. Myers and daughter and Miss Alice B. Taylor, of Toronto are guests of Mrs. McKenzie in her cottage.

Mr. John A. MacIntyre, of Detroit, is spending a few days with his mother in "Rob Roy" cottage.

Children Cry
FOR FLETCHER'S
CASTORIA

—The garden party at Queen Hill manse on Monday night was a great success, the crowd being one of the largest seen this season. A long programme of excellent quality was provided. The list of speakers and entertainers included Rev. Dr. McGillivray, J. J. Hunter, E. R. Sayles, Misses McLean, Nicholson, Lamont and Young, Miller brothers, A. Pfaff, Sandy McDonald, Jas. Scott, E. Smith, McLean and Donaldson, and Rayner's orchestra, of Southampton. The proceeds amounted to about $300

MILK FLOW DECREASING

Flies, Drought and Heat Cause of Trouble.

Suggestions for Most Profitable Care of Dairy Cows and Calves—August Ploughing and September Cross Ploughing Kills Grubs and Worms to Old Sod.

(Contributed by Ontario Department of Agriculture, Toronto.)

DURING the extremely hot weather, cows and calves frequently suffer, sometimes needlessly, from three things —effects of high temperature, lack of water, and from torment by flies.

A great mistake was made in the older parts of Ontario, when practically all the trees were cut down, thus leaving no shade for cattle and other live stock. When the late Prof. Brown was in charge of the Ontario Agricultural College farm and live stock, he planted small groves of trees on various parts of the College farm, and no more pleasant sight may be seen than that of the College herd lying in the shade among these trees on a hot day. These groves make the fields where located rather awkward to work, but the cattle certainly enjoy themselves among the trees. On a live stock and dairy farm, while it may not be advisable to plant trees in the middle of a field, it certainly will pay to have them in as many places as possible, where they do not interfere with the working of the land.

In the meantime, on dairy farms where no shade is available in the regular pasture field, sometimes a wood-lot can be utilized for the stock during the heat of the day, though they may damage the young trees to some extent. Another plan is to keep the cattle in a darkened stable for part of the day. This means a good deal of extra labor cleaning the stable, and keeping the cows clean, and under present labor conditions may not be practicable on many farms. However, where there is the necessary labor available and particularly where cows are receiving soiling or silage feed to supplement the pasture, the feeding in the stable may well take place during the day and the cows be kept inside while it is very hot. This plan also reduces worry from flies, when the windows are covered to make the stable dark.

Water Necessary for Comfort and Milk Production.

Cows frequently suffer from lack of sufficient water. As a boy, the writer remembers driving cattle to "Big Crick," in Brant County, during dry spells. The cows were nearly famished when they reached the "Crick" and would drink until they looked like bursting. By the time they reach home, after walking for a mile-and-a-half over a dusty road, the cattle were nearly as thirsty as ever.

The only safe source of a sure water supply is a deep well, driven or bored, and having the water pumped by windmill or other sources of power, with a storage tank for emergencies. There is no part of Ontario in which an abundance of water cannot be obtained, if we go deep enough to tap the hidden sources of supply.

No matter how it is obtained, the owner of dairy stock, more especially of cows milking, must supply large amount of water, else the stock will suffer, which means lessened milk supply, and small cheques from the creamery, cheesery, condensery, or milk dealer. Milk consists of about 87½ per cent. water, and this water must come from the drink and feed of the cow. A cow giving 100 lbs. (10 gallons) of milk daily, will drink from 250 lbs. (25 gallons) of water in a day. Cows giving less milk will drink in proportion. Give the cows plenty of water. Young cattle, calves, and hogs also need plenty of clean water in hot weather.

Fly Remedies.

There are several good fly remedies on the market. Where there is no time to make one, the purchase of a patent fly-killer or repellent, is advisable. These are usually applied daily, or twice a day with a small hand sprayer.

A home-made remedy may consist of one-half gallon fish oil, or any old grease, one-half pint coal oil, and four tablespoonfuls of crude carbolic acid, cresol, etc. Mix thoroughly. This will be sufficient for twenty-five cows and may be applied with a brush or cloth. If there is no rain it will keep the flies off for several days. Milkers must be careful not to get this on the hands, nor allow hairs to drop into the milk pail, as it will taint the milk. It is safer to apply after milking.—Prof. H. H. Dean, Ontario Agricultural College, Guelph.

What About Seed Wheat This Year?

Good seed of the most desirable varieties of fall wheat is sure to be scarce this autumn. The most of the winter wheat in Canada is grown in Ontario, and the acreage sown in this province last autumn was less than usual. Over fifty per cent. of the crop was winter killed. In numerous instances the wheat which was not ploughed was re-sown with other grains either over the whole areas or in patches. Owing to the scarcity of labor it may be difficult to thresh it a grain from the good fields between the dates of harvesting and seeding. Those growers who have old wheat of good quality should save it carefully for seed purposes. Special efforts should be made to thresh as much of the good wheat of this year's growing at as early a date as possible. Farmers having more seed than is required for home use or for sale to neighbors would undoubtedly receive a good demand by advertising in either the local or the agricultural papers. Tests should be made of the germination of both the old and the new wheat. Strict economy of winter wheat for seed purposes this autumn is essential.—Dr. J. A. Zavitz, Ontario Agricultural College, Guelph.

COULD NOT STOP THE HEADACHES

Until She Tried "Fruit-a-tives" —Made From Fruit Juices

113 Cosmo St., St. John, N.B.

"I feel I must tell you of the great benefit I have received from your wonderful medicine, 'Fruit-a-tives'. I have been a sufferer for many years from *Violent Headaches*, and could get no permanent relief.

A friend advised me to take 'Fruit-a-tives' and I did so with great success; and now I am entirely free of Headaches, thanks to your splendid medicine".

MRS. ALEXANDER SHAW.

50c. a box, 6 for $2.50, trial size 25c. At all dealers or sent on receipt of price, postpaid, by Fruit-a-tives Limited, Ottawa.

Clerk's Notice of First Posting of Voters' List

Municipality of Elderslie

NOTICE is hereby given that I have transmitted or delivered to the persons mentioned in section 8 of the Ontario Voters' List Act, the copies required by said sections to be so transmitted or delivered of the list, made pursuant to said Act, of all persons appearing by the last revised assessment roll of the said municipality to be entitled to vote in the said municipality at elections for members of the Legislative Assembly and at Municipal Elections and that the said list was first posted up at my office on the 5th day of July, 1918, and remains there for inspection.

And I hereby call upon all voters to take immediate proceedings to have any errors or omissions corrected according to law.

Dated this 9th day of July, 1918.

R. C. PEARCE, Clerk, Elderslie

Fall Term from Sept. 3rd

Central Business College Stratford, Ont.

The call for trained help is greater now than ever before in the history of Canada. Our graduates are securing splendid positions. We have Commercial, Shorthand and Telegraphy Departments. —Mr. Miles, who is a salesman in Ballachey's store, has rented Mrs. Chewes' residence and moved his family to town.

—Miss Skelsey, Mrs. Dunn and children, Mrs. Pomroy and son, of Toronto, are visitors at Mr. E. C. Wilkins', North St.

—Mrs. Thos. Barnes and two sons, of Vermillion, Alta., are down on a visit at the home of Mr. and Mrs. E. Barnes, 12th Bruce.

—Rev. A. H. McGillivray, of Hamilton, was greeted by large congregations when he preached in Knox church on Sunday week.

—Mrs. S. Putnam and Mrs. R. McGrath, of Tara, were visitors at the home of their brother, Mr. T. Ellis, for a couple of weeks.

—Mrs. Alex C. Ross and children, of Calgary, arrived last week on a visit at the home of her father, Mr. Wm. Brown, Lockerby.

—Mr. and Mrs. John Eby, daughter and son, of Guelph, motored up on Saturday to visit at the home of his brother, Mr. L. Eby, Saugeen.

—Knox church Sunday school picnic was held at Southampton beach on Thursday, motor cars conveying the children, teachers and friends.

—Misses Maggie and Etta Tully of Hamilton, and Miss Susie Tully of Chesley, drove over from the latter place on Saturday to call on old friends here.

—Mr. and Mrs. Kent, of Linden City, Mich., Mr. Jas. Kerr and daughter of Courtright, and Mrs. W. J. Stewart, of St. Thomas, are visitors at Mrs. T. Kerr's.

Mrs. John Stanley, north of Paisley, was operated on at the Bruce County hospital on Tuesday of last week by Dr. Houston of Paisley and Dr. Laird of Southampton for the removal of a cancer from her breast.

—Mr. John Ribey, of Saugeen, is the proud possessor of a cow that in the months of June and July gave 3,050 lbs. of milk, and is still giving 44 lbs. a day. This fine milker is a Durham grade.

—Mr. Robt. Bradford, of North Dakota, was here a couple of days last week visiting his cousin, Mr. J. B. McBride. Mr. Bradford is an old Elderslie boy, the family having lived on the farm now occupied by Mr. Jas. D. Watson, con. A.

—After successfully defending the Keystone trophy in games with three different challengers—Port Elgin, Southampton and Ripley, our local bowlers lost their grip on it when a Teeswater quartette beat them out on a close finish one day last week.

—A group of boys were pulled up with a short jerk last week when Constable Leitch brought them before Magistrate Gibson on a charge of disorderly conduct. They were found guilty and fined a dollar and costs.

—Rev. Malcolm Campbell, pastor of the First Presbyterian church, Montreal, is visiting at the home of his mother, Mrs. Campbell, Saugeen. Rev. Dr. Campbell, also of Montreal and clerk of the Assembly, is a guest at the same home.

—Mrs. H. D. Putnam was visiting in Toronto, returning last week accompanied by her daughter, Mrs. J. B. Fleming, who will remain for a few weeks.

—Robert D. McBride and Velma V. Winch, two students in Form III, Paisley Continuation School, are among the list who passed the middle school examination for entrance to the Normal School. Several students previously named secured their pending at Easter test before going to farm service for three months.

—Mrs. McLeay of Southampton, met with an accident a few days ago while visiting at the home of Mrs. Murd. McArthur, con. 1, Saugeen. She slipped on a cement step at the back door, and in falling sustained a broken hip. She was taken in an auto to Walkerton hospital. Being an aged person, the shock to her system is a severe one.

—Scofficld Russell had an adventure at the Methodist garden party that was not on the programme, and which provided an extra thrill for many who witnessed the incident. Scofield climbed up behind the refreshment booth to light a gasoline torch at dusk, and in doing so came in contact with the flame, which ignited his clothing in a couple of places. He leaped down at once and those standing near were able to quickly smother the blaze before he was seriously burned, but his skin was blistered in spots where the fire reached it.

—Mr. and Mrs. W. J. Chisholm were in town last week for a couple of days renewing acquaintances. Mr. Chisholm was formerly principal of Paisley schools and recently received appointment as a provincial inspector of public and separate schools. His office will be in Toronto. Mr. Chisholm is one of the most practical, competent and successful educational instructors that we have ever had in our midst, and his latest promotion attests to the value of his services in the higher sphere in which he has been engaged for a few years past, on the staff of the Normal school at Peterboro.

Presented with a Purse of Money

Miss Emily McInnes, of Ross St., has gone on a visit to friends in the west, accompanying Miss Nettie McIntyre, who was returning to her home in Regina. Before her departure Miss McInnes was presented with a nice sum of money by the members of Knox church choir, of which organization she has been a most faithful and valued member for a considerable number of years.

Saw Mill in Firm

Mr. J. P. Fisher has formed a partnership with Mr. Albert Pickard, of Wiarton, for lumber cutting purposes. The firm have rented the Fisher saw mill from the new proprietor, Mr. Armstrong, and will cut the timber standing on the old Collins farm, now owned by Mr. Fisher. Mr. Pickard will bring his family to town from Wiarton. He has rented a house on Victoria St. from Mr. D. McArthur.

NOTICE OF DISSOLUTION OF PARTNERSHIP

NOTICE is hereby given that the partnership heretofore subsisting between us, the undersigned, as Ballachey, Laidlaw & Co., in the village of Paisley, has been dissolved as from July 2nd, 1918, by mutual consent. All debts owing to the said partnership are to be paid to J. R. Laidlaw and all claims against the said partnership are to be presented to S. F. Ballachey, by whom the same will be settled.

Dated at Paisley, July 30th, 1918.

D. Forrester, (Witness) — S. F. Ballachey, J. R. Laidlaw.

NOTICE RE ACCOUNTS

THE accounts owing to the late firm of Ballachey, Laidlaw & Co. having been assigned to me, are now payable, and I request settlement of the same at an early date. Interest at 7 per cent. will be charged on all overdue accounts, also for all 1918 accounts, commencing Sept. 1st. Payment shall be made at the office of D. Forrester, Barrister.

Soils and Crops

By Agronomist.

This Department is for the use of our farm readers who want the advice of an expert on any question regarding soil, seed, crops, etc. If your question is of sufficient general interest, it will be answered through this column. If stamped and addressed envelope is enclosed with your letter, a personal answer will be mailed to you. Address Agronomist, care of Wilson Publishing Co., Ltd., 73 Adelaide St. W., Toronto.

THE LITTLE ENEMIES YOU NEVER SEE.

It is important that the barns and cattle yards be kept clean and sanitary to prevent the spread of infectious and contagious diseases. Whatever measures are taken should be reinforced by the intelligent use of chemical disinfectants. What shall we use? How shall we apply it? There are so many new products on the market that we are likely to lose sight of the virtues of some of the older materials in the maze of new preparations.

Many new products are greatly over-rated because in the hands of a careful user exceptionally good results will be obtained. Some of the older materials are discredited because of being used under improper or inappropriate conditions. Almost any substance will give good results under certain conditions when in reality the conditions and not the materials are unfavorable for the development of the disease germs. If the substances favorable as cultural mediums for the disease germs are cleaned up before the disinfectant is applied, an erroneous impression will be obtained as to the germicidal value of the disinfectant in question.

Heat and sunlight are the cheapest and most efficient agents for disinfecting dairy barns and cattle yards. Heat may be used to clean and sterilize the pails, cans, utensils, and mangers used in feeding the calves and cows. Sunlight will destroy most disease-producing germs if it can get at them. For the cattle yards a thorough clean up will result in a fairly effective disinfectant. The efficiency of the clean up will be greatly increased, however, if the surface of the yard is covered with a light dressing of fresh burnt lime. The use of lime in the yards not only destroys millions of these disease producing germs but it destroys the breeding places of flies and vermin.

Of the various chemical disinfectants that have been favorably recommended only a few meet the demands of efficiency, economy and practicability. Probably the cheapest and most effective product at the present time is bichloride of mercury in a dilution of one part to one thousand parts of water. It is poisonous and should not be used on metal stanchions and partitions because of its corrosive tendency. This proportion while very effective on clean floors, side walls and partitions is practically worthless unless the organic matter is thoroughly removed before it is applied.

Carbolic acid occupies a foremost position among disinfectants, but it is far too expensive at the present time to be used freely in the dairy barn. When used in a five per cent. solution it is very safe and efficient. During recent years coal tar products sold under a wide variety of trade names have become popular disinfectants and are gradually crowding out many of the older products. Some of the cresol solutions are effective disinfectants and if made by an honest concern can be depended upon to produce satisfactory results. These prepared disinfectants are cheap and effective agents for use in dairy barns, but on account of their strong odor they should not be used in the milk room and the milk should be taken from the stable very promptly after it is drawn from the cows.

No modern disinfectant excels freshly burned lime. According to laboratory tests freshly slaked lime possesses greater germicidal value than some of the phenol and cresol compounds on the market. It is important, however, to use fresh, water-slaked lime. When slaked the lime should be spread about the stable floors and in dark places where the sunlight seldom reaches. If it is desired to use the lime on the side walls and ceilings, it may be applied in the form of whitewash and is very effective if properly applied. Use the stone lime and water and apply while the mixture is still hot. It is best applied with a spray pump. The addition of other substances to make the material stick to the walls reduces the efficiency of the mixture and prevents it from filling the cracks and crevices, which are the favorite breeding places for germ life.

Before attempting to disinfect the premises it is important that all loose boards, litter and pieces of organic matter be cleaned up so that the substances may destroy all forms of germ life. It is a waste of time and money to disinfect a barn without giving it a thorough cleaning before applying the substances. It is useless to give the walls, ceilings and floors an application, of any material without going over the stanchions, mangers and feed alleys with some sort of disinfectant. Nasal passages of infected animals are usually highly infective and therefore the mangers and feeding racks must be given special attention.

For use on the teat cups of milking machines the spread of garget among the cows being milked a strong solution of lime water gives excellent results. Other materials, such as a salt brine, are equally effective but have a tendency to corrode the metal and injure the rubber on the cups.

Chemical disinfectants should not be depended upon as a cure-all or as a prevention of the spread of all diseases of the dairy cow, but used intelligently they are of great value in preventing the spread of infectious and contagious diseases and keeping down flies, vermin and foul odors about the barns and cattle yards.

Raspberry Leaf Curl.

In the interests of market gardeners and small fruit cultivators, this note on Raspberry Leaf Curl has been prepared at the Field Laboratory in Southern Ontario at St. Catharines, and is issued by the Central Experimental Farm, Ottawa.

This disease has been known for some time both under the above name, as well as under the name of Raspberry Yellows. Since the curling of the leaves is the most outstanding feature in connection with the disease, it is preferable to use the term Raspberry Leaf Curl.

The disease affects the leaves and shoots and is often confined to a single bush or part of a bush, some of the shoots being perfectly normal and others with the leaves affected. The affected shoots, instead of producing normal large, broad leaves, bear leaves which are conspicuously small and badly curled downwards. In the early stages this symptom is not so pronounced, and while a small amount of curling may occur then, the disease is more noticeable on account of the yellowing which takes place during the summer because of the unhealthy state of the foliage. Since yellowing of the leaves may be due to a number of other causes, such as wet feet, poor soil, drought, etc., it is best to determine the disease mainly by the Leaf Curl symptoms.

In the advanced stages, the canes bear no fruit. When first attacked, they flower almost normally, but the fruit is small and dry and shrivels up before ripening, so that little or no fruit is ever produced from an infected bush. Of the three varieties which are commonly grown in the Niagara district, Cuthbert, Marlborough and Herbert, the Herbert seems to be freest from the disease. The other two varieties are quite susceptible, but one rarely sees signs of Leaf Curl in the Herbert.

So far as is known the disease is not due to any parasitic organism. It apparently belongs to that type of trouble which has been called physiological disease, and could therefore be put into the same class with peach yellows and little peach, and the mosaic diseases of tomatoes, tobacco, potatoes and so forth. No records are available as to how the disease is brought into the field in the first place, nor how it is transmitted from one plant to another. It undoubtedly does spread once it becomes established in a plantation and many fine plantations are known to have been greatly injured by the presence of a large number of Leaf Curl plants. If the disease corresponds closely with the mosaic or yellow disease, one would suspect that it is carried either by insects or pruning operations.

Although too little is known about Leaf Curl to advise a sure means of control, one should always remove the affected plants as soon as they show signs of disease. They are of no use in any case and are likely to spread the disease to other parts of the plantation. In taking out Leaf Curl plants, one should be careful to get the whole of root system, otherwise the parts that are left will start to grow and produce new shoots which will also show Leaf Curl. It is possible that some of our Leaf Curl originates from nursery cuttings and some care should be taken when setting out a new plantation, to avoid this disease.—Experimental Farms Note.

GOOD HEALTH QUESTION BOX

Dentifrices and the Care of the Teeth.

The importance of the teeth is so great that every means of protecting them should always be welcomed.

Dentifrices do not take the place of ordinary care; they are not a substitute for the removal of those teeth which are hopeless and decayed nor a means for removing food between and around them, which decomposes, and causes decay of teeth, indigestion, offensive breath, etc.

But when combined with a suitable tooth-brush, properly used, they may help in the disinfection of the mouth, improve the condition of the gums and retard decay.

The frequent recurrence of receding and suppurating gums with decay and loss of teeth in Riggs' disease or pyorrhoea is one of the arguments for their better care and the persistent use of dentifrices.

The shockingly defective teeth in early life among the poor, especially in cities could often be prevented by suitable hygenic precautions, including the use of proper dentifrices.

People are beginning to realize the important bearing of teeth upon the general welfare.

It is impossible to resist disease successfully when the mouth contains innumerable colonies of disease germs, decayed teeth, suppurating gums, decomposing food, together with adenoids and enlarged tonsils.

Poor teeth are said to have emphasized the pain and distress of many of the soldiers in the trenches in Belgium and France, and they have suffered not only from toothache and neuralgia, but from the clumsy dentistry of their comrades.

A good dentifrice can be made by any competent pharmacist.

It is immaterial whether it is in the form of powder, paste, or fluid, so long as it is good and effective.

The pharmacopoelas of the nations of the world show plainly what a good dentifrice should consist of.

It should contain a fine powder of some alkaline substance, pink, red or black coloring material, fragrant powder to give body to the alkali and invigorate the gums, something to remove stains from the teeth and some kind of aromatic oil to deodorise the mouth and leave a pleasant and persistent taste after the dentifrice has been used.

Carbonate of lime, perhaps in the form of powdered oyster shells or carbonate of magnesium or cream of tartar is often used as the basis of a dentifrice.

Florentine orris root, camphor, myrrh, cinchona bark or sage leaves may be used for the invigorating substance; charcoal is often used to remove stains and absorb bad odors; carmine or cochineal to give the necessary color and oil of peppermint, cloves or cinnamon for the flavoring.

With these substances and knowing the condition of the mouth in a given case, it is a simple matter for a dentist or pharmacist to compound a good dentifrice and it would not be a difficult matter for any one who is accustomed to mixing and handling drugs.

QUESTIONS AND ANSWERS

Mrs. L. E.—Can infantile paralysis be cured? My little girl is suffering from its effects for seven years and I have been told by different authorities that it was incurable.

Answer—My advice to you would be to take the child to the Orthopedic Hospital in Toronto and have the condition examined. It is true that many of the cases of infantile paralysis remain permanently paralyzed, to a greater or less extent, but an expert opinion on the subject would be desirable for you.

L. P.—1. I should think it probable that you were suffering from some form of neuralgia. 2. If walking seems to relieve you, the best thing for you to do is to continue with this means of relief, massaging the feet and legs regularly every night, in addition to the walking.

THE COMMUNITY DRYING PLANT

One Hundred Families Can by This Means Insure Most of Their Winter's Food Supply.

The Canada Food Board conservation programme has emphasized the great importance of drying vegetables, fruits and all perishable foods. If each community would in fact save enough home-grown food to care for the needs of that community, thus doing away with the habit of depending upon factory-canned products during the winter time, it would be a very material aid to the government, relieving the burden of transportation and allowing all surplus food to go directly for export.

Aside from the aid given to the government by saving in the community the winter's food supply, the preservation of perishable products either through canning or through drying is highly desirable from an economic standpoint. Because of the stimulus given to food production, an enormous surplus of garden stuff has been produced last year and this year. There is no possible market for this perishable stuff aside from the local demand and much of it will necessarily go to waste unless it is preserved for winter use either by canning or drying.

In either canning or drying it is very practical for several families to club together for doing this work. Equipment can be purchased jointly and installed in the schoolhouse or in a vacant store or at the home of one of the members of the enterprise. A committee can be selected to purchase the equipment and superintend the work. Where a number of families do canning or drying together it becomes possible to do the work much more cheaply than it can be done in the individual home and also permits a trading of supplies so that each family can have a variety of products.

A typical drying plant consists merely of a cabinet about sixteen feet long, two feet high and three and one-half feet deep. The inside sides and floor may be made of flooring or ungrooved ceiling or compo board. The top of the cabinet is placed by hinged doors.

The cabinet is divided into five sections, four of which are large enough to accommodate two steks of drying trays of ten each. These trays are of convenient size for community drying, being one and one-half feet wide, three feet long, two inches deep, made of half-inch material for sides and braces and pearl-wire screen for bottom with wire screen at one end. The trays are inserted in the cabinet from the top and may be placed in one at a time. The compartments are lettered and the trays are numbered so that the product of each patron can be identified.

An exhaust fan is placed at one end of the cabinet. This fan may be operated by electricty or by a gasoline engine, and the air should be drawn through the cabinet at a rapid rate. The plant is operated by an electric motor of two to five horsepower or by a gasoline engine of similar power. The end opposite the fan is covered with ordinary wire screen so that flies may be kept from the drying fruit or vegetables. Air should enter the cabinet at a rate of not less than one thousand feet per minute and even better results will be secured if the speed is greater. A good test of this air movement is to see if a piece of card-board or a straw hat can be held against the screen at the in-take end of the drier by the suction produced.

The patrons have their vegetables and fruits all prepared when they come to the plant. Two or three slicing machines are provided for the convenience of those who do not have them at home. Every person is urged to have everything in readiness before bringing to the plant, even to the slicing.

A plant such as this has a capacity of one hundred trays, which will take care of about twenty-five bushels of green vegetables per day.

After drying, the product can be stored in jars, paper receptacles or any place where the product will be kept dry and away from the insects. No heat is used in connection with these driers, although it would be well to locate the drier with the open end in a room where a fire could be built, so that, if a prolonged wet spell came, the relative humidity of the air could be lowered by the heat of stove or furnace.

All manner of fruits and vegetables may be dried successfully if due attention is paid to their preparation. Corn, peas, beans, carrots, apples and the like turn out unusually well.

The dried product can be stored in fruit jars, paper sacks or tins. Moisture, insects and rodents are the enemies to watch for but it is easily possible to avoid them. In preparing the dried product for use it is only necessary to soak in water long enough to get back the normal supply. This will depend on the product, soaking over night being the usual rule. When you dry vegetables or fruit in this way all you take out is the water. The food value and the flavor remain. Put back the water and you have the equal of the fresh product.

Dairy

Sweet Corn and Cows.

Sweet corn and dairying are the twin horses on which a number of farmers have ridden to independence. For the sweet corn there is a good market at canning factories, often sold to on contract. The cornstalks are put through cutters and stored in silos. Other parts of the farm produce hay for the dairy herd, which in turn furnishes year-round employment and year-round income, besides contributing to solve the fertilizer question.

John E. Potter was one farmer who made good with cows and sweet corn. Mr. Potter bought an intervale farm capable of carrying, at the time of purchase, 12 cows and 3 horses. In six years the same land carried 35 cows and 6 horses, and the retail sales of milk in town reached 480 quarts a day. He raised 20 acres of sweet corn. In one average year his sweet corn brought $2,000 n cash, and his milk $6,000. He doubled his barn room in these six years, built two silos, and cut off 60 acres of woodland for pasture.

Of course, a farming business of this type cannot be built up in every locality, nor by every man. Canning factories are not always close at hand. Mr. Potter's farm was only a mile from town, so that it was possible to retail milk. Moreover, he had lots of push and business ability. Given the proper business conditions—and they exist on hundreds of farms—sweet corn and dairy cows will make good.

who has sold his wool both ways, and note what he says—or, better still, write us for our prices; they will show you how much you lose by selling to the General Store.

We are the highest prices of any firm in the country and are the largest wool dealers in Canada. Payment by remitted the same day wool is received. Ship us your wool to-day—you will be more than pleased, if you do, and are assured of a square deal from us.

H. V. ANDREWS

13 CHURCH ST., TORONTO

TORONTO FAT STOCK SHOW.

The Toronto Fat Stock Show, who are running an advertisement in this issue, have been steadily adding to their premium list, and this year are offering a prize for the best carload of cattle in the show. A few months more feeding might land this for one of our feeders. The cash premium and the big price always obtained in auction sale of prize winners would more than recompense him for the additional time and feed required.

Head Lice in Chickens.

The chicks should be gone over for lice—the head lice are the worst. If the brooder and the surroundings are kept clean as possible there should not be much fear of head lice. Should they appear, however, an application of ointment of some kind should be used at once. If this is not available, use vaseline, olive oil or sulphur and lard. Every head will have to be gone over and the treatment will have to be repeated in a week. It is a troublesome task to go over several hundred young chicks, but it must be done, each head by itself. Rub the paste well into the scalp and around the ears. Some use coal oil, but it is too severe and has been known to kill the chicks about as quickly as lice. Head lice in chicks are sometimes hard to locate. The chicks may be listless, getting thin, wings down, feathers ruffled, and dying off one by one. Upon examining the heads one can see nothing running around and all that appears is what looks like young feathers sprouting out of the head. To make sure that they are there, take some of the ointment and apply thoroughly to the head. Put the chick in a box and examine in a few minutes, time. The young leathers will be gone and large bodied lice will be running for their lives. The "feathers" were the abdomens of the lice, the head and rest of the bodies being buried into the head of the chick eating away at the tissue. It takes only a few days to have a whole flock cleaned out. Absolute cleanliness is the best preventative.

During the picnic season when thousands of people throughout the land gather together for social purposes, a great deal of food is wasted. People seem averse to carrying remnants of luncheons home with them. Waste of this kind should never occur. It has been suggested, therefore, that if signs were posted around picnic grounds, setting forth the fact that in time of war picnickers should not throw away food but take it home and use it, a saving might be effected. Besides effecting a food saving, the signs will serve to call the attention of the people to the serious food situation.

Horse Sense

At present prices for hay and grain feeds many farmers will find it profitable to depend more upon the use of pastures for horses. Where one has a small pasture near the buildings no time is lost in getting the teams up in the morning. The horses keep cleaner on pasture than in the barn, and there is a saving in bedding material as well as in labor in cleaning the stalls and hauling out the manure. If fed sufficient grain feed there is no danger of the horses becoming soft, especially after the grass becomes more fibrous. The beneficial effects of the hay ration during the hot weather are more than offset by the detrimental effects of standing in close, stuffy stables. As a rule, the condition of the horses themselves will furnish a good indication of whether pasture suits them or not.

Sheep Notes

One of the best and cheapest ways to control weeds on farms is to keep a flock of sheep. In addition to controlling weeds without cost, sheep will render a profit by producing food and wool. If weeds are not permitted to grow and develop leaves they will die, but it would require a great amount of hand labor to keep most of the weeds under control by this method. Sheep will keep the weeds down and the more weeds they eat the less will be their cost of upkeep and the greater will be the supply of feed released for other stock. Many rough or permanent grass pastures that require mowing can be kept clean by the use of sheep, while at the same time the cattle-carrying capacity of the pasture is increased.

FUNNY FOLD-UPS

CUT OUT AND FOLD ON DOTTED LINES

Willie wrote a little song,
I hope somebody buys it;
Fold him up and listen while
Our young composer tries it.

The Pirate.

Oh, I am a Pirate blithe and bold,
And I scour the rolling sea;
And every craft
That the brave winds waft
Must give an account to me.

For the ships I hail are the Hearts of Men,
And out of their holds I bear
Ingots of gold
And gems untold
That long had lain hidden there.

And if I discover among the crew
Hate, Envy, Anger or Pride,
I laugh out a grim
"Away with him!"
And I toss him over the side.

Oh, I am a Pirate blithe and bold,
And I steer by the stars above;
The Men of my crew
Are Angels true;
And the Name that I bear is Love.

Seasonable Designs

This is an adorable romper for the tiny tot. McCall Pattern No. 8410. Child's Dress Romper. In 4 sizes, 6 months to 4 years. Price, 10 cents.

Quite refreshingly cool is this delightful frock of figured chiffon. McCall Pattern No. 8394, Ladies' Semi-Fitted Dress. In 6 sizes, 34 to 44 bust. Price, 20 cents.

These patterns may be obtained from your local McCall dealer, or from the McCall Co., 70 Bond St., Toronto, Dept. W.

TAPPINGS SAVED PRISONERS.

Rescued Crew of Hun Submarine Would Let Baltons Drown.

In the course of a recent lecture in London on the Zeebrugge operations, Naval Paymaster Collingwood Hughes narrated a story illustrative of German cruelty and callousness. He said a patrol boat discovered a derelict German submarine from which it rescued the crew. The commander was assured by the German captain that there were no others aboard and he was about to blow up the boat and sink her when he heard tappings from the inside. A search revealed four British seamen tied up as prisoners. "The Germans," the lecturer added, "were going to allow these poor fellows to be buried into eternity after their own lives had been saved."

Combine The Grains

That's what is done in making Grape-Nuts food — barley and other grains are used with wheat. This adds to food value and flavor, and the sum total requires less wheat. The malted barley in Grape-Nuts also helps digest other foods. For an economical, nourishing and delicious food, try

Grape-Nuts

Canada Food Board License No. 8-024.

STRONG SYSTEM OF RAILROADS

HAS GROWN UP AT NEW BATTLE FRONT IN FRANCE.

Canadians Worked Untiringly at New Defences in Which Railways Have Prominent Part.

Behind the new fighting line since the Huns' advance in April there has grown up a network of strategic railways, making a formidable system which more than compensates us for the loss of those lines we had to abandon and destroy in our retirement. Almost from the day the enemy crossed the Nord Canal practically every battalion of Canadian railway troops has been working unceasingly at the task, some units acting as pioneers in the construction of the great defence line that causes the Huns to hesitate on this sector.

Little French villages that never hoped for steel links with the larger cities have now become, as if by the rubbing of some magic Aladdin's Lamp, great junctions where trainloads of supplies come and go every part of an hour. The new lines run through the fertile fields of growing crops, and careful building has saved the Frenchman his harvest, but for the necessary strip of permanent way. There are alternate routes around towns which the Hun might shell, and day by day stores of carefully concealed ammunition dumps grow up, which are fed by the strips of steel.

Stronger Than on the Somme.

"Speaking from a strategical point of view," said a railway staff officer, "we are in a better position to-day than we were on the Somme. The hundreds of miles of new track have been built specially for military use, and conform with the fighting front. All possibilities have been considered. Where, previously, we had to rely on civilian built lines, which would tediously round the country by indirect routes, we now have a military system which takes our supplies in the quickest and most direct way to where they are needed. The latest German thrust gave us the first test of the system, and divisions were shifted with a speed that must have surprised the Huns."

In the same way some of the Canadian auxiliary troops have been working untiringly in the gun spurs behind the new front, off which the big howitzers pound the enemy positions. One battery from the middle West has the record of having, twelve of them, in a week, and each one was cleverly camouflaged from the prying eyes of Hun airmen.

New Defences Powerful.

From the new railheads, many of which have been christened with Canadian names, there street freshly constructed light railway systems that wind their way through little valleys still screened from the enemy to the fine new reserve trenches, which have not yet had to be used, and perhaps never will be. You cannot run trains over a line drawn in blue pencil on an ordinary map, and the railway engineers have to build scores of miles that might be used. They must be there for an emergency.

The construction of the new British defences—railways play a prominent part—have been marvelously complete, and have been so rapid that before the Huns could take breath for another stage of attacks on this Northern section the fabric of a fortress faced them, and grew into such menacing shape that he hesitated. Now, if he takes another fling at the middle road to the coast he will have to pay the same great price in blood. The "army behind the army" has done its duty and built well—even better than it destroyed in the somber days at the end of March.

SOUR AND CLAMMY BREAD.

Letter Tells of Food Conditions in Paris at the Present Time.

Following is an extract from a recent letter from Paris: "As you may know, no white bread is to be bought in Paris, and I am told that in some parts of the provinces conditions are even worse—that bread of any sort is difficult to get. The quality of the bread in Paris is very poor. It is mixed with many substitutes which do not seem to respond to the yeast. It is generally sour and clammy, and has made a number of people sick. Besides no white bread, there is no cream or sugar or butter desserts of any kind except stewed and fresh fruits served in any hotel or restaurant; and no cheese is served if the cost of the meal exceeds a dollar and twenty cents. Imagine sitting down to the early French breakfast at a hotel like the Ritz, in Paris, and being served sour war bread and this miserable French coffee which tastes like chicory and soft soap, and then being told that you could not have butter for your bread, nor sugar nor cream for your coffee."

"Foresight is very wise, but foresorrow is very foolish; and castles are at any rate better than dungeons in the air."—Sir John Lubbock.

Take all odds and ends of soap, tie them up tightly in a piece of soft flannel and dip them in boiling water until soft. Then place in cold water until firm and hard. Remove the flannel and you have a nice ball of soap ready for immediate use.

WHEN RAZZLE-DAZZLE RAN AWAY

EXPLOIT OF A BRITISH TANK IN FRANCE.

Captain Fallon and the Crew of Seven Men Escaped but Where Was Joffre?

We have plenty of outside news of the doings of the British tanks; but inside stories of their exploits are few. So much the more interesting is Capt. David Fallon's account of his adventures while in command of one.

"The dear girl," he begins affectionately, "was named Razzle-Dazzle. She was very young, having been in service only three months, but rather portly. Matter of fact, she weighed something over thirty tons. And in no way could you call the dear little woman pretty . . . . The fact is that she showed every aspect of being a bad, scrappy old dearie. The minute I saw her in her lovely ugliness I knew she would like trouble, and lots of it."

He was quite right; she did. It was at Beaumont-Hamel that she found it when she started forth for the enemy trenches and a fortified sugar mill beyond. Because of long experience with rapid-fire guns, although he had had none with tanks, Capt. Fallon was drafted at an hour's notice to replace her captain.

"It was all new to me, but highly interesting," Captain Fallon related. "My crew consisted of seven men—five of whom were well experienced—and a black cat. Although she was a lady cat, she had been named Joffre. She was very friendly and insisted on sitting either on my knee or shoulder from the moment I seated myself and my men in the tank.

"When the order came to advance, Razzle-Dazzle, groaning, grunting and lurching, got under way slowly but efficiently, waddled across no man's land, crushed the enemy's barbed wire to messes of steel spaghetti and smashed through his trenches, throwing up the earth ahead in chocolate showers of spray, as if the ground we rode over were an angry sea of mud.

18 Guns Blazed At Us.

"Every man in the tank was shouting and yelling with the excitement of the thing, and we were tossed up against each other like loosened peas in a pod. Only Joffre remained perfectly cool. Somehow she maintained a firm seat on my swaying shoulder, and as I glanced round to peer at her she was calmly licking a paw and then daintily wiping her face. We rocked and plowed out of the trenches and went swaying toward the refinery. They had seen us coming, and every window facing us exhibited a working gun. There were sixteen such windows. They all blazed at us. . . . .

"My notion was to circle the mill, and I gave orders accordingly. But the Razzle-Dazzle's chauffeur looked at me in distress.

"'The steering gear's off, sir,' he said.

"'Stop her, then, and we'll let them have it from here!' I ordered.

"He made several frantic motions with the mechanism and said:

"'I can't stop her, either.'

"And the Razzle-Dazzle carried out her own idea of attack. She banged head-on into the mill. She went right through a wide doorway, making splinters of the door; she knocked against concrete pillars, supports and walls, smashing everything in her way, and bowled out of the other side just as the roof crashed in and apparently crushed and smothered all the artillerymen beneath it.

"On the way through, the big, powerful old girl bucked and rocked and reared until we men and the black cat inside her were thrown again and again into a jumble, the cat scratching us like a devil in her frenzy of fear."

So far, the runaway had triumphed; but disaster awaited her in a huge shell crater dead ahead. She slid and wallowed to the bottom, but could not climb out, and the Germans soon got her range with big shells. Her crew abandoned her, and presently a shell reached her tank, and with a bang and a great flare of blazing oil she met her fate. Capt. Fallon and the crew returned in safety to the British lines—at least, all but one. That one, although missing, was certainly not a prisoner; having nine lives to her companions' paltry one apiece, she probably also survived. Capt. Fallon, forgiving her his scratches, magnanimously hopes that she did.

"I wonder," he concludes his narrative, "what Joffre thought of it all? I don't remember seeing her when we fled from the tank except as something incredibly swift and black flashed past my eyes as we thrust up the lid. I sincerely hope she is alive and well, 'somewhere in France.'"

Eggs should be gathered at least twice a day now. This will prevent beating and reduce percentage of "dirties."

Honey, maple syrup, molasses and corn syrup should be used where possible, leaving cane sugar for our soldiers and allies.

Nothing will cause indigestion and general disorder in chickens quicker than food which is musty or mouldy. Look out for beef scraps particularly. It can be quickly tested by pouring a little boiling water on a small amount. The odor will tell whether or not the scrap is good.

WOMEN! IT IS MAGIC! LIFT OUT ANY CORN

Apply a few drops then lift corns or calluses off with fingers—no pain.

Just think! You can lift off any corn or callus without pain or soreness.

A Cincinnati man discovered this ether compound and named it freezone. Any druggist will sell a tiny bottle of freezone, like here shown, for very little cost. You apply a few drops directly upon a tender corn or callus. Instantly the soreness disappears, then shortly you will find the corn or callus so loose that you can lift it right off.

Freezone is wonderful. It dries instantly. It doesn't eat away the corn or callus, but shrivels it up without even irritating the surrounding skin.

Hard, soft or corns between the toes, as well as painful calluses, lift right off. There is no pain before or afterwards. If your druggist hasn't freezone, tell him to order a small bottle for you from his wholesale drug house.

CROP PROSPECTS GOOD.

Railway Official's Conclusions Following Western Tour.

"After an extended tour through the west, both over the C.P.R. and other lines, during which I looked carefully into crop prospects, I think it is safe to conclude that, with the increased acreage under cultivation, Western Canada this year will produce at least as many bushels of grain as last year, provided, of course, that conditions continue as favorable as they are at present." This was the statement made on July 15th by Mr. C. E. McPherson, assistant passenger traffic manager of the C.P.R. at Winnipeg, while in Montreal on a business trip.

Mr. McPherson said that in some parts of Alberta and Saskatchewan drought and winds had cut into the possibilities of the harvest very seriously, while in larger districts recent rains had helped the growing grain along wonderfully, so that where a few weeks ago there was little in sight it now seemed likely there would be at least fair crops. In Manitoba, which province had during recent years fallen behind in wheat production, Mr. McPherson said the prospects were particularly good, with a largely increased area of wheat acreage, and every prospect of abundant yields.

So far as passenger business was concerned, Mr. McPherson said that the roads in the west had never done better than during the present year. As to American tourist business, particularly toward the far west, Mr. McPherson said it was too early to make any predictions, but the prospects pointed to at least as good a season as last year, while the number of visitors to the Rocky Mountain resorts was well up to the average.

SOME TREES DANGEROUS.

Plane-Tree a Disseminator of Disease —Limes Attract Lightning.

The plane-tree, of which many fine examples may be seen in the London parks, is a disseminator of disease. In the spring of the year this tree is responsible for an increase in bronchitis, catarrhal irritation, and severe post-nasal catarrhs, the result of inhaling the tiny spicules which are liberated through the breaking up of the fruit balls.

Lime trees, although not dangerous in themselves, appear to have a peculiar power of attracting lightning. A large percentage of the people killed by lightning in the British Isles owe their death to having taken shelter under these trees.

Elm trees are particularly dangerous owing to the manner in which their limbs snap, often on a quiet summer day, and without the slightest warning. This peculiarity is well described by Kipling in the following lines:

"Elum she hateth mankind, and waiteth
Till every guest be laid,
To drop a limb on the head of him
That anyway trusts her shade."

The dangerous nature of the laburnum is not as well known as it should be. The leaves, seeds, flowers, and even bark, of this tree are all poisonous.

Minard's Liniment Cures Diphtheria.

"It is not what stays in our memories, but what has passed into our character, that is the possession of our lives."—Phillips Brooks.

SPRUCE USED FOR AIRPLANES.

Increased Demand Causes Attempt to Turn to This Species.

So great is the demand for airplane spruce by the Allies that eastern as well as Sitka spruce is now being used. Canada has large resources of eastern spruce, which has hitherto been used mostly for the manufacture of pulp, paper and lumber, and the British War Mission is at present trying to secure in eastern Canada as large an amount as possible of the grades suitable for airplane manufacture.

Eastern spruce has for some time been used for airplane construction in the United States, although only a very small percentage of this timber is sufficiently clear for this purpose. Tests made by the United States and Canadian governments show that where material of suitable quality can be found, this species serves admirably for airplane construction and may be expected to supplement the supplies of Sitka spruce from the Pacific Coast, which are only now beginning to approach adequate proportions.

The timber for use in airplanes has to be sawed parallel to the bark, instead of parallel to the axis of the log, as is done for lumber. In this way, straight-grained boards are obtained, having the highest possible percentage of material free from knots and possessing a maximum of strength.—C.L.

LEMONS MAKE SKIN WHITE, SOFT, CLEAR

Make this beauty lotion for a few cents and see for yourself.

What girl or woman hasn't heard of lemon juice to remove complexion blemishes; to whiten the skin and to bring out the roses, the freshness and the hidden beauty? But lemon juice alone is acid, therefore irritating, and should be mixed with orchard white this way. Strain through a fine cloth the juice of two fresh lemons into a bottle containing about three ounces of orchard white, then shake well and you have a whole quarter pint of skin and complexion lotion at about the cost one usually pays for a small jar of ordinary cold cream. Be sure to strain the lemon juice so no pulp gets into the bottle, then this lotion will remain pure and fresh for months. When applied daily to the face, neck, arms and hands it should help to bleach, clear, smoothen and beautify the skin.

Any druggist will supply three ounces of orchard white at very little cost and the grocer has the lemons.

The Power of Producing Wealth.

The power of producing wealth is therefore infinitely more important than wealth itself; it insures not only the possession and the increase of what has been gained, but also the replacement of what has been lost. This is still more the case with entire nations (which live out of rents and rentals) than with private individuals. Germany has been devastated in every century by pestilence, by famine, or by civil or foreign wars; she has, nevertheless, always retained a great portion of her powers of production, and has thus quickly re-attained some degree of prosperity.

This is to certify that fourteen years ago I got the cords of my left wrist nearly severed, and was for about nine months that I had no use of my hand, and tried other Liniments, also doctors, and was receiving no benefit. By a persuasion from a friend I got MINARD'S LINIMENT and used one bottle which completely cured me, and have been using MINARD'S LINIMENT in my family ever since and find it the same as when I first used it, and would never be without it.

ISAAC E. MANN,
Metapedia, P.Q.

Aug. 11, 1908.

Farm Help at Right Time.

The Canadian farmer does not want gifts next Christmas. He wants help for the harvest, and harvest time will be soon. 12,000 men are needed for Ontario, 12,000 in Quebec, 10,000 in Manitoba, 20,000 in Saskatchewan, 6,000 in Alberta, and 2,000 in British Columbia. New Brunswick needs all her own men she can enlist, and has none to spare. Nova Scotia needs all her own men, so does Prince Edward Island. Help will have to come from the towns and cities, and the time to make arrangements is now.

Minard's Liniment Cures Distemper.

"Cash and Carry" Pays.

A customer of an Ottawa store, which has cut its prices on a cash and carry basis, writes: "I saved exactly four dollars and eighty-seven cents last month, buying in "The Groceteria." I bought the usual amount of goods because I wanted to prove for myself the economy of the "Cash and Carry" system. Now I am fully satisfied that it pays; besides I had no worries about the delivery."

The Paisley Advocate

PAISLEY, AUGUST 7th, 1918

—While the farmers of this country should assume their proportionate share of the business of legislating for and governing our affairs, should they by organization send a large number of representatives to parliament and legislatures with the object of advancing only the interests of their own class, they will not be improving our legislative status a particle. There is too much class legislation as it is, even in Canada. What we need most is legislation that considers nothing but the interests of the people as a whole.

LANDS FOR SOLDIERS

Major Moffat, of the now defunct 160th Batt., is back from England, having been returned because he is over military age. He has an offer to accept the position of Major in the American army, but was asked by the special committee which met in Walkerton last week to go along with experts from Ottawa and Toronto to select lands in the Peace River District, about 50,000 acres, or on the clay belt in New Ontario, whichever is the most suitable location for soldiers of the 160th or others from this county who will settle in a community. This is no visionary scheme and is likely to be carried out as soon as the soldiers return when the war is over. The soldiers' problem is a big one and it is felt they would be better satisfied if they lived in a community on adjoining farms. The Bruce County committee that has charge of this scheme is composed of C. M. Bowman, M. P.P., W. D. Cargill, M.P.P., Wm. McDonald, M.P.P., Sheriff Jermyn, Messrs. A. E. McNab, J. J. Mickle and W. D. Bell. The committee will welcome suggestions for any scheme to help out their plans. Messrs. Cargill and McDonald have an appointment with the Ontario Minister of Lands, Forests and Mines tomorrow in regard to suitable lands along the Grand Trunk Pacific line of railway.—Chesley Enterprise.

A few weeks ago The Advocate published the extended explanation of the land scheme for returned soldiers, which was furnished by Major Moffat. It will perhaps be generally admitted that if soldiers are desirous of going on the land, apart from returning to their home farm or neighborhood, the community plan would be preferable to settling them on isolated homesteads, where the usual experience of pioneering would have to be gone through before life would begin to be enjoyable. The idea of applying the plan to the settlement of a single battalion, however, is a doubtful proposition. To induce the prospective farmers of the whole Canadian army would be more feasible. Not that all should be planked down on one block of land, but that enough men could be rounded up to organize communities at different points and carried on with some chance of success. We look upon the community system to be an improvement over the individual system, but could put no faith in that plan which provides a fat berth for the organizer, while the real workers dive up the proceeds of their labor that are left after paying the official salaries. Oh, no, what we wish to see is a community in which every one is a communist, and takes his chances equally with the other fellows. Before going to spy out land for the project, the men authorized to do so might do a little investigating as to what part Major Moffat proposes to play in the scheme. It can be safely said that among the soldiers who have already returned from doing their bit on the fighting line there can be found men who will be better judges of land and the farming question than the major who has just arrived back from the training front, and would be more entitled than he is or can be to any easy money that might be expended in connection with the scheme. There may not be two score Bruce County soldiers desirous of accepting land as their reward for services, and in that case the Government would have no right to insist upon them taking to farming. Every man who enlisted and stays in the fight until he becomes incapacitated or sees the finish of the campaign is entitled to some choice as to the compensation he is to receive at the hands of the country and people for whom he went out to fight. By all means give the returning boys all the land they want, but don't force it upon them. And let the conditions be the most favorable that can be secured for all who prefer farming for the future, but don't allow the good things to be handpicked by those who have done no fighting.

WHISKEY SHIPPED AS "BALED HAY"

The biggest seizure of whiskey ever made in Guelph, or even in Western Ontario, was pulled off at Guelph by License Inspector James O'Brien on Saturday morning, and had it not been that the head of one of the barrels broke open the liquor would have been safely delivered to the parties for whom it was intended. The result of the breaking in of the barrel head while being handled is approximately $8,000 worth of Goodsham & Worts whiskey now lying on the C.P.R. tracks under guard.

The whiskey came to Guelph on Friday hidden in a car labelled "baled hay, and addressed to the Imperial Mattress Company, a concern that has no legal existence so far as is known. It was billed from a suburb of Montreal and the whiskey was in 40 barrels, containing ten dozen quart bottles apiece, so far as can be learned, for only one of the barrels was opened. To the casual observer who might pass the car all appeared to contain was baled hay.

—Printing Invitations is part of THE ADVOCATE'S business.

LOCAL AND DISTRICT NEWS

Collapsed from Shock

During a severe crash of thunder here on Thursday evening last, Mrs. Jos. Bailey, of Paisley, while visiting at Mrs. Gordon Bairs, collapsed from the shock, and Miss Brillinger, nurse, has been attending her for a few days.—Herald and Times.

S. O. S. Medals

Thirty young lads from thirteen to nineteen years of age in this village and vicinity are now wearing the Sons of the Soil bronze medals which were presented at a public meeting in the town hall on the evening of July 24th. Mr. Wm. McDonald, M.P.P., made the presentations, and also gave an address. Another speaker was Mr. T. W. Brock, of the Organization of Resources Committee. Mr. D. R. Cowan, Supt. of S. O. S. work, was also present. Mr. Thos. Muir was chairman of the

Methodist Garden Party

The Ladies' Aid of the Methodist church realized over $100 at the garden party held under the auspices of the church grounds on the evening of July 25th. The programme included solos by Miss E. McInnes, Miss Lottie Kerr and Mr. A. Pfaff, recitations by Mr. Harry Stevens of Chesley, selections by a ladies' chorus and a male quartette. Rev. Mr. Walker, the new pastor, was chairman and gave an interesting talk on Japan, in which country he spent six years as a missionary. The ladies served a very nice supper to all who attended.

Paisley Soldier a Prisoner of War

A message received by Mr. and Mrs. Alex Jack on July 27th brought the news that their son, Pte. Harry Jack is officially reported missing and believed to be a prisoner of war. Pte. Jack enlisted as a bandsman with the 160th Bruce Battalion, but after this battalion was broken up he went to France as an infantryman and had been in the trenches for a few months before meeting the fate of a captive combatant. Harry was one of the best known and most popular young men of our town. He had been employed since boyhood in Batchey, Laidlaw & Co's store, with the exception of a year or two when he was travelling for a city firm. We all trust that when hostilities are over Pte. Jack may be among those who will figure in the exchange of prisoners.

High Taxes for the Village Ratepayer

The Paisley tax rate will total up to thirty-four and one-tenth mills on the dollar for this year. At the council meeting on Thursday the village rate was made up at 11 mills, the county rate is 6 9-10 mills, school rate 7 3-10 mills, while the local improvement debentures, general debenture covering carpet factory and Willow Creek bridge, and the school debentures aggregate another 8 9-10 mills—total 34 1-10. In addition there are the sanitation and street watering frontage tax. Not until the war is over, when there will not be the call for heavy county grants towards various patriotic funds, will there likely be any reduction in our annual handout to the tax collector. In two years more the carpet factory bylaw item will be wiped out of the village rate, but by that time there of disorderly conduct. They were to be made that will require a levy.

Death of Mrs. Robt. Bell

Though very sad, indeed, the loss of wife and mother in a home, the death of Mrs. Robt. Bell on Saturday evening came as a relief from great suffering, as she had been afflicted with cancer of the liver, a malignant disease with which medical or surgical skill cannot cope. Everything possible had been done to eradicate or stay the disease. Mrs. Bell had been a resident amongst us ever since her marriage 25 years ago, and was highly esteemed by her circle of friends and acquaintances. Her maiden name was Catherine Hermeston, and she was born in Normanby Tp. She was 50 years of age. Besides the sorrowing husband she is survived by one son, Reggie, who is training with the Royal Flying Corps at Toronto, and Gladys at home. The deepest sympathy is felt for them in their bereavement. The funeral took place on Tuesday afternoon to the Paisley cemetery. Services were conducted by Rev. H. Walker, pastor of the Methodist church.

Death of John Reptke

On Wednesday, July 31st, Mr. John Reptke, of 6th Bruce, passed away after an illness extending over two years, from pernicious acnemia. The deceased was 55 years of age. He was born in Carrick Tp., and had been farming in Bruce Tp. for 31 years. He was married to Lydia Hetkey of this place, who survives him, with two of their children, Irvine and Pearl. The funeral on Friday was attended by a very large number of people who had come to pay their last respects to the departed. The services were conducted by Rev. Mr. Liebold of the Evangelical church, of which congregation the deceased was a member. Among the friends from a distance were Mr. and Mrs. Jos. Reptke from Guelph, Mr. Wm. Erhardt from Hespeler, Mrs. J. C. Helkey from Drayton, Mr. and Mrs. J. Wendt from Wroxeter, Mrs. C. Wendt, Mrs. R. Schwalm and Mr. W. Wendt from Mildmay, Mrs. J. Deacon and son from Hamilton, Mrs. Fred Schmallback and son and Mrs. Fred Schmallback from Owen Sound, Mr. and Mrs. Fred Millhouse and Mr. Arch. Millhouse from Chesley.

NOMINATION MEETING

TAKE notice that a meeting of the ratepayers of the Village of Paisley will be held at the town hall on Monday, the 12th day of August, from 12 o'clock noon until 1 o'clock p.m., for the purpose of nominating one or more candidates for the office of Public School Trustee, made vacant by the removal from Paisley of F. C. Ryan, Esq.

Further, take notice that in the event of a poll, polling will be held o'clock a.m. until 5 o'clock p.m., at the usual polling places.

J. C. GIBSON, Returning Officer

The Greatest of Great Garden Parties.

The superlative degree of success was attained by the Centre Bruce Presbyterians in the garden party record, as the one they held at the residence of Mr. Alex Mewhinney on Thursday evening of last week surpassed, in point of attendance and receipts, any other ever held in this section. Gate receipts were $304, and the proceeds at booth $154—total $458. We are informed that there were nearly two hundred motor cars lined up on the road sides, and some of these came from Chesley, Kincardine, Cargill, Port Elgin, Paisley and even more distant points. As usual at Centre Bruce garden party, the grounds were well lighted, gasoline torches and wood fires furnishing the illumination. The committees in charge had all arrangements well in hand, and provided a first-rate entertainment programme. Mr. J. J. Hunter, of Kincardine, was chairman, and presided with marked acceptance and ability. An address was given by Mr. E. R. Sayles, of Port Elgin, solos by Miss Nicholson, Mrs. Duncan McDougall, Messrs. W. McKay and A. Pfaff; recitations by H. Stevens of Chesley, F. Sellery of Kincardine, and Mrs. J. G. McKay of Lorat; vocal quartette by Miss Currie, Mrs. McKay, Thos. Currie and Jas. Irwin; violin music by Geo. Snowdon and W. Parker; selections by the Centre Bruce choir, and lively music by Kincardine pipe band, with special selections by Mr. Young, the leader.

Eye Glasses that Don't Slip or Pinch.

When we fit eye glasses they fit firmly, yet comfortably, as near the eyes as the lashes will allow, each eye looking exactly through the centre of each glass.
Comfort assured.
Satisfaction guaranteed.

—Mrs. Arch. McCannel, mother of ex-warden Alex McCannel, suffered a fracture of the hip on July 12th. Mrs. McCannel, who is 85 years of age, was sitting in a chair at the home of her daughter, Mrs. Craig, at Burgoyne, watching the men at the haying. When she rose from the chair she must have twisted her body, for it was then that the fracture occurred. The old lady is resting comfortably, but naturally at her age recovery is not expected.—Southampton Beacon.

OUR BOYS IN EUROPE AND HOME PROTECTION

The men on the firing line represent the pick of our country's youth. Many were rejected because of physical deficiency. Many times the kidneys were to blame.

If we wish to prevent old age coming on too soon, or if we want to increase our chances for a long life, Dr. Pierce of the Surgical Institute, Buffalo, N. Y., says that you should drink plenty of water daily between meals. Then procure at a drug store, Anuric (double strength). The "An-u-ric" drives the uric acid out and cures backache and rheumatism.

If we wish to keep our kidneys in the best condition a diet of milk and vegetables, with only little meat once a day is the most suitable. Drink plenty of pure water, take Anuric three times a day for a month.

Send Dr. Pierce 10c for trial pkg. Anuric—many times more potent than lithia, eliminates uric acid as hot water melts sugar. A short trial will convince you.

Preston, Ont.—"I am pleased to express my experience with Anuric. I have been troubled with rheumatism in right limb and hand for several years, and lately in left shoulder. The only way I could lie was on my back. I had great difficulty getting down and more to get up. Lately I had a very severe pain in my back. I have taken Dr. Pierce's Golden Medical Discovery several times with the most satisfactory results, so I concluded to give his Anuric Tablets a trial. The pain in limb and shoulder has stopped entirely and in right hand it is very slight and getting less all the time. I can now sit or lie in any position I wish without discomfort or pain. I recommended the Anuric Tablets to two parties and they both claim decided improvement. I certainly will recommend them to any one troubled with the kidneys; there is nothing nearly so good; I tried them all."—Gunner Boos. ser. Duke and Waterloo.

Dominion of Canada
[L.S.]
CANADA.

PROCLAMATION

GEORGE the FIFTH, by the Grace of God of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas, KING, Defender of the Faith, Emperor of India.

To all to whom these presents shall come or whom the same may in any wise concern,—GREETING:

A Proclamation of conditional amnesty respecting men belonging to Class 1 under the Military Service Act, 1917, who have disobeyed our Proclamation of 13th October, 1917, or their orders to report for duty, or are deserters or absent without leave from the Canadian Expeditionary Force.

E. L. NEWCOMBE, Deputy Minister of Justice, Canada.

WHEREAS considerable numbers of men belonging to Class 1 under our Military Service Act, 1917, called out on active service in our Canadian Expeditionary Force for the defence of Canada under Our Proclamation of 13th October, 1917, although they have thus become by law soldiers enlisted in the Military Service of Canada,

Have failed to report for duty as lawfully required of them under the said Military Service Act and the regulations thereunder, including the Order in Council duly passed on April 20 last,

Or have deserted,

Or absented themselves without leave from our Canadian Expeditionary Force,

And it is represented that the very serious and unfortunate situation in which these men find themselves is due in many cases to the fact that, notwithstanding the information and warning contained in Our Proclamation aforesaid, they have misunderstood their duty or obligation, or have been misled by the advice of ill-disposed, disloyal or seditious persons.

AND WHEREAS we desire, if possible, to avoid the infliction of the heavy penalties which the law imposes for the offences of which these soldiers have thus been guilty, and to afford them an opportunity within a limited time to repent and make their services available in Our Canadian Expeditionary Force as is by law their bounden duty, and as is necessary for the defence of Our Dominion of Canada.

NOW KNOW YE that we in the exercise of Our powers, and of Our good will and pleasure in that behalf, do hereby proclaim and declare and cause to be published and made known THAT THE PENALTIES OF THE LAW WILL NOT BE IMPOSED OR EXACTED as against the men who belong to Class 1 under Our Military Service Act, 1917, and who have disobeyed Our Proclamation aforesaid; or who have received notice from any of Our registrars or deputy registrars to report for duty on a day now past and have failed so to report; or who, having reported and obtained leave of absence, have failed to report at the expiry of their leave, or have become deserters from Our Expeditionary Force, PROVIDED THEY REPORT FOR DUTY ON OR BEFORE THE TWENTY FOURTH DAY OF AUGUST 1918.

AND WE DO HEREBY STRICTLY WARN AND SOLEMNLY IMPRESS UPON ALL SUCH MEN, and as well those who employ, harbour, conceal or assist them in their disobedience, that, if they persist in their failure to report, absence or desertion until the expiry of the last mentioned day, they will be pursued and punished with all the rigour and severity of the law, SUBJECT TO THE JUDGMENT OF OUR COURTS MARTIAL WHICH WILL BE CONVENED TO TRY SUCH CASES or other competent tribunals; and also that those who employ, harbour, conceal or assist such men will be held strictly accountable as offenders and subject to the pains, penalties and forfeitures in that behalf by law provided for their said offence.

Provided however that nothing contained in this Our Proclamation is intended to release the men aforesaid from their obligation to report for duty as soon as possible or to grant them immunity from arrest or detention in the meantime for the purpose of compelling them to perform their military duty; Our intention being merely to forego or remit the penalties heretofore incurred for failure to report, absence without leave or desertion incurred by those men of the description aforesaid who shall be in the proper discharge of their military duties on or before the said twenty-fourth day of August, 1918.

Of all of which Our loving subjects and all others whom these presents may concern are hereby required to take notice and govern themselves accordingly.

IN TESTIMONY WHEREOF, We have caused these Our Letters to be made Patent, and the Great Seal of Canada to be hereunto affixed. Witness: Our Right Trusty and Right Entirely Beloved Cousin and Councillor, Victor Christian William, Duke of Devonshire, Marquess of Hartington, Earl of Devonshire, Earl of Burlington, Baron Cavendish of Hardwicke, Baron Cavendish of Keighley, Knight of Our Most Noble Order of the Garter; One of Our Most Honourable Privy Council; Knight Grand Cross of Our Most Distinguished Order of Saint Michael and Saint George; Knight Grand Cross of Our Royal Victorian Order; Governor General and Commander-in-Chief of Our Dominion of Canada.

At Our Government House, in Our City of OTTAWA, this FIRST day of AUGUST, in the year of Our Lord one thousand nine hundred and eighteen, and in the ninth year of Our Reign.

By Command,

Thomas Mulvey
Under-Secretary of State.

VILLAGE COUNCIL

Council met on 1st August. Members all present except Mr. Skinner. Minutes of last meeting were confirmed.

Communications read: From W. A. McLean, Deputy Minister of Public Highways, re road improvement; from F. C. Ryan, resigning his position as member of the School Board owing to his removal from Paisley.

By-law No. 678, providing for an election for a public school trustee to fill the vacancy, was read a first time.

By-law No. 679, providing for the levying and collection of taxes for the current year, was read a first time.

Logie—Forrester—That By-laws 678 and 679 be now read a second and third time, passed and executed. —Carried.

Pearce—Forrester—That the clerk be instructed to notify the County Superintendent of the dangerous condition of the county bridges in this municipality.—Carried.

Logie—Forrester—That no action be taken regarding account rendered by Dr. Houston for damages to auto. —Carried.

Forrester—Logie—That the clerk write for prices for coals for pumping station.—Carried.

Accounts were passed as follows: M. Leitch $62.50, Weighmaster $12.45, T. H. Maurer $35, Elec. Lights, $45, Howard Pearce $17.50, John Stoddart $5, Geo. Grant 50c, Wm. Arrow $20, Thos. Sparrow $2.50, Con. Rubber Co. $14.65, M. A. Dobson $2.50, M. Andrew $11.70, Paisley Mercantile Co. 25c.

Cattle Poisoned

Carelessness in leaving Paris green where his stock could drink the poison was responsible for killing one cow belonging to Charles Gates, of con. 8, Amabel, and two others are dangerously ill. Mr. Gates had been sprinkling his potato patch with the Paris green and unfortunately left it out in the yard where the cattle were grazing. Dr. Thomas is endeavoring to save the two that are suffering from the effects of the poison.—Tara Leader.

THOUSANDS OF MEN REQUIRED FOR HARVESTING IN WESTERN CANADA

Thousands of men are required to help in the work of harvesting the western crop. The C.P.R. has completed arrangements to transport to the west this great army of workers.

For those going from points in Ontario to Manitoba, Saskatchewan and Alberta extra trains will be operated through to Winnipeg (the distributing point) without change.

Going trip west, $12.00 to Winnipeg.

Returning trip east, $18.00 from Winnipeg.

Consult C.P.R. agents regarding transportation arrangements west of Winnipeg.

Going Dates

August 20th and August 29th—All stations in Ontario, west of Smith's Falls, pu to and including Toronto, on Lake Ontario Shore Line, and Havelock-Peterboro line, also from stations Kingston to Renfrew Junction, inclusive, and from stations on Toronto-Sudbury line. From stations on Sault Ste. Marie branch. From stations on main line Beaucarge to Franz, inclusive. From stations, Bethany Junction to Port McNicoll and Burketon-Bobcaygeon.

August 22nd and August 29th—From stations west and south of Toronto, up to and including Hamilton and Windsor, Ont., on Owen Sound, Walkerton, Teeswater, Wingham, Elora, Listowel, Goderich, St. Mary's, Port Burwell and St. Thomas branches, and stations Toronto and north to Bolton, inclusive.

Further particulars from any C.P.R. ticket agents, or W. B. Howard, District Passenger Agent, Toronto, Ont.

Two Injured in Runaway

While drawing in hay on Monday afternoon of last week, Mr. and Mrs. F. Albright, of Sullivan Tp., were thrown off the load and sustained serious injury. The wheel of the wagon apparently broke, allowing the load to slide off. This frightened the horses and they ran away. Mr. Albright was thrown against the fence and had his leg broken and other bruises, while Mrs. Albright is suffering from a broken arm.—Tara Leader.

SCENTED DUSTS

By Ben Ames Williams

Part II.

When Miss Mary heard Dick laughing in her garden, she lifted her head quickly to listen then crossed to a window that looked that way. She could see Dick and Betsy sitting very happily together, and she watched them for a moment in a curiously impassive way. As she watched she began to tremble; then she became rigid, her breath coming more swiftly than its usual gentle custom. There was something of exultation in her eyes, something of resolution in the firm line of her mouth.

Someone called to her from the porch at the side of the house and Miss Mary turned with a guilty start, as though she had been detected in an unworthy action; but before she started toward the verandah from which the call had come, she looked once more toward the bench under the apple tree.

Dick Sotheron was teasing Betsy. Miss Mary could not hear what they said but the pantomime—Dick laughing derisively, Betsy protesting in indignant confusion—was eloquent and unmistakable. Miss Mary smiled grimly and started toward the verandah.

"If you don't quit laughing at me, I'll never speak to you again," Betsy Doncaster was swearing.

"You've a smudge on your nose."

She dabbed at the offending smudge with her smudgy hands and made it worse than ever. "Aunt Mary would scold me if she knew," she declared.

"She doesn't think much of me, I guess," Dick remarked. The girl looked at him in resentful surprise.

"Why, Dick, she's lovely to you."

"Oh, yes! They're always polite to criminals about to be banished or hanged."

He nodded, smiling as though there were some hidden meaning in his assent. "I shouldn't wonder!" he agreed and for no reason in the world, Betsy blushed furiously and for a few minutes neither said anything. Then Dick asked:

"Why is it I've never seen you before this summer?"

"You've never been at home here."

He flushed a little. "I know—school and college and vacation trips have kept me going. But I've been here sometimes and I never saw you."

"I've been away too—school and college and vacation trips," she mocked smilingly and then more seriously explained, "I didn't come to Aunt Mary till Dad died when I was fifteen, you know. And I haven't really lived here at all. I'm almost a stranger."

He laughed quietly. "You're not going to be a stranger any longer," he announced.

Betsy's eyes flashed toward him for an instant then she leaped to her feet. "You must go now," she said. "Aunt Mary is looking for me."

Dick followed her eyes toward the house. Miss Mary was watching the two in the garden in a way that for no reason in the world made Dick uneasy. He turned toward the gate. Betsy waved good-by to him and started toward the house.

Miss Mary's quiet eyes flamed suddenly with exultant resolution and they were so stern and proud when Betsy ran up the steps that Betsy was uneasy and alarmed.

Dick Sotheron left Betsy behind him in the garden but he took her with him in his thoughts as he swung homeward. The big old Sotheron house, with its pillars running from ground to roof, stood back from the road and was approached by a driveway that led between a splendid row of elms. As Dick turned up this drive, Betsy seemed to dance smilingly before him.

Richard Sotheron, his father, met him on the broad verandah between the pillars. The father was as tall as the son and as straight and slim; his face was marred only by the lines which strength and power leave behind them; his eyes were as clear as the boy, and the only mark of his forty odd years was the thinning of his hair.

Father and son were comrades. The boy's mother had not lived beyond his babyhood and since then Richard and Dick had dwelt together in this fine old home of all the Sotherons, surrounded by furniture which had scarce been moved from its appointed corners for fifty years. Ancient Sotherons looked down from gloomy old paintings in the hall or peered up from miniatures and daguerreotypes hanging low on the walls or standing on desks and tables. The house was alive with the high, stern pride of race and blood. Save for a servant or two, father and son dwelt here alone.

"You're late Dick," his father said.

"I'm sorry, Father," the boy returned. "I didn't realize it was so late. Lunch ready?"

"Waiting."

"I'll be with you in three seconds."

Dick ran up the stairs and a moment after rejoined his father. The two went into the dining room together. Afterward the father said:

"Mind if I ask you a question or two?"

"Of course not."

"Come into the library."

The boy nodded and followed his father into the room in which they spent most of their hours at home. The library was a comfortable spot, reeking with dusty old books which rose tier on tier to the ceiling on three sides of the room. A huge fireplace and two French windows that led to the verandah occupied the fourth wall. There were deep and inviting chairs; a table with a reading lamp; a ladder in one corner to reach the upper shelves; and an old-fashioned, high mahogany desk in an angle near the door.

One of the French windows was open and father and son drew their chairs that way. They could look into the grove before the house. Through the window, wandering gusts and caressing whispers of the warm summer air came to touch them gently and pass on into the old house. Richard Sotheron handed his son a cigar, lighted his own, smoked for a little space in silence and then asked quietly:

"Were you at Doncasters' this morning, Dick?"

Dick looked up quickly, faintly flushing. "Yes, Father," he confessed.

His father's eyes were turned out through the window. After a little, the elder man said, half to himself, "I met Betsy Doncaster on the street yesterday. She looks very much as her aunt did, twenty years ago, Dick."

"I shouldn't wonder," the boy agreed. "Miss Mary is still awfully nice-looking."

Richard Sotheron turned to look at his son inquiringly. "Have you had any talk with Miss Mary, Dick?"

"Does she—seem cordial?"

"She is very polite. She makes me uncomfortable."

The older man uttered a low exclamation which suggested that his fears had been confirmed. After a little he said deliberately:

"Dick, Miss Mary Doncaster is the only enemy I have in the world."

The boy looked up quickly. "Enemy?"

"A bitter enemy."

"Why?"

"I don't know."

Dick watched his father in bewilderment. When the older man volunteered no further word, he asked, "Tell me about it, Father."

Richard Sotheron hesitated. "The story goes back before you were born, Dick."

"I want to hear it."

"You have a right to. I shall tell you all that I know. I'm three or four years older than Miss Mary, Dick—perhaps more. I remember that when I began to feel I had passed from boyhood to manhood, she was still a little girl in short dresses—perhaps fourteen years old.

"I used to see her frequently for although she lived with her father and mother on a farm at the other side of town, they came to meeting at the same church I attended. She was a bashful little girl and I used to tease her by watching her steadily during the sermons so that she blushed and squirmed.

(To be concluded.)

"Mother," asked 7-year-old Phyllis, "is it true that the teachers at school get paid?" "Why, of course, they do!" said her mother. "But that is not fair," complained Phyllis indignantly. "Why should anyone pay them when we do all the work?"

"I would say to all: Use your gentlest voice at home. Watch it day by day as a pearl of great price, for it will be worth more to you in the days to come than the best pearl hid in the sea. A kind voice is joy, like a lark's song, to a hearth at home. Train it to sweet tones now, and it will keep in tune through life."—Elihu Burritt.

WILLIAMS
New Scale PIANOS

THE outward beauty that distinguishes a Williams New Scale Piano is an index of its intrinsic worth. Ideals are built into every one of these famous instruments—ideals of craftsmanship that make for the most enduring quality.

Bungalow Model, $450.00

THE WILLIAMS PIANO CO., LIMITED, OSHAWA, ONT.
Canada's Oldest and Largest Piano Makers

GROW 40 WEEKS' BREAD.

The United Kingdom is Steadily Becoming More Self-Sustaining.

The United Kingdom is within a measurable distance now of being self-supporting in the matter of breadstuffs.

Sir Arthur Lee, Director-General of Food Production, estimates that this year's harvest will give 40 weeks' supply, as compared with a little over 10 weeks' supply in 1916-17, and 13 weeks' supply in 1917-18.

Sir Arthur's estimate for this year is based on the assumption that the whole of the wheat and barley crops, one-fifth of the the oats and one-fourth of the potatoes (the surplus above normal consumption) could be made available for breadmaking.

The increase in the acreage under crops in England and Wales on April 27 is shown in the following table, based on an official census:

Crop	Acres	Acres	Inc. over 1916 P.C.
Wheat	2,645,000	752,000	39
Barley	1,490,000	68,000	11
Oats	2,820,000	735,000	35
Rye, dredge corn pulse	683,000	280,000	69
Potatoes	645,000	217,000	50
Total	8,302,000	2,042,000	

The wheat acreage is the greatest since 1882; oats, 20 per cent. and potatoes 27 per cent. above previous records.

It is estimated that the increase in tillage in the United Kingdom will be well over 1,000,000 acres. The present condition of crops is very promising.

The total number of allotments is over 1,300,000.

Reckoned in tonnage, the net saving in shipping resulting from the increased production in corn and potatoes in England and Wales alone should amount in the coming year to 1,500,000 tons.

The figures quoted relate only to holdings of an acre and upwards, and take no account of allotments and gardens. The increase in allotments alone since 1916 is not less than 800,000 in England and Wales, or 160 per cent. The additional weight of foodstuffs produced by this expansion may be reckoned at not less than 800,000 tons above the normal.

Before Sunrise.

A world of half tints, faintly, sweetly flushed;
A world on rosy tiptoe, eager, hushed;
A dew-fresh waiting world, which lingers, free
Upon the shores of Day's great golden sea.

Poised like the straight, young body of a boy,
Ivory and rose, who laughs in careless joy
Above the river's brink, and breathing deep,
Flings wide his arms before the final leap.

A world of song; of feathered throats a-flute,
With every tree a swaying emerald lute,
While in the green aisles, heralding the Morn,
I hear the little Minstrel Wind of Dawn!

A Windshield Cleaner.

An inexpensive device that can be made at home and will keep the windshield of your automobile clean in spite of rain and snow is described in the Illustrated World. First secure a piece of untanned sheepskin and clip the wool to about one-half inch in length. Then a piece of skin should be cut in the shape of a square about four inches in diameter.

Wet the wool side and rub it on the windshield. The grease in the wool adheres to the glass, and though not visible to the eye will prevent particles of water remaining on the surface.

About the House

KEEPING MY FOUR CLEAN.

"Oh, you think it is easy to keep a child clean, do you?" I hear mothers say with a laugh or a sigh. "I only wish you had to try it with my Bubbie!"

I have been trying it with four children of my own without extra help, and I know whereof I speak.

The secret of success in the care of a child is system just as it is the secret of success in housekeeping or business. Many mothers who adhere rigidly to a schedule for the baby have no regular times for caring for the bodies of the older children. They let them go until they offend the eye so badly that they are caught by an exasperated mother and given a general cleaning.

If the mother has allowed herself to fall into the habit of giving the children only a Saturday-night tubbing, this sounds like a big undertaking. Aside from the dressing and undressing, however, ten minutes for each child is ample time. When the child is kept clean with a daily bath, this ten-minute period will allow either a sponge or a tub bath. Children more than seven years old can be taught to bathe themselves though it will be necessary for the mother to attend to the neck, ears and wrists of children until they are about fifteen.

In a large family it is best to have half the members bathe at night and the other half in the morning so that all will not want to use the bathroom at the same time. The father and older children will usually prefer cold baths in the morning while the evening should be reserved for little children who are dirty from the day's play, for those too anaemic for cold baths and for the mother who has little time to give to her own care in the morning if she must also prepare breakfast.

All the children should wash their faces, hands, clean their nails and comb their hair before coming to the breakfast table.

After breakfast the children should be trained to go to the toilet and to brush their teeth before leaving for school. The faces and hands of the little ones should be wiped before they are allowed to play.

Before lunch and dinner be sure to have the children wash their hands with soap and water and a nail brush. This is a necessary precaution if they are to be kept well, for more infections are carried from hand to mouth than in any other way. A child is liable to have disease germs of all sorts on his hands when he comes in from school or play.

After lunch have them again attend to the teeth and face and hands. In summer I have found it best to have the clean clothing put on at this time. In the morning I allow my children all reasonable freedom in regard to dirt.

Intentional carelessness should always meet with disapproval, accidents be passed over lightly. If a child is to learn to keep himself clean, ever to be allowed to have nice clothes and appreciate them, he must have practice and I believe it is not unreasonable to expect him to keep himself clean during the afternoon to the extent of reserving clean plays for those hours. Walks, rides, toys, books and games have their place in the summer afternoons.

FRENCH CITIES AND THE WAR.

Towns Gain Rapidly by Influx of Workmen and Refugees.

The statistics for the populations of the secondary cities and towns of France, completed before the exodus from Paris began, show an extraordinary increase owing chiefly to the immigration of foreign and colonial workmen employed in munition and other factories.

Marseilles, with about 600,000 inhabitants when the war began, has now a population of more than 1,000,000. With the many refugees from the towns about Paris evacuated because of the German advance and with some of the population of Paris which flew from the big cannon, that figure may be said to be even higher. Lyons has increased its population from 630,000 to 740,000, without including additional thousands in the suburbs. Bordeaux's population has risen from 261,678 to 325,000, and the suburban parishes have grown from 93,529 to 120,655. Havre has increased from 136,159 to 159,000 without including the garrison of 30,000 foreigners and 80,000 refugees, mostly Belgians.

Hands Across the Creads.

A German prisoner lay dying of his wounds in a British base hospital. He was Lutheran by faith, and a Protestant army chaplain sought to speak the words of religious consolation that would make his parting easier. But the chaplain did not know the tongue of Germany, and the wounded foe could not understand English. Near by a French chaplain, a Catholic priest, was ministering to one of his own creed. He came from the Lost Provinces and spoke the language of the enemy as well as his own. Softly he turned to the bedside of the dying prisoner, and kneeling beside it, translated into his tongue the words of comfort spoken by his Protestant colleague.

Such is the spirit at the front. Creedal barriers no longer separate men to whom service has become the supreme ideal. Shall they separate us at home when we can help by reaching hands across them?

Canuck BREAD MIXER

Mutual Dairy and Creamery Co. 724-6 King St. West - Toronto

Ingram's Milkweed Cream

When youth takes flight on the wings of years beauty of complexion goes too, unless you give your skin proper and daily care. Use of Ingram's Milkweed Cream will enable you to appear youthful when you are no longer young. Its distinctive remedial effect upon the tissues of the skin keeps the complexion colorful, adrift and free from blemish. It does actually "healthify" and beautify your complexion. Since 1885 there's been nothing else "just as good." Take no other. Two sizes, 50c and $1.00.

Warm days, household work, and kitchen heat, all increase perspiration and shiny, oily skin. You can avoid this by using Ingram's Velvola Souveraine Face Powder, 50c. It blends perfectly with the complexion. A light touch hides little blemishes, makes your complexion smooth, soft and flawless. A full line of Ingram's toilet products, including Zodenta for the teeth, 25c, is at your druggist's.

A Picture With Each Purchase

Each time you buy a package of Ingram's Toilet aids or Perfume your druggist will give you, with your change, a large portrait of a world-famed motion picture actress. Each time you get a different portrait so you make a collection for your home. Ask your druggist.

F. F. Ingram Co., Windsor, Ontario

THE SEAL THAT SAVES

Your fruits, jams and jellies will come from the jar, months hence, with every bit of their "canning-day" freshness and flavor, if you "Parowax" each container.

Parowax completely seals against air—and airtight jars are immune to mold and fermentation.

Melt the Parowax and pour a thin coat over the jelly glasses. After putting on cover, dip fruit jars in Parowax to seal airtight. You have sealed in goodness and barred out "spoil."

Easy to use and costs but little. In 1 lb. and ½ lb. cartons, at your grocers or druggists.

IMPERIAL OIL, LIMITED
Branches In All Cities.

Parowax

In The Hammock.

"What an idea!" exclaimed Grandma Sloan, in great amazement.

"Just one night!" teased Merville.

"The house is the place to sleep," said Grandma Sloan, with much firmness.

"But I can sleep in the house when I am at home in the city," said Merville. "Here in the country I want to do something different."

"What is all this about?" asked Grandpa Sloan, who came into the kitchen just then.

"Why Merville wants to sleep outdoors!" explained Grandma Sloan.

"Well, a bed is good enough for me," laughed Grandpa Sloan, "but if Merville wants to sleep in the trees with the birds, or in the pasture with the calves, why not let him try it?"

"I don't want to sleep in a tree or in the pasture," said Merville, "but in the hammock."

"I'm afraid that he will roll out, or that he will catch cold," said Grandma Sloan.

"If he rolls out he can get back in again," said grandpa, "and it is too dry and warm to worry about his catching cold."

Of course Merville had his way, when he had grandpa to take his side, and so it came to pass that when bedtime came that night he took a pillow and a blanket and made his way to the hammock, between two trees in the garden.

There were no lights in the rooms of the house on the side next the garden, but that did not trouble Merville—at first. It was much better than going to bed in the little room at the head of the stairs. He did not want to go to sleep; so he tried to keep awake by counting the stars. He was doing very well, although the little wind that waved the branches overhead bothered him somewhat, when he suddenly noticed that the frogs at the foot of the hill were croaking much louder than usual. Why was that? Well, frogs were only frogs, and of course they would not harm anyone, even though there were a million of them, and all of them were big, fat bullfrogs, croaking their loudest. But it was strange that they were so much noisier than usual to-night.

And the crickets, too! The grass seemed to be full of them, all fiddling frantically. Anyway, they would stay in the grass and would not try to sting him as the mosquitoes did. To be sure, few mosquitoes had troubled him yet, but they might be along in swarms any minute; so he pulled the blanket over his head, and after that the frogs and crickets seemed to make less noise.

But later—he did not know how much later—a noise awakened him. He knew where he was, but he had such a funny feeling inside! Perhaps he was sick. He sat up in the hammock and rubbed his eyes. It was very dark. Clouds covered the friendly stars. A big wind was blowing through the branches overhead, and something was moving under the trees in another part of the garden. Merville could hear it, and he felt sure that it was moving his way. What could it be? A burglar or a bear. The question did not seem at all silly to him.

But in another instant he had slipped from the hammock, run to the house and was banging with both fists on the verandah door.

"Well, well!" said Grandpa Sloan when he opened the door. "What's this? Aren't you going to sleep in the hammock, after all?"

"I thought I'd come in," said Merville, "and besides, it's almost morning, anyway."

"Oh, no!" laughed Grandpa Sloan. "It isn't half past nine, and I was just going out to get the colt in. I left him feeding below the garden, and forgot all about him after supper."

Merville climbed the stairs to his little room. It seemed a delightful place to sleep, after all.

RED RUIN FROM UKRAINIA

INSTEAD OF THE FOOD WHICH THE GERMANS EXPECTED.

It Was The Czecho-Slovak Army of Bohemia That Foiled The Hopes of Central Powers.

Who was responsible for the bare Ukrainian cupboard which proved such a black disappointment to the Teutons? It has just been announced by the Committee on Public Information at Washington that it was the remnants of the Czecho-Slovak army which put the torch to that tremendous meal of wheat which the two Kaisers had promised themselves.

When Germany sliced off great places of Russian territory it was the Ukraine that was regarded as a particularly rich plum—the Ukraine pleasantly stored with grain so badly needed by the German army and the home population as well.

Deserted From Austria

But fortunately the remnants of the Czecho-Slovak army were still stationed in that part of Russia. This army was composed of deserters from the Austrian army, Bohemians and Slovaks, inveterate enemies of the Hapsburgs, who had seized the first occasion to surrender to the Russian units. They had fought magnificently for Russia and against the Austrians during the Kerensky regime. When the Bolsheviki gained control of Russia there was no more fighting to be done for the allied cause on that front. The Czecho-Slovak army, including 50,000 men in line and the same number in reserve, was dissolved by Bolsheviki leaders. Twenty thousand men refused to part with their weapons, however, and hopefully awaited an opportunity to obtain transportation to the western front, by way of he United States. The Bolsheviki leaders made no objection to this, but, of course, no means of transportation was provided. And so they remained where they were.

Why the Cupboard Was Bare

That was why they were able to contribute so largely to the disappointment of the Germans in obtaining food from the Ukraine. As soon as they realized that this was the chief objective of the Germans they began a systematic campaign of pillage and burning in which they were assisted by the peasants themselves, who were aroused at the thought that the old landowners were to return under German protection.

Not only did they destroy what they could but they fought bitterly to prevent the Teutons taking what was left. Retiring and hampered by their lack of equipment, they stopped to meet the advancing Germans repeatedly in the field. Their last battle, one of these confused struggles which, get little space in the cable reports, was fought near Bachmac, half way between Kieff and Kursk on the road to Moscow. After the fight, though the Czecho-Slovaks had been armed chiefly with axes, they themselves buried more than three hundred Germans.

The direct result of this destruc on of the Ukrainian wheat supply as that Germany had to lower her bread ration at home instead of increasing it, as had been promised to the underfed people, and Austria continued to starve a bit more rapidly.

Revenge For Oppression

Certainly in Ukraine the Czecho-Slovaks have had their revenge for three centuries of suffocation and oppression in Bohemia. But throughout the war they have launched shattering blows against their Austrian and German enemies and the whole idea of Mittel Europa.

The Czecho-Slovak army is on the firing line with the Allies in France to-day.

In Russia 50,000 Czecho-Slovaks, organized into regiments, are waiting for transportation to Canada or the United States.

Twenty thousand of these people have turned against their Austrian commanders and are fighting with the Italians.

In the United States it is estimated that 60,000 men have joined the colors to fight with the army of Uncle Sam. In addition to these, ten contingents of Bohemians and Slovaks have gone from the United States to France to join the army fighting under the Czecho-Slovak flag, but under the high command of France.

The Letter That Never Went.

You've heard of the letter that never came,
The eyes that watched in vain.
You've heard the old excuses lame,
Again and yet again.
Ah! many a soldier far from home,
Many sad hours has spent
Awaiting the letter that did not come—
The letter was never sent!

Homesick, he, in the trenches drear,
Beside the field of flame,
Awaited throughout the days of fear
The letter that never came.
Alert at the call of trump or drum,
'Twas sorrow his great soul bent,
He knew that letter would never come—
Because it was never sent.

No wound received by the monstrous thing
Where bullets swarm and hiss,
Oh, never a word can burn and sting
Or bayonet hurt like this!
Behold him by his graveside pause,
His strength is nearly spent,
He moans, "It did not come because
The letter was never sent!"

Perhaps it is but yet too late,
Sit down and write—and write,
'Twill make his weary heart elate,
Write him a letter to-night!
Hurry! ere death shall reach the boy
Ere his young life is spent,
'Twill fill his last sad hours with joy—
The letter his loved one sent!

—The Khan, in Toronto Telegram.

Rice should be washed through three waters at least, before it is cooked.

MARCH AND DAWN.

By Arthur L. Phelps.

Marching men,
Thirty score;
Round the corner hundreds more;
Glittering in the yellow streets,
Yellow with the lamps and panes,
Guns and faces; where retreats,
Skulking down behind black roofs,
Ragged day, marching men;
Where the East,
Saffron yeast,
Awesome pours upon the world,
From the darkness,
Marching men.

Hands and feet,
Swinging hands,
Swinging feet.
Hear the beat! the insistent beat;
See the long line [illegible] and away,
All its body sinuous there,
All its colour lithe and strong,
Out of distance heaving true,
Into distance swaying on,
Within its law, a corporate will,
Indurate yet supple, too,
Power and motion governed—

Till—

Flames too sudden-redly dawn,
Thunders wildly a wild sky,
And a wreath,
Sharp with shrapnel, whistling by,
Breaks and shatters;

Scattered wide,
Rent feast 'neath the fangs of Death
Then the gaudy fragments lie.

—Canadian Magazine for July.

FRANCE'S LIVESTOCK LOSS.

Twenty Per Cent. Reduction in the Home Supply of Dairy Products.

Since the outbreak of the war France has suffered a loss of 2,600,000 head of cattle. Allowing one million for the loss due to the invasion of the ten departments of Northern France there remains a diminution of 1,600,000 head. Moreover the cattle that are left have greatly lost in weight. Before the war the average weight in meat of the slaughter cattle was from 770 to 880 pounds, whereas to-day it hardly exceeds 550 to 570 pounds. As a result of this depletion of herds, France's home supply of dairy products has been diminished by nearly 20 per cent. This situation is especially serious because of its effects upon the diet of children.

The following figures show the percentage decrease in France's livestock between December 31, 1913, and June 30, 1917: Cattle, 15.8 per cent.; sheep, 25 per cent.; hogs, 40 per cent.

The flocks of sheep have been diminished by more than 2,000,000 head, which has greatly reduced the production of wool, as well as the supply of mutton.

In a recent report to the Minister of Agriculture, it is stated that from 5 to 10 years after the war will be required to bring the herds back to a pre-war basis.

Students on the Farm.

College students, particularly those who have had experience in farming, should plan their vacations this year helping with the harvest. Things are so serious this year that they can well forego their usual vacation, well earned though it be, to aid in the saving of the crop.

THE WEEKLY SERMON

Jesus answered, My kingdom is not of this world: if my kingdom were of this world, then would my servant fight, that I should not be delivered to the Jews: but now is my kingdom not from hence."—St. John 18, 36.

This text has been frequently misapplied. Some have tried to read into it a condemnation of force. But such interpretation is wide of the mark. What our Master condemns is force as the method of His kingdom. He is stressing the difference between His kingdom and the kingdoms of this world. They are distinct in purpose, plan and method.

Jesus Christ inflictions war as an instrument of the State, the legitimate, normal organ of self-defence, and He assails unmistakably that if His kingdom was designed to take its place as one of the kingdoms of this world then would His servants fight.

The attitude of Jesus accords with the whole tenor of the Scripture. The Bible is a war book from cover to cover, whether you turn to the wars of the Lord in the earlier books or the vision of Armageddon at the close of the canon. War to maintain the integrity of the State finds ample Scriptural vindication. St. Paul, who was in constant contact with the camps and cantonments of His day, has no word of censure for the military calling, but makes the figure of the Roman soldier a type of the Christian warrior clad in the armor of God.

Not Peace But a Sword

All honor, then, to the boys in khaki and the boys in blue who are maintaining the glory of the flag and adding fresh lustre to the Union Jack. We hail them as crusaders in democracy's cause, and as they go forth we invoke upon their armor the benediction of God.

It was a grievous caricature to picture Jesus as a gentle, amiable, agreeable, inane, invertebrate personality. Such was not Isaiah's conception when he drew the bold outlines of a victorious warrior, his garments stained with blood and carnage. Far other was the Christ with His scourge of cords driving the money changers from the temple, smashing their tables and scattering their coins. Strong, virile, martial, mighty in moral indignation, majestic in wrath was the Jesus who exclaimed, "I came not to send peace, but a sword."

No disciple of the Master need have any conscientious objection to lending his full strength to the State in the prosecution of righteous warfare. Yet it is clear that Jesus discountenanced the establishment of His kingdom by force. Here is the contrast between Christian and Mohammedanism. Mahomet gathered the wild sons of the desert and started on a career of conquest. His was a religion of the "sword." The method of Jesus was distinctly the reverse. His kingdom was propagated by the "word." By loving persuasion, by personal touch, by patience, by sympathy, by brotherly kindness, by helpfulness Christianity enters into the lives of men and wins her victories by the slow, toilsome process of education.

Force Versus Love

The kingdoms of this world represent the kingdoms of force. The Kingdom of Christ represents the imperialism of love. He subdues the hearts of men not by force of arms but by the compulsion of love. There is nothing so kingly as kindness, nothing so royal as truth, nothing so lordly as love. Napoleon once declared—"Alexander, Caesar, Charlemagne and myself founded great empires on force, but Jesus founded His kingdom on love, and to-day millions are ready to die for Him."

Love alone is the abiding foundation. The consciousness of nationality which plays so large a role in modern history must give place in time to Internationalism. All national distinctions will be merged into a higher spiritual brotherhood and the grand consummation of the ages will fulfil the vision of the Apostle. "The kingdoms of this world are become the kingdoms of our Lord and His Christ, and He shall reign forever and ever." The triumph of the imperialism of love.—Rev. Thomas James Lacey.

FRENCH SOLDIER IN HUN PRISON

MISERIES OF TWO YEARS IN GERMAN CAMP.

Gaston Defoirdt Tells How Teutons Fed Prisoners Food That Even the Dogs Refused.

In contrast with the anxiety or willingness of the German soldier to fall captive to the Allies, so often manifested, is the declaration of Gaston Julian Defoirdt, of Rhode Island, that he would much rather die fighting on the front line than to go through such pains and miseries as he endured in two years spent in a German prison camp. Defoirdt, who is twenty-four and well educated, was visiting in France when the war came and very soon he was in the ranks. On the second day of his service at the front he was wounded in the left ear by a fragment of shrapnel and three days later he was taken prisoner.

With many other prisoners he was sent to the rear, and those they were loaded like so many cattle into freight cars and started on a seven days' ride to the prison camp at Altengrabow.

"At every station where the train stopped," says Defoirdt, "the German people gathered round and threw stones and spat in our faces. We were subjected to all sorts of insults. Many of us were wounded, yet we got no attention whatever, being given scarcely food enough to keep us alive and made to sleep on the floors of the dirty freight cars.

"When finally we found ourselves in the German prison camp conditions were rather worse than better. There were about twenty-five thousand men at Altengrabow, all nationalities mingled. We were guarded by German soldiers who had been incapacitated for service at the front and who on account of their wounds were revengeful toward us.

Dogs Refused Prison Fare.

"It would be difficult to picture in words the awful conditions prevailing in that camp. Our diet consisted for the most part of hot water and decayed vegetables—they called it soup. Sometimes we were given herbs mixed with grass to eat. Under such treatment the strongest men soon fell sick and were scarcely able to move about. The smell of this soup often was so nauseating that men held their noses while eating it. Dogs would take one sniff at it and refuse to eat.

At times the men became so desperately hungry that they caught and ate rats and even a dog. Occasionally we were given herring broth, made by boiling whole, uncleaned herrings into a thin liquid, the heads, bones and scales of the fishes being served with the rest. One of the prisoners was operated on for appendicitis after his transfer and four herring heads were found lodged in his intestines.

"I have seen prisoners, rendered half insane by hunger, fighting among themselves for bits of food. If one's rations were stolen or taken from him by force and he complained to the guard the answer would be:—'Why, are you not all friends, allies? Surely there can be nothing to complain of.' When the neutral commission would visit the camps, the prisoners would be given a short cut of frankfurter sausage and a lump of bread, so that it might appear that they were fairly well fed.

Sawdust Bread.

"This bread contained all sorts of stuff, such as potato peelings, straw and sawdust. All prisoners were made to sign papers indicating their willingness to work. If they refused to sign they were severely punished. The men supposed that they were to engage in farm work, but were sent to coal mines, salt mines and munition factories. I refused to work in a munitions factory and was tied to a post for three hours. One group of prisoners, who persistently refused to work were told that they would be shot and were placed under a special guard. At the end of eleven days, during which they momentarily expected to be executed, they were told that their lives would be spared.

"While in prison I slept on the same cot for eighteen months and in all that time the straw was not changed once. When I left, the straw was as fine as dust and alive with vermin. After eighteen months at Altengrabow I was transferred to Mersburg. After an exchange of prisoners had been effected I was taken to Constance, where I was provided with a new suit of clothes and was well fed and kindly treated for eight days before being turned over to the Allies. I suppose this was done in the hope that in my new comfort and the joy at being released I might forget the past.

Wounds Were Neglected.

In Switzerland I was taken in charge by the Red Cross and kept in the hospital there for fourteen months. Had the Germans given me proper treatment for my wound I would have recovered in a few weeks; as it was, after years of neglect, dirt, semi-starvation and hard work, I was in such condition when released that for a time my life was despaired of. Even now, after the best efforts of the Red Cross physicians and nurses, the left side of my face is partially paralyzed and I can see but little with my left eye."

Defoirdt says that when he left the prison camp at Mersburg the Germans did not seem quite so brutal as they were two years before. They told him the war would end this year, and when he left Mersburg they did not seem at all confident of winning.

MAKING POTATO FLOUR.

Wholesome, Nourishing Food to Reinforce Wheat.

Canada has been called the granary of the Empire, but no one seems to have thought of giving her the appellation: "the cellar of the Empire." And yet the potato cellar may be made a very real counterpart of the granary. Owing to the great development of the war-garden idea, thousands of people are growing potatoes, who, before the war, relied entirely on supplies from the farms. There is thus every reason to suppose that potatoes will be much more plentiful this year than ever before.

Why not convert as large a proportion as possible into potato flour? Potato flour mills require but a few hundred dollars of working capital; the machinery required is of the simplest and the resulting product is a wholesome, nourishing food. Potato flour has been used extensively in Britain, especially during the past year. A mill in the state of Washington produces 25 to 30 barrels a day and sold its product during the month of April for $21 a barrel. Certain starch companies in Canada are also making it, but the business is capable of very considerable expansion. According to Mr. Meeker, an American potato-flour manufacturer of long experience, a ton of potatoes will produce 500 pounds of flour. The process he describes is a simple one.

"First, the potatoes are washed clean and the sliced with the peelings on and dropped immediately into water to rinse them and to prevent discoloration. Then, as soon as practicable, they are either parboiled or steamed for eight or ten minutes, when the starch will be cooked and the slices will become transparent. The cooked slices are then transferred to a drier and, for the first few hours, are subjected to a current of hot air not hotter than 120 deg. F., after which the temperature is gradually increased to 170 deg., but no greater. The drying process is continued until the slices are brittle, though it is immaterial if a few here and there are not thoroughly dried. They are then taken from the kiln and placed in piles in a room where they can be well stirred at intervals for three or four days, after which they may be ground into flour.

"A revolving washer—a long box partially submerged in water and capable of washing a ton of potatoes an hour—can be built cheaply. An ordinary root cutter costing about $30 will answer for slicing the potatoes, but it is probable that a more desirable machine might be found on the market. The average mill will cost from $150 to $225 and up, but, at present, can not be obtained on short notice."

The Pyrenees Mountains are rich in waterfalls and minerals, but their exploitation is rendered difficult by lack of roads. With the water power thereto tent the mining possibilities could readily be developed.

BOHEMIA AND THE CZECHS

GROUND UNDER THE HEEL OF AUSTRIAN OPPRESSORS.

Turbulent Little Kingdom Whose Dream of Independence Seems on Dawn of Fulfilment.

Now that the little kingdom of Bohemia is much in the public eye as a country likely to rise in revolt against her hated Austrian oppressors, a short account of this interesting nation will be in order.

Bohemia is an Austro-Hungary province with the title of kingdom. It is a beautiful and rich country, shut in by high mountains, and with the Moldau, running through it. It is surrounded by Bavaria, Saxony, Silesia and Moravia, and has an area of 20,000 miles and a population exceeding 6,500,000, of which 2,000,000 are Germans. The Czech is the language of the country, but German is widely spoken. In recent years, French and English have been taught in the schools.

The Czechs are the most westerly branch of the great Slavonic races, and their chief headquarters has been in Bohemia, since their arrival there in the fifth century. Their language is a Slavonic dialect of great antiquity and of high scientific cultivation, and in musical value the Czech is ranked next to the Italian.

All sorts of grain are produced in abundance, and the best hops in Europe are raised there. Its mines yield silver, copper, lead, tin, zinc, iron, cobalt, arsenic, uranium, antimony, sulphur, plumbago and coal. Especially rich in coal is the country and the mines are the most productive in Austro-Hungary.

Bohemia is known best to the world for its wonderful productions of glassware. In this country are employed 50,000 glass workers. But it doesn't lack other industries. The spinning and weaving of linen, cotton and woollen goods are extensively carried on, as is the manufacture of lace, metal and woodwork, machinery, chemical products, beet-root sugar, pottery, porcelain—and who hasn't heard of Pilsener beer?

Intrepid Fighters

It's been a turbulent kingdom, little Bohemia, since it was founded by the Boli, who came from the higher parts of the Seine and the Marne. But the Czechs held on since their occupation of the country in the fifth century, fighting all comers, uniting and disuniting with their neighbors, Hungary, Silesia and Moravia, until Bohemia lost its independence to Austria. But the Bohemians never considered themselves vanquished, and to-day their dream of independence seems brighter than ever.

Prague, the capital, is built on both sides of the Moldau. It is prosperous and pretty located. It is 150 miles north-west of Vienna and seventy-five miles southeast of Dresden, and has railway connections with both. The city is inclosed by hills, which rise to a considerable height, the houses being built from the river to lofty eminences. The palace of the Bohemian kings is one of its show places, and the partly finished Roman Catholic cathedral is an old landmark.

One of the principal groups of buildings is the Jesuit college called the Clementinum, comprising churches, chapels and other structures. The old palace of Wallenstein is in a dilapidated condition. The city's manufactures comprise gold and silver embroidery, silk, woollen, cotton, linen goods, porcelain and jewelry. The Moldau affords it free transport to the Elbe.

Deserted From Austrian Army

Classed with the forces of Austria, and indeed a part of them, at the beginning of the war, the Czechs have fought their way to freedom and would have been fighting still in Russia had it not been for the shameful peace of the Bolsheviki with Germany.

In all, there were supposed in the Austrian army 350,000 Czecho-Slovaks, who were sent with the Austrian and German troops through Galicia for the conquest of Russia. At first opportunity the liberty-loving Czechs deserted and turned their guns on the men whose forefathers had torn from them their independence three centuries ago. The Germans and their allies paid dearly for this desertion in men, guns and ammunition, and when the Bolsheviki quit the Czecho-Slovaks continued the battle, in which no quarters was given and none asked by the new army. The slogan of the Czechs was "Death, but not capture." When a Czech soldier was wounded and capture looked imminent he killed himself. If he lacked the strength a fellow soldier ended his life.

There are thousands of Czech soldiers fighting on the western front; several thousands are with the Italian forces. Everywhere there is an Austrian force there are Czechs opposing them. Thousands of Czecho-Slovaks fought and died in little Serbia.

400,000,000 Short of Food.

In Europe to-day 400,000,000 people are short of food. One-third of the world's population is now on short rations.

A $2,000,000 Victory Loan which Newfoundland was asked to raise in six weeks was obtained by popular subscription in six days.

CARGILL

Rev. P. Reith and Mr. W. J. McKeeman spent a couple of days in "Cosy Nook" cottage at Inverhuron.

Born—To Mr. and Mrs. Robt. McLennan, of the boundary, a son.

The shipment for the Red Cross this month consisted of 3 pair socks, 48 towels, 24 pillow cases, 6 wash cloths, 1 bundle hospital cotton.

The anniversary services in St. Paul's church on Sunday were well attended. Dr. McGillivray, of Guelph, preached both morning and evening.

Mr. and Mrs. Murdoch Morrison, of Harriston, and Mr. and Mrs. H. McKercher, of Paisley, attended services on Sunday.

Mr. and Mrs. Sergant, of Hamilton, and Mrs. Nichol of Greenock, were guests of Mrs. Cunningham on Friday afternoon.

Quite a number of the young people of St. Paul's gathered at the home of Mr. and Mrs. Fitzsimmons on Friday evening to present their son with a purse of money. He is in the navy and has been overseas, but is home now on a short furlough.

McKinnon—McMahon—On June 26th, at Holy Trinity, Paddington, by Rev. C. E. White, John Alexander McKinnon, Staff Sergeant Canadian Mounted Rifles, to Kathleen, eldest daughter of the Ven. E. O. Mahon, Archdeacon of Imerina, Madagascar.—From the Times, London, England. John Alexander McKinnon is a son of the late Archibald McKinnon and Mrs. Catherine McKinnon, of the 10th of Kincardine.

The Red Cross lawn social held at Mr. G. Webb's might be termed a decided success, although the evening was a little chilly for such a gathering. Many came a long distance to help with the good work. During the evening there was a splendid programme rendered which received good attention and order throughout the evening. The ladies in charge are to be congratulated upon securing such excellent talent. The proceeds amounted to $97.

(Intended for last week)

Misses Beer and Burns, of Hamilton, are visiting at Mr. Jos. Cunningham's.

Miss Edith Howson left on Saturday to spend some time in Clifford.

Gilchrist — Sawyer — That this council do now adjourn to meet at Dephtsow on the 19th of August, to levy rates and for general business. —Carried.

Thos. H. Purdy Clerk

CANTIRE

Haying will be finished this week, and if the warm weather continues there will be no breathing spell between haying and harvest.

A number of members of Cantire Farmers' Club attended the meeting held in Chesley last Thursday night. The address of President R. H. Halbert is spoken of in glowing terms by those who attended, and it would seem only reasonable when we consider all other lines of industries are organized, that the great manufacturing concerns to the boot black on the street, that the farmer, if he ever intends to come to his own, should be united in some compact for the common good of this basic industry. If farmers will but throw their Gritism and Torvism to the dogs and realize more that what is going to be good for one farmer cannot be very bad for another, they would do more good in one election-campaign than we have ever dreamed of. Co-operation should be the watchword.

One of the prosperous farmers of this line who recently delivered a fine bunch of hogs to Wallace Megraw is wearing a broad smile these days. He received by cheque for over eight dollars extra. Hogs took a raise in Toronto. They did that many a time, but the farmer's pocket never heard of it.

Mrs. Wm. Mitchell and children, of Galt, are visiting at the home of the former's parents, Mr. and Mrs. Geo. Walpole.

Mr. and Mrs. Geo. McPherson and daughter, of Toronto, are visitors at the home of Mr. J. B. McPherson.

Miss Sara Fuson spent part of last week with friends in Parkhead.

Mrs. Donald Reid and children spent last week visiting friends at Tara and Owen Sound.

Miss Olive Hetherington spent the week end with her friend, Miss Sara Eason.

This is the place to get all requisites to fight the summer pest; such as **Paris Green, Arsenate of Lead** (in paste form), **Bug Death** (the great bug destroyer and fertilizer), **Bug Finish**, also a fertilizer, **Insect Powder** in packages and bulk, **Mosquito Oil** to keep the mosquitos away, and **Larkspur Lotion** for the boos. **Fly Skoot** for flies on stock, **Limestone, Copperas, Hellebore, Crude Carbolic Acid, Formaldehide** and **Creolin.**

Water Glass for Preserving Eggs

VILLAGE PROPERTY FOR SALE OR RENT

GOOD frame dwelling, stable and outbuildings, with five acres of land—formerly Tim George property—near Stark's mill. Will be sold on reasonable terms or rented. Also a four-year-old driving mare for sale. Apply to D. DUNLOP, Prop.

CARD OF THANKS

Mr. Robt. Bell and family wish to very kindly thank the many friends and neighbors for the kindness and sympathy shown them in their recent bereavement as well as during the period of the deceased's illness.

COLLECTOR WANTED, TP. OF ELDERSLIE

APPLICATIONS will be received by the undersigned up till 1 o'clock on Monday, Sept. 2nd, for the office of collector of rates for current year. R. C. Reaves, Township clerk. R. R. No. 3, Paisley.

PUBLIC NOTICE

IS HEREBY GIVEN that any person or persons who may injure, deface, damage, break or destroy any village property will be prosecuted and liable to the penalties in such cases made and provided by statute. By order of council.

ADVERTISING RATES

Subscription Price—$1.50 per annum in advance. To United States subscribers $1.50 per year in advance.

Advertising Rates—Legal and other casual advertisements 10c per nonpareil line for first insertion, 5c per line for each subsequent insertion.

Advertisements of Strayed, Farms for Sale or to Rent, and similar, $1 for first three weeks and 25c for each subsequent insertion.

Advertisements without specific directions will be inserted till forbidden and charged accordingly. Transient display advs. charged by the inch. Rates on application.

Advertisements in the local columns are charged 10c per line for first insertion, and 5c for each subsequent insertion. Professional cards non-resident rate for 26 weeks $5 in advance. Local notices, 5 cents per agate line. Reading notices (No. 1 Bc. Leaded or solid) one or two lines, one week, one time, $1; first in 30 days 15c per line and one-half.

—Fresh Salmon Trout at F. Oltcher's butcher shop.

—If you want an oil cook stove read Sinclair's ad.

—**Printing Invitations is part of THE ADVOCATE'S business.**

—Marriage licenses issued and money to loan. **T. H. George.**

—We have just received a few dainty blouses and fancy silk skirts. These are exclusive and new. S. F. Ballachey.

—Full line of fine engagement and wedding rings at L. Shoemaker's jewellery store.

—**For Sale**—A No. 2 Clipper fanning mill, also a Vassot grinder, 6½ inch plate. W. Stark.

—**For Sale**—One coal stove, refrigerator, cot and mattress. To be seen above fancy goods store.

—**For Sale**—A quantity of oats and barley. Thos. Swindlehurst, Con. 1, Saugeen, Paisley P. O. Bell phone.

—How about threshing orders of Groceries? We have special prices on large lots. S. F. Ballachey.

—Private sale of household effects, including one "Good Cheer" coal heater. Apply to Mrs. D. Galbraith.

—**For Sale**—One 10 h. p. gasoline engine nearly new, one lumber wagon all complete with hay, hand made bobs, Reed, one cook stove. Apply to W. W. Wynn, Paisley P. O. R. No. 2

—**Highest prices paid for hides and sheepskins.** H. E. McGregor, Butcher, Steele Block.

—Don't swelter in the hot kitchen when all stoves are to be had at such low prices at Sinclair's Hardware.

—Highest price for beef hides, horse hides, calfskins, sheepskins, tallow, &c. F. Oltcher, Paisley Meat Market.

—**For Sale**—The cottage dwelling next to the Balmoral Hotel. Freshly painted and re-papered. Apply to Neil McAllister.

—**Farm Laborers' Excursion, Aug. 22nd and 29th.** For tickets and all information apply to the old reliable C. P. R. Agency, Paisley.

—Embroidered voile with heavy embroidery in different patterns, yard wide, 75c; 18 inches wide, 50c. There is nothing nicer for summer dresses. S. F. Ballachey.

—**For Sale**—A large and comfortable frame house with good stable, on ½ acre of good garden land, on Water St. N. McArthur, prop.

—E. Stevenson's quick healing salve is the best made. We have a choice line of tobaccos and cigars, stationery and school supplies. Agent for daily papers and magazines. Give us a call.

—**Flour, Feed, Seeds, Grain**—We keep a full stock of Five Roses and Stark's high grade flours, bran, shorts, Royal Purple calf meal, poultry foods and tonics. Always in the market for coarse grains. Morning delivery only. W. Stark.

Keep a Smart Appearance

You can be smartly dressed without being extravagant if you will leave your next order with us. We have a good assortment of the very newest patterns in fancy and Plain Tweeds from which to choose. Also in Ladies' Suitings we have a full line to choose from of the newest patterns and Styles,

I. S. CRUICKSHANK, the Tailor

—Dr. Black, of Hespeler, was in town on Saturday.

—Miss Consie Carter is visiting in Toronto and Sunderland.

—Miss Minnie McKay has been visiting friends in Goderich.

—Miss Ina Allen is home from Mount Forest for a few days.

—Miss Alicia Winch was home from Montreal for a few days.

—Miss A. K. Scott, of Arthur, is visiting her aunt Mrs. D. McKenzie.

—Misses Nina Johnston and Elizabeth McLennan are holidaying at Port Stanley.

—Dr. Allen was in Chicago last week, attending the international dental convention.

—Mr. J. T. Kissack and family removed last week to London, where he has a position.

—Mr. and Mrs. McInnes and Mr. Bilson, of Chatsworth, spent Sunday in town at Dr. Allen's.

—Ptes. Clyde Thomson and Frank Ross of London, spent the week end at Mr. Alex McDonald's 10th Bruce.

—Mr. F. S. MacLachlan was on Monday elected by acclamation to fill the vacant seat on the School Board.

—Mrs. Geo. Dicks and daughter, Miss Olive Dicks, are visiting at the home of the former's cousin, Mrs. G. E. Little.

—Mrs. Faskin and daughter, of Elora, Mrs. Land and granddaughter of Toronto, have been visiting at Mr. Jas. Stark's.

—Miss McLaren, of Toronto, is spending holidays visiting at the home of Mr. and Mrs. Jos. Stoddart, 4th Elderslie.

—Mr. and Mrs. Ryan and children, of Walkerton, are visiting at the home of her parents, Mr. and Mrs. Thos. Collins.

—Mr. and Mrs. Alex McArthur, of Winnipeg, are here on a visit to his brother, Mr. J. D. McArthur, and other friends.

—Mrs. Irwin, sr., Mr. and Mrs. Harris of Ripley, and Mrs. Irwin of the Soo, were visitors at Mr. G. B. Irwin's on Sunday.

—Mrs. (Dr.) Donald and Mrs. Shiels, of London, were visiting at the home of their brother, Mr. W. C. Kissack, 12th Bruce.

—Miss Gladys Tratter, of Southampton, and Miss Delila Frank, of Owen Sound, spent the week end at the home of Mr. H. Lemont, Lovat.

—Mrs. J. T. Waters, of Tamworth, returned to her home on Saturday after a visit at the home of her sister, Mrs. E. N. Brownscombe, of Lovat.

—The school board have engaged Miss Margaret Davison, of Chesley, as teacher of the Entrance department, and Miss Myra Hardy of Harriston, for the primary room.

—Mr. C. E. Brigham, Mrs. Brigham and part of their family spent a vacation at Fordwich and Toronto. Mr. John Wagner was the relieving agent at the station in Mr. Brigham's absence.

—Mr. Al Irving and family, of New York City, were in town on Monday calling on some of the old friends of his boyhood days. The family are spending a month at Port Elgin beach.

—In the recent departmental exams Miss Velma V. Winch, of Paisley Continuation School, passed in all twelve subjects for junior matriculation, and Robt. D. McBride is starred in only one subject, algebra.

—Mrs. Wm. Allen, of Moosejaw, Sask., was visiting friends in Paisley and vicinity for a few days, a guest at Mrs. R. B. Grant's. Mrs. Allen came east as a delegate to the National Council of Women, and was one of the speakers at that gathering in Ottawa.

—Mr. and Mrs. Thos. Turnbull and children of Dundas, Mr. and Mrs. McLaughlin of Walkerville, returned to their homes on Monday after visiting at the home of the ladies' parents, Mr. and Mrs. D. Brown, Victoria St. south.

—Miss Victoria Rose, who was on the Standard Bank staff here, left last week to take the position of teller in the Harriston branch. Before her departure she was presented with a suitcase umbrella by her friends and fellow members of the Organized Bible Class of the Baptist church.

NOTICE OF DISSOLUTION OF PARTNERSHIP

NOTICE is hereby given that the partnership heretofore subsisting between us, the undersigned, as Ballachey, Laidlaw & Co., in the village of Paisley, has been dissolved as from July 2nd, 1918, by mutual consent. All debts owing to the said partnership are to be paid to J. R. Laidlaw and all claims against the said partnership are to be presented to S. F. Ballachey, by whom the same will be settled.

Dated at Paisley, July 30th, 1918.

D. Forrester, (Witness) — S. F. Ballachey, J. R. Laidlaw.

NOTICE RE ACCOUNTS

THE accounts owing to the late firm of Ballachey, Laidlaw & Co. having been assigned to me, are now payable, and I request settlement of the same at an early date. Interest at 7 per cent. will be charged on all overdue accounts, also for all 1918 accounts, commencing Sept. 1st. Payment shall be made at the office of D. Forrester, Barrister.

J. R. Laidlaw

Soils and Crops

By Agronomist.

This Department is for the use of our farm readers who want the advice of an expert on any question regarding soil, seed, crops, etc. If your question is of sufficient general interest, it will be answered through this column. If stamped and addressed envelope is enclosed with your letter, a complete answer will be mailed to you. Address Agronomist, care of Wilson Publishing Co., Ltd., 73 Adelaide St. W., Toronto.

Save the Soil.

Never before in the history of Canadian agriculture has there been any such a tendency toward the depletion of soil fertility. Thousands of farmers in our richest agricultural regions who were at one time growers of good cattle, sheep and hogs are becoming soil robbers. The high price of grain is tempting them to sell instead of feed out the crops. One may build up his bank account by that process for a few years, only to find that he has really been selling his farm by the wagon-load. Every consideration present and prospective, points to the importance of maintaining and increasing the fertility of the land, and this is just the reason why every farmer in Canada whose land will support live stock ought to find some way of utilising good animals in his system of farming. The farms on which some sort of live stock may not profitably be maintained are few and far between.

The high price of grain has not continued long enough to enable anyone to measure its full effects, nor have we any means of determining whether the conditions which are holding the price of grains to their present level will continue long enough for the full effects to be realized. One effect, however, is plain, that it is checking the movement toward crop rotation, stock feeding and maintaining the fertility of the soil. Should this continue for years to come, we fear that this terrific waste of fertility that is going on will not only continue but actually increase.

It is going to take a number of years to measure the effect of this drifting away from live stock on the land. It has been with the utmost difficulty, even when grain was bringing moderate prices, that farmers could be persuaded to change from growing grain for the market to stock farming. Nor is this to be wondered at; for the growing of cattle, sheep and hogs is an entirely different type of farming. It is an easy matter to develop a profitable system of grain farming on productive land, but it requires exceedingly good judgment to make live stock yield maximum returns. And when a man has once drifted away from live stock it is all the more difficult for him to take up the work where he left off.

Another question arises: What is going to be the result of the present generation of farmers drifting away from live stock farming on the future generations of farmers? The difficulty of teaching the coming generation how to care for live stock is sure to hold back the development of the industry for many years. Therefore, grain must be grown until the farmer is affected by reduced fertility and consequent declining yields. Then when the tide does turn, as it eventually must turn, there is going to be a mighty problem of restoring the wasted fertility and a mighty hunger for knowledge of live stock feeding and soil management.

One thing is certain, that unless there is a complete change in our methods of farming, grain will never be as cheap as it has been in former years. There are too many demands for it besides feeding it to live stock. In fact, there are only two ways of increasing grain production; one by increasing soil fertility; the other by better methods of culture. Both of which are educational processes and necessarily slow.

Live stock raising is the best insurance against an impoverished agriculture. Those who have studied the problem know that this is true. Do not increase your acreage of grain crops, but improve your methods. Grow fewer acres and more bushels to the acre. Do not keep too much live stock but use better blood and give them better care. Do not break up good pastures and put them in grain because they offer a profitable rotation of crops and become a soil robber and a price chaser. The scales are sure to turn in favor of the live stock grower, and as live stock cannot be increased rapidly there is sure to be some good years ahead. It is claimed that hogs are an exception to this rule, that they can be increased very rapidly, but, even with hogs, when the supply of breeding stock becomes reduced it requires two or three years for production to get back on a normal footing.

Sheep Notes

"I would like to know how to do good farming without sheep," says Mrs. George McKerrow, of Wisconsin, one of the best and most widely known sheep breeders of American. "Why?" he continued. "Because my sheep use up the wastes of the farm. They clean up the grass, weeds, brush and gleanings, and in so doing turn into cash what otherwise would be lost."

"Sheep," he says, "make the most economical gains of any kind of live stock because they clean up the odds and ends. They are particularly useful on the farm in the fall of the year, for they turn into mutton the things that otherwise would not be used. At the same time they save the feed stuffs that would be given them if they did not have access to these other things."

After harvest, Mr. McKerrow's sheep are turned into the oat fields for a few hours the first day; an hour or two longer the second day; and the time gradually increased until at the end of a week they have complete possession of the fields. The lambs are permitted to enter the corn before it is cut and they clean up on the weeds and lower corn plant leaves. Lambs do not pull down the lower ears of corn as do the sheep. Roots are grown for the cattle and sheep on Mr. McKerrow's place, and after the larger roots are hauled into storage for winter use, the sheep are turned into the field and eat the smaller ones that remain. Both the sheep and lambs are turned into the aftermath of the meadows and this brings them into winter quarters in good condition.

Another profitable practice on this farm is that of plowing up fields that become weedy after harvest. These fields are sown to rape and turnips, and later the sheep are turned in. They eat the rape and turnip tops with relish and will later hollow the meat from the turnip, leaving but a shell.

Mr. McKerrow has found that a frequent change of pasture is beneficial to the sheep. A thirty-six-inch woven wire fence in twenty-rod lengths is moved about, thus preventing the too short cropping of the grass, and furthermore reducing the internal parasite plague to a minimum. Water is also an important consideration, and ewes particularly should have water the same as dairy cows.

"I would not go so far as to say that there should be some sheep on every farm," declares Mr. McKerrow, "for peculiar conditions might not make it practical, but I do believe that there should be sheep on the vast majority of farms in this country. They turn waste into cash. The sort of saving that the good housewife is making in her kitchen can be practiced with corresponding effectiveness by the use of sheep on the farm.

Poultry

Grass clippings are an excellent green feed for chickens. The back yard poultry flock of a family often lacks sufficient green feed with a consequent reduction of egg and meat production. With the easy availability of lawn clippings the poultryman can always have green feed through the summer for his chickens. The flock can be fed daily as much of the green clippings as they will eat. If any continued bowel trouble shown, the amount should be reduced. The remainder of the clippings can be allowed to dry and fed moistened during the time between lawn cuttings.

Among the green crops can be dried for winter use. Dried grass clippings are a good green food for winter. They can be dried and stored in sacks. These died clippings, moistened and fed to the flock, are a very fair substitute for the succulent green feeds of summer.

Pay More and Eat Less.

"One could eat two meals in some cities very easily in London, and leave the table slightly minus the self-satisfied feeling to be got by unrestricted eating in any American Cafe," writes Raymond B. Bolton, a newspaper correspondent. "In addition one has to pay more on the average for a meal here than in the United States or Canada."

SMOKE TICKETTS

ORINOCO

WOOL

Farmers who ship their wool direct to us get better prices than farmers who sell in the general stores.

ASK ANY FARMER! who has sold his wool both ways, and note what he says—or, better still, write us for our prices! They will show you how much you lose by selling to the General Store

We pay the highest prices of any firm in Canada, and are the largest wool dealers in Canada. Payment by return mail. Ship your wool by express and we will be more than pleased to pay you all any excess of express and duties.

FUNNY FOLD-UPS

CUT OUT AND FOLD ON DOTTED LINES

I'LL GO AND BORROW MOTHER'S MUFF. I THINK THE FUR IS JUST THE STUFF TO MAKE A TALL DRUM MAJOR'S HAT WE HAVE NO DRUM - BUT WHAT OF THAT.

To Blast Big Stumps.

About the first work I did with dynamite was to tackle a big field of stumps. For this I used a 40 per cent. grade, which is about the proper thing to use for stump-blasting on ordinary soils. I find that on low, boggy ground, where the stumps are very large and tough, it is more economical to use a higher grade of dynamite, such as 50 or 60 per cent., placing it under the stump and firing electrically by a blasting machine. All very large tough stumps over three feet in diameter, such as: oaks, hickory, and elm, should be blasted only by this method.

The distributed charges will then all go off together, and the combined effect of the several charges so distributed will give a much better blast than putting the entire charge in one hole bored directly under the stump.

A few months ago a neighbor of mine excavated a ditch through a low bottom field of his which was very much subjected to overflow. In the digging of this ditch he encountered several large willow stumps which were at least one hundred years old but still in a pretty sound state of preservation. Knowing that I was accustomed to using dynamite, he called upon me to blast out these stumps standing in water, for it was too wet and boggy to get them otherwise.

I find that blasting for tree-planting, either for fruit or shade trees, is one of the most profitable ways of using dynamite.—R. W.

Getting Even

"Yes," remarked a conceited young bachelor, "I have the greatest admiration for the fair sex, but I never expect to marry—oh, dear no!"

"Indeed!" remarked a lady. "Then I am to understand that you not only admire women, but you have a sincere regard for them as well."

The Dairy

One of the most important things in the operation of a dairy is the cleaning of the dairy utensils. They must be cleaned and rinsed thoroughly immediately after being used; this will prevent the water in the milk from evaporating and the solid matter sticking fast to the utensils. If it is found impossible to wash the utensils at once, it will be a good plan to rinse them in lukewarm water so that the greater part of the milk will be removed before it has had a chance to stick fast to the pail or cow. Hot water should never be used until the milky substances have been removed with the lukewarm water first, as the hot water will coagulate the casein in the milk so that it sticks to the pail and will therefore require a great amount of washing before it can all be removed from the vessel.

After thoroughly rinsing the utensils in the lukewarm water, they should be thoroughly washed in hot water, using some good brand of alkali washing powder. There are many good washing powders to be found on the market that will answer the purpose and make this part of the dairy work easier each day. Soaps or powders that contain grease as a part of their composition will not make a satisfactory brand of soap or powder to use in this work and not nearly as good as a genuine alkali powder.

It is a good plan also to have on hand several good stiff brushes that are adaptable to cleaning the various utensils used daily. If steam is installed it can be used very effectively in sterilizing the utensils, but of course this is not always installed and it is necessary therefore, to follow out the rinsing and washing process, as I have described. Never wipe the utensils after washing them in the hot water. The heat imparted by the steam or hot water will make the utensils dry very quickly. They should be placed upside down on the racks so no dust or dirt will get on the inside of them. This is just as important as the cleaning process. Never put covers or lids on the cans or pails, but give them free access to air and sunlight at all times. This keeps them bright, clean and sanitary.

Camera Used to Candle Eggs.

Bad eggs are unfailingly detected by the camera. This has been demonstrated in France, where experiments are being conducted with a photographic egg-testing apparatus, says Popular Mechanics Magazine. The idea of utilizing the camera instead of the human eye for candling is a new one. So far it has not been carried past the laboratory stage, but its commercial utilization at present, it is of more than passing interest. Eggs are held in a half dozen oval holes provided in a metal plate. Their large ends point toward a common centre. While intense light is passed through them; they are photographed. A powerful lens is used and an exposure ranging upward to three minutes is made. The result is a picture that shows the size of the air chambers in the eggs.

A Patriotic Urge

Colonel Grimbattle—Why so gay? You were in deep mourning the last time I saw you.

The Widow—Lookabout—I was. But since the soldiers began to rendezvous here I've been called to the colors.

GOOD HEALTH QUESTION BOX

By Andrew F. Currier, M.D.

Dr. Currier will answer all signed question in of general interest it will be answered through these columns; if not, it will be answered personally if stamped, addressed envelope is enclosed. Dr. Currier will not prescribe for individual cases or make diagnosis. Address Dr. Andrew F. Currier, care of Wilson Publishing Co., 73 Adelaide St. West, Toronto.

Remedies for Nervous Diseases.

In no class of diseases are medicines more hopeless and useless, so far as cure is concerned, than in those which involve the brain and spinal cord and the nerves proceeding from them.

I don't mean that medicines are powerless to relieve some of their symptoms, but I do not know of any that will cure them, when once well established, any more than they can cure cancer.

Neither do I include in this sweeping statement the milder forms of neuralgia which are often relieved and cured for the time at any rate, by external or internal remedies.

In a great many cases it is a waste of good money to buy medicines, and to expect them to cure disease will almost surely be disappointing.

Three medicines and perhaps four the world could not well do without, opium to relieve pain, quinine to cure malarial poisoning, mercury to cure syphilis, and salicylic acid to cure rheumatism.

We could manage to get along if most of the others were dumped into the sea.

More than thirty thousand different proprietary medicines are made in North America; who would be foolish enough to imagine that they would do what they are advertised to do for those who buy and take them.

If the money spent for them were used in buying good simple food, how much better everybody would be, except, of course, the patent medicine makers.

Some nervous diseases are self-limited, they burn like a candle until the material causing them is used up, and then die out.

This is so for instance, with some of the nervous diseases of childhood and early life, St. Vitus' dance and others.

Medicines are sometimes given in this disease and sometimes seem helpful, though I would not recommend the patent medicines advertised to cure it. If a child with this disease has good food, plenty of sleep, sunlight and outdoor exercise, is clean in his habits, and is kept free from excitement, he will get well in nine cases out of ten without a drop of medicine.

Epilepsy may disappear after a few years with good hygienic care, though I am aware that frequently it does not.

It is so benefited by careful regulation of the diet and habits, and I am free to say there are some powerful medicines now used for it which are apparently of great value.

It may be too early to say whether they will cure it permanently or not, they are not likely to cure those cases in which the cause of the disease remains, for instance pressure upon the brain by a depressed portion of the skull.

QUESTIONS AND ANSWERS

E. F.—Two years ago, my husband, who is forty-five years old, began to have epileptic fits, and now he has at least two every week. We have not yet been able to find any help for him.

Answer—If you will send a stamped and addressed envelope, I will be very glad to send you an article on Epilepsy, which you may read.

FALL SETTING OF STRAWBERRIES

Heretofore our preference has been spring setting of strawberry plants over fall set. I could never see what was to be gained by fall setting as ordinarily practiced. Late August and early September is the season usually employed for this. To be sure, when weather and soil conditions are favorable, and good plants set, quite a fair growth will be made both in root and crown, growth sufficient to mature a fair crop of berries if allowed to fruit. But if permitted to fruit the first season an inferior stand of young plants must necessarily result. The cultural conditions required, in each instance are altogether incompatible. The object or purpose sought in each case is wholly unlike.

Then, too, I figured that spring set plants make all the growth necessary under proper conditions of soil and culture, hence, what was the use of endeavoring to establish the new plantation at a season when favorable weather conditions were so much more problematical. Another thing, the labor of creating a fine mellow root pasturage with plant occupying the ground, would be greatly augmented. Indeed, I figured that to place a piece of ground in as excellent a condition as is possible when larger, deeper working tools may be used, is practically out of the question; hence, raising the matter up in the light of the experience I then had, I decided that the fall setting of strawberry plants had nothing to offer us.

But for some time back I have been looking at the proposition in the light of greater experience and can now see how, if fall setting can be made successful, the plan offers one very decided advantage to us, viz., the setting of the plants will come at a season when other work is far less pressing. With a large amount of work of this sort to be done in the spring some of it must necessarily be neglected; hence, any plan or system that promises to relieve the pressure of work at that time is worth a fair trial. As time passed the attractiveness of the plan increased until I decided to try the plan out. So this fall an acre of new bed has been set as an experiment. Conditions of soil and weather were not ideal. If the plan is a success this time, it will be possible to make late fall setting successful under average fall weather conditions, so it seems to me.

To begin with, the ground used was in peas this summer. As the rainfall has been deficient since pea harvest the ground was not moisture-saturated as may be secured under ordinary spring conditions. For several weeks after pea harvest the soil remained almost dust dry. Then a shower came to moisten the soil down about five inches, when the ground was plowed and floated down with a plank drag. Other showers followed in a week or so of sufficient magnitude to moisten the surface so that a fairly good soil plant bed was secured. A shower came just as the work of setting was begun; just enough to crust the surface when the weeder was used to re-establish the loose surface. This loose surface soon dried out so that it bothered some in setting, for additional work was made necessary that none of this dry soil got next to the roots. Then, too, the job was more or less unpleasant as a fresh breeze blew the dry particles into our faces.

Just how the experiment will turn out, future developments only can reveal. Only light showers have fallen since the setting was finished. To prevent crusting and consequent loss of soil moisture, the weeder has been used to re-create a loose surface. Because of the deficient rainfall it may be necessary to reset quite a number of plants. This will be done as soon as it becomes clear that the plants first set are not starting out vigorously.

Of course, it is not expected that plants set this late in the season will make much growth in the short time before freezing weather sets in. This is not expected. Neither is it necessary to the success of the plan. All that is required is that the plants get their root system established and be ready to go to business next spring.

It will be imperatively necessary to supply winter protection to these fall set plants. They wouldn't be worth shucks if not fully protected from the injurious results of exposure to winter's frost and sunshine, and the heaving action upon the soil of "Sugar Weather." One of my helpers said, when I cautioned him against getting the plants too deep: "But just wait till the frost gets in its work." Our reply was to the effect that it would never do to let frost get in its work as the plants must be fully protected against such harmful agencies.

Whatever may be the outcome it is certain that one feature of advantage will be a success; we will have a start of a week with our spring work. Establishing the new strawberry bed in spring, coming as it does right along with so much other similar work, adds largely to the strenuous life of the season. If this job can be transferred from the busy time to a season more convenient, a very decided advantage will be gained.

After all due care and protection, spring growth may show up plants not starting out with full vigor. These may easily be replaced with plants from the propagating bed and a full stand made secure.—M. N. Edgerton.

Popularity.

It is possible for a person to be undeservedly popular. His popularity may not be due to good qualities, but to wealth or other advantages. Many people honor a person for selfish reasons. They think it pays them to have his good will.

A humble person may after all have as many real friends as an honored one. The friends of the former are generally true, being friendly because of admiration for him and not because they are seeking worldly favor. He knows who his true friends are, but the other doesn't.

When an apparently popular man fails in a financial or any other way which reduces him to a humble position he soon finds who his true friends are.

Unless he is a very bad character, one with only a few friends is usually a man of better principle than is one with only a few enemies. The former usually doesn't seek popularity, but the latter generally does. It is easy for anybody to become popular if he has the advantages. When a person has only a few enemies they generally have good reasons for being such. It is found that many a popular man will be very generous in his dealings with people he wants for friends but unscrupulous when dealing with those whose friendship he doesn't desire. One person may truthfully say of another that he may have acted good with nearly everybody else but that he acted meanly with him.

Individual Churns.

The cream-gathering trunk stopped the weekly or daily churning for us, and the idea of table butter became a question. The creamery had that habit before they asked us for our cream.

The nice-looking, high-class creamery butter wrapped in tissue paper and packed in ice, right to our door every time they came for our cream, was their answer.

We tried it. Fresh and clean as it was, it did not fill the want for good country butter.

It is out of the question to make a churning each week with the big churn, and pack it down until used. We have a gallon and a half glass churn which we bought at our hardware store for a small amount two years ago, long enough ago to know that our investment is a success and that it is the real way for the farmer to have butter upon his table.

This churning plan proves to be capable of making clean butter, and it is operated easily.—G. W. B.

Corks if steeped in paraffin oil for a few hours will make excellent fire-lighters.

"Country of Mine."

Country of mine, that gave me birth,
Land of the maple and the pine,
What richer gift has this round earth
Than these fair, fruitful fields of thine?

Like sheets of gold thy harvests run,
Glowing beneath the August sun;
Thy white peaks soar,
Thy cataracts roar,
Thy forests stretch from shore to shore;

Untamed, thy northern prairies lie
Under an open, boundless sky;
Yet one thing more our hearts implore—
That greatness may not pass thee by!

—Helena Coleman.

The Farmer's Office.

Farmers are not slow in recognizing the value of an article or method for the improvement of their business, so they are buying typewriters and other office conveniences, and they're using 'em, too.

The typewriter is especially useful, as it writes letters in a standard way that indelibly stamps the sender as a business man. For the sake of the letter alone the typewriter is well worth owning; but it has other uses which help prove its value. Carbon copies of all letters written can easily and conveniently be made by inserting a sheet of carbon paper and a "second sheet" under each letter written. Carbon copies are accepted as evidence in the courts. Card index records can be printed by the typewriter; also bills, loose-leaf records, etc.

The first cost may be a bugbear to many. This is a needless fear, as a good rebuilt typewriter can be purchased for about $25 or $30.

The repair expense is usually very slight if the typewriter is oiled occasionally and used with reasonable care. It will be necessary to purchase a new ribbon once or twice a year, depending on the amount of writing done; but this is a very small item of expense.

To Conserve Fish Waste.

The Canada Food Board has been advised by Messrs. Ernest Scott & Company, engineers, Fall River, Mass., that they are prepared to install equipment in Canada for the reduction of fish and fish waste to fish meal, fertiliser, oil and glycerine. Considerable research has been conducted along this line by private parties and various branches of the Government in Canada, but great quantities of the material are still being wasted.

"An easy job will suit me." "How about winding the clocks every week?" "I might make that do. But what's the matter with tearing the leaves off the calendars every month?"

AutoStrop SAFETY RAZOR

Mechanical Perfection

There are many reasons why the AutoStrop is the ideal aviator's razor, but one stands out more prominently than the others and will instantly appeal to every "Knight of the Air", that is, its mechanical perfection.

Every aviator knows and appreciates what mechanical perfection means—his plane must be perfect in every detail to avoid accidents.

His razor must be perfection itself to give a complete satisfaction. The AutoStrop is the one razor that will give continued satisfaction without the annoyance of buying new blades. Besides it is the only razor that sharpens it's own blades automatically—in 15 seconds, you receive with the AutoStrop will give you at least 300 clean, comfortable shaves.

Brothers in Arms.

Upon these fields of Flanders and those plains of Italy,
Brothers! At this dire moment there is waged titanic strife;
Nearly every stream in Europe now runs red unto the sea,
From hills, war-tramped, where freedom is sore struggling for her life.

And we were happy, happy lads at home but yesterday,
With bat and ball, with oar and rod, with song and feast and mirth;
War's challenge made us men at once, and broke the charm of play,
And here we'll die ere freedom shall be driven from the earth.

Think? Some will see the fourth Yuletide dawn to the roar of guns;
For all who lie neath folded hills we cannot stop to weep.
And we—Freedom's last citadel—must face the furious Huns;
And on the frontiers of the world appointed vigils keep.

Then, brothers, can you wonder that, in mud and rain we ask
When, in the lull of firing, we wipe our smoky brow:
"O, where in all the future will you find a grander task,
Where will a year of man's short life count more than here and now?"

—Alexander Louis Fraser.

Never allow anything to keep you from being polite. Courtesy is a kindly and thoughtful consideration of others that will give you a distinctive position and win the admiration of all with whom you come in contact.

Suits Your Own Taste

You can vary the strength of your INSTANT POSTUM by using either more or less of the powder to the cup. A level teaspoonful seems to please most people.

A DELICIOUS DRINK MORE HEALTHFUL THAN TEA OR COFFEE

A NIGHT IN THE AIR PATROL.

Perils and Exploits of Heroes Who Guard London Against Raids.

The bombing of darkened London by raiding Zeppelins has been vividly described many times; but we have not heard much about the perils and exploits of those alert and daring hawks of the night, the British air patrol, who are the city's defense against the raiders. Mr. Phillips Dwight Rader, in Sunset, has recently given an excellent account of his experiences when he served with them.

Have you ever been on a railway train at night, he asks, and watched the landscape rushing by? Your speed is, say, sixty miles an hour. If you hit anything you have tons of steel and wood to break up before it finally gets to you; even then your chances of getting hurt are good.

Now, picture yourself in an aeroplane at night. Your engine stops. The machine is fast and heavy. Your gliding speed is seventy miles an hour. Down, down, down you rush. You cannot see the earth at all. You are in the same position as if you were on a titan-and-spruce express train loaded with dynamite, and running wild at seventy miles an hour.

It is peril such as that, not that of encountering the enemy, which the anxious flyer has oftenest upon his mind. Mr. Rader narrates a typical experience: Zeppelins had been reported off the east coast, approaching London. He was ordered to take the air, proceed in a certain direction for one hour, at an altitude of nine thousand feet, and return at the end of that time to his home aerodrome. He swept upward in climbing circles. The guiding flares below vanished.

"Around me," he says, "nothing except grayish blackness, perforated above by the stars and below by occasional pin pricks of violet light that some careless housekeeper has left unshaded. I seem to have entered a silent shrouded world. The reaction to be excitement of my ascent comes. I try to sing. My very voice, audible above the roar of the engine, sounds uncanny, and a cold chill runs down my back. Something is following! Swiftly I whirl—It is only the uncanny form of my own fuselage.

"Away off to the right a shaft of light like a silver pencil cuts up through the sky! Now another! Another! Still more. Some wave back and forth, others hold their shafts steady, like colossal marble columns joining the sky with the black earth. The shafts concentrate in one spot. For a few seconds only, another silver pencil appears, parallel to the rest of the lights. Then little dashes of red light, like matches being lit in the distance, appear—they have spotted a Zeppelin with the searchlights down below and are shelling it. Shall I fly in that direction? No. My orders are to proceed on my course, and I hold true. Then suddenly the lights are gone. The firing ceases. The raider disappears. My hour is up. I turn back.

"I have flown for an hour and forty-five minutes now. Anxiously I strain to see the aerodrome night marks, but beneath and before me is only darkness. I have flown now another ten minutes. I should have sighted the aerodrome flares five minutes since. Where have they gone? The night flyer's fear of a lost landing place comes to me as I strain my eyes to see the flaring 'L.'

"My heart beats fast, for I see a dirty, milky substance begin to crawl across the black earth in spots—the dreaded ground mist (adrawing a wet blanket over my landing place. All may mean crashing into the side of a house or a hill if the gas flares fail to show."

When at last the welcome flares showed the stiff and weary aviator the way to safety, his first thought was to telephone his report; in response a voice over the wire told him jubilantly:

"Lieut. Brandon has brought down the Z-18 over the Thames estuary. Good night's work. The Zepp have not scored this night."

WORLD'S LARGEST DISHES.

Belonged to the Indians of Vancouver Island.

The largest food dishes in the world were recently bought off the Indians of Vancouver Island, British Columbia, for the Museum of the American Indian, New York City.

These dishes were purchased from a tribe named Kwakiutls, which in English means "Smoke of the World." They are used for special festivals when great numbers of Indians gather to celebrate some religious or ritual festival. The dishes are carved out of wood and stews and soups are brought to boiling point by dropping hot stones into the food. Carvings at the ends represent the clan to which the dish belongs.

The Friendless Soldier.

While mothers smile, who fain would wildly weep,
And sweethearts kiss, in token troth to keep,
He leans against the stolid station wall
Without, it seems, a single soul at all
To hold his hand; to sorrow if he die!
Dost mark his face? Then say to him good-bye!

The Right Idea

Drawing Teacher.—What? Forgotten your pencil again? What would you think of a soldier without his gun?

Fresh.—I'd think he was an officer.

A French armoured car supporting a British attack on the Western front. This French official photograph was taken less than one hundred yards from the Germans.

Two Popular Designs

The well-cut separate waist and skirt are always appreciated by the woman of good taste. McCall Pattern No. 8401, Ladies' Blouse. In 7 sizes, 34 to 46 bust, No. 8433, Ladies' Two or Three-Piece Skirt. In 7 sizes, 22 to 34 waist. Price, 20 cents each.

Here is an especially attractive design for the popular pajamas. McCall Pattern No. 8411, Ladies' and Misses' Pajamas. In 8 sizes, small, 32, 34; medium, 36, 38; and large, 40, 42 bust. Price, 20 cents.

These patterns may be obtained from your local McCall dealer, or from the McCall Co., 70 Bond St., Toronto, Dept. W.

Fashion's Changes.

One can say as a certainty that in the twentieth century no one will be able to boast that he has created anything absolutely new in fashions. The crinolines of the Empress Eugenie were a reminiscence of the panniers of Marie Antoinette, and long before her time, in the Orient, women had conceived the idea of enlarging their skirts by means of hoops. A few years ago women of fashion affected high waists and sheath dresses, but before them Mme Recamier had done the same thing, and the dresses of Mme Recamier were suggested by the Greeks and the Romans. In short, like everything else, fashion is a part of the same everlasting come and go. We do not advance as we are so prone to imagine; we repeat our steps.

Waste of Food By Dogs

Many dogs have already been destroyed in Great Britain because of the necessity of conserving foodstuffs. It is estimated that there are between four and five million dogs in the United Kingdom, and a committee has been considering the question of their rationing and the extinction of a certain percentage.

"AT RAILHEAD" IN WAR ZONE.

Where Supplies Are Distributed to the Firing Line.

The S.S.O.'s car turns into the railway road leading to railhead, and is promptly halted by a vigilant Traffic Control. A long column of A.S.C. wagons fills the road.

They are supply wagons of a divisional train, waiting its turn to draw supplies from the pack-trains which arrive daily from the base, bringing rations for man and beast.

The senior supply officer makes a short cut across to the wilderness of siddings, tracks, stacks of stores, forage, fuel, and salvage comprising an "advanced railhead."

The S.S.O. picks his way amid gangs of jabbering Chinamen. His objective is a sandbagged hut bearing the sign "R.S.O." Beside it is another, labelled "R.T.O."

The railway transport officer sees to the traffic arrangements. The railhead supply officer takes over the supply trains as they arrive, checking the contents and issuing them to the various divisions and units "feeding" off his railhead.

Each division has its senior officer, whose job it is to see that it receives all, if not more, than its lawful requirements, to the last pint and pound. If any item of food or forage is deficient, it must be procured promptly elsewhere, from some reserve.

A word to the supply column supply officer is all now that is necessary. Spare lorries are standing by for such emergencies.

The S.S.O. returns to his wagons, now drawing up beside the pack-train.

Each truck bears the identification number of the division to which it is assigned. One truck or more is packed tight with bread—eighty loaves to a sack. Others are loaded with frozen beef or mutton. There are trucks of groceries, hay, oats, and any amount of sundries, down to fly-papers, wood-preserving oil, and cigarettes.

In theory, lorries only should be loading this bulk of stuff at railhead, conveying it forward to "refilling point," for shipment there into A.S.C. horse wagons.

But then in theory railhead should always be some ten or fifteen miles behind the firing-line, whereas this one is scarcely five. Next week, what is more it is to be pushed up closer still. And then look out for shells!

WITH THE FINGERS!

SAYS CORNS LIFT OUT WITHOUT ANY PAIN

Sore corns, hard corns, soft corns or any kind of a corn can shortly be lifted right out with the fingers if you will apply on the corn a few drops of freezone, says a Cincinnati authority.

A little cost one can get a small bottle of freezone at any drug store, which will positively rid one's feet of every corn or callus without pain or soreness or the danger of infection.

This new drug is an ether compound, and dries the moment it is applied and does not inflame or even irritate the surrounding tissue. Just think! You can lift off your corns and callusses now without a bit of pain or soreness. If your druggist hasn't freezone he can easily get a small bottle for you from his wholesale drug house.

When the curds of cottage cheese refuse to be anything but tough and lumpy, after they have been drained through a cheesecloth bag, try running them through the food chopper and see how light and delicate they become.

Minard's Liniment Cures Colds, Etc.

One of the reasons why a small flock of hens does better than a large flock is because table scraps form a large part of the small flock's rations and they are an evenly balanced ration.

FLIES ARE BABY'S FOES.

Direct Cause of Death of Thousands of Little Ones.

The fly is a relentless foe of the baby.

On the hairy legs and sticky mouth parts these pests carry disease germs. If they get into baby's milk, or light on the clean bottles or nipples or crawl over the child's hands or face they leave behind a trail of these infectious germs. Germs transmitted in this manner are one of the important causes of "summer complaint" and the resultant deaths of thousands of babes every summer.

A running of the bowels, particularly when accompanied by vomiting, should cause anxiety on the part of the parent. It is a particularly bad sign in hot weather. If, at any time, more especially during the summer, a green watery stool appears, or as many as three watery movements occur during a day, call in your family physician at once. He is better able to do something for the baby if called in early than if called in late. While waiting for him to come, give nothing but boiled water, properly cooled.

Keep the baby comfortable. Do not turn it into a fireless cooker with clothing that does not permit the body heat to escape.

LEMONS WHITEN AND BEAUTIFY THE SKIN

Make this beauty lotion cheaply for your face, neck, arms and hands.

At the cost of a small jar of ordinary cold cream one can prepare a full quarter pint of the most wonderful lemon skin softener and complexion beautifier, by squeezing the juice of two fresh lemons into a bottle containing three ounces of orchard white. Care should be taken to strain the juice through a fine cloth so no lemon pulp gets in, then this lotion will keep fresh for months. Every woman knows that lemon juice is used to bleach and remove such blemishes as freckles, sallowness and tan and is the ideal skin softener, whitener and beautifier.

Just try it! Get three ounces of orchard white at any drug store and two lemons from the grocer and make up a quarter pint of this sweetly fragrant lemon lotion and massage it daily into the face, neck, arms and hands. It is marvelous to smoothen rough, red hands.

South American Visitors.

With a view to a greater interchange of commerce between South America and Canada, Mr. E. W. Lloyd, New York export manager of the British firm of Frederick Huth and Company, and Mr. Miguel A. Volcan, of Caracas, Venezuela, have been visiting the Canada Food Board. They have quantities of hides, tobacco, coffee and cocoa for which they want a Canadian market, while in return they need such commodities as canned goods, malt, etc.

Montreal, May 28th, '01.

Minard's Liniment Co., Limited.

Yarmouth, N.S.

Gentlemen,—I beg to let you know that I have used MINARD'S LINIMENT for some time, and I find it the best I have ever used for the joints and muscles.

Yours very truly,

THOMAS J. HOGAN,

The Champion Clog and Pedestal Dancer of Canada.

Music in the Schools.

The springing up of the community chorus here and there indicates clearly that music has passed the [illegible] stage, And it is a healthy sign. The desire for expression must not be stifled, whatever its channel, and when that channel happens to be of a musical nature, the need for facilities for further development and expansion becomes a question of individual attention no longer, but a national issue. Particularly pressing is the want of music in the schools; and it is in this department that most harm may be wrought by inefficient methods, careless tuition or mistaken ideals. With the developing of a scientific system of propaganda, much musical waste will be eliminated, many archaic rules discarded, and a promising course of countryside musical education pushed to a vigorous conclusion.

Minard's Liniment Cures Garget in Cows

Paris To Eat Chestnut Loaf.

Dr. Labesse, professor in the medical school at Angers, urges the use of chestnuts in bread, says a Paris despatch.

Chestnuts, which used to be sold in profusion in the streets of Paris, have disappeared from the market, he points out, and says a considerable saving in potatoes and wheat could be affected by using them in bread, according to a recipe which was demonstrated before the Academy of Sciences as long ago as 1861.

Minard's Liniment Cures Distemper.

CONTAINS NO ALUM

Retired Farmers' Opportunity

Many men living in town to-day have spent most of busy lives on the farms. They have earned their retirement. But the need for saving the 1918 harvest is very great. Retired farmers have a splendid opportunity to help out in the present crisis and many have volunteered to work on neighboring farms for the rush period. Every one that can do so is needed, for experienced men are at a premium. Their knowledge of how to do things would help to make inexperienced men and boys efficient.

Minard's Liniment Cures Diphtheria.

Colored Scavengers.

Paris streets have recently gained in picturesqueness by the employment of colored scavengers. Ebony-hued Senegalese and copper-colored Arabs from Algiers and Morocco, whose terra cotta faces contrast so deliciously with the pale blue soldiers' uniform, clean, or affect to clean, metropolitan thoroughfares. In the boulevard there is a giant negro, with the lordly gait of an African prince, who trails his besom behind him as majestically as if it were a peacock's feather fan.

MONEY ORDERS.

Send a Dominion Express Money Order. Five Dollars costs three cents.

An elevator for the Alberta Pacific Grain Company is being erected at Clarasholm.

If you want to add piquancy to cottage cheese, either purchased at the store or made at home, add a few chopped-up cherries. Another way of varying the flavor is to mix in it tiny chopped onions.

The Paisley Advocate

PAISLEY, AUGUST 14th, 1918

LOCAL AND DISTRICT NEWS

Willing to Help Farmers

A list of those men of this village and surrounding district who registered on June 22nd as willing to assist in farm work has been left with Mr. G. L. Carter, secretary of the local Patriotic League, who will be pleased to assist in procuring help for those who require it.

Soldiers Home on Harvest Leave

Many of the farmers' sons and farm employees who have been in training at London camp, arrived home last week on six weeks' harvest leave. In all there were 2,000 men granted leave at London, in accordance with a recent order of the Militia Department at Ottawa.

Special Prizes for Farm Boys and Girls

The Canadian Bankers' Association is again offering liberal cash prizes to boys and girls who will feed and exhibit calves or pigs at Paisley Fair. Those desirous of competing should make preparations and enter at once. Full particulars will be given at the Royal Bank, Paisley.

Former Elderslie Boy Died of Wounds

Capt. Malcolm McKechnie, in charge of No. 6 Canadian Field Ambulance, died in France on Aug. 8th, of wounds. The deceased was a son of Mr. D. McKechnie, county jailer of Walkerton, and was born at Gillies Hill about 30 years ago. He had graduated as an M. D., and had been practising in the west for a couple of years before enlisting with a western Highland battalion. He had been in France about two years.

Barns Burned

Fired by lightning on Thursday night last the barn on Mr. Arch. Darroch's farm in Saugeen (Petticoat Lane), was totally burned, together with the season's crop of hay, about 70 bushels of oats, and other contents. As there was no insurance on building or contents, the loss will be a very heavy one. The family have the sympathy of the community in their misfortune. The barn on the Kirkconnel farm near Tiverton is also reported destroyed from the same cause.

Now It's the Bowman Trophy

The bowling prize known as the Bowman trophy was lost to Bruce county for a considerable time, but has been brought back by the northern men. Batchellor's rink of Owen Sound, winning from Guelph, and then losing to McAuley, of Southampton. On Monday evening skip Shoemaker went up to the lake town, supported by T. Muir, W. Rae and J. H. Glover, and wrested the tall silverware from the fishermen. An Owen Sound rink is to make a try for it to-day.

Bridge in Bad State

The flooring on Teeswater bridge in Paisley is in such a rotten and broken up condition that there is every time an automobile rolls over it at speed faster than a walk. As damage suits come high, it should pay the county authorities to have repairs made before waiting for an invitation to settle up in court. For a bridge over which there is so much traffic there should be a more substantial and permanent covering than narrow plank which wears and rots away in a few years. By putting additional supports beneath the superstructure, or by other means, it should be possible to make it bear the additional strain of the more weighty cement flooring, which would outlast several wooden ones, and always be smooth, solid and safe. The Highways Committee should be induced to look into this item of county expenditure.

On Leave in Ireland

Lieut. A. E. Babcock spent a short leave in Ireland last month. In Dublin he ran across Fenton, of Tara, and they did that city together. "We stayed at Hammon Hotel, on famous Sackville St., near the post office," he writes. "Everything is quite orderly there now. Would hardly know that anything had happened, except for a few bullet marked walls. Most of the destroyed buildings are being rebuilt, and some are completely finished. My pal and I went to the Royal Theatre at night. What surprised us most was that the people stood while the orchestra played the national anthem before the performance. I expected a scene, but nothing happened except a few hoots from the gallery. Belfast reminds me very much of Glasgow. It is a busy little commercial city, quite compactly built with good wide, nice and clean streets. Went through their city hall the other p.m. It is the most beautiful building of its kind I have ever seen. Built in 1899. People here are very loyal, although there are a lot of fine young men in civilian clothes yet, and will be until they have conscription. They have joined the colors much better here than in the south, though. Left Belfast and took the boat at Fleetwood. As soon as I stepped aboard the O. C. troops on board elected me ship's adjutant. I was the only Canadian officer, and I suppose that was the reason. I was furnished with a large stateroom near the ship's captain and given a free trip."

An Aged Resident Gone

The death of Mrs. McMillan on Wednesday last was not altogether unexpected, as she had been in failing health for some time. The deceased lady was 72 years of age, and had been a resident of Paisley and vicinity since the very early days of the settlement. Her maiden name was Rachel Forrest Davie. She was born in Aberdeen, Scotland, and her parents and family came to Canada when she was a child. They settled at Fergus, but only remained there for a few years, coming on to take up a homestead in the Queen's Bush immediately following the land rush in Bruce Co., locating in the Grove View district, with a large group of Aberdonian families, the Davies, Mains, Lambs, Lumsden, Dalgarnos and others, who made up a typically thrifty, and substantial agricultural community that remained so Scottish as to seem to have been bodily transplanted from Auld Scotia. Since her marriage to the late Malcolm McMillan, who predeceased her 27 years ago, the subject of this sketch lived in Paisley. She is survived by a family of one son and four daughters—John, Belle, Addie, Gevena and Violet, who were all home at the death of their mother, and have the sympathy of all in their bereavement. Three brothers and one sister of deceased are living—James Davie, of Chesley; Gavin, of Toronto; Wm. C., of Tara; Mrs. Henderson, Toronto. The funeral on Friday was conducted by Rev. G. C. Little, of Knox church, assisted by Rev. Mr. Walker, of the Methodist church. Interment was made in Paisley cemetery. Among those present besides relatives mentioned were Miss Bruce and Mrs. Nesbitt, of Toronto (both nieces), and Miss Smith, of Ottawa.

Escaped from Huns

Pte. Harry Jack of Paisley, who officiated as a bandsman in the 160th in Walkerton, and who we mentioned last week had been taken prisoner by the Germans, has, according to a letter received Tuesday from Gunner Norman Hibbert in France, escaped from Heine, after putting up a desperate fight, and has got back to the Canadian lines again, where his wounds were dressed and he has been put for a time in "Blighty." The Owegoing from the Walkerton Herald and Times was the first news received here of Pte. Jack's escape. Mr. Alex Jack telephoned Mr. Hibbert in Walkerton and found that the story of Harry's escape had been told to Gnr. Hibbert by a Wiarton man of the 160th. We are well aware that the militant hospitality of his Hun captors would not be any more agreeable to Harry than the company of a pack of wolves, and are not surprised to hear that he made a successful break away. Everyone here is hoping that the good news may shortly be confirmed, as a letter received on Monday by Mr. and Mrs. Putnam from their son, Pte. L. R. Putnam, dated July 21st, the latter tells how Pte. Jack became a captive. The Germans, he says, rushed the post in which there were six men. Two were killed, and two were wounded, while Harry and another were taken prisoners.

MINISTERS COME FROM COUNTRY CHURCHES

St. Andrew's and Queen Hill congregation has had the pleasure of hearing some "big" preachers the past few weeks. Men who are occupying prominent places in the ministry sometimes wander back to the "little white church in the country"—the old home church—and this has been happening here.

On Sunday week Rev. A. H. McGillivray, M. A., of St. John Church, Hamilton, preached at St. Andrew's. Although this is the church of his boyhood days, Mr. McGillivray had never, until Sabbath last, occupied the pulpit of St. Andrew's. The service was of special interest also because Rev. M. A. Campbell of Montreal, another old Saugeen boy, assisted in the service. The attendance was very large.

In conversation the day following Mr. McGillivray spoke of two things that impressed him. One was that not one of the men of the pioneer days was present. It brought the verse to mind, "Your fathers, where are they, and the prophets, do they live forever?" The other was that fully half of those who came to church came in automobiles.

Speaking of the earlier history of the congregation, Mr. McGillivray said that Bruce county was famous for two things: supplying settlers for the Canadian west, and producing Presbyterian ministers. In both regards St. Andrew's and Queen Hill congregation has done its duty to the full. Scores are to be found from Winnipeg to the Yukon, who were born in this parish, and as a rule they have not forgotten the church of their fathers. In the matter of ministers, this congregation has given Dr. Donald McGillivray, of Shanghai, one of the great men of China, and who preached in the old home church a couple of weeks ago; Dr. Margaret McKellar, of India; Rev. Gillies Eadie, M.A., of Honan, China; Rev. N. McKinnon, of Caledonia; Rev. M. A. Campbell, of Montreal; Rev. H. D. McCulloch, B.A., of Appin; Rev. W. D. McIntosh, B.A., of Nairn; Rev. J. K. McGillivray, M.A., Missionary Superintendent of Montana; Rev. A. J. McGillivray, D.D., of Guelph.

Few churches, large or small, have a finer record. The type of ministers and the type of home were the two factors in such a result.

Mr. McGillivray also noted with appreciation the fact that this congregation, though small, supports its own foreign missionary.

"I covet for the ministry some of those bright young boys who gave such diligent attention as I preached yesterday," said Mr. McGillivray. "To the country we look mainly for our ministers. May North Bruce and St. Andrew's continue the above succession both in quantity and quality."—Times.

—Forty mills on the dollar is Kincardine town tax rate for this year of year.

—Mount Forest has now only one newspaper, Mr. A. W. Wright of the Confederate having bought out Mr. Lambert of the Representative, and amalgamated the two.

DIED

Stewart—In Greenock, on Aug. 8th, Mary Marguerite, infant daughter of Mr. and Mrs. Wm. Stewart, aged 8 months.

RESULT OF CONSERVATION

Conservation measures and voluntary saving in the homes have reduced Canadian consumption of flour from 900,000 to 600,000 barrels per month as compared with pre-war consumption. Conservation efforts in Canada are releasing meat enough to provide the ration for at least 500,000 soldiers.

Canada is now saving sugar at the rate of more than 100,000 tons per annum as compared with a year ago.

Nearly 60 cars of foodstuffs have been saved from total or partial loss from spoiling through regulations of the Canada Food Board.

Net exports of beef from Canada have been increased by nearly 15,000,000 pounds per year, or 6,795 per cent. increase over the average net exports for 1910-1914.

Before the war Canada imported butter at the rate of 7,000,000 pounds annually. This country is now exporting at the net rate of 4,000,000 pounds per annum.

Canada exported from 25 to 30 per cent. more wheat during the last twelve months than could have been exported had it not been for conservation and organization of our food resources.

By standardization of flour and increasing the percentage of flour exing 20,000 barrels of flour per month. traction from wheat Canada is sav-

Rabbit a Starve-to-Death Diet

It is announced that rabbit-breeding will be undertaken in England in order to relieve the meat shortage. It is to be hoped that English rabbit is a more satisfactory food than the common or garden variety of "bunny" on this continent. Otherwise there is little to be hoped from it. Rabbit without fixings, in other words, cooked without pork and that sort of thing, is about as tasty as a rubber boot, and also about as nourishing. In the old days the North American Indians when driven to it from lack of other foods tried to sustain life on rabbit, but without much success. Rabbit hunger, and even starvation, was their fate if an exclusive bunny diet was persevered in over long. The animal as we know it simply lacks the essentials which make it a proper diet, the chief fault no doubt being the absence of fat.—Saturday Night.

WOMEN ARE NEEDED
TO HELP IN WAR

Women can be usefully employed in nursing the wounded, in making up the soldiers' kits, and a thousand other ways. Many Canadian women are weak, pale or anemic from women's ills. For young girls just entering womanhood; for women at the critical time; nursing mothers and every woman who is "run-down," tired or over-worked—Doctor Pierce's Favorite Prescription is a special, safe and certain help. It can now be had in tablet form, procurable at any good drug store, or send Dr. Pierce, Invalids' Hotel and Surgical Institute, Buffalo, N. Y., 10 cents for trial package. Branch office, Bridgeburg, Ont.

St. Catharines, Ont.—"I have taken Dr. Pierce's Favorite Prescription during expectancy when I felt especially in need of a tonic and it benefited me greatly. I always take pleasure in recommending 'Prescription' to young mothers, because I know it will never fail to help them."—Mrs. J. H. Fawcett, 8 Beach St.

Stratford, Ont.—"I do think Dr. Pierce's Favorite Prescription one of the best medicines I have ever known for the ailments of women. I had for quite a long time been all run-down, weak and nervous. I doctored, but nothing seemed to give me relief until I began taking 'Favorite Prescription.' This medicine gave me such wonderful relief that I am glad to recommend it to others."—Mrs. A. Goewin, 60 Brant St.

GO UP HEAD, JOHNNY

Once upon a time an inspector was examining a very youthful class of Scotch boys, and among other subjects he requested the teacher to ask her pupils a few questions in nature knowledge. Desiring her class to do her honor she decided upon the simple subject, "Chickens."

"Now, children," she said. "I want you to tell me something very wonderful about chickens."

"How they get out of their shells?" promptly responded one little fellow.

"Well," said the teacher, "that is, of course, wonderful; but I mean something more wonderful still."

There was a silence for a few seconds. Then up spoke little Johnny. "Please, ma'am, it's really wonderful how they ever get into their shells!"—Exchange.

Prepare yourself for his place

When He Leaves to Shoulder a Gun

You must be ready to step in and fill his job. The war requires the maintenance of efficient manufacturing and mercantile organizations at home and it is your patriotic duty to do your bit.

You Must Be Trained to Be Ready

You must be able to do what he has done. Business men cannot stop to train you—They have not time—You must be trained when you take hold.

We Are Ready To Train YOU

The Northern Business College with a good staff of experienced instructors will teach you what you need to know—what to do and how to do it. The cost will be very moderate. The fees are no higher than they have been for the past ten years.

THE CROPS IN BRUCE

A Toronto Globe representative looked over our county recently, and furnished the following report to the readers of that paper:

There are few sections in which fall wheat has done as well as in this particularly trying year as it has in Bruce. In a run of 60 miles over this county, covering parts of Brant, Carrick, Elderslie and Greenock townships, I was hardly at any time out of sight of fall wheat ready for harvest. Occasionally, as in other counties, this was in strips along the lines of fences or in the shelter of bush, but whole fields that looked good for 20 or 25 bushels to the acre were to be seen in all directions.

Heavier Snowfall in Bruce

Why has fall wheat done so much better in Bruce county than elsewhere? One reason is probably found in the fact that snowfall was more abundant there and lay longer on the ground. The chief reason is probably found in the thorough tillage which is given to wheat land in Bruce in advance of seeding.

Outside of southwestern Ontario there is probably not a farmer in the province who will this year have more fall wheat to thresh than will Mr. Conrad Hossfeld, of Carrick. He has two fields of ten acres each that give promise of 25 bushels to the acre. Since Mr. Hossfeld has never had a failure in this crop, when following a certain line of cultivation, it will be worth while to tell of the method followed by him.

Unique Wheat Cultivation

Mr. Hossfeld takes two crops of hay from his fields after seeding down and then pastures in the third to these fields as soon as spring seeding is over and commences to plow down in June or July. Part of the manure is plowed down with the sod; the rest is disked in after plowing. Whenever there is a spare day or half day the harrow is kept going on these fields. Mr. Hossfeld was harrowing one field with a three horse team when I called on him. He said it was the fourth time he had been over the field since plowing and that he would probably go over it four or five more times before seeding. By this means weeds are killed and a perfect seed bed secured.

Produces Good Results

That there is no special virtue in the Hossfeld farm itself is shown by what is seen in a third field on his place that was sown with wheat last fall. This field was in barley last year and the cultivation for the succeeding crop of fall wheat was of necessity not so well done as is usual on the Hossfeld farm. Furthermore, the same amount of manure was not in the soil as when sod preceded the wheat crop. On this field this year's wheat but for the barley drilled in last spring would not give a quarter crop. And yet the field is more favorably located than the other two fields where sod was plowed under in June or July of last year that are showing an almost perfect stand.

"In almost every case where fall wheat has done well in Bruce this year the land was summer fallowed last year or was handled in the Hossfeld way," said District Representative McKay.

Sweet Clover Before Wheat

Not far from the Hossfeld farm is the home of Mr. J. Holm, whose father came from Denmark. At the time of my call Mr. Holm was about through hauling manure to a field of eleven acres which was covered with sweet clover a foot in length. The limited length of the clover in this case was explained by the fact that 17 cattle had been constantly on the field since spring, and that three horses had been on it at night during the same time. A tractor is to be put on the field at once to prepare it for fall wheat. As the roots of the clover form a bulk equal to half that of the top, and as the field has received a liberal dressing of manure, the soil will be full of humus by the time it is ready for seeding with the fall wheat to be sown there.

In speaking of the pasturing of sweet clover, Mr. Holm said the mistake generally made is in not turning enough cattle on to keep the pasture crop well eaten down. Mr. Holm did not make this mistake. Twenty head on a field of eleven acres would seem to be crowding things pretty well, but the condition of the field when I saw it proved the wisdom of what was done. There was no coarse, woody fibre in the clover, but an abundance of succulent feed.

The number of fields already in course of preparation for seeding indicates that Bruce farmers intend to put in at least their usual acreage of wheat this fall, and they will have sufficient home grown seed for less fortunate neighbors.

Clover Everywhere

In Bruce, as well as in Grey, one can not but be struck with the large acreage in all kinds of clover—sweet, alfalfa and red. On all sides luxuriant fields of alfalfa are seen. Mr. Holm has a ten-acre field which has given excellent crops in four successive years. From that field Mr. Holm took 21 loads of hay this year, and as he has big horses it may be accepted as a fact that the loads were not small ones. When I was on his place the field was covered and cattle are to be turned on this for pasture because there is no room in which to store the second crop.

Mr. Alex J. Lamont in Port Elgin district, has a much larger area in this crop—60 acres. Mr. Lamont facetiously says he stacked all there was room for outside and then put the rest in the barn and stables.

Home Grown Alfalfa Seed

Speaking of alfalfa, it is worthy to note that in both Bruce and Grey reliance is placed mainly in home-grown seed. For a beginning in producing this seed the two limestone counties are mainly indebted to two men—Mr. Lamont in Bruce, and another farmer in Beaver Valley, Grey County. This home-grown seed is true "variegated" and much superior to that obtained from other sources. The truth of this statement was demonstrated in Mr. Holm's ten-acre field. The whole of that field is in good condition, but a little strip sown with other than home-grown seed is not nearly equal to the rest of the field that was seeded with seed produced in the county.

Result of One Man's Example

In Grey county silos are largely built of wood. In Bruce the prevailing construction is of concrete. Mr. W. A. Rowand, of Brant township, is credited with having built the first silo in Bruce. That was put up some 20 years ago. To-day, look where one will, silos can be seen in all directions in the county. That is one illustration of the beneficial work one man may do by starting a whole community on the right line.

A Ranching Section

Up about Paisley and Port Elgin a good deal of land is given to ranching. There are holdings of 300 to 500 acres, and some holders have, District Representative McKay tells me, as many as 200 cattle on grass now. The extent of the beef interest in this section is shown by the fact that in one year 365 cars of cattle were shipped from Paisley alone. The cattle fed are, too, as a rule, of prime quality. There has been very little nondescript kind of breeding so much in evidence in some sections. In this county, too, a beginning has been made in co-operative marketing. There is one co-operative shipping centre at Greenock Gore, with Mr. Wallace Megraw in charge of the work. This organization in the 18 weeks since beginning operations has shipped 780 hogs and 20 sheep from Paisley.

An Insurance Fund

In this case an insurance fund of one-half of one per cent. of the proceeds of sales is deducted. This meets not only the payment to Mr. Megraw for his services, but covers unforseen expenses as well. For instance, in one case a shipment of hogs had to be held over for a day and the feed bill was met out of this fund. On another occasion, when more than a car of hogs was in sight, some of the shippers were asked to hold theirs over for the next car. Meantime the price dropped 75 per 100 lbs., and this loss was made up to the men who held their hogs over out of the insurance fund.

Greenock Gore shipments of hogs are sold at a f. o. b. price. Mr. Megraw gives each shipper a ticket showing the weight of hogs shipped by him and this is cashed at the bank, thus enabling each shipper to take his money home with him on shipping day. The bank is recouped by a draft on the firm, with shipping bills attached, to which the hogs are sold.

Potatoes and Tomatoes

There is a considerable potato district about Hepworth. In that district, Representative McKay informs me, ten to fifteen acre fields of potatoes, largely of the Empire State variety, are common. There is some little leaf trouble in the district, but prospects are for a 75 per cent. crop at least.

That part of Bruce lying near Walkerton may almost be considered in the banana belt, as Mr. A. E. Sherrington has some tomatoes ripening now. These are from seed produced by Mr. Sherrington himself. That seed has been saved by Mr. Sherrington ever since six years ago when he was in truck farming before, and still this seed gave better results than did some seed ripened last year.

Killing Out of Cherry Trees

There was a good deal of yellow leaf in Bruce cherry orchards last year. This weakened the trees and last winter's severe cold put a further strain on them. As a result one Bruce orchardist had to tear out 200 cherry trees this spring.

In Bruce, as in other counties, orchards show the effects of labor shortage and the trying conditions of last winter. Bruce orchards, as a rule, however, show much less winter-killing than may be seen along the Lake Ontario front.

Creditable School Buildings

There are few counties in which the average standard of farm buildings is higher than in Bruce. There are still fewer counties in which such a good showing is made in the class of school buildings. No. 8, Greenock, a purely rural section, has a brick school house which would be a credit to a town. A windmill pumps water to a tank and furnishes water for flushing inside lavatories.

Bruce farmers, like their brothers of Grey, are prospered a prosperous year. In a 60-mile run crops all showed up well, some of the oats being level with the fences. The clean appearance of the fields was particularly noticeable. There are very few dirty farms in Bruce.

AHMIK.

DR. BELAND'S POLITICS

The statement of Hon. Dr. H. S. Beland on his return from four years of prison life in Germany, might be taken to heart by many Canadians. When interviewed in New York and was asked by a newspaper man if he had anything to say about politics, Dr. Beland replied: "The only politics in civilization still this war is won is the winning of it," he exclaimed eagerly. "That is what we all want most. I came out of prison like a baby that had just been born. I know very little about events that have taken place in Canada while I have been in prison. My correspondence has been very limited and severely censored. I must begin again; I must learn like a child. That will come perhaps, by-and-by. But there is one thing I don't have to learn—one thing I know. Humanity must make itself safe, now and for all time, against any other fearful tragedy that it is now undergoing. That is my politics—aye, and I say it reverently, my religion, too. If I can do something, anything, to bring about the end for which we all pray, then I am going to do it to the best of my ability, that's all."

BEDRIDDEN WITH RHEUMATISM

Felt That He Would Never Walk Again. "FRUIT-A-TIVES" Brought Relief.

MR. LORENZO LEDUC

3 Ottawa St., Hull, P.Q.

"Fruit-a-tives" is certainly a wonder. For a year, I suffered with *Rheumatism*; being forced to stay in bed *for five months*. I tried all kinds of medicine but without getting better; and thought I would never be able to walk again.

"One day while lying in bed, I read about 'Fruit-a-tives' the great fruit medicine; and it seemed just what I needed, so I decided to try it.

The first box helped me, and I took the tablets regularly until every trace of the Rheumatism left me.

I have every confidence in 'Fruit-a-tives' and strongly recommend them to every sufferer from Rheumatism".

LORENZO LEDUC.

50c. a box, 6 for $2.50, trial size 25c. At all dealers or sent postpaid on receipt of price by Fruit-a-tives Limited, Ottawa, Ont.

The Thrift Car

Overland

Model 90 cars are helping many Canadians to do more work, to save time and to save money.

Considering the quality of Model 90, it is priced unusually low.

No one knows how far the shortage of material will go.

But you do know that we are unusually well prepared to take care of all service and parts requirements. Even extraordinary requirements can be promptly supplied from our Toronto factory or nearby Branches.

GIPSIES MUST CEASE NOMADIC LIFE

Two families of gypsies who have made camp periodically at Paisley in the past were recently arrested at Goderich as loafers. All pleaded guilty and were given a chance to dispose of their horses and find work. Gray is to report to the chief of police every Monday starting at Goderich on August 17th to dispose of his cars if satisfactory. Joseph Watson was given until August 1st to report, as he has a longer distance to travel and more horses to dispose of than the others. He said he intended to go to Hamilton to-day, and he was advised to report there on August 1st, and also to appear in court there on August 17th. Robert Watson was given until July 25th to dispose of his horses and report to the chief of police in Toronto. He is also to appear in court at Goderich on August 17th.

RECIPES FOR JAM MAKING.

Canadian housewives should make all the jam they can this year, but they should do so with the minimum of sugar. The Canada Food Board has issued regulations governing the use of sugar by public eating-places, candy manufacturers, ice-cream manufacturers, bakers, confectioners, etc., and these have resulted in an aggregate saving of a very large quantity. This saving has been increased by voluntary economies in private homes. The Anti-Hoarding Order providing limitations on holdings of sugar also has been effective. The Food Board has been able to arrange for a number of ships to carry raw sugar to Canada. The cumulative effect of all these measures is that a sufficient supply for the canning and preserving season seems now to be assured.

In order that the maximum use may be made of our fruit crop this year in all parts of Canada, housewives are asked to use no larger proportion of sugar than is needed for preserving and jam-making. The recipes in this article have been prepared by experts, having in mind the use of those proportions of sugar which will give the best results. No more sugar is required than the amounts stated in the recipes given below.

Strawberry Jam.—8 lbs. strawberries, 6 lbs. sugar. Mix the strawberries and sugar in a kettle and let them stand over night. In the morning set the kettle over the fire on an asbestos mat, and bring the contents slowly to a boil. Do not stir the fruit any more than is absolutely necessary. Boil gently without stirring until it is sufficiently thick and then put it away in sterile jars.

Currant Jelly.—4 lbs. currant juice, 3 lbs. sugar. Boil the currant juice without the sugar about 10 minutes, or until the quantity is reduced. Heat the sugar in the oven, and add when very hot to the liquid, so that the temperature will not be greatly reduced. When all is dissolved, bring to a boil again, and continue from three to five minutes. Test, and when done remove and put away in unsealed jars. When cool, seal with melted paraffin.

Apple and Plum Jam.—4 lbs. crab apples; 2 lbs. plums, 2 lbs. sugar. Cut the crab apples into quarters and cook in just sufficient water to extract the juice. Strain through a double cheese cloth, and add the sugar to the crab apple juice. Put over the fire and bring to a boil. Stir until the sugar is melted. Then add the plums, and boil until the plums are thoroughly cooked.

Note.—Other apples can be used if crab apples be not obtainable, but on no account must the skins and cores be taken away, as the pectin is contained largely in the cores, and directly under the skin. Any sweet plum can be used for jam. The Damson is considered quite satisfactory. Because of its acid nature, the Lombard plum will not make a good jam with the proportion of sugar prescribed above.

Plum Jam.—8 lbs. plums, 6 lbs. sugar. Put the plums and sugar together in a preserving kettle over the fire, with just sufficient water to start the cooking. Boil gently until the fruit is thoroughly cooked. Stir as little as possible.

Black Currant Jam.—For 1 lb. of fruit, not over ripe, allow ¾ lb. of sugar. Put the currants in a granite saucepan and mash to allow the juice to escape. Add no water. Bring to a boil, stirring occasionally to ensure that all the fruit is being cooked, and to prevent burning. Cook without sugar until the quantity is reduced and the fruit is all broken. The time will vary with the quality of the fruit. Heat the sugar in the oven and add to the fruit, stirring until it is all dissolved. Then boil without stirring from three to five minutes. Remove from the fire and put into sterile jars, glasses or stone crocks. Seal when cold, by pouring melted paraffin over the top. In making Black Currant Jam, the sugar must not be boiled from the beginning with the fruit, as in some jams; otherwise the currants will become hard and unpalatable.

Little Points in Canning.

Keep the water at a jumping boil and do not allow the fire to die down for an instant while cans are in the canner.

Keep the cover on the canner during every moment of the processing time. Steam plays a large part in cooking the contents of the can.

Greens or green vegetables are most satisfactorily blanched in steam instead of hot water. Use a steam cooker or put the products in a colander and set them over a vessel of boiling water, covered tightly.

To prevent bleaching or darkening of products packed in glass jars, wrap jars in paper.

Examine jars and cans occasionally during the summer to detect any sign of fermentation, leaking, or swelling.

The flavor is often injured by letting peeled fruit stand too long before cooking. Prepare at one time only as many cans as can be processed immediately.

In seasoning it should be kept in mind that most vegetables, as well as meats, are injured in flavor by an excessive use of salt in the canning process. A little salt is very palatable, but it is better to add no salt in canning than to use too much. It can be added to suit the taste when the canned products are served.

Mold may develop on canned goods if the seal is defective, if after sterilizing the tops are removed from the jars to replace the rubber rings, and if the jars are kept in a damp place where the rubbers may decompose.

Success in canning depends upon:
1. Fresh fruit and vegetables.
2. Perfect fruit and vegetables.
3. Good jar bands.
4. Airtight lids.
5. All water must be boiling violently.
6. Time must be accurate in the cooking in the jars.

Dry all foods which cannot be canned at 150 degrees F.

Test with a soda cracker closed in the jar of dried food. It should stay crisp. If it becomes limp, dry the food over again.

Dry food is leathery, not crisp.

Soak all dried foods at least six hours before using, and cook in the water in which they were soaked, in order to retain all the valuable mineral salts.

Keep dry foods in jars that would not do for canning or in empty can with removable tops, which have been boiled in washing soda and water to remove any strong odor.

Every ounce of food which a woman conserves releases a corresponding amount for the woman who has not the opportunity to store away food.

STOPPING ANOTHER WASTE.

By-Products of Packing Plants Which Are Splendid Food.

Packing houses in Canada, acting on the request of the Canada Food Board, are endeavouring to popularize certain by-products, particularly parts of the hog not generally used for general consumption in Canada. These include pigs' feet, pigs' brains, calves' brains, hogs' livers, neck-bones and neck ribs. These parts of the animal, while good for human food, have been hitherto not popular in this country among consumers, although they are perfectly healthful and nutritious and the demand far exceeds the supply in the United States.

At a recent dinner given for demonstration purposes at the Armour Canadian plant at Hamilton, the guests were served with the following menu: Pigs' tails in aspic jelly, devilled backbone, fried pigs' brains, braised ox-joints, creamed sweetbreads, jellied pigs' snouts, jellied pigs' feet, pickled hams' tongues, pickled pigs' tongues, pickled ox-tongue, brain croquettes and sweet-bread rissoles.

It is estimated that sufficient pigs' livers are thrown into the waste tanks of the packing plants of Canada every week to supply all the families in the Dominion with meat for one day.

At the present time all these products of Canadian packing houses are either disposed of in the United States or thrown into the waste tanks.

"There are two stones we may not dare to cast:
The stone of stumbling in our brother's way,
The stone of judgment at our brother's past;
We, who ourselves, like sheep have gone astray."
—Hamilton.

When making a juicy pie do not press the upper crust down on the lower one. That shuts in the steam, and tempts the juice to overflow. Just lay the upper crust on and trim the edges.

SCENTED DUSTS

By Ben Ames Williams

Part III.

"When I was twenty-one years old, I realized that Mary Doncaster was becoming a young woman and though even in this little town, we had never actually come together, I began to think a great deal about her and I remember once telling my mother that I wished I might know her.

"Mother, like all mothers, thought I was too young to be thinking about girls of any age and one told me Mary Doncaster was too young for me to think about her. Then, when I was twenty-two and Mary Doncaster was about seventeen, Mother died. She died suddenly, you know, Dick. She was thrown by one of father's horses."

The young man nodded and after a moment, Richard Sotheron continued:

"Mary Doncaster's enmity toward me began about that time, Dick. I never knew why. I only knew that one Sunday, a little while before Mother died, I smiled at her across the church and she turned away her head after her eyes had flashed with an anger more intense than I had ever seen in any eyes before. After Mother died I went to see her; and she would not see me. I tried more than once. I wrote to her—the letters came back to me."

Something in his father's voice made Dick look at the older man with curious intentness. Richard Sothern caught his son's eye, nodded faintly and smiled. "Dick," he said, "I fell in love with Mary Doncaster and I was never even able to tell her so."

"You fell in love with her!" Dick cried. "But—"

Richard Sothern nodded. "But I married your mother. Yes, Dick. Your mother and I loved each other with a love like fire and flames. As long as she lived, I scarce remembered that Mary Doncaster was alive but after she was dead, with my memories of her came Mary Doncaster again."

Dick leaned toward his father incredulously. "You mean, Father," he whispered, "that you—"

"If she would have me, I would marry Mary Doncaster this afternoon," said Richard Sotheron, "but she hates me."

"But why? What did you do to her?"

"I don't know! Nothing."

"Was there nothing?"

"Dick, I have tried for twenty years, in one way and another, to solve that mystery. It is as absolute today as it was the day Mary Doncaster first turned her flaming eyes away from mine."

"Is that why she is so—polite to me?"

"I don't know. I only wanted you to know, Dick, so that you may understand whatever is to come.

The splendid days of summer marched along their endless way. The old garden saw Dick more than once at Betsy's side. Richard Sotheron watched with a dread for his son's happiness gnawing at his heart; Miss Mary watched with exultation singing in her breast. Dick and Betsy danced child-like through the days, Dick forgetting everything save Betsy, Betsy forgetting everything save Dick.

One night, the round moon rose above the trees and peered down into the Doncaster garden. The flowers there were nodding drowsily on their stems and their fragrance hovered over them like a coverlet. From the house among the maples came the occasional low murmur of a voice and through a window gleamed the lamp by whose light Miss Mary was reading in the living room. Dick and Betsy were on the broad, vine-hung verandah; as they were talking soberly and quietly as though each feared a spoken word would break the spell which was weaving about them.

When the big moon found the garden empty, it went searching among the trees and its beams diffused a growing light in magic patterns there. The two on the verandah were beyond its reach but when they saw the rays searching among the trees, each felt the stir of a summons that would not be resisted. Dick looked up quickly at the girl and she looked at him.

Her eyes shone softly; he heard her quick-caught breath. Her throat was fluttering and throbbing and the fragrance that surrounded her was almost too sweet for bearing.

There is something theatrical and unreal in impassioned declarations. The language of love lovers is always a language of whispers, half-spoken words and broken sentences. Dick must have said some word of invitation but only Betsy heard him. Betsy must have assented but the assent was for Dick's ears alone. They rose together, and moved quietly down the steps and went side by side around the house toward the garden, heads high, eyes shining, as to a tryst with some other person there—the sweetest of all trysts!

The garden's gravelled paths were narrow; their elbows brushed as they walked side by side. The rough old bench beneath the apple tree welcomed them; they paused there. Betsy looked up at Dick as though for his permission to sit down; Dick looked down at Betsy, and forthwith the garden, the bench and the moon that was doing it all dissolved into nothingness. Betsy saw only Dick; Dick saw only Betsy.

Presently a glowing, smiling face which had been buried in Dick's shoulder turned up to him, and Dick and Betsy stood tremblingly content. Then Dick, disturbed and frightened, softly exclaimed:

"You're crying! What is it Betsy? Why!"

"I'm so—awfully happy, Dick."

"Sure?"

"Of course I'm sure, silly."

"Then smile at me."

She smiled radiantly though her eyes were pools of trembling tears. It was a very long time indeed before Dick announced:

"I'm going in and ask Miss Mary now."

"Dick! Oh, shall we?"

"I will."

"I'm coming with you."

He smiled. "Come then."

She took his hand and the two went quietly around the house again, up the steps, across the verandah and entered the living room and stood there, hand in hand before Miss Mary.

Miss Mary Doncaster had been reading by the light of the big lamp on the table. Her book dropped to her lap and she looked up at the two with a curious, steady inquiry. Her bosom moved more quickly, her eyes misted then burned dry with fierce determination and she waited for them to speak.

Betsy broke from Dick and ran to Miss Mary dropping beside the little spinster. Miss Mary's hand patted the lovely bent head. Dick stepped nearer. The lamp shone on his face though Miss Mary's was in shadow. He smiled with a wistful petition in his eyes.

"Don't you see, Miss Mary?" he asked gently.

Miss Mary studied the boy. "What is it?" she inquired.

"I love Betsy, Miss Mary."

"Do you?"

Betsy lifted her head. "He does, Aunt Mary. Dreadfully. And I love him."

Miss Mary patted Betsy's head again. "Do you?" she asked Dick again.

"Yes," he told her.

"How do you know?"

Dick flushed. "You can't make a mistake in a thing like this, Miss Mary," he said. "I—just know."

Miss Mary rocked quietly in her chair, studying the countenance of the boy before her. Dick met her gaze squarely. "You are very like your father, Dick," she said quietly at last.

His heart contracted at the menace in her tone and Betsy looked up quickly at her aunt's impassive face. Dick said steadily:

"If I am like my father, I am very proud."

Miss Mary nodded. "You would be," she agreed.

"He has a right to be," Betsy cried. The voice of the little spinster was not raised; her chair still rocked steadily but she lifted her book from her lap and over it spoke to the young man:

"Richard Sotheron is a scoundrel. If my niece marries his son—I shall kill myself."

(To be continued.)

Food Prices Abroad.

In Paris beef can be obtained with difficulty, and costs 60c. a pound or more. In Italy beef sells from 79c. to 82c. per pound, and veal 66c. to 79c.

Steamboats built in England for use on a tropical river have been provided with means for spraying their cabin roofs with water to cool them by evaporation.

Too much fertilizer produces bad results. Hardy plants can be stimulated up to a point where they will produce splendid results this year but may suffer or die out next year. A number of fine young peach trees produced an amazing crop of large, beautiful fruit in 1916 owing to very liberal fertilizing, but in 1917 they died as a result of overfertilization and overproduction.

FOOD SITUATION IN ITALY.

It Continues to be Acute, With the People on Very Small Rations.

The people of Italy live largely on bread and macaroni, but despite this fact, they have reduced their consumption of grain by 25 per cent. during the past year. The grain situation now is a most difficult one and will continue so. Sugar is scarce and unless imports can be increased, a further reduction in consumption will be necessary. The ration in sugar in Italy during May was only three ounces per person per week and the butter ration was two ounces per person per week.

In order to cope with the meat shortage, three meatless days every week have been instituted and on Wednesdays, Thursdays and Fridays meat cannot legally be served in public eating places or bought for home consumption. The price has risen tremendously, and now beef sells from 72 to 88 cents per pound, and veal from 66 to 78 cents per pound.

Cream Wanted

We are in the market for cream all through the year. We pay the HIGHEST market prices. Our plant is right up-to-date. In business since 1866. Drop us a postcard for particulars.

Matthew Dairy and Creamery Co.
910-2 King St. West Toronto

Fares Paid for Farm Help.

To provide help in haying and harvest, the Trades and Labor Branch of the Ontario Government will pay the going railway fare of persons who agree to work on a farm for at least 3 weeks. The worker has, however, to pay his return fare. The maximum distance for which this free transportation is given is 200 miles.

It is understood also that the Quebec Government has arranged with the railways for reduced fares for farm laborers.

With a fish dinner should go a green vegetable, and a salad, preferably lettuce and young onions.

WILLIAMS New Scale PIANOS

THE example of the late Queen Victoria in selecting the Williams New Scale Piano has been followed by many of the world's most renowned musicians. This fact has caused it to be known as the Choice of the Great artists.

Louis XV Model, $550.00

Ingram's Milkweed Cream

Many women look older than they are largely because they do not take proper care of their complexions. Ingram's Milkweed Cream will keep you looking younger than you are. It keeps the complexion clear and velvety. It gives each cell the healthy nourishment it needs because it takes distinctive therapeutic properties from the delicate skin tissues. Two sizes, 50c and $1.

For abluteness of the nose and forehead try Ingram's Velvola Souveraine Face Powder. It is so fine and delicate in texture that you can scarcely detect it is on you and effectually conceals the minor imperfections of complexion and hides perspiration. 50c. A Box at all Ingram's toilet goods counters including Zodenta for the teeth, 25c. Is at your druggists.

A Picture with Each Purchase

Each time you buy a package of Ingram's Toilet aids or Perfume your druggist will give you, without charge, a large portrait of a world-famed motion picture actress. Each time you get a different portrait so you make a collection for your home. Ask your druggist.

F. F. Ingram Co., Windsor, Ontario (94)

It is fine for cleaning cans—says the dairyman

"Safety First" in Preserving

Don't take chances with your preserves. Protect them from mold and fermentation with Parowax, the air-tight seal.

Parowax on preserving day means happiness on opening day. The preserves come out with all their original flavor and freshness.

Melted Parowax poured thinly on the jelly glasses does the trick. Air can't enter. On fruit jars, adjust cover and dip in the melted liquid.

Parowax is odorless, tasteless, and absolutely pure. Sold in inexpensive 1 lb. and ½ lb. cartons. Your grocer or druggist has it.

IMPERIAL OIL, LIMITED
Branches in All Cities.

Parowax

For the BOYS & GIRLS

Double Ten.

There's something that vexes you, laddie,
I know by the flush on your cheek;
But just hold your temper a moment
And count double ten ere you speak.

There's someone has angered you, lassie,
I know by the flash in your eye;
Perhaps you can answer them sharply,
But count double ten ere you try.

For words, dear, like horses, need reining
Or else they will fly off the track;
And words that escape once, remember,
Can never be coaxed to come back.

So hearken to me, little lassie,
And laddie with anger-flushed cheek.
Remember the maxim I give you,
And count double ten ere you speak.

Mary Jane's "Bit".

The hair of Mary Jane, who was Elizabeth's favorite doll, was falling out at an alarming rate. Elizabeth brushed it, shampooed it, and even used father's hair tonic on it. Yet the little ivory brush collected more and more glistening threads of gold and the head of poor Mary Jane became more and more bald

Elizabeth asked mother whether it would be wise to buy a new wig for her cherished Mary Jane—a wig of real hair; a wig that would curl naturally and that should be brown instead of yellow.

Mother agreed that it would give Mary Jane just the added touch that she most sadly needed in order to become a truly delightful dolly.

But mother also said that, charming as that touch would be, it was an expensive one in time of war. Elizabeth herself must give it to her almost bald-headed darling. War time or not, Elizabeth could do errands and perform certain new duties that in time would earn enough money to buy the longed-for wig.

So, early and late, Elizabeth worked for her Mary Jane. No matter how tired she was, she always roused herself to go in search of mother's spectacles; no matter how interesting the game she hunted for the lost needle or pin.

The cents began to rattle in her little bank. When she shook it wildly to and fro a joyous clatter rang through the house. Whenever Elizabeth was discouraged, whenever errands seemed many and the pay small, the family were awakened by a sudden clickety-click, clickety-clank! At a sound so pleasant sorrows flew away not only from the breast of Elizabeth but from all those who dwelt within the house; for after all, there is nothing that swallows up troubles or worries much quicker than glad sounds. Sometimes the sound is a bird; sometimes a brook; sometimes a crackling fire; at times it is music. And sometimes it is only a happy voice. Just try it and see!

Well, the money in the bank grew and grew. The beautiful brown wig, the naturally curly, brown wig, that Elizabeth had already priced, could now be bought! Elizabeth skipped to school with her money tied neatly in a fresh handkerchief to show to the girls and boys. Well she knew that when afternoon came the wig would rest for all time on the head of her Mary Jane.

But when the morning exercises were over, a lady rose beside he principal, and said, "Children, I have come over here to tell you about your little sisters and brothers in Belgium. I have come to let you know how hungry they are, how cold and how lost they are—lost not only from mother and fathers but from homes and from all that they once held dear. They were exactly as you are—happy, contented girls and boys. They had comforts and pleasures just as you have. But now—they have nothing and—"

Before the lady could finish, Elizabeth rose from her seat, rushed to the platform, and, sobbing, thrust all her money into the hands of the lady and said:

"Oh, give them that!"

The lady's voice sounded queer as she said to Elizabeth, "Will your mother let you give all this money away without asking her permission?"

Not a sound could be heard, except the voice of Elizabeth:

"It's mine! You see, I earned it myself to buy a naturally curly, brown wig for Mary Jane. She's waited all these weeks for it, but I guess she can keep on waiting a little longer!"

Then a strange thing happened. Right there in the school chapel people began to clap their hands. People began to laugh, and some even stamped their feet. But the best part of all was the next day, when every little boy and every little girl went into the school-room with his or her own separate offering for the Belgian children. Some brought ten cents, some brought five, some only a cent. But it was Elizabeth's generous act that started the gifts.

The lady sent Elizabeth a beautiful ribbon, woven of the national colors of Belgium—a ribbon to tie Mary Jane's few remaining golden wisps of hair. Elizabeth has decided to let the ribbon take the place of the once longed-for wig. For Mary Jane has now taken on a new and altogether distinctive air: a certain added dignity, as if she, too, had done her "bit."

The Greatest War in History

The Forces Involved

	Allies.	Central Powers.	Total.
Area (square miles)	30,153,563	1,203,800	31,357,363
Population	1,200,840,000	143,721,000	1,348,561,000
Wealth (1914)	$408,000,000,000	$105,000,000,000	$511,000,000,000
Man power	88,000,000	31,000,000	119,000,000
Men in arms	33,000,000	20,000,000	53,000,000
Men killed	6,342,000	2,667,000	7,009,000
Men disabled	9,186,000	1,936,000	8,129,000

The Cost in Dollars

National budgets	$86,000,000,000	$48,000,000,000	$134,000,000,000
Shipping destroyed	1,050,000,000	———	1,050,000,000
Men lost	21,000,000,000	14,000,000,000	35,000,000,000

Indirect Losses

Inflation of currency and increased prices.
Business development checked and business machinery wrecked.
Property damaged by under maintenance or idleness.
Industry crippled by diversion of men and (in U. S.) lack of immigration.
Production diverted from creative to destructive purposes.
Death rate increased and race vitality lowered.
Birth rate decreased.
Lack of education for children and for youthful soldiers.
Physical suffering.
Moral degradation.

OPINIONS ON WORLD PROBLEMS

By Chas. M. Bice, Attorney-at-Law, Denver, Colorado.

TURKEY AND THE GREEKS.

"The glory that was Greece and the grandeur that was Rome."

Rome has not lost her grandeur, nor will she forfeit it, while the sons of gallant little Italy continue to stand up so heroically for the great cause of humanity. But the "glory of Greece" is gone, vanished, and may never be returned.

The German-Turkish machine is crushing Hellenism in the Turkish provinces, and annihilating the Greeks in the same brutal, unwarranted fashion they employed in wiping the Armenian race from the face of the globe.

* * *

We hear but little of these Turkish atrocities and persecutions of the Greeks, and perhaps it is for the very simple reason that there is very little left to hear from. A campaign of annihilation has been waged against the Greeks by the Turks and Germans for four years steadily—a campaign that is merely a more savage continuation of the Young Turk's program that began in 1913, with this one marked difference: During the period when the government of the Young Turks was most active a persecution was attempted that might, perhaps, destroy entire Greek communities, but which permitted those persecuted to save themselves by flight. But in the period dating from Turkey's participation in the present war and her alliance with Germany, the persecution assailed the very existence of Hellenism in Turkey.

German participation and activity were manifest from the start, for while the Turk is a master in the art of crime, he is incapable of developing any scientific system whereby a nation can be wiped out and totally ruined.

This was Germany's part of the task, and her advice to Turkey was followed out to the letter, with the result that to-day Hellenism in Turkey is merely a memory.

* * *

In following out the Hun plan, the Turk's stuck to a program that included abolishment of special privileges to Greeks, the drafting of Christians into the Turkish army, the taxation and commandeering of Greek property, deportation and assassination of individuals. To go into all the details of how this hellish program was carried out is unnecessary; suffice it to say that at least 240,000 Greeks have been murdered or deported, their property seized and their homes ruined, while the misfortunes which these victims of Teutonic "Kultur" and Turkish savagery have undergone cannot be paralleled in the darkest ages of the world's history.

* * *

"The glory that was Greece" is, indeed, a vanished thing, a thing that the civilized world must always regret. A day of reckoning, we hope, will come, when the nations that have the misfortune of being small, will be protected against future despoilment and defilement of the Hun variety.

Greece may rise again, and the Ottoman empire may perish for all time, but, regardless of these things, no one ever will forgive the Hun and the Turk or condone the bestiality and cruelty they practiced upon a helpless and defenceless people.

ROBS KAISER OF RICH MARKET

ENGLISH TRADE WAR ALARMS GERMANY.

Preferential Tariffs in Favor of Colonies Will Push Teutons Out of Wealthy Markets.

The following despatch plainly indicates that Germany at last is beginning to realize that the power of "a scrap of paper" may be a power as disastrous as reverse on the battlefield

The Hague, July 28.—Great Britain's future economic policy has caused the greatest alarm in Germany, where its significance is fully realized. The newspaper Vorwaerts declares the British war cabinet's decision to introduce preferential tariffs in favor of her colonies to be one of the most important facts of the war. Besides its great economic importance it will have a lasting political effect. England's transition to protective tariffs is of incisive importance to Germany.

In peace times England was the greatest purchaser if German wares. With her colonies she absorbed one-fifth of the whole German export. The diversion of German export into Austria-Hungary, a poor country little apt for consumption, can never substitute the loss of the British market.

British Empire is United.

The experiences of the war have convincingly, unfortunately to the surprise of influential German authorities, proved that Great Britain is to be a much greater degree closely united than public opinion in Germany was willing to believe before the war. Canadian, Australian, New Zealander, South African and Indian divisions have advanced against German soldiers on every battlefield. Lloyd George, formerly a free trader, is working systematically for the strengthening of this unity while he extends the economic foundations and consults the colonial ministers on all important decisions.

The close economic and political consolidation of the British world empire also is smashing the contentions of our annexionists, who think only in square kilometers. By treaties, by creation, by intimate combination, the British Empire can be extraordinarily strengthened, and the danger arises that Germany by befog more or less pushed out of her wealthy markets.

This convincingly effective example illustrates the justice of the saying so often uttered here: "Treaty rights are more powerful than territorial rights." The cry for acquisition of territory leads merely into error.

Breakfast on browned crusts with cream.

More than twenty thousand war gardens in back yards are being cultivated this year by citizens of Winnipeg.

In dairying it is very important to have a part of the cows calve in the fall, so as to have the heaviest flow of milk and make the greatest amount of butter when both are highest in price.

HOW ITALY SAVES WAR'S WRECKAGE

WONDERFUL SUCCESS IN OVERCOMING THIS PROBLEM.

Description of the Work of Reclaiming Wastage as Carried on at City of Milan.

One prime essential for success in modern warfare is economy—economy in lives, in energy and in materials. Waste of everything must be reduced to a minimum. The metal fragments of exploded shells, the soldiers' cast-off shoes, even the crusts of bread left from his meals must be gathered up and made to serve some useful purpose again.

Italy is attacking the problem of salvaging as much of war's wreckage as possible with wonderful success. The following account of the Italian efforts along this line is from La Lettura.

"The gospel of St. John says: 'Gather all the remnants so that they do not go to waste.' This is exactly what the Italian military authorities are doing by finding a way to utilize much of the waste material of war. It is a task just as important as that of military sanitation, which cares for and cures the most precious of war materials—man.

The Milan Establishment.

"Everything abandoned on the field if battle, in camp or along the line of march is carefully gathered up and sent to renovating establishments. One of the largest of these is the Military Establishment of Disinfection and Re-utilization at Milan. More than thirty train loads of material of all kinds from the war zone come in here every day.

After every battle a little of everything is abandoned on the field. Wherever the soldiers pass they leave arms, pieces of machinery, knapsacks, caps, drums, bugles, kitchen equipment, shoes, clothes, etc. Objects of every kind are left behind. Each of them has a glorious past. Each furnishes the clue for reconstructing a page of history.

The task of the renovating establishments is to repair all the objects which can be repaired and to transform the rest into things which can be of use either at the front or in the homes of the nation.

'At the Milan establishment the various articles are assorted in heaps, the shoes in one place, the caps in another. The cloth is separated from the metal, the wood from the leather, etc. About three-quarters of the material which is brought in can be repaired and made suitable again for its original purposes. Everything is first disinfected before assortment and cataloguing.

Saiving the Uniforms.

"The gray green army uniforms when they are gathered together are divided into two heaps—one consisting of very soiled clothes, the other comparatively speaking in good condition. The cloth from the latter pile is sent to the washing rooms and is thoroughly cleansed and scoured. A certain amount of this, the poorer quality, is sent to the cap makers, the best material is sent to wool laboratories where the wool is utilized for cloth which is eventually worked up into coats, pants, overcoats and ponchos. A small amount is sent to another establishment where the wool is used for making cloth for capes.

"After being manufactured and tailored the various articles are sent to a central bureau which attends to the distribution—the Material Corps—out of the first heap of very soiled cloth the major part is washed and cleaned and sold as washed rags which may be used for good grades of paper. The rest is sold for what it will bring without wasting the expense or labor on cleaning."

Canada's Allowance and Britain's.

How does your voluntary allowance compare with the British ration? Figure it out and see. The adult is allowed a pound of meat per week and the child half a pound. The bacon ration is the same, with a supplementary allowance for heavy workers and adolescents. Five ounces of butter and margarine and two ounces of lard per head are allowed. The sugar ration is half a pound per head. The milling extraction for bread is now 90 per cent. in Britain as compared with 94 per cent. in Germany.

BRITAIN, SHIELD OF CIVILIZATION

WAR COSTS GREAT BRITAIN $25,000,000 A MINUTE.

Her National Debt Has Grown From Three to Thirty-Nine Billion—Credit is Unimpaired.

The war is costing the people of Great Britain the gigantic sum of $34,920,000 per day, or $1,455,000 every hour, or nearly $25,000 a minute, according to advices received at Ottawa from the British Ministry of Information.

A statement prepared by the Imperial authorities reads:

After four years of exhausting war Britain's credit is still unimpaired. Her "silver bullets" are being turned out by the hundred million, and everyone is finding its billet. Her people are cheerfully bearing the ever-increasing strain which has been placed upon their shoulders, and will spare no effort in blood or treasure till victory is assured.

Debt Increases Twelve-fold.

Britain's national debt has increased during the war from $3,225,000,000 to $39,500,000,000, or in excess of twelve times over, and yet she is paying all—and much more than all—her debt charges out of current taxation, while the new taxation, raised by Germany is not enough to pay the interest accumulated upon her war debt. The population of Germany is half as large again as that of Great Britain, and for her largest war loan subscriptions of one shilling and upwards were accepted, while in Britain the minimum subscription received was 15 shillings, yet the record number of subscriptions to the German war loan was 5,279,000, against 5,239,00 to the British loan. The cost of living in Great Britain had risen enormously because of the war, until now the housewife can obtain only half the food received for the same money in peace times. And yet, when the third British war loan was issued cash applications for war savings certificates made by individuals too poor to subscribe the minimum sum of 15 shillings to the loan itself amounted to $100,000,000.

Before the war the people of Britain paid taxes amounting to approximately $1,000,000,000 a year; to-day they are paying taxes to the tune of $3 270,000,000 annually. In spite of this, Great Britain raised her third war loan of $5,000,000,000, a sum equal to nearly half her entire national income in 1914.

Great Britain is now spending $8,305,000,000 a year on her army, her navy, her air services and her munitions factories, and supplies, but despite this colossal financial burden, she has advanced loans to her poorer allies amounting in the aggregate to $3,140,000,000.

Although she is spending more every day at the present time than she did in two weeks prior to the war, Great Britain's credit remains unshaken; despite the sea-pirates of Germany, her ships and commerce still go and come across the oceans; and she is ready to spend her last shilling in safeguarding the security of the world from the unspeakable Hun.

Great Britain has been the "sure shield" of civilization.

EUROPE EXPECTS TOURIST AID

Busily Preparing for a Tourist Rush When Conflict is Over.

While the guns are still roaring on the battle fronts there are people in Europe who think of business after the war. It is quite natural that the Swiss should think of rebuilding their fortunes after peace is declared, for their best income producing "industry," the tourist business, has been killed by the war. The question the Swiss press. The Neue Zuercher the Swis press. The Neue Zuercher Zeitung thinks the Federal Government will have to spend a great deal of money if Switzerland is to recoup her loss. There is an undisguised tendency in all European countries to discourage travelling and spending money outside of their own respective domains.

In France the "Office National du Tourisme' has been created to foster the tourist business. Former Minister Sembat is the director of this Government Department. The French expect a mass incursion by Americans after the war. They believe America will more than recompense them for losses caused, for instance, by the Germans staying at home.

Italy too is making strenuous efforts to put her tourist industry again on a sound footing. Italy is spending millions to improve the Italian Riviera in addition to a share spent by the localities for the same purpose. Immense sums are ready to be spent for advertising as soon as peace is declared.

Germany and Austria have formed a union, political as well as economic. This economic union includes the tourist business. The leading hotel and transit organizations are cooperating with one another to boost German and Austrian watering places, baths and mountain resorts.

Before the war the overwhelming majority of foreigners touring Germany were Russians, and Germans believe the invasion from the East will materially increase on account of recent events, military and revolutionary.

The northern countries, Norway especially, are bidding for foreign tourists more and more. They are the pioneers in developing winter sports and are reaping their harvests both summer and winter. They cannot expect any foreign tourists, however, until after the war, as they have hardly enough provisions to feed the home population.

War Gardens in Canada

Frederick Abraham, Hon. Chairman of the Vacant Lot and Home Garden Section of the Canada Food Board, reports there has been enthusiastic response to the appeal for the planting of War Gardens throughout the West. "The British Columbia War Gardens could supply the prairie Provinces with fresh vegetables for many months in the year," says Mr. Abraham, "if the transportation problem could be solved. I believe this is only a question of time. Everything seems to grow in greater abundance in British Columbia, and many of the vegetables have two crops in the season." Mr. Abraham reports that the school children of British Columbia have joined the school garden plot movement with splendid enthusiasm and the crop produced will make a material difference to the local supply.

It is important that the larder should always be kept well aired so that the contents may be quite fresh and sweet. To prevent dust and smuts getting in through the open window cover it with a piece of butter muslin. This lets the air penetrate and at the same time keeps everything spotless.

THE WEEKLY SERMON

Therefore all things whatsoever ye would that men should do to you, do ye even so to them; for this is the law and the prophets.—St. Matt. 7, 12.

It is far easier to accept rules than it is to obey them. They appeal to our sense of right, to our judgment, to our innate knowledge of God's will when we read or recite them, but the struggle comes when we seek to apply them to our own conduct. Everybody accepts with his mind the excellence and the necessity of the Ten Commandments, but each man of us has his own personal battle to fight when they touch conduct in the everyday life. They are like machines, with their splendid shape and their fittings, but the product coming from their working suggests struggle. We all love the golden rule; we can see what a splendid world this would be if it was universally followed. But oh, how difficult it is to deal with men as you would have them deal with you!

Yet that is the ideal of living which must be kept before us, and we must try hard to live up to it. Being human, the ideal for us is always above the real and many are our failures; but we must keep up a stout heart and press on, rising on the mistakes we make in a closer approach to the perfect. Let us see what we can do, by God's help, to keep our face and our progress toward the light.

Sometimes the rule does not seem to work and men take advantage of mercy. Enemies think us cowardly because we do not retaliate, and they misunderstand the spirit of kindness. And there are times when a severe thrashing must be given. Christ came to bring peace; but peace itself often has to be brought by the sword, and so the Master said: "I came not to bring peace" (that is, outward peace) "but a sword." But it must be a "sword bathed in Heaven," a righteous casting out of evil spirits, a cleansing of the temple of humanity with a scourge in the hand of Christ himself.

A Course Full of Danger

Perhaps personal kindness is easier when we try to return good for evil, and yet there is apt to come to us at such times of gentle treatment a false pride which spoils our mercy with self-gratulation. "He will see now how forgiving I am; he will mark the difference between his own rudeness and my courtesy." Such a fulfilling of the golden rule is full of danger. Rather should we think of how we ourselves, but for God's grace, might have fallen, and not count it as a virtue that we forgive, but, rather be ashamed that such forgiveness demands an effort. The moment I congratulate myself upon a good and kindly deed I rob it of excellence. Instinctively should my heart go out to the offender, discriminating clearly between his error and the man himself. The golden rule should work, as it were, automatically and impulsively. Loving all men, whatever their place and character, the sin they commit must not cloud or weaken that love. It must shine on even through the cloud of contest as I rebel against the wrong done. It should sing its song of gracious interest even when the gun of rebuke, seeking to kill the daring evil, is pouring forth its potent demand. The rule should so hold me that even when wounded to the death by cruelty I should pray, like Stephen, for my persecutors.

The Whole Armor of God

It helps, too, to remember that we are fighting the Lord's battle with His own divine weapons. All wrong and sin and injustice are God's enemies seeking to destroy His kingdom of love. As His child I must fight against them. It is not my battle, but His, and mine only as I recognize it as His. Therefore self is forgotten No matter what men do to me or say of me, I am the soldier of Christ, and it is against Him that these cruel darts are cast. I will take, then, the sword of the Spirit, which is the Word of God, and I will put on the whole armor of God, praying and watching. That is the real battle of life. No matter for my suffering. No matter what is done to me. I am serving my King and seeking His glory and honor, and the golden rule is my manual of arms.—Rev. F. W. Tompkins.

GLAMIS

Miss Emma Howson, who spent some months in Toronto and Campbellford, returned home on Wednesday.

Mr. Tufford, of Bemmsville, joined his wife at "Cosy Nook" cottage, Inverharron.

Misses Beere and Burns, who have been visiting friends here, returned to Hamilton this week.

Mr. Angus McLean, of the 10th, who was operated on in the Guelph hospital, had an attack of typhoid fever, but is on the road to recovery.

Mrs. Stocks and two sons, of Port Huron, are visiting Mrs. Nesbitt.

Mr. Richard McGregor has returned from Toronto, where he was receiving treatment for his face. We trust that he may continue to improve.

Mr. and Mrs. John McFarlane, of Toronto, are guests of the former's parents, Mr. and Mrs. Neil McFarlane.

Miss Helen Oliver, of Inverharron, spent a few days last week with her aunt, Miss MacIntyre.

Miss Reta McKinnon entertained a carload of her young friends to a day's outing at the lake on Tuesday of last week.

Union services were held in the Baptist and St. Paul's churches on Sunday last. Rev. P. Reith occupied the pulpit.

Mr. Jackson, Mr. and Mrs. Will Jackson, of Markdale, motored up and spent Sunday with Mrs. Nesbitt.

Mrs. McSween and family are spending a week with friends in Kincardine.

Miss Lizzie Cunningham, of Milton, came on Monday and will remain until after the funeral of her brother, the late Mr. Jos. Cunningham.

Mr. and Mrs. Tufford, Mrs. Oliver and daughter Miss Jessie, motored up from Inverharron on Friday and spent the evening at W. J. McKeeman's.

Mr. McClung motored to Chatsworth on Friday with a car load of people.

It is our sad duty this week to chronicle the death of our postmaster, Mr. Jos. Cunningham. Although in poor health for some time his many friends were not prepared for his death, which took place on Sunday afternoon. Mr. Cunningham was a resident of Glamis for a good many years, and was very highly respected by all. He was in his 70th year. The day of the funeral has not yet been decided as they are awaiting the coming of his son Alton and daughter, Mrs. Burgess, of Saskatchewan.

SECOND CON. ELDERSLIE

A. Dawson visited Eugenia Falls one day recently.

Mr. and Mrs. H. Ferrier and children, of Bervie, were guests of Mr. and Mrs. Jas. Vancise on Sunday week.

A large number from this con. attended the funeral of the late Mrs. Robt. Bell, Paisley, on Tuesday last.

The harvest operations here are in full swing, and the grain promises a good yield.

Miss Flora Bell, of Sauble Falls, is visiting friends on this con.

A goodly number of the progressive farmers of this section have joined the Vesta Farmers' Club.

Messrs. C. Lillico, of Guelph, and Arthur Lillico, of Toronto, visited their mother over the week end.

Mrs. Thos. Patterson spent a day at Owen Sound beach last week.

While climbing a ladder to the hay loft on Tuesday last Mrs. A. Lillico had the misfortune to slip and fall a distance of eight feet, breaking her hip bone on the right side and getting a very bad shaking up in general. At time of writing she is progressing as favorably as can be expected.

Mr. J. Vancise, M.F., from the west, visited last week at the home of his cousin here, Jas. Vancise.

WILLISCROFT

Miss Annie Hunter, of Owen Sound, spent a couple of weeks with her aunt, Mrs. C. Sparrow.

Mr. Alex Robb has purchased a new Ford car.

Miss Talbridge is to be congratulated on the success of her pupils all passing their entrance examinations.

Miss Ennis Sparrow is spending a couple of weeks in Owen Sound.

Pte. Harris Powell was home on leave for a few days.

Miss Gillis, of Toronto, spent a couple of weeks with Mrs. F. Walpole.

CASTORIA

For Infants and Children

In Use For Over 30 Years

Always bears the Signature of Chas. H. Fletcher

TURNER'S

Mrs. Fraser McRae, with her mother, Mrs. J. McVeety, are spending a two weeks' holiday with relatives at Loring and Parry Sound.

Mr. and Mrs. Wm. Karcher and family spent a day last week with friends in Chesley.

Mr. and Mrs. Wm. Hall, of Guelph, are visiting for a short time at the home of their uncles, the Davidson brothers.

Mrs. A. Mercer, of Port Elgin, spent a day last week with friends here.

CASTORIA.

Bears the Signature of Chas. H. Fletcher. The Kind You Have Always Bought

GRESHAM

Mr. John George Brown left for the west last week. We will miss him very much, as he was sec.-treas. of our Sabbath School here and one of our most promising young men.

Mr. and Mrs. D. McKinnon, of the 9th, visited friends at Kingarf lately.

Rev. Mr. Watson, of Toronto, preached here and at Underwood last Sabbath very acceptably.

WALKERTON

At a special meeting of the town council on Tuesday night, Chief Constable Ferguson was appointed fuel controller for Walkerton at a salary of $50 per year. The Chief has been instructed to thoroughly enforce the law, and especially to see that no coal which has been shipped for use of the citizens of Walkerton is allowed to be sold and teamed to the country without his specific consent, and instructions. Infractions of this kind are to be especially severely dealt with, as are also any cases of undue hoarding of coal by any of the natives here.

A Walkertonian while standing at a bar in Kitchener the other day having a soft drink, saw two strangers enter and get into conversation at once with a number of thirsty souls, with the result that the pair drew a flask of whiskey apiece off their hips and poured a portion into the soft-stuff that the gang was lapping up. The new kick in the proposure tickled the appetites and awakened a keen desire for further service. Seeing they had the crowd with them, the strangers opened up a grip and did a land office business selling flasks at $2.50 each to the aggregation, the hotel keeper himself investing in four bottles of the elixir for future use. After the pair had departed, the thirsty ones started to pull the corks and sample their purchase. Preparing their throats for the real poison they raised the bottles aloft and let the contents gurgle down, but what was their dismay on discovering that instead of Hiram Walker's preparation or Joe Seagram's rare horse brand they got treated merely the flavor of Salada-Ceylon. In other words they had been duped into buying cold tea for whiskey and had paid $2.50 per bottle for what the servant girls usually throw into the garbage pails after meal time. As they were breaking the statutes themselves the victims weren't licensed to squeal and but for the Walkertonian peeping on the ordinance the story of the clean-up would never have got out.—Herald and Times.

CARGILL

Mrs. Wm. and K. Cliff are busy packing their household effects and are moving to Oshawa, where their husbands are working for the McLaughlin Motor Co. We are sorry to lose the Cliff family. They were first-class citizens. We wish them every success in their new home.

Lieut. Kenna and the Misses Kenna, of Ayton, were here on Saturday.

Lieut. Wittich and Pte. Wittich, of London, spent the week end here.

Miss Irene Hood has secured a position on the Hunstein & Wittich staff, and commenced her duties on Monday.

Mr. Thos. Sparling, who has been working in the garage here, has returned to his home in Southampton.

Pte. H. Letagus, H. Kenny and L. Bester are home on harvest leave.

A small blaze in the stave mill last week caused our citizens to rise about an hour earlier than usual. It was fortunate that the blaze was discovered when it was. Had it occurred earlier the mill would likely have been entirely destroyed. Little damage was done, as it was confined to the boiler room.

Master Trimble Bailey had a small bone in one of his limbs broken on Monday night. The fracture was set by the doctor.

Miss Dryden and Mr. Watson, who have been visiting at Mrs. Bell's, returned to their home in Hamilton on Saturday.

ELDERSLIE COUNCIL

Gillies Hill, Aug. 5th, 1918

All the members were present at meeting on above date.

The report of the engineer engaged by the council to make an examination of the swamp drain was read. A by-law covering same was given its first reading and the clerk instructed to have same printed and served upon interested parties.

Oswald—Allen—That the clerk advertise for a tax collector for current year.—Carried.

On motion of Messrs. Fraser and Clements the following rates were adopted and a by-law passed providing for same: General county rate including Provincial war tax, 8 8-10 mills on dollar; Tp. purposes, 3 mills on dollar; general school levy, 1 9-10 mills on dollar; being 13 7-10 mills exclusive of school section levies.

Clement—Oswald—That orders be issued for the following accounts.—Carried.

Arch. Thomson, 42 yds. gravel per Oscar Lloyd, pathmaster, $4.20; T. Dinsmore, 80 yds. per Jas. Hammond, $8; A. Slumski, 93 yds. per A. T. Powell, $9.30; John Walpole, 61 yds. per W. T. Thompson, $6.10; A. McKinnon, 2 yds. per W. T. Thompson, 20c; W. T. Thompson, performing arrears statute labor, $11.25; T. Collins, 41 yds. gravel per J. Richardson, $4.10; Pt. Wilson, 66 yds. per Robt. Harper, $6.60; Thos. Dinsmore, 85 yds. per Jas. Cameron, $8.50; Earl Grant, 93 yds. per Rich. Grant, $9.30; J. H. Schmidt, 53 yds. per J. C. Johnston, $5.30; W. J. Allen, 90 yds. per Jas. Walks, $5.90; J. T. Buchanan, 80 yds. per H. Davis, $8; L. S. McClure, 90 yds. per L. S. McClure, $9; K. Bone, 64 yds. per S. Fenton, $6.40; Geo. Alexander, 34 yds. per Harry Cass, $3.40; Silas McCoy, 75 yds. per R. H. Clark, $7.50; Arch. Thomson, 117 yds. per A. Thomson, $11.20; J. H. Schmidt, 68 yds. per McCullough, $6.80; W. J. Fortune, 50 yds. per W. J. Fortune, $5; Jas. Hammond, performing arrears statute labor, $3; L. S. McClure, performing arrears of statute labor, $6; Jas. Hammond, building culverts, con. B and con. 10, $4.50; R. H. Clark, gravelling 25 sideroads, $7; Arch. Thomson, performing arrears statute labor, $7.50; J. McCullough, gravelling at bridge 25 sideroad, $4.60; J. S. Campbell, cement tile, $30; D. Connor, gravelling and fill, bridge 25 sideroad, $60; I. Shoemaker, rings for soldiers, $11; R. McDowall, services as engineer, $105.50; Robt. Sloan, sheep killed by dogs, $28; Ed. Thomson, services as sheep valuator, $2; Jas. Hammond, drawing tile and team on grader, $2.50; Roy Buckley, cement tile, $26.25; C. J. Middle, legal services, $154.90.

Allen—Oswald—That this board do now adjourn to meet again on Monday, Sept. 2nd, at 10 o'clock a. m. for general business.—Carried.

R. C. Pearce, Clerk

BRUCE TP. COUNCIL.

Underwood, July 27th, 1918

Bruce Township Council met in the township hall on the above date. Members all present. Minutes of previous meeting read, adopted and signed.

A number of communications and accounts were dealt with.

The trustees of U. S. S. 19 appeared before council with the view of council getting a loan to build school house in said section, to be repaid in two yearly payments.

McNeill—Dobson—That the clerk prepare a by-law for the purpose of authorising the Royal Bank of Canada, Paisley, to loan the trustees of U.S.S. No. 15, B. and S. townships, the sum of $5,500 or such less sum as may actually be required for the purpose of building a new school house in said section, said loan to be repaid in two yearly instalments, viz., in the taxes for the years 1918 and 1919; said section at a special meeting called for the purpose having authorized the building of said school and the payment of same in two years, and that the reeve and clerk be authorized to sign said by-law and attach the corporate seal.—Carried.

McKenzie — Dobson — That this council recommend Wm. Stanley, lot 14, con. 8, Bruce Tp., Tiverton, No. 3, P. O., be appointed and John Bowie, lot 14, con. 1, Bruce Tp., be reinstated as county constables.—Carried.

McKenzie — McNeill — That the reeve and deputy-reeve be a committee to consider any necessary amendments to the Assessment Act, and report at next meeting.—Carried.

Baker—McKenzie—That the following accounts be paid and orders issued for same, viz: Geo. Tennyson, cleaning ditch, 11-15-6, $39.20; Jos. George, cleaning ditch, $21.20; Dan McKay, gravel, B. and K. bdy., $78.50; K. McNaughton, inspecting tp. share, $4; Mrs. Humphrey, gravel, $15; A. J. Smith, cleaning ditch, 29-2, $18.72; M. McKenzie, s. l. refund, div. 75, $10.50; John Miller, s. l. refund, div. 74, $12; A. Groves, s. l. refund, div. 9, $1; C. W. Kinsella, s. l. refund, div. 65, $16.50; Wm. Wilson, s. l. refund, div. 10, $2.25; J. K. McLennan, s. l. refund, div. 8, $12; A. Thornburn, s. l. refund, div. 56, $4.50; M. Campbell, gravel per J. Miller, $2.60; Jos. George, culvert, 24-4, $7; Baines & Peckover, beams and expanded metal, $143.29; John Wood rebuilding culvert, s. l. 10-10, $10; Geo. H. McKay, supplying gravel, div. 32, D. H. McDonald, assessor, $100; Gere Leggett, bailiff court day, $2; Mrs. J. D. Strather, xmas. Underwood Red Cross, $50; J. Johnston, reeve, $3.10, special meeting, $1.60—$4.70; P. Dobson, deputy-reeve, $3.35, special meeting, $1.85—$5.20; G. Baker, councillor, $3.50, special meeting, $2—$5.50; J. McKenzie, $3.50, special meeting, $2—$5.50; M. McNeill, $3.40, special meeting, $1.90—$5.30; J. Coleman, $1.25, corn, $1.50—$2.75; J. G. MacKay, clerk and treasurer, $25.

Dobson — McKenzie — That this council do now adjourn to meet on Saturday, the 24th day of August, 1918, for general business.—Carried.

J. G. MacKay, Clerk

MAY SAVE SEED WHEAT

(Simcoe Reformer)

Messrs Quance Bros., of Delhi, wrote the Food Board of Ottawa to get a ruling upon the yarn in circulation to the effect that it was illegal to save wheat for seed. The answer they received was as follows:

"Replying to your letter of June 18th, there is no regulation either on the part of the Canada Food Board or the Board of Grain Supervisors to prevent or discourage anyone from retaining necessary adequate supplies of seed wheat. Special regulations of the Board of Grain Supervisors issued from their office, Grain Exchange, Winnipeg, stipulates that anyone may sell wheat for any price which the purchaser is willing to pay for it for use for seed purposes."

Water Glass for Preserving Eggs

GOVERNMENT TO MAKE A BIG DISPLAY

The Canadian National Exhibition has joined in the war on non-essentials, has reconstructed its classifications on war-time basis and has striven in every way to reflect the spirit and interest of the times. It has offered every facility to the governments, Federal and Provincial, for displays to illustrate the achievements of the various national departments engaged in war work, and has freely given space for this purpose. The governments apparently have come to realize the importance of the Exhibition as a point of contact with a million people each year displays of a most interesting and educational character. In fact, in no other year did the governments cooperate so readily and completely, and the result will be an array of exhibits demonstrating how the experts at Ottawa, Guelph, Toronto, and the west are striving to give the people the very best scientific service along production, conservation and kindred lines. These demonstrations will cover every branch of the food problem, both from the standpoint of the city man and the country resident.

—Port Elgin's tax rate is likely to be 40 mills.

ADVERTISING RATES

THE STRICTLY CASH STORE

MY SON—AND THE CITY

"Fortunately, before it was too late, I woke up to the fact that I was giving the live stock better shelter and more comforts than my wife and children."

By Donald Morton.

I am not like my Scotch neighbor to the north. He tells me that when he was a young man he inherited ten pounds from a rich uncle. "Man," he adds, "I was such a spendthrift and a wastrel that by the end of seven years there was not a farthing left of the whole sum."

I never inherited any great fortune, as did my Gaelic neighbor. I was never a wastrel or roysterer; I have worked hard all my life, far harder than any of my children will ever have to work, I hope and verily believe.

There were a good many years when it was my ambition to have more land and more stock than any of my neighbors. That ambition died with my firstborn, for the doctor's bills were large and there was sadness in the goodwife's eyes, and we had other things than money to think of. Followed then the years when I turned to public service for forgetfulness: township reeve first, school trustee next, and so on, until there were several terms as county warden. —that's about the sum and substance of all the public serving I've done.

I may never have had the ambition to give my folks the most "homey" home in our township, to rub the wrinkles, away from my wife's eyes, to keep the brood of children around us in a house as comfortable and well furnished as any we could have in town, had it not been for a little talk one night with my oldest boy. I remember it was snowing outside; funny who little, immaterial things stick in our minds, as big, sometimes, as the large, eventful ones.

I was reading the county-town paper, stopping now and then to throw another stick of wood on the fire and to cram the sofa pillow more firmly in the broken window pane which we had neglected to repair before the cold snap caught us. I had been reading the "patent insides" and must have been nodding at the last, for the fire had died down and the room was chilly when the lad came in. He hadn't said much until I was shivering; nervousness as much as the temperature, I guess.

"I'm going to quit you, Father," he said, with determination written large on his countenance. "None of the other boys I know in town live like we do. I'm going where I can have some of the comforts of life, even if I have to work harder and pay a bigger price. I'm going; that's all there is to it."

I couldn't say anything for a minute. You see, there was a peculiar bond between the boy and me. He bore my name; he was the image of me. After the first lad died I was bitter. Many nights I lay awake, thinking of the little mound out in the graveyard. The tears would not come though my eyeballs burned hot; it would have been better if they had come. Many days I found the tears blinding my eyes as I plowed the corn, row after row, and saw no farther than the turning at the fence.

Then the other boy came, and when I saw him I kneeled down and cried like a child and thanked God, and I gave the boy my name—and there he was saying he was going to leave me—me, who worshipped him down to his last fault.

There's no need of making a long story out of it. I built the new house to keep him home with me. I told the goodwife it was for her, but there was something in the eyes of the grown-up boy this night that was like the look in the eyes of the little one when he left me for the mound in the graveyard. I couldn't stand to have another boy go. I built the house.

The first thing I did when I decided to build was to consult an architect. He charged me three per cent of the cost of the house for drawing the plans and writing specifications. Some of my neighbors laugh at me and say I threw away that much money. I often wonder if they think it is throwaway money to pay a doctor for writing the prescription for the medicine which cures them and their loved ones.

The prescription itself doesn't do the work—it's the medicine the druggist gives us; yet we go to a doctor. The plans and specifications do not build a house—it takes masons, carpenters, plumbers, and so on; yet we should go to an architect. That's the way I figure it, anyway.

You know, when you come right down to it, typhoid fever, dysentery, and the like are common diseases among farmers. Why? Because we do not know enough about sanitation. Therefore, when we build, why not go to a sanitation expert and minimize the possibility of sickness? I am a farmer, not a plumber or a well digger or a chemist. How can I tell how far away from the barn and outhouse I should put my well in order to avoid all seepage danger?

What do I know about the proper wiring of my house in order to prevent fires? Would I ever have thought of putting the bathroom over the kitchen instead of the living-room? or the dining-room, so that, should a pipe burst and the ceiling be spotted or seriously injured, the damage would not show or be so great. My house cost me $8,000; the architect's fees were $240. I shall always believe it was money well spent.

I went to the architect just as a sick man goes to the doctor; I knew I needed something, but I didn't know what. I built a stucco house, rather a novelty in the country nowadays, but cement is the building material of the future, I believe. Part of the place is purely ornamental, no earthly use so far as shelter is concerned. Maybe I have been a wastrel and used up my ten-pound inheritance in seven years, as my extravagant Scotch neighbor did when he was young. But the ornamental work has brightened the eyes of the boy who was going away, and the girls who never threatened to go, but whom I would have, lost, sooner or later, had it not been for the new house, I am sure. It was worth all it cost.

For instance, you enter the house by way of a cement-floor terrace or porch, without roof, which extends clear across the front and faces the road. From this terrace you enter a covered porch, screened-in for summer, glassed-in for winter. To the left as you enter is a big built-in closet for wraps, and encased in the door of this closet is a full-length plate-glass mirror which gives the ladies a good chance to see themselves as they take off or put on their wraps. I've a theory that a few more good mirrors in a farm house would keep wrinkles and stoop shoulders from being so common. Maybe not, but that's my theory.

Outside the kitchen, in the rear, is an additional room which we call the kitchen entry. In this room is a built-in refrigerator. Off another side of the house is a sun parlor, with glass windows and a radiator to keep it warm for winter, and screens for summer. Up-stairs there are three large bedrooms and a sleeping porch, with every bedroom having a large closet and every closet door a full-length mirror; none of those things which distort the features and make you look either like a roly-poly or a bean pole, but a good, honest mirror which shows the wrinkles in time to stop them, and enables a man to shave without leaving a cluster every here and there, like a spotted cornfield. There is a large bathroom, with both shower and tub bath.

The basement is my favorite, for it's here I can work on rainy days and in winter. It extends under the whole house. There is a good-sized vegetable room, a room for the wife to store canned goods, a coal and wood-room, a boiler and furnace-room, a laundry-room, and a little workshop for me. Next to the laundry is a drying-room, where the clothes can be dried indoors when it is too cold outside. In the laundry I have a combination water heater and laundry stove, built-in tubs, and a chute where the clothes come tumbling down from up-stairs, so they won't have to be carried all through the house. Even with an electric washer laundry work is no picnic, but there are no more "blue Mondays" at our place, believe me.

I made only one mistake, as I see it now, and that was in not having the garage a part of the house, so I could heat it in winter. I had only a cheap second-hand car when the architect drew up the plans—and what's another burst radiator to such a car? Now I've got a regular car, and I need a heated garage. If you're planning to build, don't overlook this; it is important.

A little while back I promised to tell you the effect the new house had on all our lives. I can do it. Can you tell the effect the sun has on your life? Can you sit down and figure out, in dollars and cents, the value of good, fresh air? Neither can I compute the value of our changed way of living.

I have seen it figured out that a woman, without running water in the kitchen, lifts a ton of water a day. It goes something like this: The water is brought into the kitchen from the pump, it is poured into a kettle, poured from the kettle into a dishpan, and from the dishpan it is dumped outdoors. The water in this simple operation is handled six times.

A bucket containing two gallons of water will weigh 20 pounds. Handling it six times means a total weight of 120 pounds. The cooking of three meals a day—on a meager allowance of water, necessitating the use of buckets and pans—means lifting for cooking alone 1,260 pounds a day. When to this we add the water for bathing, scrubbing, and the weekly wash we have the over-burdened farm wife lifting a ton a day. I think too much of the companion of my life to compel her to do this.

Now, with running water, both hot and cold, in laundry, kitchen, bathroom, and small toilet on the first floor and basement, there is none of this burden-bearing. Can I figure this out in dollars? No. I can figure it easier in wrinkles which are missing, eyes which are sparkling, hair which is still black, shoulders which are still straight.

My children are all with me to-day, save the little one under the sod in the graveyard. Had I built the house of gold and set the window panes in diamonds, they would have been worth it all, and more. You can't argue these things; they're not so. I was figuring out last night how much more the taxes were on this place than on the old home. It looked a little bad on paper. Then the boy came and put his head over my arm and I think I heard whispered in my ear: "You're the best daddy there ever was in the whole wide world, and I love you!"

What do I care for taxes! Why, I'd even squander a ten-pound inheritance in seven years and still consider myself the wealthiest man in all creation.

You pay the same war tax on a pound of cheap, poor tea that you pay on Red Rose. In other words you pay 10¢ war tax on a cheap tea which will make perhaps 150 cups to the pound and you pay the same 10¢ tax on a pound of Red Rose which easily makes about 250 cups.

You will find today more value, more economy, more real satisfaction in Red Rose Tea than ever before.

It is truly a war time tea.

No Optimistic.

"One of the foolishest things we mortals do," said Mr. Gratebar, "is to make mountains out of molehills.

"Half the worry and distress in the world comes from this unfortunate habit. It breeds distrust, creates bad feeling, breaks up friendships, makes discord in families. It makes misery all around, and all this in 999 cases out of 1,000 for just nothing.

"The commonest form of molehill is the spoken word. Somebody says something to us that we think is mean, or that we think is suspicious, or lacking in appreciation, or twitting or sarcastic, and right away we begin to brood over it, to eat it rankle in us, to magnify it, to make a mountain of it.

"It is at least an even chance that the little thing of that sort that distresses us so was never meant that way at all. But suppose it was meant to be sharp. What of it? We are all human, and the best of us are liable to make little slips at times and say little thoughtless things that we ought not to.

"But why should we make mountains of such molehills, of things that would have been forgotten the next moment if we did not dwell on them, keep thinking of them and brood over them until finally we magnified them into great grievances?

"I once knew a man who got rich, very comfortably rich, by holding a good opinion of people. I think it not altogether improbable that there were some people that he didn't altogether fancy, but he never showed it, and really he believed that most people, the very great majority of people, meant well and he treated everybody accordingly.

"I don't mean that he stood out in the middle of the road and let people come up and kick him, but he never did permit himself to be annoyed in any degree whatever by any of the little pleasure aggravating sayings or doings that, as we go through life, we are liable to encounter. He was uniformly cheerful, good humored, hopeful; confident always of the good in his brother men, and for all this his brother men liked him very much. They were drawn to him greatly and they made him rich.

"But more than riches he gained by this; by consistently and always refusing to make mountains out of molehills he gained peace, contentment, happiness."

The Swallows' Game.

Here and there the swallows go,
Up and down, fast and slow,
Sometimes curving from the ground,
Sometimes darting far around.

As I watch them skim and tip,
Upward rise and downward dip,
I have wondered what they play
Just before the close of day.

Suddenly the answer came
As I watch their evening game.
Tag's the game they play; now see
If you don't with that agree.

Listen as they fly around,
High above and near the ground;
You will hear them, as they flit,
Calling quickly, "It! it! it!"

The recognition of a composer in this world seems to depend some on his entrance into the next.

The skeleton remains of a giant human were excavated by a dredge in Lake St. Mary, Ohio. The weight of the thigh bone is such that professional evidence was necessary to establish its human origin.

Tangled Arithmetic.

If one boy, playing,
Makes one bit of noise,
How many bits, think you, are made
By two little boys?

Where is the answer?
Not in any rule
That your teacher made you learn
When you went to school.

Those rules are easy;
All they'd have you do
Would simply be to set down one
Multiplied by two.

But two boys, playing,
Thus the sum is done,—
Make ten to twenty times the noise
That is made by one.

Encourage Musical Talent.

It is a good thing to cultivate the least inclination or talent for music in young people. There can hardly be too much pleasure in the average human life, and whatever will add to the sum total is worth while, and music certainly does this. A person who can play one instrument even fairly well, or who can sing, has something to contribute to society, and is therefore in demand. So it often happens that young people who lack accomplishments feel that they are unpopular, and pass many unhappy hours that might have been spared them. smaller instruments,—the violin, guitar. The piano must head the list, but the ear, mandolin, etc., make excellent music, and for a person who sings the guitar makes a good accompaniment, while a violin is always welcome in company. Young girls now play the violin as often as young men do. A flute, well played, makes charming music, and the banjo is popular; but the instrument which attracts the most attention to-day is the ukulele, which comes to us by way of Hawaii. It will pay to make some sacrifice to obtain a musical accomplishment, but whatever will make life happier for ourselves and others is worth the cost of the time and labor.

Cryolit—a source of aluminum, used also in making soda and glass—is nearly wholly imported from Ivigtut, an Eskimo hamlet on the southern coast of Greenland.

GOOD HEALTH QUESTION BOX

By Andrew F. Currier, M.D.

Dr. Currier will answer all signed question in of general interest it will if not, it will be answered personally if stamped, addressed envelope is enclosed. Dr. Currier will not prescribe for individual cases or make diagnosis. Address Dr. Andrew F. Currier, care of Wilson Publishing Co., 73 Adelaide St. West, Toronto.

Constipation.

None of the ills to which human beings are subject has more victims than constipation.

It is therefore a matter into which everybody ought to look rather carefully.

The intestinal tract or tube is that portion of the human machinery which starches and fats are digested and dissolved, and digested food stuff absorbed as it proceeds to nourish and sustain the body, and it also is the sewer through which flows the current of waste matter.

It is very important in any kind of a sewer that this current should move freely and without obstruction and the human sewer is no exception to this rule.

When obstruction occurs in the sewer of your town you are well aware that the consequence is an effusion of foul gases into your house, overflow of offensive material and injury and damage in a variety of ways.

In the same manner when the human sewer is obstructed, foul gases are generated, waste and poisonous material is absorbed and distributed over the body of the blood current, skin diseases break out, you are bent over with pain in your abdomen and the resisting power of your body to infectious and other diseases is lowered.

Many diseases which have a fatal ending trace their beginning to this common and as often neglected ailment—constipation.

It is quite as important to keep the intestines free from poisonous material as it is to supply it with the food which is essential to life.

What is the situation—here is a tube thirty feet long the last third of it the large intestine, the reservoir for waste matter, two or three times the caliber of the other two thirds, the small intestine.

In the large intestine also are valves and folds, greatly increasing its capacity while the entire intestinal tube is so elastic it can easily be made to hold gallons of material.

If this material is poisonous you can guess at its possibility for harm.

Many people would deny that they are constipated and yet they suffer from auto-intoxication and are astonished at the great quantity of offensive matter they have been carrying about when their intestines are emptied by means of drastic purgatives.

In order to be free from constipation and its bad effects it is therefore imperative that the intestines should be emptied once or oftener every day, the exceptions to this rule are few in number. The solid or indigestible residue of some foods is greater than of others and the work of digestion is more completely performed in some persons than in others, this being the explanation why there can be no fixed standards as to the normal daily output for the intestines.

QUESTIONS AND ANSWERS.

E. M.—1—Can the appendix be located on the left side? I have a dragging pain, occasionally, in this part of the abdomen, and have had it during the last three or four months.

2—Will vinegar or lemon juice harm the hair?

Answer—1—It would be unusual for the appendix to be transposed from the right side, where it belongs, to the left side, although I believe it has occasionally been found there. It is more likely that you are suffering from gas in the intestines, or from adhesions, than from a displaced appendix.

2—I do not think that either vinegar or lemon juice would work either harm or benefit to the hair, but I would suggest that it would be better not to use either.

A Reader—Will you kindly inform me whether a leaking valve in a serious heart trouble, or whether it can be cured and, if so, how?

Answer—It is sometimes serious and sometimes it is not very serious. I would suggest that you send stamped and self-addressed envelope and an article on Valvular Disease of the Heart will be sent you, which will inform you in regard to this disease.

Keep the Flowers Growing.

Oh, keep the flowers growing in our gardens,
In No Man's Land there is no living green!
Near all that grime, 'mid all the hate that hardens,
In memory only blossoms may be seen.

In dreams of home he sees our garden flowers
And risks his life that peace may have its bloom;
Can we do less than make our cottage bowers
Rare visions that will help dispel his gloom?

Write him that roses climbing 'round the doorways
Perfume the night, and how the pansies grow;
Let hollyhocks distract him from his war ways;
These are the little things he wants to know.

When he returns victorious we'll meet him
With garlands and with petals at his feet;
And if, mayhap, we never more shall greet him
Our flowers still shall keep his memory sweet.

MAKING ENGLAND LARGER.

Pamma Grass Being Used to Stabilize Shifting Sand Dunes.

England's scientists are giving considerable attention to the problem of permanently increasing the area of the British Isles by stabilizing the thousands of acres of land which are being added to them every few years in the form of huge sand dunes cast up by wind and waves.

In stabilizing the sand dunes great reliance is placed on planting them with marram grass. Just how this accomplishes the desired purpose is explained in a British periodical, as follows:

"The two chief methods of stabilising a sand dune are by a rigid fence and a living plant, around either of which the shifting sand will gather. The fence acts perfectly until the sand reaches its height, but the plant has the advantage of growing and continually rising above its dust heap.

"The best plant for this purpose is psamma or marram grass, because it grows vertically and extends horizontally. Thus the embryo dunes expand both vertically and laterally till they coalesce into dune systems, and the growth continues till the systems form ranges of psamma-covered sand hills.

"Psamma has long been known as the great sand binder and the practise of growing it on tidal land has existed for many years. As far back as the reign of George II. an act of Parliament was passed for its protection.

"Now that the utilization of psamma as substitute for Esparto grass has been favorably reported upon by paper manufacturers, we think the time come for the conversion of some of our dune areas to this purpose."

Jewels.

Sapphire days, sky so blue,
Mountains, hills, waters, too;
Emerald days, meadows green,
Every little field between;
Topaz days just at dawn;
Rose-pearl days, sunset gone;
Opal days of light and mist,
Twilight hours of amethyst;
Diamond days of ice and snow—
Oh, the lovely days I know.
Set together, fair and dear,
In the crown of one sweet year!

Increase Wheat Profits by Increasing Wheat Yields

The average increase in yield of wheat obtained from using fertilizers by two British and three American Experiment Stations over periods ranging from 5 to 20 years' test, averaged 11 bushels per acre.

Fertilizing Fall Wheat Pays

Eleven bushels per acre increase on your 25 acres of wheat at present prices would amount to 11 bus. × 25 acres × $2.20 per bus. ..... = $605.00
Fertilizing at this rate of 150 lbs. per acre will probably cost you for your 25 acres $187.50
Your return from the increase on 25 acres if utilized $417.50

Send for our Free Bulletin No. 2, on Fall Wheat Production.

WOOL

Farmers who ship their wool direct to us get better prices than farmers who sell to the general store.

ASK ANY FARMER!
who has sold his wool both ways, and note what he says—or, better still, write us for our prices; they will show you how much you lose by selling to the General Store.

We pay the highest prices of any firm in the country and are the largest wool dealers in Canada. Payment is remitted the same day wool is received. Ship us your wool to-day—you will be more than pleased if you do, and are assured of a square deal from us.

SMOKE TUCKETTS
T & B CUT

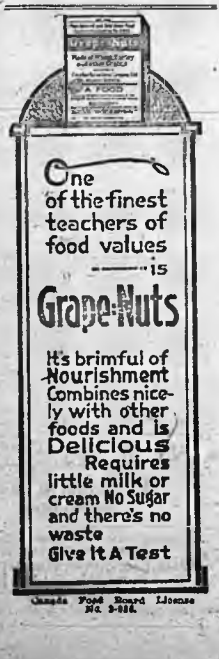
Two Popular Designs

This attractive little model owes its charm to its simplicity. It is one piece from shoulder to hem and has the newest fall feature, the collarless neck. McCall Pattern No. 8456, Misses' Dress. In 3 sizes, 16 to 20 years. Price, 20 cents.

For the girl who is interested in sports, here is an ideal costume. It features the sleeveless jacket which is so popular this season for sports wear. McCall Pattern No. 8453, Misses' Dress. In 4 sizes, 14 to 20 years. Price, 20 cents.

These patterns may be obtained from your local McCall dealer, or from the McCall Co., 70 Bond St., Toronto, Dept. W.

Where to Put Whalebones



They were reviewing the lesson about the whale in the third grade and the teacher was anxious to see how much they had remembered.

"What do we do with whalebones?" asked the teacher.

There was a long silence, then one small boy raised his hand.

"Well, what do we do with whalebones?"

"We put 'em on the sides of our plates," he said.

Canada Food Board License No. 8-088.

FORESTS AND CIVILIZATION

NO UNFORESTED COUNTRY HAS EVER BECOME GREAT.

The Effect of Deforestation is to Render a Country Desolate, Unfertile and Impoverished.

Forests and civilization are inseparably bound together. Not all forested countries have reached a high degree of civilization, but no unforested country has ever reached a state of culture. Egypt, Babylon, and Assyria may be mentioned as exceptions, but the probability is that they were all forested at the zenith of their progress, and that their decline may be directly attributed to the disappearance of their forest wealth. The whole north coast of Africa, Palestine and China were at one time well forested, and, with the vanishing of the trees, these civilizations waned and are now at a low ebb. China is probably the best example of deforestation which we have. Originally a country of great wealth, both in timber and agricultural lands the removal of the woods has, over very large areas, destroyed the farms by allowing the rainfall to rush down the hillsides in the form of torrents, carrying large amounts of sand and gravel, which have covered up and destroyed the arable lands. To-day China is a desolate, treeless country, forced to use dung for fuel and to carry on the most intensive form of agriculture in order to wring a meagre sustenance from an impoverished soil.

When Forests Are Removed.

Where timber is removed from hill and mountains by lumbering, fire almost always follows and burns not only the timber but also the soil, right down to the rock. If the formation is not rock the situation is far worse, for the soil is washed down year after year into the fertile valleys, destroying them completely. In the Cevenne and Pyrenees districts in France 8,000,000 acres of farm land were destroyed by floods, and a huge sum of money had to be spent by the government in reclaiming them. Where forests are removed in sandy country the wind soon strips the soil of the meagre remaining cover and carries the sand for miles over the surrounding country, converting it into a desert. This happened along the west coast of France, and millions were spent to arrest the devastation. An old friend of the writer, Senor Don Ricardo Codornio, a Spanish forester, has spent his life in this work of stemming torrents, replanting denuded mountain slopes, often carrying earth up on mule-back to start the nucleus of a future protective forest. His work in connection with drifting sands has been most interesting, especially where the sand had commenced to invade a village, burying the houses in the suburbs. Wattle fences had first to be built, and between these pines were planted, and when the sand had piled up against the first line of fence this had to be raised to prevent the little trees from being buried before they could fulfil their function. Nor do we have to go so far afield to see the results of axe and fire. Travel west on the C.P.R. through Ontario; take the Canadian Northern to Lake St. John, or the National Transcontinental to Winnipeg, and see the blackened waste which should be one of our greatest tourist attractions. On the Lievre River there is a large tract of country where the hills are of white quartz. Fire has passed over it and the rain has washed away the burnt soil, and to-day seen in summer, from a distance, they look like snow-capped peaks. There is another hill of this character at Riviere a Pierre Junction, on the C. and I. St. J. R. R. at Lachute, Que., and along the line of the C.P.R., near Berthier Junction may be seen the drifting sands which have swept over several square miles of once fertile country, turning it into a desert. Fortunately, our progressive Minister of Lands and Forests, the Hon. Jules Allard, through his chief forester, Mr. C. C. Piche, has begun the work of checking this menace, and at Lachute has planted a large area with beech, grass, and young trees to hold back the devouring sand.

The shell that struck this house saved the making of a door for a British canteen.

TELLING THE TIME

How Our African Soldiers Watched the Hands Go Round

France has many black fighting men from Senegal in the field; nor are they the only troops recruited from savage or semi-savage races that are engaged in the great conflict. A young British officer found himself one night by a mischance to his motor cycle, stranded by the wayside far from the destination he must reach at dawn, and with only a little group of negro stragglers anywhere in sight. He was very tired, having had no sleep for many hours. One of the Africans talked the pidgin English of a coast town, and this man informed him that some motor lorries would be coming along soon, upon which it would be possible to get a lift.

"Soon," in the month of an African is an elastic term; but the captain thought he could afford to wait an hour before setting forward on foot in search of some other means of transportation. Meanwhile, he wanted a nap—wanted it desperately,—but he could not trust himself to wake at the end of the hour. The African could not tell time, but the captain determined to depend upon him, nevertheless. Showing him the dial of his wrist watch, he explained that he wished to be waked when the long hand reached there, and the short hand, there. Then he lay down, with arm extended, and the negro crouched beside him, with his eyes on the dial.

Exactly at the right moment the sleeper was called; and as he opened his eyes they fell upon the African, in precisely the same position, with something strained in his aspect that suggested inquiries. It appeared that he had not dared look away during the entire hour.

"For sure him clock trabbel slow, massa," he explained. "But s'pose him stop go walkee, walkee? S'pose him go jump, jump ?"

Upon a river steamer in Africa Miss Mary Kingsley, the English explorer once heard other passengers giving directions to the native steward in the adjoining main saloon:

"You savvy six o'clock? When them long arm catch them place, an' them short arm catch them place you call me in the morning time."

An interval of silence, and then another voice:

"You savvy, five o'clock? When them long arm—" And so it went on, until each passenger had pointed out on the clock face the proper relation of the two hands to each other at the moment he desired to be called. The ignorant native steward, who could not tell time and could not learn to, was yet sufficiently observant to place and remember the calls correctly; he never got them mixed.

ANY CORN LIFTS OUT, DOESN'T HURT A BIT!

No foolishness! Lift your corns and callouses off with fingers—it's like magic!

Sore corns, hard corns, soft corns or any kind of a corn, can harmlessly be lifted right out with the fingers if you apply upon the corn a few drops of freezone, says a Cincinnati authority.

For little cost one can get a small bottle of freezone at any drug store, which will positively rid one's feet of every corn or callus without pain.

This simple drug dries the moment it is applied and does not even irritate the surrounding skin while applying it or afterwards.

This announcement will interest many of our readers. If your druggist hasn't any freezone tell him to surely get a small bottle for you from his wholesale drug house.

A Song of the Air

This is the song of the Plane—
The creaking, shrieking plane,
The throbbing, sobbing plane,
And the moaning, groaning wires—
The engine—missing again!
One cylinder never fires!
Hey, ho! for the Plane!

This is the song of the Man—
The driving, striving man,
The chosen, frozen man—
The pilot, the man at the wheel,
Whose limit is all that he can,
And beyond, if the need is real!
Hey, ho! for the Man!

This is the song of the Gun—
The muttering, stuttering gun,
The maddening, gladdening gun—
That chuckles with evil glee
At the last, long drive of the Hun,
With its end in eternity!
Hey, ho! for the Gun!

This is the song of the Air—
The biting, drifting air,
The eddying, steadying air,
The wine of its limitless space—
May it nerve us at last to dare
Even death with undaunted face!
Hey, ho! for the Air!
—Observer, Royal Flying Corps.

Minard's Liniment Cures Diphtheria.

THE COUNTRY CORRESPONDENT

(St. Thomas Times-Journal)

Some of the overgrown papers in the big cities note the passing of so many country weekly journals and the amalgamationof dailies in some of the smaller cities and are deluding themselves with the belief that this is is an evidence of the growing influence of the metropolitan sheets. In time they say, the big dailies will cover the entire field and the country correspondent who now writes weekly to the press chronicling such facts as that John Smith has finished his new barn or that Sam Jones has purchased a car, will pass away for all time.

The country correspondent, at whose expense the city newspaper man affects to make merry, has his own place in the world to fill. In his limited sphere he is just as much of a community builder as the funny man in the urban centres. He records the events that happen around him just as the city journalist does, and anything— someone whose name escapes us has said—that Providence is not too proud to allow to happen, no news paper should be too proud to put into print.

In many respects the country correspondent can give the city reporter or editor lessons in the ethics and the morality of the profession. He deals with the virtues rather than with the vices of humanity. No country correspondent, with a warped idea of his duties, ever attends a magistrate's court and essays to make jests with human derelicts as his subjects, a line of endeavor that is all-fours with chortling over the sad scenes witnessed in an insane asylum or in a casualty hospital.

The country correspondent describing in his own way a service in a church at the crossroads, or a meeting of the Epworth League, is doing infinitely more to develop a sturdy brand of national character than is the arrogant occupant of the city sanctum grinding out blood-curdling and scuttle-lifting homilies on the political outlook or articles setting the different religious sects at war with each other flattering himself the while that he is the one man chosen for the duty of saving his country from social and religious degeneracy.

The people are becoming weary unto death of the arrogance of the big party papers that, blind and often morally halt themselves, are still assuming to lead the world and to dictate to men and women as to how they shall worship and for whom they shall vote. The people refuse to be coerced. They have long since broken the party leading strings and are able not only to think for themselves but to find their way around alone.

There is talk of newspaper changes in the big as well as in the smaller cities. But this talk is not in the line of amalgamation. The union of two rapidly partisan papers would not improve conditions, but rather increase the opportunities for working economic mischief. What the people want in the newspaper of to-day is a broader spirit in political and every other style of discussion, a press that is not controlled by any faction or throttled by a particular interest, a press that will recognise the reading public as composed of so many individuals who cannot be led around and made to play the game set by the journalistic dictator.

Was It Worth It?

Jam tarts unlimited was little Bobby's idea of heaven, but since war flour came in and fat was scarce he hadn't been quite so fond of them as before.

Mother came into the kitchen one afternoon, saw Bobby gazing at a dish of newly baked tarts.

"What are you doing, Bobby?" she asked sharply.

"I was just wondering, mother."

"Wondering? You haven't touched those tarts, I hope?"

"Not yet, mother," said Bobby. "I was just wondering if they're nice enough to be whipped for."

LEMON JUICE IS FRECKLE REMOVER

Girls! Make this cheap beauty lotion to clear and whiten your skin.

Squeeze the juice of two lemons into a bottle containing three ounces of orchard white, shake well, and you have a quarter pint of the best freckle and tan lotion, and complexion beautifier, at very, very small cost.

Your grocer has the lemons and any drug store or toilet counter will supply three ounces of orchard white for a few cents. Massage this sweetly fragrant lotion into the face, neck, arms and hands each day and see how freckles and blemishes disappear and how clear, soft and white the skin becomes. Yes! It is harmless.

War Tanks 2,000 Years Old

"Is the war tank not a brand new invention?" was one of the questions that came to the editors of "2,000 Questions and Answers About the Great War." Probably 999 people out of 1,000 would answer "yes" unhesitatingly. On the staff of the Review of Reviews, which produced the book, there was, however, a specialist on ancient wars, and he spoiled the whole thing by answering that the first war tanks were used exactly 2187 years before they made their appearance the British-German front. It was during the gigantic siege by Rome and her allies of Carthage, the "Queen of Africa." After many months of assault, which ended only in mounds of Roman dead under the fatal walls, the besiegers suddenly approached under enormous armored tanks shaped like tortoises. Safe beneath these huge wheeled shields, the Roman soldiery labored to breach the walls, unmindful of the rocks, spears, boiling water and oil, molten lead and liquid fire which the desperate Carthaginians poured on them. Before that ancient siege was ended the Romans devised battering rams—pending, land-thread monoliths. It will be worth while to watch for some such development this year.

Minard's Liniment Cures Colds, Etc.

MONEY ORDERS.

A Dominion Express Money Order for five dollars costs three cents.

Handkerchiefs

If the handkerchiefs are yellow, the reason is that they have not been properly washed. To overcome this yellow color, put the handkerchiefs in cold water in which there is kerosene, about one teaspoonful to a quart and a shaving of good laundry soap. Let the handkerchiefs boil in this about three hours. Take them out, dry in the sun, and they will be snowy white. This treatment will apply to any linen or white clothing.

Minard's Liniment Cures Garget in Cows

German Dog Whips

That the German officers carried small whips with which to accentuate their commands—given in a snarling and bullying tone—to the soldiers, is one of the many intimate points noted by Captain A. Radclyffe Dugmore in his book, "When the Somme Ran Red," just published by Doran Company. Falling into the enemy's hands, Captain Dugmore escapes, or rather is let go, and then the famous camera hunter of African lions gets permission to go at once into the thick of the fray at Alsot and take pictures of the German Army in action. His camera is spotted and he is greeted with a shower of "German hail." He had almost made his escape when he was wounded in the leg by a shrapnel splinter. As an eye-witness Captain Dugmore lays great stress on the wonderful marksmanship of the Belgian soldiers.

Potato Bugs

A group of potato growers and a seedsman were discussing the damage which had been done by potato bugs last season.

"The pests ate my whole crop in two weeks," said one grower. "They ate mine in two days," said a second, "and then roosted on the trees to see if I'd plant more."

"All that is very remarkable," said the seedsman, "but I saw a couple of potato bugs examining the books in our store about a week before planting time to see who had bought seed."

Minard's Liniment Cures Distemper.

No Use For Them

The Irishman came home beaming.

"Bridget," said he, "O!'ve got a job"

"Glory be!" said Bridget, who was tired of supporting the family.

"I shall want a new suit," said Murphy then. "An' yez can pawn me nightshirts to get it."

"Your nightshirts!" gasped Bridget, "Shure." said Pat. "An' what for should I be wanting them when I've got a job as night watchman, and can only sleep in the daytime?"

Minard's Liniment Co., Limited.

Gentlemen,—I have used MINARD'S LINIMENT on my vessel and in my family for years, and for the every-day ills and accidents of life I consider it has no equal. I would not start on a voyage without it. If it cost a dollar a bottle.

CAPT. F. R. DESJARDIN.

Schr. Storke, St. Andre, Kamouraska.

Two Legs or Four

Anne, aged five, was drawing a picture of her sister's beau. She worked very earnestly, stopping every few minutes to compare her work with the original. Finally she shook her head sadly.

"I don't like it much," she commented. "Tim't much like you. I guess I'll put a tail on it and call it a dog."

FOR SALE

WEEKLY NEWSPAPER FOR SALE in New Ontario. Owner going to France. Will sell $2,500. Worth double that amount. Apply J. H. ... to Wilson Publishing Co., Limited, Toronto.

WELL EQUIPPED NEWSPAPER and job printing plant in Eastern Ontario. Business cash $1,800, or for $1,200 on quick sale. Box 69, Wilson Publishing Co., Ltd., Toronto.

The Paisley Advocate

PAISLEY, AUGUST 21st, 1918

LOCAL AND DISTRICT NEWS

Trophies Coming and Going

Our bowlers held the Bowman trophy for only one day, a Wiarton rink who came down on Wednesday beating them out for it. On Friday they again got possession of the Keystone trophy from Chesley club, and lost it to Port Elgin on Monday.

Sergeon Soldier Wounded

Pte. Jos. Young, son of Mr. and Mrs. John C. Young, River Road, Saugeen, is among the recent casualties in France, having been wounded in the face by a gunshot. Pte. Young went with the 160th, and was still in England when his last letter, dated July 23rd, was received at home.

Winners in Crop Competition

The winners of the standing crop competition, oats, in connection with the Pinkerton Agricultural Society have been announced as follows: 1, Archie Tolton; 2, Harvey Clark; 3, Julius Holm; 4, David Pinkerton; 5, T. Harry Young; 6, John Cruickshank; 7, James Garland.

Wounded Second Time

Mrs. Geo. Hepburn received official word on Monday that her son, Pte. James Hepburn, had been admitted to No. 1 Australian General Hospital at Rouen, France, on Aug. 10th, suffering from gunshot wound in left leg. This is the second time Pte. Hepburn has suffered from German missles, having been wounded a year ago.

Must Work or Go to Jail

Two young men in this town were before Magistrate Mayor Halliday on Tuesday under the anti-idling law and were let off on condition that they secure work within 48 hours, otherwise they go to jail. Boys who work one day and are idle the next should be committed to an Industrial Farm to learn a useful trade.—Chesley Enterprise.

She Killed the Weasel

Mrs. Tennant, of Eden Grove, disposed of a weasel that had been slaughtering her chickens by killing it with a stick. This wily little animal makes a clean sweep of the poultry yard when allowed to continue its visits. Not many women would tackle even a small animal, but in this case of conservation Mrs. Tennant did the the right thing to slay the destroyer of chickens.

Folly or Corruption

Quite a sensation was created in Paisley on Thursday morning last when a couple of men from a neighboring town motored over in search of two young women, their daughters, who had been away little over night. The lost were found and although no court proceedings ensued, those men connected by rumor with the escapade do not get off without having their characters more or less besmirched.

A Critical Case

Mr. Wm. Campbell, of Holland, Man., who has been visiting at the home of his sister, Mrs. J. Sharpe, Inkerman St., was taken suddenly ill with appendicitis a few days ago, and was taken to Walkerton hospital, where he was operated upon by Dr. Houston. It was a very critical case for some time, but at present writing Mr. Campbell is reported to be improving even better than was expected. His wife and brother, Mr. Jas. Campbell, arrived from Holland on Wednesday night of last week.

Great Changes in Nine Years

On Sunday morning last Rev. G. C. Little, pastor of Knox church, recalled to his congregation that it was just nine years on that day of the month since he was inducted here. During that time a great change has taken place in the personel of the congregation. There have been 205 new members received by profession of faith or by card, and 100 removals by death or otherwise, including six members of session who were in office at the beginning of his pastorate, five of whom have been called to their reward.

Do You Want to Go to Siberia?

A contingent, C. E. F., is to be mobilized for service in Siberia. Instructions have been received from Ottawa to proceed with recruiting for this unit. One hundred men are required for the infantry from Military District No. 1. Returned soldiers physically fit and others not at present liable under the Military Service Act, will be given first opportunity. Discharged soldiers' reenlisting will be given original regimental numbers. Applicants may apply to any authorized medical examiner in Military District No. 1 for medical examination.

Repatriated Canadian Soldier

Pte. Geo. D. Burgess, of Orillia, is visiting at the home of his aunt, Mrs. John Shaw, Church St. Pte. Burgess was wounded at Regina Trench, on the Somme, in October, 1916, and taken prisoner. For nine months he was in a hospital at Cologne, and for six months in the German camp at Limburg. He left Germany in January last when an exchange of disabled prisoners was effected. As a result of his wounding, Pte. Burgess is minus his right arm. He informs The Advocate that, owing to the scarcity of food in Germany, the Red Cross system of supplying food to prisoners is the means of saving many prisoners' lives. They are furnished with a pound of bread per day, sent through Switzerland, also 70 shillings' worth of grocery parcels each month sent through Holland, besides clothing and tobacco parcels.

—The banks are said to be thinking of cutting out interest on small accounts. By all means let this be announced just before the next Victory Loan is floated, and the depositors will know what to do with the amounts in question.—Toronto Star.

More Coal Come In

The citizens whose fuel bins are still yawningly empty were glad to hear of the arrival of four cars of coal at the station last week, and hustled to get in line for a share of the supply. The shipment was brought in by Mr. J. S. Dewar, who has lately engaged in the coal business and received his license as a dealer. Speaking about coal, we may be excused for interjecting the suggestion that no purchaser should be given more than one wagon load until every one in town who desires to buy coal has been supplied with that amount. So long as there is any uncertainty as to a full supply being available no one should have his cellar filled while another ready to buy has an empty bin. Mr. Lyon has also received a shipment this week.

Death of Dick Grant

Once more we are constrained to say that death is in the world and the spoiler is amongst the works of the Almighty. The sudden removal of Richard W. Grant, of Ebenezer, from the scenes and activities of this life caused a shock throughout the whole district. Dick was one of the most robust and active young men in the whole countryside, and when it was reported on Monday evening that he was dead, the feelings of those well acquainted with him can well be imagined. It was two weeks ago on Friday that while butchering he suffered prostration from the heat. The week following he worked as usual, although not feeling as well as before. On Friday week he took paralysis in his hand, and on the following Monday became confined to his room. While it was thereafter necessary for him to be under the care of both a doctor and nurse, it was not considered that his condition was dangerous. We are informed by Dr. Gage, the attending physician, that the disease causing death is polio myelitis, otherwise known as infantile paralysis, so called because it usually attacks children, but is sometimes contracted by adults as well. The patient often recovers, but is usually left in a badly paralyzed condition. However, if a vitel part of the system is attacked, it invariably proves fatal. While this is a contagious disease, occurring principally in the months of August and September, it is altogether different in type from cerebral spinal meningitis. On Sunday Dr. Gage held a consultation with Dr. Hanbidge, of Ogdensburg, N.Y., who was over visiting his father and brother in Arran. Dr. Hanbidge has had considerable experience in treating this disease, and agreed with Dr. Gage in his diagnosis. On Monday forenoon the disease took a serious turn, and death ensued about six o'clock in the evening. The parents of the young man were both away from home when the end came. Mrs. Grant went to Peterboro five weeks ago to wait upon her aged father, who passed away at the end of last week and was buried on Sunday. Mr. Grant went down on Saturday to attend the funeral, and both arrived back on the late train Monday night, to be met with the news of their son's death. It is indeed a terrible blow to the parents and family, and the sympathy of the whole community goes out to them in full measure. The funeral on Tuesday afternoon was private. The burial took place in the Ebenezer cemetery. A memorial service will be held in Ebenezer church on Sunday afternoon at 3 o'clock.

Lieut. Horace Parker Dies of Wounds

On Thursday morning last an official telegram was received by Mr. and Mrs. Christopher Parker, of Greenock, hearing the sad news that their son, Lieut. Horace Parker, had paid the supreme sacrifice by giving up his life for king and country. The brief message was that the young officer died of wounds on Aug. 11th. Lieut. Parker enlisted with the 70th Battalion at Chatham, but upon receiving a commission as lieutenant transferred to the 160th Bruce Batt., and was placed in charge of the machine gun section. After going overseas and taking various courses in training he was promoted to captaincy, but when the 160th was broken up he reverted to lieutenant to get to the front. He went to France about the end of February last. He was the son of a veteran soldier, his father having been one of the Paisley company of volunteers who went in 1866 to repel the Fenians invading Canada, and Lieut. Parker showed by his eagerness to serve in the firing line that he was possessed of the true heroism of our great-hearted soldiers who are fighting and dying in the defence of liberty. Lieut. Parker was born in Greenock 31 years ago, and attended Jackson's school until he had passed the high school entrance examination. Shortly after he went railroading, and became one of the best locomotive engineers on the G.T.R. His father carries a handsome gold watch presented to young Parker when he left their employ. Lieut. Parker took to military life when quite young, joining the 32nd Bruce Regt., and became a lieutenant. He also attended military school and qualified for higher rank. Altogether he was a splendid soldier and stood high in the esteem of his companions in arms. Had he been spared to return to civilian life he had a long and useful career before him. He was a member of the Masonic order, honored with many of the high degrees. His aged parents have suffered a great shock by the sudden news of the death of their dearly beloved and noble son. The sympathy of the public at large goes out to them and the brothers and sisters in their hour of trial. Mrs. Parker received a letter on Friday written by her deceased son on July 15th, in which he mentioned Pte. Harry Jack being taken prisoner. Horace told his mother in the letter that he thought the beginning of the end of the war had come, and it would not be long until it was over. On Sunday evening a union memorial service was held in Knox church, the sermon being preached by the pastor, Rev. Mr. Little, and Rev. Mr. Walker taking part in the service. There was a large attendance. The following sympathetic telegram was received from Ottawa on Friday:

To Mrs. Mary Parker, Paisley

My colleagues and I send our deepest sympathy in the great bereavement you have sustained in the death of your gallant son.

C. J. DOHERTY,
Acting Prime Minister

Going to Underwood

Mr. J. R. Laidlaw has purchased the big general store business at Underwood formerly owned by Roppel Bros., but latterly by Mr. Harstone, and will shortly move from this town to the hub of Bruce Tp. Mr. Laidlaw has been a citizen of Paisley for nearly thirty years back, although not quite continuously, and no man more deservedly enjoys the cordial friendship of our townspeople as well as the people of the surrounding country. Filling the position of postmaster as he did for a number of years during which the post office was the centre at which all postal business was transacted, and for the past ten years being in the general store business, Mr. Laidlaw came in contact with every person, young or old, in this part of the country, and his courteousness at all times won him wide popularity. In local organizations, such as the band and orchestra, he has been a great help. For several years he was a member of the school board, also on the board of management of Knox church. We are all sorry, indeed, to lose from our midst one who was so ready to give his time and attention to such duties. As a business man he has an enviable reputation, and there forward indeed is fortune in having him located there, as Mr. Laidlaw is just the stamp of man who is most likely to restore the prestige of that place by bringing it back to its old standing as a country trading centre.

The Late Joseph Cunningham

The late Joseph Conningham, the highly esteemed postmaster at Glamis, whose death was briefly mentioned in this paper last week, was a man of sterling character, upright, sincere, and kindly in all his relations with his fellowmen. His death is a sad loss to his sorrowing family, and throughout the country he is deeply mourned. The deceased was born in Trafalgar Tp., Halton Co., on Feb. 12th, 1849. He came to Bruce County in 1872, and for four years ran a sawmill in Greenock Tp. He removed to Glamis in 1877 and the following year started storekeeping which occupation he continued until his death. He had been postmaster for about fifteen years, having been appointed under the Laurier administration. He was a member of the Baptist church and an active, faithful worker in that body. Mr. Cunningham was married in October, 1874, to Miss N. Elizabeth Hemstreet, who survives him, along with a family of two sons and four daughters. They are A. B., A. of Melville, Sask.; J. Charles, of Regina, Sask.; Mrs. R. W. Burgess, of Cabri, Sask.; Misses Mina, Laura and Lila, at home; Mrs. Wm. Aitor Gallivan, Sask., and Miss Lizzie Cunningham, of Milton West, are sisters, and Mr. Wm. Cunningham, of Allis-ton, an only brother. The funeral service was held in the Baptist church on Friday morning, interment being made in Purdy's cemetery. All the surviving members of the family were present for the funeral except his son Charles, of Regina, who was detained owing to sickness in his home. Just a year ago (Aug. 15) his youngest son, Ernest Hall Cunningham, made the supreme sacrifice and sleeps in Flanders fields. The deceased had been in poor health for several months. Of late he appeared bright and hopeful of recovery, but this was due largely to his buoyant and courageous spirit. He had never been ill in his life and he fought bravely against the forces of disease. Gradually, however, his strength was failing, and on Sunday he very quietly passed away to be with his Maker.

Misty Vision

Comes with advancing years, but can be cleared by properly fitted glasses. Spectacles are our specialty. When we fit them, they give satisfaction. Eyes examined free.

BEAUTIFUL JEWELERY

in great variety of novel patterns and artistic designs, rings, chains, necklaces, bracelets, everything in the jewelry line, may be found at our store. We give you a cordial invitation to come in and see what we have to offer, for we feel sure there will be something that will just suit you.

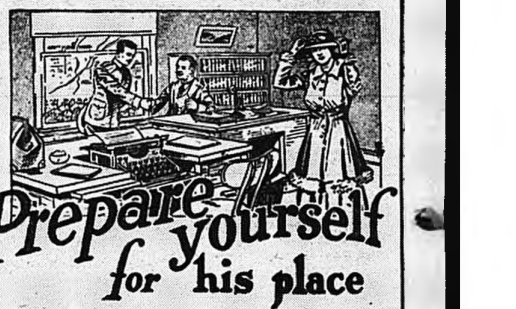
A Fight for Life

It has been fight or die for many of us in the past and the lucky people are those who have suffered, but who are now well because they heeded nature's warning signal in time to correct their trouble with that wonderful new discovery of Dr. Pierce's, called "Anuric." You should promptly heed these warnings, some of which are dizzy spells, backache, irregularity of the urine or the painful twinges of rheumatism, sciatica or lumbago. To delay may make possible the dangerous forms of kidney disease, such as diabetes or stone in bladder.

To overcome these distressing conditions take plenty of exercise in the open air, avoid a heavy meat diet, drink freely of water and at each meal take Anuric (double strength). You will, in a short time, find that you are one of the firm indorsers of Anuric.



Hamilton, Ont.—"For kidney ailments I have never known any medicine to equal Anuric. When I started to take it I was very miserable with lame back, pains in the cords of my neck and shoulders and all over my body. The water was high colored and offensive. All of these conditions left me after one week's use of Anuric and I consider it to be the greatest of all kidney medicines."—MRS. JENNIE CLARK, 79 Queen St. So.

Toronto, Ont.—"My husband suffered severely with pains in his back for three or four weeks. He commenced to take Anuric and in three or four days he not only looked better, but remarked that his back felt much better, and now he says that his pain has all gone. It is with pleasure that we recommend Anuric."—MRS. MARY RYAN, 54 Seaton St.

DAYS ARE NAMED FOR EXHIBITION

Following is the list of days named for the Canadian National Exhibition:—

Monday, August 26th—War Veterans' and Opening Day.
Tuesday, August 27th—School Children's Day.
Wednesday, August 28th—Women's Day.
Thursday, August 29th—Allies' Day.
Friday, August 30th—Press Day.
Saturday, August 31st—Production and Conservation Day.
Monday, Sept. 2nd—Labor Day.
Tuesday, Sept. 3rd—American Day.
Wednesday, Sept. 4th—Farmers' Day.
Thursday, Sept. 5th—Manufacturers' and Transportation Day.
Friday, Sept. 6th—Review Day.
Saturday, Sept. 7th—Citizens' and Athletic Day.

Prepare yourself for his place

When He Leaves to Shoulder a Gun

You must be ready to step in and fill his job. The war requires the maintenance of efficient manufacturing and mercantile organizations at home and it is your patriotic duty to do your bit.

You Must Be Trained to Be Ready

You must be able to do what he has done. Business man cannot stop to train you—They have not time—You must be trained when you take hold.

We Are Ready To Train YOU

The Northern Business College with a good staff of experienced instructors will teach you what you need to know—what to do and how to do it. The cost will be very moderate. The fees are no higher than they have been for the past ten years.

College Opens for Fall Term Sept. 2nd
:: Write for Any Further Information You Wish ::

WEEPING ECZEMA SOON RELIEVED

A Perfect Treatment For This Distressing Complaint

Wasaga, Ont.

"I had an attack of Weeping Eczema; so bad that my clothes would be wet through at times.

For four months, I suffered terribly. I could get no relief until I tried 'Fruit-a-tives and 'Soothe Salve' The first treatment gave me relief.

Altogether, I have used three boxes of 'Soothe Salve' and two of 'Fruit-a-tives', and am entirely well"
G. W. HALL.

Both these sterling remedies are sold by dealers at 50c. a box, 6 for $2.50, or sent on receipt of price by Fruit-a-tives Limited, Ottawa.

"Fruit-a-tives" is also put up in a trial size which sells for 25c.

THE PARAMOUNT ISSUE

(Simcoe Reformer)

Hon. Mr. Lemieux recapitulates three matters in which Sir Wilfrid Laurier was right and the Government was wrong. That is all the more reason why Sir Wilfrid should have been a member of the Government. The latch-string was always out. No man denies his right to a foremost place. Had he so chosen he might to-day be the dominant force in the administration of this country's affairs—and the history of the last ten months, so far as this Dominion is concerned, would have to be re-written. The one thing required of him was that he lead in the direction that the overwhelming majority of Canadians wanted to go. His judgment or his conscience, or both, prevented his acceptance of the one essential condition. And so it was impossible for anything but what happened — just another of the 'might-have-beens' of history. There is absolutely no sense in Mr. Lemieux pleading Sir Wilfrid's wisdom in matters of secondary importance and of recent date. At the crucial minute in the one vital decision Sir Wilfrid was wrong and he and the Liberal party and all Canada have suffered from the moment of his error to the present.

WALKERTON HIGH SCHOOL WILL RE-OPEN ON SEPT. 3rd

The Board, having secured competent teachers to fill the two vacancies that occurred during the holidays, announces that the staff is now complete.

Students are prepared in Courses required for the following examinations:

1. Entrance to Normal Schools
2. Entrance to Faculty of Education
3. Matriculation—Pass and Honor—into the various Universities

Full information as to Courses, Text-Books, and other matters will be given on opening day.

Those wishing advanced information on the above or other matters will obtain it by writing to the Principal.

SINCLAIR'S HARDWARE

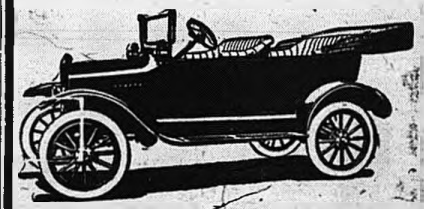
What Will You Do For Help?

FARM help is scarce, but this condition can be relieved to a marked degree by using machines that accomplish more work in a given time with less man power.

Why should the farmer cling to horses—a slow, expensive means of power—when every other business is adopting the truck and thereby reducing the cost of hauling, speeding up deliveries, and saving for human needs the food that the horses would otherwise consume?

The motor driven truck can work constantly at maximum load under the burning summer sun, or in the coldest weather. Unlike the horse it needs no rests while working, it eats only while in actual use, and when the day's work is done it requires very little attention, and leaves you free for other "Chores" about the place. Then, it can be housed in one-quarter the space of the horses, wagon and harness it replaces.

It is a mistaken idea that a truck is useful only for driving upon paved roads. The Ford can be driven all over the farm, and used for hauling grain, potatoes, fruit, roots, fertilizer, wood, stock, milk or any other product. The speed it travels, the time it saves, and its low upkeep cost appeal very strongly to all users of the Ford Truck. If you need help, order your Ford One Ton Truck today.



All prices subject to war tax charges, except trucks and chassis

INTERNATIONAL BABY SAVING.

For once the civilized world is believing what Germany says when she speaks incessantly of the next war. For once the world being fore-warned by Germany's attempts to increase her birth rate by whatever means, is forearmed and is starting out for the first time on organized baby saving. Instead of this work being conducted in isolated communities there is a conviction that if the future citizens of the world are to be saved all the babies must be saved no matter where they live. There is a conviction that no one knows quite as much as he should know about baby welfare and that no one is doing all he should to secure fair treatment for this "little infant soldier" who has had to fight far too many of his battles unaided, in the past.

England is thoroughly roused on this subject. First of all she means to effect a radical reform at home. The Children's Jewel Fund has yielded £27,052 for baby welfare work in England. Added to this fund is a contribution of 4,000 guineas from the American Red Cross to go to the same work in England. The Baby Week Council in celebrating its organization this year intend to concentrate on getting its propaganda into otherwise neglected places and to levy on all available help—especially teachers and children.

Travelling movies will be used as helps and the climax will be reached in a great conference in London where all questions pertaining to baby welfare are to be considered with a view to instant adoption. It is intended to include the provinces in this conference, by proxy, as it were. Sectional conferences in the provinces will link the whole English-speaking British world in one great body of Baby Welfare workers. An attempt will be made to induce local authorities in all overseas dominions to organize far-reaching schemes looking to the preservation of baby life.

In view of this earnest effort in the motherland it is most gratifying to know of the splendid work that has already been accomplished in Canada this year. Three well organized Baby Welfare Week programmes have been carried out in our large cities. The work for summer should not end there and, in view of Germany's ceaseless activity along that line circumstances seem to warrant a repetition later in the summer of those same Welfare Weeks. What is really needed is a "Get Together Conference for the Dominion" with nation-wide, standardized warfare for the sake of Canadian babies.

An Ieeless Refrigerator.

The woman who cannot conveniently get ice, or who cannot afford it, resorts to all sorts of contrivances to keep her milk sweet and her butter hard.

Here is a plan for a home-made milk house that will answer the purpose.

Make your framework the size you want the refrigerator, making the bottom a trifle larger than the top. Cover the framework with ordinary "bag" sacking—clean potato sacks will do. Stretch this covering tight and secure it with small nails. The door is made of the same material. The door can be made to open and shut or you can have a hanging door which simply drops over the opening.

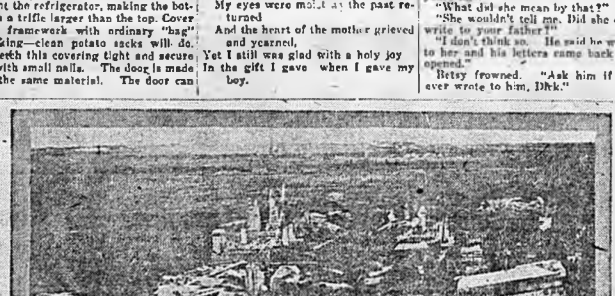
Now set a vessel of water on top of the refrigerator. Of old woollen cloth make strips two or three inches wide and slip them in the water. Place one end in the vessel and lay the strips out over the sides of the refrigerator. These make wicks and gently draw the water on to the sacking. Evaporation immediately sets in, and you will be surprised to find in a short time that your butter is hardening and your milk growing cold. A few gallons of water will keep this refrigerator in operation throughout the day and night, but the vessel should be filled morning, noon and night.

This refrigerator will give good service if placed in the sun, but better service if placed in a shaded place. The water used may be either cold or warm, the object being to have free circulation of the air force evaporation and keep the sides of the refrigerator wet at all times.

Reading Matter For Our Soldiers.

Sir Douglas Haig, writing to Dame Eva Anstruther recently said: "Urge all at home to buy books and magazines and pass them on freely to the Camps Library for circulation among the troops. The demand that has now to be met is very great." The last sentence was underlined.

The Earl of Derby wrote: "We feel we have only to ask for every man, woman and child to respond to an appeal which will add so great a pastime to the life of his or her own belongings and friends at the Front. The matter is urgent." Here also the last sentence was underlined.



Do Canadians keep their boys supplied with papers and magazines? Do we share the good stories, the little poems that say what we would like to say and cannot, the jokes, the fun? "If not, why not?" as the dreadful examination questions used to say.

Another thing: Because we have gloomy solemn thoughts should we send them over there? Every one says: "Make your letters smile." Why not send smiling, rollicking printed matter—even the kind we do not like but know that our boy likes it? Why not?

The Gift.

You marched away and my soul was proud
For yours was the use of the cheering crowd,
And yours was the chance to do and dare
And have in the conflict for right a share;
My boy, with a thousand women's sons
To go over the top with their eager guns.

But after that, in the dust alone
In the little room that we long had known,
My eyes were molt at the past returned
And the heart of the mother grieved and yearned,
Yet I still was glad with a holy joy
In the gift I gave when I gave my boy.

The Germans do not even respect the dead. Here is a photograph of a cemetery near Lens which the Canadians found with broken tombs and graves robbed both of the dead and of their jewels.—Canadian Official Photograph.

SCENTED DUSTS

By Ben Ames Williams

Part IV.

She resumed her reading. White, gasping, shocked into silence by the resolution in her voice, the two young persons stared at her. Betsy rose awkwardly to her feet, tottering and unsteady. Dick started to speak, caught himself and went out the door. Betsy, fleeing as though on wings, overtook him as he reached the gate before the house. She was sobbing.

"Dick! Dick!" she cried.

Dick looked down at the girl, whirled and took her hands in his. "I love you," he whispered fiercely.

"And I love you, Dick dear."

"Yes—"

She shook her head, her voice steady and proud. "But we can't—be married now, Dick."

He nodded. "That's right," he said dully.

"We must—"

"Give each other up," he finished for her. "Yes."

Renunciation is not a pain; it is joy. Statisticians estimate that in the course of a season thousands of young folk give each other up forever, with all due ceremony. Sometimes the renunciation endures a week or ten days, perhaps till the next full moon. Lovers find an ecstatic anguish in renouncing their love. Dick's head lifted proudly, Betsy's eyes glowed and they gave each other up forever and parted. Dick turned toward home, and Betsy went drooping back to face Miss Mary.

Before Betsy reached the house, she had decided she would never give Dick up. No, never! Before Dick reached the corner, he was planning a thousand ways to reconcile Miss Mary.

They did not see each other again until the next morning. Then it was by the merest accident they met. Dick, utterly forgetful of the fact that Betsy always did the marketing, went down town and met a friend on the corner and when Betsy, basket on arm, came swiftly toward him, he was immensely surprised.

Nevertheless he retained sufficient self-possession to carry her basket as she turned homeward. In spite of their renunciation of the night before, his first words were:

"Father doesn't know why she hates him."

"I think I know. Anyway I have an idea."

Dick took her arm. "Father is in love with her," he announced.

Betsy's eyes glowed. "Really, Dick?" she exclaimed. "How do you know?"

"He told me so."

"What did he say?"

They were so preoccupied that they lost the homeward way. There was plenty of time for Dick to tell Betsy all his father had told him of Miss Mary's ancient anger and Betsy plied him with questions to draw forth the forgotten details, till Dick interrupted with a question on his own account.

"But you said you had an idea!"

She nodded swiftly.

"What is it?"

"I think it has something to do with a letter."

"Why?"

She flushed and looked up at him with a faint smile. "I started to write to you last night, Dick."

He laughed. "That's funny. I started to write to you too."

She caught his hand eagerly. "Oh, did you?"

"You put I tore it up?"

"Why?"

"I don't know. What did you do with yours?" His voice was deep with concern.

Betsy's eyes clouded. "I was writing in my room," she said, "and Aunt Mary came in and saw me. She looked at the letter and I said:

"'I'm just writing to Dick, Aunt Mary.'

"She looked at me steadily and said, 'No man is worth writing to, Betsy. And it is especially unwise to write to the son of Richard Sotheron.'"

Dick exclaimed, "What did she mean?"

Betsy shook her head. "I asked her," she said. "But she only told me, 'Richard Sotheron is a scoundrel. I found him out more than twenty years ago.'"

"What did she mean by that?"

"She wouldn't tell me. Did she ever write to your father?"

"I don't think so. He said he wrote to her and his letters came back unopened."

Betsy frowned. "Ask him if she ever wrote to him, Dick."

"I will—right away. Will Miss Mary let me see you? For I must see you!"

"Yes. I asked her. She said she was willing. She said, 'I've been waiting a long time to even my score with Richard Sotheron: Now I have done it. That is my only concern.'"

"Where can I see you then?"

Betsy told him and they parted. Two hours later Dick found her busy with her trowel in the old garden. When she ran to meet him, he shook his head. "Father says she never wrote to him," he said. "He is coming this afternoon to try to find out—"

Betsy shook her head quickly. "He mustn't," she cried. "Aunt Mary would not see him, I asked her." She caught Dick's arm. "I'm sure a letter had something to do with it, Dick. I wish I could talk to your father."

"You can. Come home with me now. He'll be there early, this afternoon."

Betsy hesitated, glancing toward the house among the trees. "I will," she decided swiftly. "Wait for me, Dick, a little way up the street."

When she joined him, the girl's eyes were shining. "Dick, Dick," she cried, "Aunt Mary is reading over a packet of old, old letters from a trunk in the attic. Are there any old letters at your house?"

"Hundreds!" Dick exclaimed. "Dad always keeps them. So did his father and mother." He gripped Betsy's arm. "Listen," he said. "I just remembered. Father's mother—he told her about Miss Mary when he was a boy—and she told him he was too young to—"

Betsy clapped her hands softly. "Hurry, hurry, Dick!" she begged. "Oh, I just know—"

When they reached the big Sotheron house, Richard Sotheron had not returned. The house was quiet and still in the hot afternoon; he faint perfume of age hung about the old rooms. Betsy paused at the door and looked about her, eyes shining. "Oh, isn't it beautiful, Dick?" she cried.

"It will be mine," he told her.

She looked up at him shyly. "And mine, too, Dick," she whispered. "I—I just feel it."

"Not unless—"

Not until we find the letter, Dick. There is one. There must be. Can we look for it?"

He nodded. "Father won't mind," he said.

"Could we look among his mother's letters?"

"Will it be all right?"

"Of course. Come, I'll show you."

In the old room on the second floor, the curtains were drawn and the air was heavy with the dust of years. Even when Dick drew back the hangings and opened a window, their nostrils were filled with the breath of the past. At one side of the room stood his grandmother's desk, of old mahogany veneer, severe of design, the drawers stuck fast in their places, the locks dry and rusty.

Their voices fell to whispers as they stood before the desk. When Dick tried to move the upper drawer and could not, they drew back for a moment, hesitating.

"Father and I have read these letters more than once," he said softly.

"Oh, we mustn't disturb them!" Dick shook his head. "It's all right," he decided. "Wait a minute."

He opened the desk, found the keys and unlocked the drawers and then by hard tugging opened one revealing close-packed bundles of letters, each bundle wrapped with faded ribbon. As the drawer opened, the dust of rotting paper drifted up to them, perfumed with a scent that his grandmother had used. They bent together above the drawer and Dick took out a bundle of letters and showed the girl the name on the outer envelope.

"From my father to her when Dad was a boy," he explained.

Betsy touched the packet gently. "Put them back, Dick," she begged. "It isn't right to open them."

His hand dropped on hers. "It's all right," he reassured her. "Only—I've read all these. Some are from Father, some from his younger brother who died. The other drawers though—"

He pushed the drawer recently into its place and opened the next. It slid out more smoothly. Again the close-packed letters were revealed and the scented dust clouded up into the two young faces. Dick smiled a little. "These are my grandfather's letters to her," he said. "And those in the back of the drawer there are from her friends when she was married."

"It wouldn't be there, would it?"

"It might but the letters in the bottom drawer are all from different people. I should think if there is anything, it would be there."

(To be continued).

Chicken Conservation and Autoists.

If one in five of the three million cars in daily use during the past year killed a single chicken, six hundred thousand fowl were accounted for. That is a big loss in food value and in dollars. A little more care on the part of each motorist will help to cut down this loss.

Grow Potatoes in Cemetery.

The ancient cemetery around the church on Oberstrass is no more. The city needed the space to grow something that will feed the people, so the resting place of the dead was turned into a potato field, writes a correspondent from Zurich, Switzerland. All the tombstones were removed with exception of the monument erected in honor of a local poet who died many years ago.

Food Control Corner

Arrangements have been completed by the Canada Food Board with the United States Food Administration by which 15,000 tons of linseed oil cake and meal will be supplied to relieve the conditions which prevail in Canada owing to the scarcity of feed and fodder.

The Food Board will be responsible for the allocation of the oil cake and meal. All dealers who wish to import these commodities must attach to the regular import application blanks a sworn statement of the quantities sold during the three years prior to July 1st and distribution will be made on this basis. Applications should be sent direct to the Canada Food Board.

Every city, town and village in Canada should have a farm employment agency in charge of some good, live local man. Farmers want help, and it is the duty of the towns and cities to provide it if there is no other source of supply. Able bodied young men of all classes have been enlisted for the army, and the factories had already drained the country of regular farm laborers. There is no immigration to help the situation. The United States wants about a million or more men for its own harvest. Some of those men will doubtless be available in Alberta, Saskatchewan and Manitoba for the Canadian wheat after the American crop is in, but the great bulk of the extra labor required on Canadian farms this year, will have to come from Canadian towns and cities.

To enable these men to be distributed when they do come forward, as by their Registration cards they have promised to do, there should be machinery ready and well organized. In some Provinces the local Government has established employment agencies. Every province might well have similar offices supplemented by voluntary organizations in every centre. Business men in every other Canadian town, should become active in this matter because it vitally concerns them. Employers of labor should do everything in their power to arrange their work so as to release men who are willing to go to the aid of the farmers. Every encouragement should be given these men, for this work is of first importance. Farmers, of course, prefer experienced men, and men who have been brought up on farms or spent some years on the land should be specially encouraged to devote a few weeks of their time and the capital of their experience to the harvest of 1918. Extra men for the harvest are wanted in every province—in British Columbia 3,000, in Alberta 6,000 to 7,000, in Saskatchewan 20,000, in Manitoba 10,000, Ontario 12,000, Quebec 12,000, New Brunswick 2,000, Nova Scotia and Prince Edward Island all the men locally available.

Leading business men of every centre should get together in a committee and open up a farm labor bureau. Then there is none already. There should be no trouble for the farmer in learning where to find such an office, and there should be no trouble for the man who is willing to go on the farm to find out where to go and leave his name and address for the farmer looking for him.

We are in receipt of two very artistic posters issued by the Canada Food Board. One reads: "Fish and Vegetable Meals will save wheat, meat, and fats for our Soldiers and Allies." The other represents a child on his mother's knee at breakfast saying: "Remember we must feed Daddy too." The mother's eyes see in vision her husband on the battlefield.

When Baby Gets Prickly Heat

If your baby has prickly heat very badly look to his food. Often times the prickly heat is caused as much from the heat inside as well as from the heat outside the body. Overfeeding in the hot weather may cause the blood to be overheated. Reduce the food a little. It were better to consult a physician, however, as to how much to reduce it.

"Three parts of good conversation consist of good manners."—E. F. Benson.

Mix a teaspoonful of corn-starch with your damp salt, and stand it on a cup on the back of the stove for a while. It will dry nicely and keep dry.

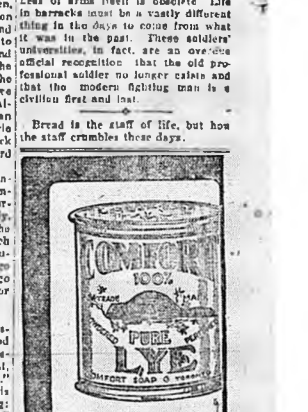
Cream Wanted

We are in the market for cream all through the year. We pay the HIGHEST market price. Our plant is right up-to-date. In business since 1906. Drop a postcard for particulars.

Mutual Dairy and Commerce Co., 44-46 King St. West Toronto

COLLEGES ON THE FIELD.

Canada is the Pioneer in Establishment of Soldiers' Universities.



We are glad to see that field colleges are gradually being established in all our armies at the Front, says the Manchester Guardian. The idea was, we think, first put into practice by the Canadians, whose "University of Vimy Ridge" was so popular with the men that the United States Government at once followed the example and introduced as a component part of the American army an organization known as the Soldiers' University. Now the Australian force is to have a similar institution—one, in fact, even more ambitious than the others.

The British Army is also undertaking an educational scheme which will doubtless adopt as its foundation the Y.M.C.A. camp classes, whose teaching staffs have for a long time deserved adequate official recognition and encouragement. The scope of these field universities is large and will accommodate the needs of the student, the professional man, and the craftsman not only during the war but in the period of demobilization. The Germans have had similar institutions for long enough.

It is a scheme that will be welcomed by nobody so much as by the men themselves. Every one of us has heard the lament of young soldiers—their only lament, in fact—that they are growing more and more conscious of a widening gulf in their careers as the war prolongs itself. For much too long. It must be confessed, our soldiers have been without any systematized opportunities of maintaining some point of contact with civilian habits of mind and vocation, and it is a thousand pities there were no soldiers' colleges for the men who went through the first weary months of trench warfare.

Still, though these educational institutions may have come late in the day, the future before them is surely considerable. There is no reason why they should pass away until the business of arms itself is obsolete. Life in barracks must be a vastly different thing in the days to come from what it was in the past. These soldiers' universities, in fact, are an overdue official recognition that the old professional soldier no longer exists and that the modern fighting man is a civilian first and last.

Bread is the staff of life, but how the staff crumbles these days.

For the BOYS & GIRLS

How Robert Fooled Himself.

Robert walked up to the path to where Ruth was waiting. He had been to the lower end of the field, and there was a shrewd look on his freckled face. "I'll tell you what! You take the first three rows, Ruth, and I'll take the next three. We'll pull by threes all the way. There aren't nearly as many weeds in the first three rows," he added magnanimously.

The children had undertaken to weed out the onion bed, and they were to get ten cents a row.

"Huh, it's just as easy! I can pull three at once," Robert boasted.

"But it doesn't get the roots out clean," replied Ruth conscientiously.

"Yes, but what's the difference?" Robert questioned. "It all looks the same. "My rows look as well as yours."

"It may look just as well, but it isn't," Ruth persisted, firmly. "I'd be ashamed to cheat father."

"But it isn't cheating. He never said we were to get out every last one of the roots, and anyhow, I'll get ten cents apiece for my rows, just the same as you do," taunted Robert.

Anyhow to prove his assertion, he soon passed his sister, and was working at the other end of the field when Ruth had progressed sufficiently to see why Robert had been so anxious for her to take the first three rows. They were considerably longer than any others in the field.

But there was one thing he had not seen—he had not gone over the entire field, and did not know that the last three rows, which, counting by threes, would naturally fall to him, had not been worked with the rest of the field, and, being nearest the fence row, were unusually full of grass and weeds, and that the ground was hard and full of roots.

He was of a sociable nature and soon tired of working ahead of Ruth, and fell behind, so they could talk.

"You see how easy it would to beat you if I wanted to," he boasted grandly. "It would make my arms ache to work as slowly as you do."

"Well, they don't need to ache on my account," Ruth retorted hotly.

"What's the matter, sis?" he questioned boldly, flicking her hand with a thorny weed. "Mad?"

"No, I'm not mad, Robert Reynolds! I'm disgusted," she said with dignity, not lifting her head. "Before I'd stoop to anything so small—"

"Small? How'd you s'pose I knew these three rows were longer, than the rest?"

"Why, you saw them, of course," Ruth remarked dryly; then she refused to talk.

"'Fore I'd be mad about a little thing like three rows of onions," Robert taunted, when the silence became unbearable. "See here! I'll bet you haven't got an onion in your row as big as that."

"Maybe not," Ruth retorted, "but I soon will have, if you don't do a better job weeding."

When they neared the end of the field Robert stood up and looked beaten. He took off his hat and began to mop his heated forehead. "Whew! Who knew this was here!" he said, as he viewed the weedy rows.

"That's what a fellow always gets when he tries to cheat somebody else," remarked Ruth. "If you'd been willing to share the long rows at the other end I might have shared the hard ones at this end with you."

Just then the children's father came through the field, sizing up the rows.

"Who did the three long rows at the farther end?" he asked quizzically. "Uh, huh! I see! Working by threes, are you?" Robert looked ashamed. "See here! I have an idea." Father Reynolds put his hands in his pockets thoughtfully. "This onion patch will have to be gone over at least twice more. Now I suggest that you each keep on as you have begun—Ruth take the first three rols, and so on, through the field. At the end of the season, when the onions are pulled, I'll give a prize of five dollars to the one of you who can get the most onions out of any single row you have weeded."

"But how about those extra long rows father? That wouldn't be, exactly fair."

"Well, if Ruth did the extra work it seems as if she ought to have the advantage of it." He looked at the children shrewdly.

"No, it wouldn't be fair," Ruth decided liberally. "We'll just cut off the ends of the long rows when it comes to harvesting."

"All right." farmer agreed, proud that his little daughter was so just.

When it came to a second weeding Robert saw where Ruth's thorough work had given her the advantage of him. The weeds that had not been thoroughly pulled but only broken off at the surface, lost no time in springing up again, and in a few days were almost as riotous as ever. Their strong roots doubled themselves in vigor, and when it came to a second pulling Robert found it almost impossible to get them out of the ground; besides, they had starved and crowded the onions till he saw with alarm that they were only half the size of those in Ruth's rows. In trying to get out the weeds he loosened many of the small onions, too, and was obliged to set them back, though he felt sure they would only wither and die.

"It isn't the way things look on the top so much as the way they feel down under that counts." Father Reynolds explained as he gave Ruth her merited five dollars. "Good, conscientious work will always tell, even if it doesn't show from the surface. It isn't the fact of things looking right, but of their being right, that gives us an easy conscience and makes us know that things are going to work out right in the end. No matter how much we think we've fooled folks, it always turns out that we've fooled ourselves the worst."

And Robert hung his head, for he couldn't help admitting that it had certainly worked that way in his case.

MORE HUN VANDALISM.

Germans Wreak Vengeance in Destruction at Chateau Thierry.

Evidence accumulates that during their brief stay in the Marne salient the Germans indulged in wholesale acts of vandalism. In a message sent from French army headquarters, the correspondent gives details of their conduct while in possession of Chateau Thierry.

The Germans were in the town for some time and apparently thought they would remain there indefinitely. When they found they would have to give it up they apparently determined to take the only vengeance in their power. The injuries which have been inflicted on the town are such as could not be the result of shelling, the correspondent points out, as those houses which suffered most were entirely uninjured by shell, shrapnel or bullet. He says:

"These houses were magnificently furnished, the walls hung with costly tapestries and admirable pictures. The furniture was of exceptional elegance and impressive mirrors and charming statuettes were numerous.

"To-day there is nothing that has not been destroyed. The tapestries have been hacked to pieces, the pictures slit from corner to corner, the leather and other chair coverings have been ripped and all the delicate marquetry and the irreplaceable examples of craftsmanship of past centuries have been smashed. The legs have been torn off the tables and used as further work of destruction. There is not a mirror which has not been broken and the glass and china flung at them lie in fragments before them.

"The costly carpets have been soiled and rent in every possible way and the pots flung at the silken papers on the walls. This vengeful fury has been carried even to the extent of smashing nurseries and doll houses. The fashion in which beds and rooms have have been defiled is difficult of description. It would seem the work of lunatics."

I'm Glad I'm Home

Were you ever in a country where the
sky is seldom blue,
And the rain just patters ceaseless
on the clay,
Or the snow melts drab and chilly as
it flickers out to you,
And the nights are weird, while
dawn or noon is grey?
Where you rarely taste the sugar,
which less frequently you see,
And you tramp or sit, or sleep in
sticky loam?
Then you'll understand the feeling and
the thrill that comes to you
When I shake your hand and say:
"I'm glad I'm home."

Have you heard the belching cannon
play a ceaseless serenade?
Have you ducked in muddy ditches
from the shot?
Have you known the M. G. whistle or
the "s-dang" of a grenade?
Have you lost your pal—and could
not mark the spot?
Did you walk where death was master
and the earth seemed filled with
slain,
And the law was—kill, or perish—
on the Somme?
And your vermin-eaten body was half-
frozen, starved, in pain—
Then you'll know the merging of
"I'm glad I'm home."

If you've only lived in Canada, where
clear skies drown the land
And the food you get in plenty
keeps in store;
Where the sugar's on the table, and
the milk is close at hand,
And the native bread—pure white—
comes to your door
And the great expanding country and
the silver lakes and streams,
And mountains call you from the
city's boom—
Kneel to-night and thank your Maker
for His gifts and peaceful dreams
And the plucky lads now fighting
for your home.

—Sergt. E. T. Calloway

Hypocrites confess the sins of others, and overlook their own.

LOOPING THE LOOP.

Thrilling Description of Feat Accomplished Making a World's Record.

Many a man who has sat down to describe a supreme emotion of experience, has given up in despair because of the seeming feebleness and inadequacy of words. To him they appear to fall short of the mark. To the reader, however, those same, despised words often seem inspired. Vividness and thrill are in their very letters. The young American aviator who wrote the following account of his first experience in looping the loop doubtless found words inadequate to express his full sensation, yet they cannot fail to thrill the reader whose imagination, like the aeroplane, is ready to take flight.

In know, of course, that I should loop before my flying career ended, he says, but the test would be an much harder in the early stages that I wanted to see if I could make it. Lumpke, a clever flyer, who flew for Carranza in Mexico, tells me that I have made a world's record for looping with the least number of hours' practice. Previous to the flight in which I looped I had had three hours and fifteen minutes of solo flying.

As a matter of fact, the loop is a very simple stunt, but the first time is hard—mighty hard. I was flying alone at thirty-five hundred feet altitude. The motor was turning over fourteen hundred and fifty revolutions a minute, and the plane was traveling at about sixty miles an hour. I looked down at the bay, and could see the city of Pensacola to my left and in front of me; way down on the water a boat was churning across the bay. I was nearly at the northeast corner of the course, ready to turn south. It was the first time I had been over thirty-two hundred feet—high enough for a safe loop.

"Now is the time," I said to myself. If you don't nose her over now, you are a coward and no flyer."

You see I had figured the thing all out and knew how to do it. I was making myself prove to myself I was no four-flusher. A gust threw one of my wings up. I looked down and realized how far it was to the ground, how delicately balanced I appeared to be, although perfectly safe; and then I gritted my teeth and shoved down on the flippers.

Such a rush of speed I have never experienced. I shot down like a dead weight pulled on by the motor. I watched the tachometer, which registers the revolutions of the motor, climb to 1650-1700. Then I shoved her still farther down and reached 1850. I was going about ninety miles an hour. Then I pulled back on the flippers, and here was the nose of the machine coming up to meet me—up, up, up! I was hunched way forward in the seat up against the cowl. We poised, absolutely without movement, there. I was virtually upside down. What a frightful, delightful sensation! Then the nose swung over and slipped a little to one side: my motor stopped for a second, then, as the nose swung down straight toward earth, picked up again with a roar, and we were plunging straight down at terrific speed. I gradually pulled the flippers up, which I had shoved forward as we passed over the top of the loop, and gradually we came into horizontal flight.

I say "we" because it seemed as if the machine were a very obedient, understanding bird, obeying my least impulse. Oh, but I am master of that airplane! I can do anything, absolutely anything, with it. I know you think I am foolhardy and overconfident, but I know what I can do and what I cannot.

The second time I looped it came easier, but going over the hump was still pretty hard. I was forty-two hundred feet then, and it was a fine, inspiring loop and, according to those who saw it, very good-looking. I got up two thousand revolutions, or about one hundred miles an hour. After I had looped I flew on to the spiral field at the end of the course, although we are not supposed to spiral until we have had ten hours of flying. I put her into a reversed control spiral, that is, banked over nearly vertical, when your flippers become a rudder, and rudder flippers. I shot down in a corking spiral, and came out of it just at the right time to shoot back in front of the station, land, and rush to the beach.

THE WEEKLY SERMON

Ho, every one that thirsteth, come ye to the waters, and he that hath no money; come ye, buy and eat; yea, come, buy wine and milk without money and without price.—Isaiah 55, 1.

There are some wonderful chapters in Isaiah's prophecy which have been a comfort to Christians in all ages. Who can ever pass over that beautiful fortieth chapter with its opening cry, "Comfort ye, comfort ye My people"? In the oratorio of "The Messiah" it is the opening hymn, and when one has heard it sung in a clear tenor voice he knows that God is love. And then there is the fifty-third chapter with its declaration of the sufferings of the Messiah, and the sixtieth chapter, the great missionary chapter, and the sixty-first chapter, which our Lord Himself read at a Sabbath service in Nazareth. No wonder Isaiah is called the "Gospel Prophet."

This fifty-fifth chapter, God's gracious invitation, is like a great symphony, singing and pleading and throbbing with God's love. In the eastern cities, where water is scarce, men used to go about the streets selling water and calling out the excellency of the spring whence the water came and exciting interest and trade by making a kind of song to advertise the water and draw buyers. In some of our large cities to-day, where the water is not very good, we can see wagons with advertisements that such and such a spring has the purest water in the world.

The need of pure water is one of our greatest needs. So God presents Himself as one who gives water to satisfy thirst. No did our Lord speak to the woman by Samaria's well, saying, He had the water of life to give, which, when taken, thirst would never more be known. And again St. John tells us how He cried, "If any man thirst let him come unto Me and drink." (St. John, iv. 14, and vii. 37). And in the Beatitudes He cried, "Blessed are they which do hunger and thirst after righteousness, for they shall be filled."

Trusting and Serving

But above all else, this gracious invitation tells us of God's love. How He longed for our salvation from sin and our happiness in life! How He (this, 700 years before the Messiah came, declared that "a leader and commander" for His people would surely appear! Nay, how He declares the final story of a redeemed world when all His people should "go out with joy and be led forth with peace!" Centuries have passed and yet the fulfillment has not come; but God's word can never pass away and His promises are "yea and Amen." Wars and sorrows, life and death, generation succeeding generation, and still the old world is struggling on. No matter! A thousand years are with God as one day. And your life and mine may be completed in spite of all if only we "trust and obey." For God is saving individual souls all the time, and as they "come to the waters," they are refreshed, and as they "seek the Lord," they find Him and know Him as their Best Friend. In spite of thorns and briars the way is clear and beautiful, for He goes before us and we need not be afraid. Oh, the beauty of a Christian life as one goes on loving and trusting and serving!

A Gracious Invitation

How blessed we are in praying and reading God's word! How happy is the service we render to our fellows even in giving a cup of cold water to the thirsty! I think we should learn this lesson of the glory of living when life is consecrated to Christ. What are the trials, the troubles, the loneliness, the misunderstandings when we know that God loves us and will take care of us, and permits us to work with Him? This gracious invitation comes to you, dear friend. Read it aloud and change the personal pronoun and see how it rings with a music all its own. "Ho, thou thirsty one, come to the waters; though thou hast no money, yet come thou, buy and eat without money and without price. Thou shalt go out with joy and be led forth with peace!"

My dear Lord, I thank Thee for this message. Long have I sought for peace through the things of earth which have cost me much, and vainly have I tried to satisfy my hunger with stones and not with bread. Now I come to Thee, and lo! my thirst is quenched, my strength is revived, and I live in Thee. Keep me in Thy paths. Make me brave in trouble. Open mine eyes that I may see all the blessings Thou hast provided for me. And at last bring me to Thy holy hill and to Thy dwelling. For Christ's sake, Amen.—Rev. F. W. Tompkins.

Poultry Diseases Responsible for Big National Loss.

At least fifty per cent. of the chickens, young ducks and turkeys, and ten per cent. of the adult birds, die each year from diseases, many of which are preventable. This is an annual national loss of probably millions of dollars that should be avoided to a large extent.

War conditions make it imperative that farmers and poultrymen as far as possible should stop this enormous leak. To do this every breeder should pay strict attention to the general conditions of his flock. When anything unusual is noted in a fowl, it is advisable to place the affected individual in separate quarters. If within a short time recovery does not take place, it is unwise to destroy the fowl without first ascertaining the cause of the disorder. The prevalence of disease is more often the cause of failure than the lack of practical knowledge and the extreme importance of keeping the quarters clean; isolation of all ailing fowls and immediate action in regard to finding out the cause cannot be too strongly impressed upon the poultryman.

When trouble occurs, forward to the Biological Laboratory, Central Experimental Farm, Ottawa, Ont., a live but sick fowl, or, in the absence of such, a dead bird. In the interval disinfect the quarters, runs, drinking fountains and feed dishes to check the spread of any infectious disease.

Disinfect the poultry houses by spraying the interior with a lime-wash solution (50 lbs. stone lime slaked in a barrel of water, plus one gallon of a good commercial disinfectant). Fill cracks and crevices to destroy mites, lice, etc. If a smaller amount is required it may be prepared by adding two and a half pounds of lime to a pail of water, plus half a teacupful of disinfectant.

Keep a crop growing in some part of the yards and alternate poultry crops. If the runs are small cover with a coating of air-slaked lime and dig up. If the runs are too large to dig, plough and cultivate before sowing. Rape is a good crop for this purpose. Rear all chicks on fresh soil.

Although these precautions may appear unnecessary it is the only way of combatting many disease conditions affecting poultry, which if left to themselves will undoubtedly prove decidedly costly in the long run.

Knights Organizations of Britain

The Most Honorable Order of the Bath is one of the oldest of the knights organizations in Great Britain. It was established in 1399, fell in decay in the reign of Charles II., and was revived by George I. It consists of 65 military and 27 civil members, exclusive of the Sovereign, Princes of the blood royal, and distinguished foreigners who may be nominated to the honorary distinction. The Most Distinguished, order of St. Michael and St. George is conferred, exclusive of honorary members, natural-born subjects of Great Britain who may hold, or have held, high and confidential office within the British territorial possessions, and is the reward for services in relation to the foreign affairs of the empire. The Knights Grand Cross are limited to 100, exclusive of honorary members. The order was instituted in 1818.

To increase the Canadian supply of substitutes for wheat, the largest milling concern of its kind in Canada will be opened in Peterboro on August 15 by the Quaker Oats Company, according to an announcement by the Canada Food Board. Corn flour, oatmeal and oat flour will be turned out at the rate of 7,000 barrels a day. Mr. J. H. Ebert, manager of the Quaker Oats Company, Chicago, and Mr. George McDonald, of the company's branch at Peterboro, have been visiting the Canada Food Board offices to make final arrangements for the operation of the mill.

DEMOBILIZATION AFTER THE WAR

GREAT BRITAIN ALREADY IS PREPARING.

Comprehensive Scheme Adopted For Return of Soldiers With Pay and Insurance Good For One Year.

Although the end of the war may be far distant, projects for demobilizing the British army when the proper time arrives are well under way, says a London despatch. The military authorities, acting in conjunction with the Ministry of Labor, are perfecting the scheme by which the soldiers will be returned to civil life with the utmost security, and at a camp not far from London there has already been a rehearsal of the methods to be adopted for dispersing the men.

"Big as was the job to get men into the army," said an officer engaged in the work, "it will be a bigger job to get them out of it. But the country may be sure that everything will be done to enable the soldiers to reach their homes and get employment with the minimum of friction."

The scheme is far reaching. The authorities have had to consider not only the situation at home but also how the project will fit in with the convenience of France, Italy and the overseas dominions, and with transport facilities from Salonica, Mesopotamia, Palestine and from other parts of the world. How long it will take to demobilize the millions of troops is a question to which even those occupied in the task are not prepared to give a definite reply.

Out of Work Insurance Policy

Eighteen dispersal depots are to be established in England, Scotland and Wales. Every step has been worked out in detail. Before the men in France are ordered home they will be assembled in the order of the districts from which they came, so that all may be sent in a body direct to the dispersal depot closest to the locality from which they joined the army. Each man will take with him his entire kit, including his arms and personal equipment, steel helmet and box respirator. Previously he will have been deprived of his ammunition.

On reaching the dispersal stations the men will hand over their equipment. Everything must be given up except the uniform which the soldier is wearing and his great coat, although the coat must be returned after the month's furlough to which each man will be entitled. He will be permitted to retain his uniform.

The soldier will pass through several huts before he is sent on furlough. In one he will receive a protection certificate, containing all particulars regarding his regiment, length of service and destination. In another he will receive an advance on the pay still due him, and post office money orders in three equal instalments for the remainder.

On application the soldier will obtain with an "out-of-work" insurance policy, for a year. This will enable him to receive a fixed sum for a definite period from a post office, if unemployed.

Finally the men will be grouped in different huts, according to the locality to which they are to be sent. Railroad tickets already will have been made out. Then will come engagement, and the start for home.

The Tongue

(Anonymous)

"The boneless tongue, so small and weak,
Can crush and kill," declared the Greek,
"The tongue destroys a greater horde"
The Turk asserts, "than does the sword."
The Persian proverb wisely saith,
"A lengthy tongue an early death;"
Or sometimes takes this form instead,
"Don't let your tongue cut off your head."
"The tongue can speak a word whose speed,"
Say the Chinese, "outskirts the steed',
While Arab sages this impart,
"The tongue's great storehouse is the heart."
From Hebrew writ the maxim sprung,
"Though feet should slip ne'er let the tongue."
The sacred writer crowns the whole
"Who keeps his tongue doth keep his soul."

Used That One

The young housewife, looking very pretty and workmanlike in a big green overall, was cleaning out the pantry cupboard.

"Dickie," she called to her young husband, who was smoking in the apple-pie-an little drawing room, "I want you to bring me a mousetrap home to-morrow."

"But, angel," cried the young man, "I only brought you one home yesterday."

"I know, pet" called back the young bride; "but that one has a mouse in it."

At the age of 30, Beethoven became afflicted with deafness from which he never recovered.

Hymns are essentially the people's portion of the musical service and every effort should be made by the organist to encourage them to sing.

WALKERTON

A telegram to Mr. and Mrs. D. McKechnie from Ottawa on Monday morning bore the sad intelligence that their son, Capt. Malcolm Archibald McKechnie, had died of wounds in France on Aug. 6th. No further word has been received yet, but doubtless he was one of the first gallant Canadians who fell in the offensive last week in which the Canadian divisions won back a wide strip of ground from the enemy. Dr. McKechnie, who had been serving with the 6th Canadian Field Ambulance Corps, was a young man of attractive personality and high ideals of life and service. The noble spirit which has won the respect and admiration of the world, and which in future years will be Canada's richest heritage, was his in full measure. His last letter to his mother before leaving Camp Hughes, Manitoba, for England on Oct. 24th, 1916, shows what manner of young man he was. He recalls the joy of childhood when sleighing down gentle slopes. As he grew older the steeper hills were the attraction. These, too, lost their charm, but the steep hill near the exhibition grounds was always a joy. Arriving after a climb over the crusted snow, the start downward was slow at first, then faster and faster, shooting over hummocks and attempting to fly, and on through a piece of swamp out upon the icy river where the sleigh glided gently and then stopped. Then all was excitement and how glad they were and yet sorry for those who did not come along and take the trip. And so the desire came to him and he hoped to travel far and swiftly and safely along life's pathway, and when the speed slackened and the sleigh begins to slow up he would look along the river and up to the grand old hills towering far above, emblem of his mother's devoted love and the eternal Father's care, which enabled him to take his bumps over the hummocks and arrive safely at the river, and then he would be happy, oh, so happy. In his last letter, received last week, he speaks about transfusion of blood which starts anew life which had almost flickered out, and how keenly he was interested and rejoiced in its success. The equipment apparatus had to be invented and made from any material at hand and the men contributed a great la making these articles. Noble chaps they were, always anxious under all conditions to do their utmost to help those who were wounded and gratified at the results, and realized that it is one thing to put a dressing on a wound and send the case on to the casualty clearing station, often beyond help when taken there, and what a different feeling they had when the case under circumstances was almost beyond hope and yet they succeeded in bringing the patient around and then sent him on. They themselves were transfused with the desire to help the other chap when in dire distress. Dr. McKechnie was born at Gillies Hill on Jan. 11th, 1889, died of wounds Aug. 8th, 1918, came with his parents to Walkerton in 1892 when his father received the appointment of county gaoler. He graduated from the Walkerton public and high schools, and in medicine from Queen's University in 1914, and was registered in the University of Alberta at Edmonton. He was associated with Drs. McKenzie & McKenzie as a physician for the Canada Northern Railway until he enlisted in 1916 and went overseas from Camp Hughes as medical officer with the 179th Cameron Highlanders of Winnipeg. For a time he served in England on a medical board, classifying convalescent soldiers. He went to France in March, 1917, as captain of No. 6 Canadian Field Ambulance, C.A.M.C. On Aug. 8th he made the supreme sacrifice. We bow our heads and pay our tribute of respect to the memory of a heoric character. Such fallen heroes have left a serious bequest to the coming-generation of Canadians. It is ours to catch the torch thrown by dying hands and to hold high the principles of Canadian citizenship.—Telescope.

CARGILL

Mesdames Wagner and Jewell, who have been visiting at Mr. Sid Parker's, left for their home in Grand Ledge, Mich., on Saturday.

Mr. Jas. Alexander, of Oshawa, spent last week at his home here.

Mrs. Wm. Grainger, of Stratford, is visiting her parents, Mr. and Mrs. H. Brownscombe.

The Kind You Have Always Bought

TENTH CON. BRUCE

Mr. Dave Annees is laid up with a very severe attack of tonsilitis.

Mr. and Mrs. John Caldwell and Mr. and Mrs. Robt. Caldwell visited friends in Chesley on Sunday.

Mr. Dan Sinclair, from Hamilton, is visiting friends in this vicinity.

Mr. W. H. Brown purchased a new Ford car this week.

Miss Marie Walmsley is visiting friends in Kincardine and Huron.

PRESENTATION IN GREENOCK

On Friday evening, the 9th inst., a number of the friends and neighbors gathered at the home of Mr. M. Fitzsimmons, of Greenock, in honor of Nathaniel, jr., who has been home on three weeks' leave after serving nearly two years in His Majesty's Navy in the North Sea Service. Mr. T. H. Purdy officiated ably as chairman, and after the presentation of a well filled purse the youth and beauty of the community enjoyed themselves in the usual way to an early hour. The admiration of the neighbors for "Nat," their own Jack Tar, is very nicely conveyed in the following address:

To Nathaniel Fitzsimmons, jr.

Dear Friend—We your friends and neighbors meet with you here tonight, knowing that you are soon to return to duty in His Majesty's service. You, like many of our boys, heard the call of your king and country, and bravely responded to that call. You entered as marine in the British Navy and you have done your bit to help old Britain rule. "Rule, Britannia, Britannia rule the waves, Britons never, never shall be slaves." We were all glad to hear of your return even if but for a short time, and be assured that our best wishes will go with you all the way through, and we hope you may safely return after the foe is vanquished, and the reign of peace has been restored. Many of our boys who went out like yourself we know will never return. They have given their best to a life of service, and their sons' fires full of hope and of possibilities have been placed upon the altar as a sacrifice for the cause of freedom, of justice and of right. Their blood seals the freedom of the weak against the strong, of the oppressed against the oppressor. Tonight as we meet here with you our thoughts and our hearts go out to the many Bruce boys and girls who have gone overseas. We are met here in friendly social intercourse, none to molest us or make us afraid and we wonder how it is with them.

Many are the hearts that are weary to-night,
Wishing for the war to cease;
Many are the hearts looking for the right,
To see the dawn of peace.
We're tired of the war on the old French ground,
Many are dead and gone;
Of the brave and true who've left their homes,
Others been wounded long.
We've been fighting to-day on the old camp ground,
Some are dead and some are dying,
Many are in tears,
Dying to-night, dying on the old camp ground.

The poet has expressed here the yearnings of many, very many, of those who have been at the front. We hope this may not come to those whom we hold dear, and yet they are all enlisted in the one great, grand and noble cause—the breaking of tyranny and the building up of freedom and of equal rights. Let us to-night honor our boys and girls by letting our sympathies go out to them. Let us think of some of the things they have suffered for our country and our homes, and for ourselves, and have we suffered or sacrificed anything for them. Are we denying ourselves anything because the boys and girls are away? Do we realize that our Canada is at war? Let us think of this and let us arise and do our part. There can be real service at home as well as at the front if we but put our minds and hearts to the work. There should be sacrifice as well. And now we ask you to accept this purse as a slight token of our respect for you, and again we give you our best wishes, and we ask the blessing of God to rest upon you and upon the cause for which you are giving your service and upon all who are engaged in that cause. Signed on behalf of your friends, Thos. H. Purdy, John N. Bell, Roy Alexander, Wm. J. Moffatt.

SECOND CON. ELDERSLIE

Mrs. F. Creighton, of Kingston, is visiting at the home of her parents, Mr. and Mrs. A. Lillico.

Mrs. T. Brighty and daughter Miss Jennie Brighty, have returned to their home in Toronto after a month's visit at J. B. Allen's.

Mrs. Alex Campbell and little daughter Leona spent the last three weeks with Dornoch friends.

Wilson Patterson, sr., Mr. and Mrs. Wilson Patterson, jr., and children motored to Cookstown and visited friends there recently.

Mrs. Lillico's many friends here will be pleased to hear that she is improving as well as can be expected.

Mac Bell is assisting with the harvest operations on this con. this week.

Mr. Rich. Lillico, of Toronto, who is holidaying at Oliphant, visited his mother last week.

PINKERTON

Rev. and Mrs. R. M. Gale and Misses Hattie and Gladys Gale are spending holidays at Alma.

Mr. Raney, of Toronto, representing the Dominion Alliance, occupied the pulpit on Sunday morning.

Miss R. McKee, who has been visiting at Mr. D. Pinkerton's, returned to Toronto last week.

Mr. and Mrs. T. Birrell are visiting friends in Toronto and also enjoying a trip down the St. Lawrence.

Miss Margaret Garvey, of Arkell, is visiting her cousin, Miss Mertin Donnelly.

Work has been completed at the saw mill for another season.

Rev. Jas. Gale, of Hyde Park, is spending holidays in the village.

The ladies of the Red Cross wish to thank Mr. D. Pinkerton for his generous donation of $100.

LOVAT

Mr. and Mrs. Walter Dudgeon, Mr. and Mrs. John Davis, Misses Alma and Reta Fraser, spent Sunday at Ed Dudgeon's.

WILLOW CREEK

Mrs. Geo. R. Baker is on the sick list at present.

Harvesting is in full swing. The cutting is all done. Crops are a good stand and grain a good quality.

Most of the potatoes are blighted and the vines dying up.

Fall wheat is most all sown.

Mrs. H. N. Schmidt and daughters, Victoria and Elfrieda, of Sheaton, S. Dakota, are visiting at the home of the former's sister, Mrs. F. Schmidtker.

Disagreement Over Wages

A rather curious incident in connection with farm help is reported from Owen Sound. Mr. Geo. Menzies, who was acting as employment agent in the interest of farm help at that town, sent Carman Sword out to John Brett, a Sydenham farmer wanting help. Friday morning it rained but the man worked from immediately after dinner until dark, and then from early Saturday morning until dark that night. When the time for settlement came the farmer was only going to pay for a day and a half. The man objected and wanted two days' pay as he had been engaged for two days and had worked more than the usual number of hours in a working day. The farmer refused and the man sued for his wages. The case was heard by the Owen Sound police magistrate. Brett's plea was that he did not agree to pay for wet weather, but could not explain how Sword would leave a sure job in town under such an agreement. In the opinion of the court Sword earned his $3 a day and was awarded his $6 wages. Brett locked against paying $1.50, but ended up in paying $13.59 including court costs.

Sudden Death in Bruce Township

Mr Wm. Gilchrist, of th 2nd con. Bruce, passed away very unexpectedly during Tuesday night. Not having risen at the usual hour this (Wednesday) morning, his sister went to waken him and found him dead in bed. The deceased had been hauling in oats on Tuesday and was apparently in the best of health. He was about 53 years of age and unmarried, his two sisters, Mrs. Finnison and Miss Gilchrist, living with him. His sudden demise has caused a great shock to the family and community.

Camping at the Lake

—Abbie Stanley, Misses Mabel and Annie Stanley, Mr. and Mrs. G. B. Irwin motored down to Toronto last week to spend a few days in the city.

—The Public Library closes on Saturday, Aug. 31st, for two weeks, to allow the librarian to take vacation. Patrons are asked to exchange their books on or before the 31st.

—Mr. Samuel Steele, one of the oldest ex-residents of Paisley, has returned to resume citizenship in our town after an absence of several years in Vancouver, B.C., where he was living with his daughter.

—A meeting of the Woman's Patriotic League will be held in Putnam's hall, on Friday afternoon, at 3.30 o'clock. A good attendance is requested to consider some important new business.

—Misses Ina and Donalda Galbraith are both engaged to teach in the Oakville public school for the ensuing year. These young ladies are both excellent teachers. Their going means the removal of another estimable household from our midst, as their mother, Mrs. D. Galbraith, will take up her residence in Oakville.

—As we mentioned a couple of weeks ago, the Teeswater bridge is in very bad shape. A horse broke through at the north end one day last week, necessitating some immediate repairs. Reeve Steele called up Reeve Johnson of Bruce, chairman of the road and bridge committee of county council, who came over and had a look at the structure with a view to conferring with the committe at an early date.

Ladies, Don't Forget

Red Cross supply shower, Saturday next, Aug. 31st, in the town hall, afternoon and evening.

Principal Resigned

The School Board have recieved the resignation of Mrs. Birchall as principal and are having the vacancy filled at once. Several applications are in and one will be secured within a day or so.

Among the Wounded

Corp. Robt. Stanley Martin, son of Mr. and Mrs. Wm. Martin, of Arran, received a gunshot in the chest wall, and was admitted to Rouen convalescent depot on Aug. 19th. Corp. Martin is one of four brothers who are now at the front, and he has been in France for over two years.

Grow Prize Crops

The winners in field crop competitions in Saugeen and Bruce townships are: Saugeen—1 Alex Lamont, 2 W. J. Pierson, 3 W. S. Airth, 4 John Wittig, 5 W. Atkinson, 6 John Wallace, 7 Chas. Sang. Bruce—1 Geo. H. MacKay, 90; 2 Carl Kopas, 86; 3 C. Nicholson, 85½; 4 Chas. Drummond, 84½; 5 J. W. Johnson, 84; 6 W. A. Begg, 83½; 7 Joshua Howe.

Girls Are Wanted

During the past week the management of Central Business College, Stratford, had applications from 28 business firms for lady stenographers and bookkeepers, one firm offering $75 per month for good stenographers. The C.B.C. re-opens for the fall term on September 3rd, and we recommend it to those who wish a good position as well as a thorough training.

—Flour, Feed, Seeds, Grain—We keep a full stock of Five Roses and Stark's high grade flours, bran, shorts, Royal Purple calf meal, poultry foods and chicks. Always in the market for coarse grains. Morning delivery only. W. Rook.

AUCTION SALE

Great Auction Sale of the whole of my valuable stock of

General

Dry Goods and Clothing

Hats, Etc.

Amounting to Over $5,000.00

By Public Auction, as possession of store and premises has to be given by 1st Sept.

The Sale will Commence

On Saturday Afternoon Aug. 31st

Sharp at 2 o'clock, and will continue afternoon and evening until the whole is disposed of.

This sale offers a grand opportunity for every householder to secure goods at their own prices. The stock consists of the following goods, viz.:

Ladies' Sweater Coats
Silk and Voile Waists, Ladies' Middys
Ladies' and Men,s Raincoats
Boys and Youths' Tweed and Serge Suits and Overcoats
Men's Odd Pants, Overhauls and Smocks
Sweatercoats, Underwear, Shirts
Collars, Ties, Gloves
Mitts. Suspenders, Hats and Caps
Children's Straw and Felt Hats
in great variety of styles
Boys' Caps, Girls' Felt Hats
Children's Winter Coats
Bath Towels
All kinds of Fancy Dress Goods
Laces, Embroideries, Insertions
Buttons
Ladies' Leather Hand Bags and Purses
Lace Curtains, Table Oilcloth
Curtain Poles and Pole Trimmings
Ladies' and Children's Corsets
Brassiers' Hosiery, Continental Cotton Underwear, Night Gowns
Odd Skirts, Dress Goods
Boys' and Girls' Rubbers, etc.

I have been instructed by Mr, Ball to offer the whole of the above by public auction, in detail lots to suit the buyers. As this sale offers a rare chance to get genuine bargains. don't failto attend.

Come Early. Remember the date and place—SATURAUG. 31st. Queen St., Paisley. Sale starts at 2 o'clock.

A. BALL, *PROP.*

R. C. PEARCE *AUCTIONEER*

The Shop Furniture will be offered at the same time—1 National Cash Register, 1 Dayton Computing Scale, 1 Small Scale, Scoops, 1 Taylor Safe, Stools, Tables, Counters, Window Dressing Fixtures, Dress Model Forms, Paper and Twine Holders, Cheese Stand and Cutter, Perrin's Biscuit Case, Oak frame, Paper Baler, Umbrella Stands, Wood Stove and Pipes, 1-ton Ford Motor Truck

DAUGHTER CHOOSES THE FARM

By Katharine Henry.

If you can make farm life attractive to your daughter she will love her home but she cannot live on nothing but hard work. On some farms the work is never done. The working day begins at four o'clock in the morning and ends at eight in the evening and if the sun set later, the work would keep on longer.

True, in one sense the work is never done; one can always find another weed to pick, another plant to hoe or another window to clean. But a man ought to be master of his farm and sometimes call a halt on work rather than let the farm drive him and his children. Every one on the farm is willing to work to the utmost during a period of stress like haying time and harvesting but there must be periods of fun to make up for the hard work.

Probably her work could be made much easier by the use of labor-saving machinery, especially in the house. You do not use the sickle or the grain cradle your grandfather used. You have bought two or three improved rompers since his day; but are your wife and daughter still washing with the old-fashioned wash-board in the heavy wooden tubs that grandmother had and are they still cooking over the same style of stove she used?

If your daughter has been fortunate enough to attend or even to visit a school where the home-making arts are taught, she will not be satisfied to use the awkward, heavy, worn-out tools of her grandmother's day.

A running stream on the farm will supply power for an electric plant at no great expense and save the mother and daughter hours and hours of hard work. An electric washer, electric iron, motor for the butter churn and the new sewing machine and modern oil stove, will not cost as much as one large piece of farm machinery and they will make life a different thing for your home-makers.

A well-equipped bathroom is something which every farm house needs and which the family has a right to demand. It need not be any more expensive in the country than in the city—less expensive if you can run the water under its own pressure. Health, time and labor are conserved by the installation of a bathroom.

Sometimes our farmers' daughters are deprived of pleasures they might easily have. If your daughter desires to take piano lessons, let her have them and help her to plan for an hour each day when she may be free to work on that lesson. When the heaviest summer work is over and she longs to invite a group of friends for a week-end or to go away for a few days of rest and pleasure, let her do so if you possibly can.

It would not cost much to keep a nice little saddle horse for your daughter's use (it could be used for light work too) and I can think of no other one thing that would go so far toward keeping her happy and contented with her life on the farm.

There are so many beautiful and interesting things for a girl to enjoy in the country—skating, driving, the sunsets, the wild flowers and animals, the birds, the farmyard pets—but if she is in treadmill, all heart is worked out of her and she is too tired to enjoy the wonderful beauties surrounding her. It is a small matter to bring home a pair of skates for Annie's birthday or to pick up a new book for her but how often do you do it?

I know one farmer's daughter who, in spite of many obstacles, became a stenographer. Her birthday falls during her summer vacation but she never spends it at home. For weeks before her twenty-first birthday she planned for a bit of leisure and a little pleasure on that one day; but her father chose that date for beginning work on the new shed and she spent her birthday over the kitchen stove, cooking for the carpenters. Do you wonder she vowed then and there that before another birthday she would leave the farm?

There may be a County Young Women's Christian Association in your district. Encourage your daughters to join and help the cause all you can. They will seek associates somewhere. Help them to find worthy and elevating companions. If you can get in touch with the public library of your nearest city or secure a travelling library from your state library commission you can have a supply of excellent books at very little cost. Read some of them yourself and discuss them with your children. This makes conversation worth while, at table, on the road or at such tedious work as weeding or corn husking.

If you have not already done so, read, in the life of Harriet Beecher Stowe, how her father, Lyman Beecher, turned drudgery into fun by his stories, wit and conversation. At one time when the family spent a long evening preparing apples for their winter's supply of "cider applesauce" Mr. Beecher and his boys (of whom Henry Ward Beecher was one) vied with each other to see who could tell the most about a given book, treatise or some other standard book. Mr. Beecher turned into a game even the hard task of chopping and storing the great pile of wood each autumn. Then when the last piece of wood was shoved and the last chip cleared away he purchased a bobbsy and took every one in the big wagon for a flaking trip.

The question of money is often a cause for discontent to the farm daughter.

The fact that you provide your family with ample food, clothing and shelter does not meet the problem. An old darkey who was much poorer after the Civil War than when he was under the protection of his master, explained his happiness by saying, "Free ain't carin' 'bout money, sir."

Your daughter would rather have ten dollars to spend just as she pleases than to have you pay a bill of twice that amount for her. Suppose she does make mistakes and spends some of it foolishly; so do you. How is she to learn to use money if she never has any to use?

When my three-year-old nephew wanted to see my watch I showed it to him but I held on to it. He kept saying: "Let me see it! Let me see it!"

Said, "Well, look, there it is."

He looked me squarely in the face and said, "I want to see it in my own hand."

Your daughter wants some money "to buy corn kisses."

Of what benefit is it to her if you have an immense farm and ten thousand dollars in bank, if she has not five cents to use as she pleases? "She will some day inherit a nice sum." Yes—but she needs some of it now.

Try to keep the way open between her heart and yours. Try to see her side of it. When you sell a tract of timber for two thousand dollars what does she get out of it? Or if you do things on a smaller scale, when you sell the cow she helped to raise or the turkeys she fed all summer, does her work get recognition? Does she feel that she has been recompensed?

Perhaps you have a mortgage on your farm and feel that you cannot afford some of the things I have mentioned. Then give her the things you can afford. There are a thousand little pleasures you can give without money and without price. Lawn swings, porch rockers, croquet sets, quoits (old horse shoes) cost little and they have great possibilities in pleasure-giving and home-making.

If you can afford nothing else you can bring your daughter a handful of wild flowers or a specially choice apple because it is her birthday; you can select a fine chicken for the table because it is a holiday. It will cost nothing for you to give each of your girls a small plot of ground that shall be her very own to plant and market. Her zeal and industry will bring results that may even give you some pointers.

Lights Out.

"Lights out!" along the land
"Lights out!" upon the sea.
The night must put her hidden hand
O'er peaceful towns where children sleep,
And peaceful ships that darkly creep
Across the waves, as if they were not free.

The dragons of the air,
The hellhounds of the deep,
Lurking and prowling everywhere,
Go forth to seek their helpless prey,
Not knowing whom they maim or slay—
Mad harvesters, who care not what they reap.

Out with the tranquil lights,
Out with the lights that burn
For love and law and human rights!
Set back the clock a thousand years;
All they have gained now disappears,
And the dark ages suddenly return.

Kaiser who loosed wild death,
And terror in the night—
God grant you draw no quiet breath,
Until the madness you began
Is ended, and long suffering man,
Set free from war lords, cries,
"Let there be lights."

—Henry Van Dyke.

Removing a Stubborn Nut.

Scarcely anything is more tantalizing than trying to remove a nut from a bolt that turns in its socket. The following method will almost always overcome this difficulty and enable the nut to be screwed off with comparative ease: With a cold chisel make an incision in the head of the bolt similar to that found in the heads of screws. Often the chisel incision is sufficient to enable the screwdriver to get a good grip; sometimes, however, it may be necessary to deepen the incision with a file. Frequently the chisel itself answers very well for a screwdriver. Thus gripped it is a comparatively easy matter to start the stubborn nut.

Saturating the threads of the nut with kerosene a few minutes before attempting to unscrew it often makes the attempt easier, for the kerosene penetrates quickly to the rusted recesses of the nut and softens the rust quite perceptibly.

If for any reason it is not advisable to indent the nut head with a cold chisel, opposite sides of the head may be filed away slightly so as to enable the wrench or vise to get a flat grip. With a sharp file it is only a moment's task to file away the small bit required to do this. The writer has removed very stubborn bolts by both of these methods, and can recommend them as great savers of temper and time.

China imports great quantities of old horseshoes and converts the metal into knife blades.

War times are teaching us that there is no economy in buying the cheapest goods not the fancy high priced ones. We are depending on the solid values of the good standard brands—the brands that were good in peace time and have doubly proved their worth in war time.

Red Rose Tea—costing today only about ½ of a cent per cup—is one of the solid war time values that anyone can afford—and that everyone will enjoy.

It is truly a war time tea

Yards of Beauty.

I was once called upon to plan the landscape gardening around a millionaire's home, and the only stipulation he made was that I must make use of the native wild shrubs. Nor was this a difficult restriction. The stately elder, the sweet briar, the modest wild rose, the unassuming pokeberry, the clinging bittersweet, the ever gracious wild grape, the ivy, sumac, dogwood, mountain ash—all these and various other varieties of plants converted the bare grounds into an attractive estate.

Beautiful grounds need not be expensive. The most lovely flowers and plants that God ever made grow are found in the woods, along the banks of streams, in fence corners, in fields and shady nooks. They are ours for the asking and the digging. What is prettier and yet so rare as a large bed of wild violets in a shady place near the house? Plant generously of perennials so that they will bloom and grow year after year with little attention and give stability to your landscape effects.

Select them so that you will have blossoms from early spring until late frost. While the best arrangement of trees and shrubs on large grounds requires the services of a landscape expert, a few simple hints will serve to prevent the inexperienced person from making serious mistakes. Plant in masses, with the larger shrubs in back and the smaller ones in front. Leave plenty of open space, which is generally made into a lawn. Avoid straight lines and exact symmetrical arrangement, unless you desire a formal effect, which is generally avoided in beautifying the home grounds.

Use vines profusely wherever possible, selecting those which are hardy and not seriously affected by pests. This applies also to other shrubbery. In selecting trees consider the matter of litter and the shedding of leaves. Some trees, such as horse chestnuts, are beautiful, and have many desirable qualities, but the flowers which they shed litter the ground and will cause stains on clothing that are difficult to remove. While a great many interesting and valuable points about nursery stock may be learned from books and the pamphlets of nursery companies, observation is equally important. Consider the ultimate size of the trees which you plant. Oaks, elms, and other large trees should not be planted near the house, as in time they will shut out too much light, unless pruned heavily, which will destroy their beauty.

The improvement of one's home grounds is usually as contagious as idle gossip, once it is well under way. It is much more interesting and worthy of respect. I feel that the exterior of my own home does not belong to me alone. I have a moral responsibility to add to the attractiveness of the neighborhood in which I live, and therefore my grounds in part at least belong to the owner of every eye that gazes upon it. The architecture of the house, the decoration of the grounds, the walks, fences, and general surroundings are each man's contribution to his community. It is one way in which we can give pleasure and enjoyment to other people.

Whether the house is a log cabin or a mansion, it is, after all, a home, a place of love and adoration. It should be the most restful place on earth. To make it so costs mostly thought and play. The tenant's problem is somewhat different, but a few seeds will make a profusion of pretty plants some of which may possibly be moved. But the attractiveness even of a tenant's home is not a quality that easily dies. I have observed that landowners desire the neat and efficient tenant. Plants and flowers about the house show ideals that go with character. A pretty yard may be the means of attracting congenial people and making friends.—Mrs. J. L. Nesbitt.

Weather-Tight Sills.

The sill for a frame house should be set in mortar on the foundation wall to prevent the cold air from chilling the floors. If that is not done the furnace will have to be forced just so much more in order to heat the rooms on the first story.

The average contractor will tell you that it is not necessary to use mortar. His argument is that the weight of the house bearing down on the sill will force a tight joint between the masonry and the wood. That is true only when the top of the wall is as smooth as glass, and would happen about once in a thousand cases.

If you wish to save on your fuel bill and obtain the best results from your furnace, see that the joint is made perfectly tight with mortar. The cost is so slight that it will not be noticed.

Frequently one is in a quandary to know why the first floor cannot be properly heated, and is likely to place the blame on the furnace when the opening under the sill is the whole trouble.

A little foresight at that place when you build will avoid serious annoyance in the future.

Good Advice.

Robert Louis Stevenson was once called upon to address a Sunday school class of young girls. He told them the parable of the talents, and then went on to say that there were three talents everyone possessed and ought to make use of: "Tongues that they must use to cheer and make happy all around them; faces that they must keep bright as new shillings, so that they might shine like lamps in their homes; and hands that must be kept employed in useful work cheerfully done." Very good advice in these war days for all of us, whatever our age or sex.

A Frenchman has invented an effective silencer for aeroplane motors that is said to reduce the power but 2 per cent.

Current in a new electric iron is controlled by a button on the handle, which shuts it off automatically when the implement is idle.

GOOD HEALTH QUESTION BOX

By Andrew F. Currier, M.D.

Dr. Currier will answer all signed question is of general interest it will be answered through these columns; if not, it will be answered personally if stamped, addressed envelope is enclosed. Dr. Currier will not prescribe for individual cases or make diagnosis. Address Dr. Andrew F. Currier, care of Wilson Publishing Co., 73 Adelaide St. West, Toronto.

Anaemia.

Anaemia means deficiency of blood. If a person loses a quart or more of blood by a hemorrhage, or a severe surgical operation, or in connection with childbirth, it is very evident that he or she has a deficiency of blood, for there has been a loss of a considerable portion of the normal supply of the body, consequently he or she is anaemic.

If a man cuts his throat or ruptures a blood-vessel in his brain, or a dilated artery, called an aneurism breaks there is so great and sudden a loss of blood that he dies, for blood is essential to life.

It used to be thought that because the blood carried humors and diseases over the body, it was a good plan to occasionally draw some of it off, and bleeding for hundreds of years was fashionable practice for almost every kind of ailment.

Sometimes it worked well and people were relieved by it, but very often it was mischievous and a person who had been bled several times in the course of a disease became so anaemic that he was practically or actually killed by the treatment he had received.

A vigorous sugar maple may lose a portion of its sap every spring, it is one evidence of the prodigality of nature in supplying the means which are concerned with life, but let a tree that is sickly or poor or withered, lose a similar quantity of sap and it will promptly die.

A person who has plenty of blood may be anaemic from the poverty of its quality, especially when it lacks the proper quantity of coloring material called haemoglobin which contains iron and oxygen; iron and oxygen therefore are essential to the body and to the blood.

A person who is anaemic is pale, not for a few moments only as in fright or sudden emotion but all the time, the face, the lips, the entire skin are colorless like those of the dead.

The same is true when the skin is of greenish color as is often the case in poorly developed and poorly nourished young girls or in those who are suffering from tuberculosis, cancer, malaria or lead poisoning.

When there is anaemia there is almost always loss of appetite, strength, and weight, and poor nutrition.

The anaemic often suffer from buzzing in the ears, dizziness, faintness, and shortness of breath.

All of these symptoms mean not only that the blood is insufficient, poor and deficient in the substances which build up the body, but that the heart by the action of which the blood is kept in motion is unable to do proper work, that the kidneys cannot perform their task, that the lungs do not contract vigorously enough to supply the blood with the proper amount of oxygen, and consequently that the brain is unable to respond to the usual demands by which thought is created.

An anaemic person under any circumstances is therefore more or less disqualified from doing work and in many cases he is entirely helpless.

QUESTIONS AND ANSWERS.

X.—Please tell me how I can get rid of a very troublesome corn. Have used various means of removing it, but it has always returned. Do you think it would be dangerous to have the doctor cut it out?

Answer—In matters like this, at least two courses are possible. You can use a felt corn plaster which protects the toe from the shoe and frequently, in all that is necessary, or you can have the corn removed by a competent chiropodist. Of course, it will come back again, as long as you continue to wear shoes.

Reader—Please tell me the course and cure for varicose veins.

Answer—They are due to the pressure of the blood current in the veins working against gravity. This results in dilatation and weakening of the vein walls and frequently causes dragging sensations and even pain. Sometimes relief is procured by supporting the veins by a bandage or some other means of support, and if this is not effectual, it is necessary to tie the veins and cut off the circulation from the vessels which are thus diseased.

THAT "FEELING" IN THE FAMILY

"Yes there is some feeling between the Farrar sisters—"

"And a very sweet sisterly feeling I hope it is," said a gentle old lady who was passing through the room. The door closed; the two women in the window seat continued their discussion of the sisters whose feeling for each other was in no wise friendly.

Why is this "feeling" so often observed between members of the same family? A certain man who for three years has worked night and day inventing an electrical labor-saving machine meets a friend and pours forth, perhaps in more or less technical terms, his faith in the work to which he is devoting his life. He passes on, comparing his attentive, sympathetic friend with his brother, who sometimes leaves the room with a frown when he tries to talk about the subject nearest his heart. The politely attentive friend probably enough tells the first man he meets that he has wasted ten minutes that morning listening to Brown "rave over that crazy notion of his"; and that very day Brown's brother whirls round in his office chair and confides to his partner: "I don't know one thing about electricity,—the subject gets on my nerves,—but I have faith in John. When he needs more cash he can call on me. Some day there will be one member of our family to be proud of!"

Now, this brother does not weary John with a recital of the names and business reliability of all his customers; why should John be offended because the merchant cannot patiently listen to his "ravings"? Members of a family, as individuals, have rights that are too often overlooked.

A theological student produced several of his sermons one morning and began to read them to an admiring father and mother, and to a married brother who was supposed to be filled with admiration. As he turned page after page he noticed that his brother was nodding and grimacing to the infant that lay gurgling in his arms. At last he could stand it no longer.

"I care no more about your" baby than you do about my sermons!" he cried hotly as he left the room.

That young man had never held a baby in his arms and did not know the overpowering sensation it gives—especially when the baby is your own. The young father, an accountant, had never risen to the heights to which a man ascends when he reads the words he has written for the help and betterment of mankind. It was easy enough for "feeling" to arise; until both learn tolerance, it will not subside.

An ideal situation exists in a family in which the daughter is a writer of pleasant short stories. Her unimaginative father revels in facts but cares nothing for fiction. He considers it as his duty, however, to read his daughter's stories. One night his daughter found him in the library so engaged.

"O father, don't waste your time over that!" she cried. "You are too tired." But her doting father continued to read of poor Aunt Matilda's grief when she discovered the theft of her Christmas bank. A minute or two later he looked over his glasses at his daughter, who was intent upon her embroidery, closed the magazine quietly and picked up a paper at his elbow, Aunt Matilda was forgotten.

"Eleanor," he presently demanded, "did you know that it was estimated that about seven hundred million dollars' worth of material is wasted in this country in a single year?"

"No, father, I didn't," replied the young woman, about whose lips there lurked only the suspicion of a smile. She was not aware of this startling state of affairs and, after five minutes, could not have told whether the country wasted millions or billions of dollars. But she loved her father and admired him for his knowledge of many subjects that interested her not at all. She knew that her father loved her and that he was proud of her work, which others admired. There was not the slightest "feeling" between them.

A broad-minded person can live peaceably with anyone—even the members of his own family.

They Fool Themselves.

Some people think they are never talked about because they never hear it.

"I have learned that mistakes can often be set right, that anxieties fade, that calamities have sometimes a compensating joy, that an ambition realized is not always pleasurable, that a disappointment is often of itself a rich incentive to try again."—Arthur Christopher Benson.

WOOL

Farmers who ship their wool direct to us get better prices than farmers who sell to the general store.

ASK ANY FARMER!

who has shipped to both of us, and note what he says—or, better still, write us for our prices; they will show you how much you lose by selling to the General Store.

We pay the highest prices for wool of any firm in the country and pay the largest wool dealers in Canada. Payment is remitted the same day wool is received, ship as soon as you read this—prices will be good for a few days longer. Get the most you can out of your wool by shipping it to us.

MANNERS AT NAVAL MESS

INEXORABLE . . LAWS . . WRITTEN AND UNWRITTEN

Despite the War, There Is Little Change in Naval Dining Customs on British Warships.

Nothing puzzles a new-comer so much as the customs of the senior Service. There are laws, written and unwritten, which are inexorable. Woe betide the culprit who innocently breaks any of them! The etiquette of a military mess is not in the least the same as that around which a naval officers' mess is conducted.

The first thing a colonel who came aboard my ship the other day asked me was whether he was supposed to stay all through the dinner, as he had to get away early, says a naval officer. I told him what he might do in that connection, and incidentally mentioned a few other customs, at which he was amazed. I told him, for instance, that it would be as well if he refrained from inquiring after my wife—or any other lady—at table, at any rate until after the King's health had been drunk; that, also until after the King's health had been drunk, it would never do to make a wager or leave the table without the express permission of the president.

Drinking Toasts in Water.

My friend the colonel was much surprised to find that a dinner in a naval officers' mess even in war-time is a very formal affair. The president—a senior officer—sits at the head of the table, with a vice-president opposite. Punctually to time he raps the table with his polished hammer and says very informally, "For what we are about to receive, thank God," whereupon the dozens of orderlies—generally Marines—who have been waiting for the signal, hand round the dishes, the president, of course, being served first, and the vice-president next.

Officers nowadays are rationed, but there is, comparatively speaking, plenty, and three courses are the minimum (a second helping, however, is permitted from the same dish!) Sugar, too, abounds. An important item for some of us!

The King's health is drunk before dessert, after, the grace. "For what we've received, thank God." Then the table is cleared, all tumblers—even if full—being removed, too.

Dessert-glasses having been served, three, sometimes four, bottles of wine are placed in front of the president. Around each is a silver label—say, madeira, port, sherry, marsala. The president starts the ball rolling, first by methodically removing the stopper of each bottle and placing them in order side by side. Then he slides the bottles around with the sun—i. e., from right to left. Not everybody, of course, helps himself from these decanters, it being permissible by order of the King to drink the Royal toast with water, or an empty glass. On the last ship I was in practically everybody drank the toast in wine; on my present ship hardly anybody does. When the bottles, having gone the round, reach the president again he helps himself, and, having carefully replaced the stoppers, lifts his glass and looks towards his vice.

Quaint Superstitions.

"Mr. Vice—the King!" he gives; whereupon the vice-president says most solemnly: "Gentlemen, the King!" and the toast is acclaimed with "The King! God bless him!" everybody remaining seated. If the ship's band is in attendance the signal for the toast is the moment for the rendering of the National Anthem, when, of course, the toast is drunk standing—as on guest nights.

There is usually a general exodus from the table after grace—before the dessert is served. Those who remain fill up the seats nearer the president, so that the toast and after-dinner party is compact and jolly. Dessert and coffee are then served. Should an officer not desire to take dessert, he signifies this by crossing his knife and fork on his dessert-plate or finger-bowl.

I had a puzzling experience at dinner the other night. I accidentally touched my glass with my fork. As the tumbler resounded, three voices spontaneously called out "Hun!" I asked what it meant, and found that when a tumbler rings, according to the belief of sailors, some misfortune is nigh.

"Every time somebody made the glass ring on the ship I used to command," an officer told me, "a seaman sure enough fell overboard." That was why they called out "Hun!" In doing so they were transferring the bad luck to our enemies! Usually somebody calls out "Save a poor sailor!" and the ringing of the glass, plate or bowl is at once stopped by placing a finger on it.

Nowadays so many novices abound in the Navy that many of the old and revered customs are falling into decay, if they are not actually taboo. The "pukka" sailor regrets this, and is inclined to look forward to the time when the old customs will come into their own again. Speaking as one of the novices, however, let me say that most of those I have met have easily fallen into the "ways of the many," although some of us believe it could very well do without a few of the curious ceremonies, which apparently are kept up out of sheer deviltry.

Drastic Treatment.

For instance, if a man happened to so far forget himself as to take from a dish passed to him by a fellow-officer, instead of taking the dish first from the officer, he is said to be "doing a Marine," and the penalty for this—at any rate, in the gun-room mess—is the dish is upset over his head. What if it happened to be hot potatoes!

Nowadays I notice officers arriving late for dinner, forgetting to apologise to the president. This is a point which in normal times would be considered a grave breach of etiquette. In large messes, such as that at Portsmouth or Chatham, a side-table is laid for late-comers.

Of course, everybody has heard of the toast that is made on Saturday nights at sea. After the King's health has been duly drunk, the wine is once more passed round for the pleasing toast, "Sweethearts and Wives." The cynic has added the tag, "May they never meet." But the loyal—a happy one—really is: "To our sweethearts and wives! May our sweethearts soon become our wives, and our wives remain our sweethearts!"

"CUTHBERT" IN FRANCE.

Thousands of 'Chinese Coolies Are Employed Behind the Lines.

Why an anti-aircraft gun is "Archibald," or, in familiar diminutive, "Archie," is one of the minor mysteries of the great war. A kindred puzzle is how every Chinese coolie has become "Cuthbert"; but so it is. Many thousand coolies, profiled by the Chinese labor commission, are at work behind the lines in France and are rendering admirable service.

Physically, they are of a far finer type of Chinese than we commonly encounter in Canada: lithe, quick, supple and tall—often well over six feet—and enormously strong. They are splendid workers; in loading a train with heavy army blankets done up in sausage rolls, they easily did one hundred and twenty to every ninety achieved by European workers, and at high pressure ran the count to one hundred and fifty. They are not fighting men, and their contract requires that they shall be employed only at a stipulated distance behind the battle line; but they are courageous and treat with indifference the occasional enemy shells that come their way. They are gay and good-natured, cheerful under any discomfort, and extremely fond of music. They sing as they work—strange Eastern songs, often discordant to Western ears—and have appointed song leaders. To the rhythm of these songs they set their labor, and carry it forward with a swing, much as our old-time sailors were wont to do under the head of a deep-voiced chantey man.

One song leader, nicknamed Tommy, says an English correspondent, is one of the cheeriest and ugliest men imaginable. "The other day he tumbled off a roof on to a pile of timber. We thought he must be killed, but he wasn't, although the tears were running down his cheeks when we picked him up. A passing doctor looked him over and reported, 'No bones broken, but very badly wrenched and bruised.' When the verdict was translated to Tommy, he smiled and said:

"'Me restee two day, then me workee.'

"It took much longer than that, but the spirit was ready earlier than the flesh."

"Cuthb has two other marked tastes besides music: dress and—like most Orientals—gambling. On his off days he becomes elaborate in his attire and employs a whole battery of toilet accessories in getting himself up. Singing is popular as a recreation as well as an accompaniment to toil, but he is also immensely fond of phonographs. Sometimes they render classics, sometimes the records are Chinese; and the frequent transition from nerve-trying sounds to the voice of some great prima donna is startling indeed.

"During one such period of enjoyment a group of Chinese, dressed in their best, were playing ten-tan and listening to a favorite record when an opportune air abruptly dispersed the party, scattering the men in all directions, wounding several and tossing the phonograph, uninjured, to the top of a steep bank. An officer who ran up was reassured by a smiling coolie, stripped of everything except a shoe and a few rags by the explosion and clasping a wounded hand.

"All Right" said "Cuthbert" cheerily. "Clo' gone, cashee gone, HIT finger gone—nem min'. Gottee moosic. All life."

JERUSALEM

Described By a Correspondent of the British Army

"Jerusalem, says a correspondent of the British Army, is still, as the Psalmist describes it, builded as a city that is compact together. Though it spreads untidily outside the Crusaders' walls, it is a small place, and can be taken in a glance from the mount of Olives or Mount Zion. Outwardly the city has changed little during the years of war. There has been a little widening of parts of the Jaffa road, and there are trenches and emplacements on the Mount of Olives and Mount Scopus, where leading armies in former ages have been encamped. But there is a striking change in the character of the place and the people that throng its narrow ways. The city within the walls is still a religious preserve, screened off from the common world, and into which the soldier can enter only if he has a special pass. But without the walls the soldiers have taken possession of nearly all the places where the various religious bodies had their abode.

Along the Jaffre road tea-pots invite our soldiers with signboards in strange English to partake of tea, cakes and sweets. Just outside the Jaffa Gate, a primitive place of entertainment is produced by the troops of a division that boasts professional talent from the neighborhood of Drury Lane in one of its battalions, and a kinematograph booth, which before the war had a precarious existence, has now a nightly crowd of patrons."

THE GOLDEN AGE IN TURKEY

Describing Commercial Conditions in in Asia Minor a Century Ago

With all his faults, the Turk is—or was, before he came much in contact with the more commercial civilization of the West—singularly honest and in the best sense of the word simple-minded. In a Quarterly Review article, Mr. W. M. Ramsay gives an idyllic picture of trade conditions in Asia Minor as they existed a century ago.

With regard to the simple ways of Anatolian trade, he says, I give one example: An English friend, an experienced and successful business man in the inner part of Turkey, used to relate what he had heard during a visit to Trebizond more than sixty years ago. Until a few years before he was there, and within the experience of many of business associates, the custom had been that goods for sale in Central Asia were intrusted to native traders, who went in charge of caravans of camels laden with merchandise. A trading journey lasted from a year to eighteen months. On their return these native traders entered Trebizond early in the morning having bivouacked for the last time some little distance outside the city. As they passed along the street they deposited at the door of each merchant for whom they had done business a bag containing the money that they owed him; and when the merchant arose he found the money waiting on his doorstep. Everyone was satisfied; there were no contracts, no accounts, only a reasonable profit. Most remarkable of all, there was never any theft of money from the doors until Maltese immigrants, who began to settle in Trebizond, introduced European "civilization."

In those days there were no large fortunes; there was no opportunity to make them, for it was impossible for one man to force into his service a large number of persons and so to create a big organization out of which he might make big profits. A very large number of men did business on a small scale; all made a decent living and all were reasonably happy in a humble fashion.

YES! MAGICALLY!
CORNS LIFT OUT
WITH FINGERS

You say to the drug store man, "Give me a small bottle of freezone." This will cost very little but will positively remove every hard or soft corn or callus from one's feet.

A few drops of this new ether compound applied directly upon a tender, aching corn relieves the soreness instantly, and soon the entire corn or callus, root and all, dries up and can be lifted off with the fingers.

This new way to rid one's feet of corns was introduced by a Cincinnati man, who says that freezone dries in a moment, and simply shrivels up the corn or callus without irritating the surrounding skin.

Don't let father die of infection or lockjaw from whittling at his corns, but clip this out and make him try it.

If your druggist hasn't any freezone tell him to order a small bottle from his wholesale drug house for you.

BLACK TEETH POPULAR.

Are Preferred to White Ones by the Natives of Tropical Wilds.

Dentists are learning that the wilderness is full of opportunities for wide and lucrative practice.

"Black teeth for human wear are in growing demand," said a dealer in dental supplies. "In some parts of the world they represent all that the unenlightened masses know about the benefits of modern dentistry.

"It is idle to contend that black teeth are contrary to nature and injurious to the character. When the people want black teeth they will get what they want. They will even be encouraged to want black teeth. It would be the same if they wanted green teeth or red teeth or teeth of any other color. Our civilization is strictly commercial.

"Travellers have long noted the strange predilection of half civilized races for wearing black teeth. Natives of the Philippine Islands and most other islands of the Pacific, including the South Sea Islands, are addicted to the fad of black teeth, which they prefer to wear. Sometimes the natural teeth are dyed black with a dye produced from certain herbs and berries suitable for the purpose. But for the most part natives who can afford to do so have all their natural teeth extracted by a dentist and full sets of black ones substituted.

"Hence the great quantity of black teeth manufactured for export and the increasing number of dentists in the tropical wilds of southern countries."

Minard's Liniment Cures Garget in Cows

It is said "The Barber of Seville," Rossini's happiest effort took but thirteen days to compose. His Semiramide" was his last production in Italy before going to France to live.

Curfew Bells Silenced in England.

The curfew bells throughout England have been the subject of much prose and poetry. One of the best bits of verse inspired by the night bells of war reads:

No curfew tolls the knell of day;
Night silences all bells.
When dark descends no belfry tells
The hours, no "Vanite" swells
To summon those who pray.
For devils from ten thousand hells
Wait to be guided by the bells.

In silence still the hours steal by,
Wrapped in a hushing mystery.

Some day, who knows, the sound of chimes
Again will ring adown the gloom
And deeper tones from Minster's boom
Where guns sound in these stricken times,
Some day, from every church and tower
The bells will pour a molten shower
Of glorious chords—but hope by hour,
But in one vast God-thanking rain,
That righteous peace has triumph'd again.

GIRLS! WHITEN SKIN WITH LEMON JUICE

Make a beauty lotion for a few cents to remove tan, freckles, sallowness.

Your grocer has the lemons and any drug store or toilet counter will supply you with three ounces of orchard white for a few cents. Squeeze the juice of two fresh lemons into a bottle, then put in the orchard white and shake well. This makes a quarter pint of the very best lemon skin whitener and complexion beautifier known. Massage this fragrant, creamy lotion daily into the face, neck, arms and hands and just see how freckles, tan, sallowness, redness and roughness disappear and how smooth, soft and clear the skin becomes. Yes! it is harmless, and the beautiful results will surprise you.

The Canny Scot.

A man called one day on a friend—a Scottish merchant—who before the war had a large continental business connection. "This war must have hit you very hard," he said. "Verra hard," replied the merchant, shaking his head sadly, "I've ower sixteen hundred pounds awin' me in Germany, an' I'm no sure I'll ever see a bawbee o't." "Indeed," said the other: "that's hard luck." "Losht" answered the Scotsman, "it is so, but no' altogether, for I owen five thousands poonds tae these same Germans."

Pilard's Liniment Cures Distemper.

No Self-Starter.

The energetic automobile salesman had just delivered the fair customer her new car, and everything was lovely. He had scarcely entered the office, however, when he received a telephone call. She said:

"I thought you told me this car was a self-starter."

"So it is."

"Nothing of the sort. I have to push a button to make it go."

MONEY ORDERS.

When ordering goods by mail send a Dominion Express Money Order.

Getting His Number.

There was a rush of wind, a cloud of dust, and the car rushed on, leaving the old gentleman sprawling in the roadway. He picked himself up and dashed up to a policeman, yelling excitedly:

"That motor car knocked me down!"

The policeman took out a business-like notebook and said:

"Did you notice the number, sir?"

Lachute, Que., 25th Sept., 1909.
Minard's Liniment Co., Limited.

Gentlemen,—Ever since coming home from the Boer war I have been bothered with running fever sores on my legs. I tried many salves and liniments; also doctored continuously for the blood, but got no permanent relief, till last winter when my mother got me to try MINARD'S LINIMENT. The effect of which was almost magical. Two bottles completely cured me and I have worked every working day since.

Yours gratefully,
JOHN WALSH.

His Choice Limited.

Aunt—Do you know you are playing with two very naughty little boys, Johnny?

Johnny—Yes.

Aunt—You do? I'm surprised. Why don't you play with good little boys?

Johnny — Because their mothers won't let them.

Minard's Liniment Cures Colds, Etc.

Roses, chrysanthemums, tomatoes and many other flower and vegetable plants must be sprayed with sulphate of nicotine or tobacco water as often as required to keep them free from aphis. The under sides of the leaves and the stems must be covered.

EATS DIRT
MADE IN CANADA
GILLETT'S LYE

Laborer Digs Up Buried Treasure.

A jar containing gold coins to the value of about £400 has been dug up by a laborer named Albert Hill, who engaged in excavating work at Elms, Lincolnshire. The earliest date on the coins, which include spade guineas, was 1734, and the latest 1826. As a result of the find a treasure inquiry was held at Alford, and the jury decided that the coins were treasure trove. Hill, who is 63 years of age, has a wife and 17 children, and it is hoped that he will be amply rewarded.

Minard's Liniment Cures Diphtheria.

Cyclamens from seed sown last autumn require six inch pots for blooming. Old plants should be kept outside and not permitted to dry out. When they start new growth repot and stand in a cold frame.

PAISLEY, AUGUST 28th, 1918

RURAL CONTINUATION SCHOOLS

(The Globe)

Recently the results of the midsummer examinations in some rural schools that retain pupils above the high school entrance examination standard have been appearing in local papers. This is a very encouraging sign, because it indicates a revival of the old-time idea of a public school training that should aim at fitting a pupil for a vocational career rather than merely at preparing him for entrance into some higher institution. The worst incubus by which the public school teachers of the present time in Ontario are hampered in their work as educationalists is the general acceptance of the entrance examination as a leaving examination for the public school, so that parents, pupils, teachers and inspectors alike have their educational outlook contracted, and their cultured opportunities wasted, by grave but widespread and potent misdirection.

Every public school should aim at being sufficient unto itself in the matter of affording facilities for getting such a training as will obviate the necessity for a youth to go anywhere else to extend it, unless to obtain a teacher's certificate or enter a learned profession. The urban public school and the rural public school should have advanced courses that are identical, except that in the former the work is elementary science and the manual arts should be differentiated, so as to be a preparation in the former for manufacturing operations or counting room work, and in the latter for agricultural pursuits. Throughout many American States such aims are now persistently pressed on the attention of school authorities; it is time for the Educational Department of Ontario to do much more than it is now doing, or has ever tried to do in the way of keeping this province from falling behind the procession.

NAVY LEAGUE APPEAL

A general meeting of the delegates interested in the Navy League's effort to raise monies for the dependents of deceased sailors of the Mercantile Marine, who have been killed by submarine warfare, was held this afternoon in the town hall, Walkerton, for the purpose of forming a county organization. The amount required to be raised is 50 cents per capita, or $22,000.

Communications were read from many who could not attend the meeting, and in every case the heartiest co-operation in the work was promised. In the rural municipalities it was apparent that a successful house to house canvass could not be made at this time of the year, and that the most satisfactory way for them to contribute to this worthy cause would be by a grant levied in the usual way on the municipality.

The matter of organization in local municipalities was dealt with in detail, both as to results by individual canvassing and by direct grants from each municipality. From reports so far received it was quite evident that the serious consideration of this matter has shown that the cause of the sailors of the Merchant Marine who have braved the perils of the deep for the welfare of Canada is one of the most worthy to be supported. In order to have uniform organization, and a uniform share of the assessment of the contribution through the different municipalities, it was unanimously agreed that the proper channel through which to make this assessment would be through the County Council. As long as the local municipalities are willing to assume a levy for this purpose, it is the fairest way of meeting the public demands.

It was moved, seconded and unanimously carried, "That a committee be appointed to present a request to the County Council of Bruce asking that a levy of three-quarters of a mill on the dollar be made for the Navy League's fund for the dependents of sailors of the Mercantile Marine who have lost their lives by submarine warfare, and that the county secretary communicate with each reeve to ascertain if he is willing to support the proposed grant."

A committee of delegates were appointed to appear at the County Council at their next session to support the request.

Local committees were appointed for the purpose of educating the public to not only the present but the future need of our gallant sailors who have given their lives to our cause. Following are committees in this district: Arran, Jos. Johnston; Bruce, D. Willoughby, W. A. Rowand, Geo. Sirrs; Bruce, Jas. Johnson, A. Mewhinney, Arch. McLean; Elderslie, J. Lewis, J. E. Cass; Greenock, D. Phelan, John Coumans, R. J. Nelson; Kincardine Tp., R. B. Scott, Chas. Matheson, Milton Alexander; Saugeen, G. Christie, Alex McCannel, Duncan Bell; Paisley, J. H. Steele, Geo. Carter, I. Shoemaker, D. McArthur.

The following county officers were appointed: Chairman, David Robertson, Walkerton; Vice-Chairman, H. H. Stevens, Port Elgin; Secretary, Geo. D. MacKay, Walkerton.

GEO. D. MacKAY, Secretary
Walkerton, Aug. 22nd, 1918.

COMPANY FARMING—WHY NOT?

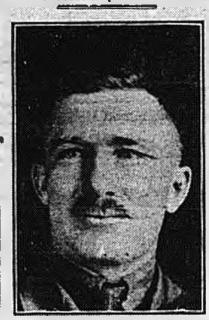
"Is it possible for groups of people in many of our cities, towns and even villages, to undertake some form of company farming?" This question is being asked in a circular letter just issued by the Organization of Resources Committee of Ontario. The idea is to enlarge the activities from community gardening schemes to grain production on farm lands. Groups of business men and others in urban centres are urged to form some sort in order to take over good vacant land in the neighborhood and get it ready for cultivation so that it may produce a 1919 crop. Company farming operations are now being carried out with a great deal of success at St. Catherines, Sarnia, Windsor, Owen Sound, Weston and Oshawa. Citizens of every town are asked to get together and talk it over.

Our Growing List of Fallen Heroes

PTE. HARRY JACK NOW REPORTED KILLED

PTE. GLADSTONE McGREGOR KILLED

The chaplain of the infantry battalion with which Pte. Harry Jack was serving in France wrote to the latter's mother under date of July 27th, as follows: "Dear Mrs. Jack—You have probably heard by now that your son is 'missing,' and you will long to hear some definite news about him, so I will tell you what I know. He and others were in an outpost which was raided by the enemy on the morning of July 18th. The Germans took him prisoner, and when last seen he was well and not wounded. So you will be comforted by this thought. I hope that you may soon get more definite news of his condition and whereabouts. Your son is missed by his comrades, who had a great liking for him, and they will be glad to hear that he is sound and well. Please believe me that if I can do anything for you I shall be delighted to. May I add the prayer that your son may soon be restored to you sound and well."



The hopes of parents, relatives and our townspeople generally, who were all eager to hear further news of Pte. Harry Jack, were dashed to the ground when, on Tuesday forenoon, an official telegram was received by Mr. and Mrs. Jack containing the information that their son is reported to have been killed on July 18th. Various reports had been received since the first intimation came to hand, and there was a strong hope that he was still alive, although in the hands of the foe.

Mr. and Mrs. D. McGregor received the sad news on Monday that their son, Pte. Gladstone McGregor, had been killed in action on Aug. 10th. Gladstone enlisted with the 160th Bruce Battalion, and was a member of the bugle band. Following the breaking up of the 160th he was transferred to another corps in England and crossed to France this spring. In his last letter home he mentioned that he had been picked out for machine gun duty, but it is not known what branch he was serving in when he met with his death on the field of battle. Gladstone was employed in Ballachey, Laidlaw & Co.'s store prior to enlisting. He was of a happy, smiling disposition, and always well liked by everyone. The family have the sympathy of all in their bereavement.

It is a notable sequence that the two brave boys whose death we record this week were employed in the same store at the same time in their home town, and were both badsmen in the home county battalion.

MEMORIAL SERVICE

A union memorial service will be held in Knox church on Sunday evening next, in honor of these two brave soldiers who have died for the cause of freedom.

LIEUT. HORACE PARKER
Died of wounds in France, on Aug. 11th, son of Mr. and Mrs. C. Parker, of Greenock

THE BEREAVED

Toronto Globe

The black shadows of the war are again falling thick on Canadian homes. Some of the sorrows are so poignant that sympathy stands almost appalled. Such a case is that of parents in London who were notified this week in official telegrams only a few hours apart, that their two sons had been killed in the same action. The casualty lists are again full of melancholy length. Scores of families are plunged daily into mourning, and thousands of others live in ceaseless dread lest the ring at the door may herald evil tidings.

Compassion may do little to heal the wounds of grief when they are fresh, but there will be lasting sources of consolation for those who have lost near and dear ones in this war to make the world habitable for decent people. They will have proud memories which nothing can take from them, and which time will only intensify when history pays its homage to the dead. They will have the abiding sense of a country's gratitude; but it is for the nation to see that its thankfulness is not expressed in sentiment alone, and that parents or wives or children shall not have life made harder for them because sons or husbands or fathers have laid down their lives to stay the tide of barbarism. It will also be a great part of their comfort when the victory is won that the men who lie in Flanders' fields did not die in vain. The loss of the war or an inconclusive end to it would be a blow that would be felt with special bitterness by those who have been bereaved. Of all classes they are the most concerned to see that it is won. They have a moral right to ask that no effort be spared to carry to triumph the cause for which their kinsmen have made the last and greatest sacrifice.

MR. G. KASTNER
Reeve of Wiarton and Warden of Bruce County Council

—"I hope you appreciate the fact, sir, that in marrying my daughter you marry a large-hearted, generous girl?" "I do sir," with emotion—"and I hope she inherits these qualities from her father."

ARRAN COUNCIL

Council met August 14th, all present. The treasurer's statement showed a balance of $870.98 on hand and in bank. On motion of Miller and George the treasurer was instructed to pay the sum of $5 to each of the residents of Arran who may enlist in the army. By-law was passed to borrow money if needed to meet expenditure before taxes are collected. Communication from the Department of Highways acknowledging the receipt of copy of resolution re charge of county road; from Provincial Secretary's office asking for suggestions regarding changes in assessment. On motion of Miller and Thomas $100 was granted to the Agricultural Society. The matter of fixing the rates was taken up and after discussion it was moved by George and Thomas that the rate for township purposes be 5 7-10 mills on the dollar—Carried. The schools ask for $1000 more than in 1917. Quite a number of small orders were issued. The total assessment of the township is $1,322,700. The rate of 5½ mills for township expenditure produces $8,374; schools about $9300; bridge debenture, $1295.04; the dog tax reaches $660, and the county $16,303. These sum to amount to $35,932. The amount of taxes in 1917 was $34,600. This shows an excess for 1918 of about $1,352. We have included war tax of $1,848 in Co. rate. In the sums stated as township rate is included the sum of $1000 for Red Cross. We give this statement to show what constitutes the large sum of $35,942, and to help the tax payers to digest it.

H. T. Potts, Clerk.

—Simcoe Reformer: Some newspapers are making much ado about what they are pleased to term the folly of attempting to govern by orders-in-council. But in England the order-in-council is all but omnipotent. At Washington Congress has handed over to President Wilson tremendous powers, heretofore exercised by itself. Some Prussian methods must be made use of, if Prussia is to be recaged.

—It is a good plan to aim high and make an effort to get there. It is a satisfaction to know that you made a good race, even if it were not as successful as you had expected.

—Not only to say the right thing in the right place, but far more difficult thing, to leave unsaid the wrong thing at the tempting moment.

A Fight for Life

It has been a fight or die for many of us in the past and the lucky people are those who have suffered, but who are now well because they heeded nature's warning signal in time to correct their trouble with that wonderful new discovery of Dr. Pierce's, called "Anuric." You should promptly heed these warnings, some of which are dizzy spells, backache, irregularity of the urine or the painful twinges of rheumatism, sciatica or lumbago. To delay may make possible the dangerous forms of kidney disease, such as diabetes or stone in bladder.

To overcome these distressing conditions take plenty of exercise in the open air, avoid a heavy meat diet, drink freely of water and at each meal take Anuric (double strength). You will, in a short time, find that you are one of the firm indorsers of Anuric.

Hamilton, Ont.—"For kidney ailments I have never known any medicine to equal Anuric. When I started to take it I was very miserable with lame back, pains in the croth of my neck and shoulders and all over my body. The water was high colored and offensive. All of these conditions left me after one week's use of Anuric and I consider it to be the greatest of all kidney medicines."—Mrs. JENNIE CLARK, 79 Queen St. So.

Toronto, Ont.—"My husband suffered severely with pains in his back for three or four weeks. He commenced to take Anuric and in three or four days he not only looked better, but remarked that his back felt much better, and now he says that his pain has all gone. It is with pleasure that we recommend Anuric."—Mrs. MARY RYAN, 54 Seaton St.

WALKERTON HIGH SCHOOL WILL RE-OPEN ON SEPT. 3rd

The Board, having secured competent teachers to fill the two vacancies that occurred during the holidays, announces that the staff is now complete.

Students are prepared in Courses required for the following examinations:

1. **Entrance to Normal Schools**
2. **Entrance to Faculty of Education**
3. **Matriculation—Pass and Honor—into the various Universities**

Full information as to Courses, Text-Books, and other matters will be given on opening day.

Those wishing advanced information on the above or other matters will obtain it by writing to the Principal.

J. MORGAN, M.A., Principal — M. G. DIPPEL, Secretary — H. M. LAY, Chairman

Prepare yourself for his place

When He Leaves to Shoulder a Gun

You must be ready to step in and fill his job. The war requires the maintenance of efficient manufacturing and mercantile organizations at home and it is your patriotic duty to do your bit.

You Must Be Trained to Be Ready

You must be able to do what he has done. Business men cannot stop to train you—They have not time—You must be trained when you take hold.

We Are Ready To Train YOU

The Northern Business College with a good staff of experienced instructors will teach you what you need to know—what to do and how to do it. The cost will be very moderate. The fees are no higher than they have been for the past ten years.

College Opens for Fall Term Sept. 2nd

Northern Business College
C. A. FLEMING, Principal, OWEN SOUND

SAUGEEN COUNCIL

The Saugeen council met on Aug. 17th, and levied the rates for the year. The county rate will be 5½ mills this year, an increase of 4½ mills, and the township rate is 5½, a decrease of ½ mill. As the banks will not receive taxes this year, the collector's salary was increased $50, and the clerk instructed to advertise for applications.

The council approved of the Navy League campaign and appointed a finance committee to assist in the work.

[illegible] were ordered paid, and council will meet again on Sept. 28th.

F. W. Elliott, Clerk.

License No. 8-488

Pickling

LEAVE your order with us for all your pickling requirements—Pure Spices, Extra Strength Vinegar, Tomatoes, Cucumbers, Onions, &c.—anything you may require. If we have not got it we will get it for you.

We pay Cash or Trade for Butter and Eggs

GREENOCK COUNCIL

McNab's Hotel, Chepstow, Aug. 19th, 1918

Council met as per adjournment, all the members present, the reeve in the chair. Minutes of last meeting were read and adopted.

The following accounts were presented for payment: A. Fritz, 231 yds. gravel, divs. 31, 32, 33, $23.10; M. Keifer, 73 yds. div. 15, $7.30; H. A. Wilhelm, 218 yds. divs. 12, 19, 20, $21.80; G. Smith, 45 yds., div. 53, $4.50; F. Griffith, 8 yds., div. 3, 80c; J. Rathwell, 164 yds., divs. 47, 53, 57, $16.40; E. Brownscombe, 162 yds., divs. 58, 60, $16.20; G. Webb, 65 yds., div. 52, $6.50; S. Parker, 70 yds., div. 38, $7; P. Meyer, 162 yds., divs. 11, 12, $16.20; W. Pettepiace, 49 yds., div. 13, $4.90; M. Diebold, 170 yds., divs. 26, 27, $17; M. Diebold, peas damaged by roadway, $3; J. Graf, 98 yds. gravel, div. 39, $9.80; C. McTeer, 99 yds., div. 43, $9.90; L. Voisin, 48 yds., div. 43, $4.80; J. Kramer, 181 yds., div. 14, $18.10; J. Lippert, 97 yds., div. 34, $9.70; J. Desmond, 28 yds., div. 49, $2.80; J. Schurter, 102 yds., div. 25, $10.20; J. Bechberger, 59 yds., div. 35, $5.90; D. Lamb, 64 yds., div. 46, $6.40; T. Collins, 51 yds., div. 64, $5.10; D. Parliament, 16 yds., div. 64, $1.60; J. Zettler, 23 yds., div. 29, $2.30; C. Webb, 58 yds., div. 55, $5.10; J. G. Carter, 117 yds., div. 14, $11.70; W. Wall, 25 yds., div. 52, $2.50; H. Spitzig, jr., 42 yds., div. 28, $6.20; A. Watson, 31 yds., div. 62, $3.10; A. Watson, gravel contract, 31 yds. at 65c, $20.15, rep. culvert, 50c—$20.65; A. Zettler, drawing tile and 5½ days' work at $2 per day, putting in tile, $16.50, less $1.50 for old timber, $15; H. Scott, road to Rathwell's gravel pit, $2; Kennay, 5½ days' road work paid in taxes in 1917, $6.88; J. Murray, 3 15-inch cement tile for div. 8, $4.50; G. Bannerman, tile for div. 8, $3.35; T. O'Hagan, breaking road $3, rep. bridge $1—$4; Wm. McDonald, spikes, 20c; Jas. Fullerton, 1 day shovelling gravel, $1.25; M. Schurter, repairing grader, $3.30; T. H. Purdy, 120 yds. gravel, div. 50, $12; road through R. Wright's, $2, levying tax on Kauke drain assessment, $2—$5; M. McNab, winter road through fields, $2, room for meeting, $1—$3.

Campbell—Sawyer—That accounts be paid, and that the reeve and treasurer be instructed to sign cheques for same.—Carried.

Sawyer—Campbell—That a grant of $250 be made to open the 15th side line south to the 8th con., and that the reeve and J. Campbell be a committee to attend to the work.—Carried.

Symon—Gilchrist—That the clerk be instructer to draft a by-law for the purpose of levying rates for the year 1918.

By-law No. 577 was drafted and read a first time, fixing rates as follows: General county rate, $14,700.41, by rate of 9 1-10 mills on dollar; Provincial war tax, $1896.85, by rate of 9 1-10 mills; county municipal equlent, $141.46, by rate of 8-10 mills; general public school levy, $2917.05, by rate of 2 mills; township rate, $14,591, by rate of 8 mills; trustees' requisitions for each school as follows: Pub. S. S. No. 3, Greenock, $299.77, by rate of 3 5-10 mills; No. 4, 4314.89, by rate of 2 6-10 mills; No. 5, $504.17, by rate of 3 5-10 mills; No. 6, $506.40, by rate of 3 2-10 mills; No. 7, $726, by rate of 3 mills; U. S. S. No. 1, Kincardine & Greenock, $51, by rate of 2 5-10 mills; No. 2, Gr. & Culross, $685.62, by rate of 5 2-10 mills; No. 1, Gr. & Culross, $416.39, by rate of 2 6-10 mills; No. 1, Br. & Gr., $161.77, by rate of 5 3-10 mills, including deb. No. 9, $49.21; No. 2, Br. & Gr., $625.48, by rate of 7 6-10 mills; including deb. No. 18, $71.58; No. 3, Gr. & Eld., $1073.11, by rate of 5 7-10 mills, including deb. No. 6, $541.98; Paisley, Eld. & Gr., $284.38, by rate of 9 6-10 mills, including deb. No. 4, $78.05; No. 10, Br. & Gr., $65.62, by rate of 2 8-10 mills; No. 16, Br., Kin. & Gr., $259.21, by rate of 6 6-10 mills, including deb. No. 19, $40.11 No. 7, Kin. & Gr., $78.31, by rate of 4 1-10 mills; separate S. S. No. 3, Greenock, $1609.48, by rate of 5 1-10 mills; U. sep. S. S. No. 4, Gr. & Br., $357.75, by rate of 5 3-10 mills; U. sep. S. S. No. 1, Car., Cul. & Gr., $15.64, by rate of 4 6-10 mills; $539.39 is levied on Kauke drain assessment by rate of $1.60 on the dollar to pay balance of costs to date.

Symon—Gilchrist—That by-law No. 577 be now read a second and third time and finally passed.—Carried.

By-law duly read and finally passed.

A communication was read from the council of Pickering, giving notice of a municipal convention to be held in Toronto on Sept. 4th and 5th.

Gilchrist—Sawyer—That the reeve and Thos. Symon be appointed to attend the convention at Toronto.—Carried.

Gilchrist—Sawyer—That the reeve and J. D. Campbell and Thos. Symon be a committee to build Symon's bridge and also to repair Riversdale bridge.—Carried.

Campbell — Sawyer — That this council do now adjourn to meet at Pinkerton on Monday, Sept. 23rd, for general business.—Carried.

CULTURE MEANS CHARACTER

Toronto News

In the message delivered by the Hon. Dr. Cody to the students who are concluding a course of training in the Normal schools the Minister emphasized the value of character in all teaching. He said it was not of so much importance what they taught as what they were. It is a view that has not been too common in this country. The schools exist, not for the object of filling the minds of innumerable children with some bushels of facts, sufficiently dry, but to teach the principles of good citizenship.

It is more important for a man to be honest than to know the six forms of the "ablative absolute." Culture is not knowledge, but character. It is the practice of assembling the facts and experience of past times so that they may be a guide to honourable and efficient conduct in the present. Sometimes we hear of students who have used "crooked" devices to pass their examinations. Sometimes a student has been impersonated by another with a good memory. Under a sound educational system such occurrences as these would be absurdities.

Economy!

"SALADA" TEA

PREPARING THE PERISHABLE FOODS OF MIDSUMMER.

Midsummer illnesses are often charged to excess of fruit and vegetables in the diet. This form of diet is the best for this season of the year but unless these foods are not in perfect condition of ripeness and cleanness, trouble is sure to follow, especially if we ourselves are not in good physical condition.

The high temperature and moisture usually present in August afford just the condition under which bacteria grow. We need, therefore, to be very carefull how and what we eat.

Most houses are now screened against flies but harmful germs also are carried in dust. All food should therefore be protected from dust as from flies.

While food is cooling, uncovered or standing exposed to the air, spores or germs of molds and ferments enter and the warmth present causes their rapid multiplication. Food should, therefore, be cooled as quickly as possible and never left standing in a hot kitchen or unprotected anywhere. It is wise to put soup or stewed fruit into dishes instead of one that they may more rapidly cool and be put away.

Do not trust too much to the refrigerator to keep foods in good condition. If trouble-making germs have settled on meat, dessert, milk or butter before they reach the cooler, their multiplication may be delayed but the temperature of the ice box, being below freezing, is not such as to render them harmless and if through lack of ice, it warms up, a dangerous change in the foods is easily brought about.

Few foods should stand over twenty-four hours without scalding to kill germs that may be present. Meat with gravy, reheated in a pie crust, or a salad or meat loaf can become as germ-infected as to cause severe illness. The housemother may succumb first to the poison created by the germs, because she has worked hard and eaten carelessly. It is well for her to try to keep cool in mind and body during the busy, trying days of August.

Why spend hours in a hot kitchen making cakes, pies and fancy desserts when fresh fruit is more abundant than at any other time of the year? Try to plan to have as few hot dishes as possible and yet have something warm at each meal. Plan all three meals at once and "dovetail" them to save handling the same materials and utensils twice a day.

Where ice is not available, gelatine may be used to give form not only to desserts but to meat loaves or salads. The knuckle or end of the leg of veal may be made into an attractive dish for hot weather by the aid of gelatine, instead of serving it as a stew, which is more appetizing for a cool day.

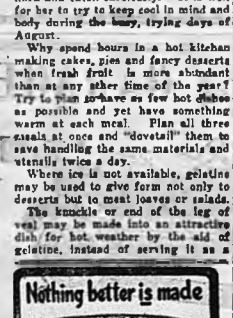
Lamb can be used in the same way.

To prepare a delicious jellied loaf, trim and wash the meat and barely cover with cold water, add a few whole cloves, an onion, parsley or dried celery leaves, and one teaspoonful of salt for each quart of water. Cook gently for two hours or until the bones may be slipped out. Drain the broth from the meat and let it cook again, uncovered, until reduced to less than the bulk of the meat. Dissolve some soaked gelatine in the broth and more seasoning as needed, a little lemon juice or vinegar or a cucumber pickle chopped fine. Have the meat carefully picked over, all skin and bones removed. It may be left in large pieces or be chopped. Arrange in a good mold or loaf pan or a bowl and strain the broth over it. Leave over night to cool. Or it may be shaped in small cups, one mold to be served to each person on a lettuce leaf or nest of water cress. Almost any meat or fish or fowl may be prepared in the same way.

Liver boiled, chopped and mixed with a little chopped ham, makes a good change. Canned salmon mixed with a cooked salad dressing in which a little gelatine has been dissolved, is excellent.

This is a fine way to put in attractive shape the last bits of a roast of meat or of a boiled ham, instead of using them for hash or a hot meat loaf.

Sometimes when we make a meat loaf and steam it there is considerable liquid in the pan when it is done and the solid portion has drawn away from the pan. This liquid may be used to dissolve a small amount of soaked gelatine and then be poured over the meat again, thus surrounding it with jelly when it is cold.



When meat broth is lacking as a foundation for the jelly, strained tomato may be used, or celery or even cucumber may be cooked and strained and seasoned.

Sterilize Your Fruit Juices.

Fruit juices for use later in jelly making can be sterilized and bottled without sugar and made into jellies at the housewife's convenience. This enable her to do with fewer jelly glasses and to distribute her purchases of sugar for jelly making through the year. More over, with the bottled juice she can make a greater variety of jellies, as juices which will not "jell" can be put up when the fruit is ripe and combined later with fruits that will jell, or fruits ripening at different seasons can be combined. For example, the juice of strawberries, cherries or pineapple can be kept without sugar, and later, when apples are plentiful, can be made into combination jelly.

To put up unsugared fruit juices for jelly making, proceed exactly as if jelly were to be made at the time. Cook the fruits until they are soft and strain out the juice through a flannel bag. Heat and pour while hot into bottles previously scalded. Fill the bottles full, leaving no air space between juice and cork or seal. Place the filled sealed bottles on their sides in water near the boiling point, and keep them in the bath for about thirty minutes. Make sure that the corked or sealed end is under the hot water, cover the cork with a paraffin seal. Thorough sterilization and sealing are absolutely essential to success.

To make jelly from the sterilized juice, test its jelling quality, add the proper amount of sugar, and proceed as in making jelly from freshly expressed juice.

"How Can Ships Die Better"

For the glory of the Service,
And the honor of the Race,
Late H.M.S. "Vindictive"
Now blocks both time and space.

'Twas a splendid thing to do, sir,
For the cause she held most dear,
To let herself go under
Without a trace of fear.

"Vindictive" only for the Right,
She has nobly done her "bit,"
Whilst adding to the fame, sir,
Of lads with British grit.

"Can men and ships die better
Than facing fearful odds
For the ashes of their fathers
Are the temple of their gods!"

One potato supplies as much starch as one slice of bread.

By Ben Ames Williams

CHAPTER V.

She touched his hand, pressing the drawer back into place with him. "We mustn't, Dick," she urged. "I feel as though we were waking dead people from sleep."

Dick laughed. "We'll look down here anyway," he declared. "The people who wrote them won't mind."

The lower drawer was even more obstinate than the others had been. Dick at first could not move it, but by pulling the key in the lock he wedged it out an inch at last and then another inch until he could get his fingers inside the end of the drawer. Then wrenching it up and down and from side to side, he tugged and tugged. The drawer yielded a quarter of an inch then slid free so suddenly that Dick almost fell and the drawer itself flew clear out of the desk and dropped upon the floor at their feet.

Betsy uttered a cry dismay.

"No damage done," Dick said. "Now, let's see."

They sat down tailor fashion beside old drawer and began their search.

They lost themselves in the old letters, forgot each other as they delved. They trembled and their voices were hushed. They finished their search at last; and only then did either remember that the thing they sought was not in the drawer.

"It isn't there," said Dick huskily as he stowed the last envelope into its place again.

Betsy scarce heard him. "She must have been a wonderful girl, Dick."

He nodded. "But the letter isn't there," he reminded her. "It must have been something else."

Betsy climbed to her feet. "I don't care so much, Dick," she said. He was preparing to slide the drawer back into its place again. "I think we will come out all right in the end."

He looked up quickly. "We'll have to, Betsy," he exclaimed. He had fitted the drawer into its place and was pushing it home. Betsy watched him. Halfway in, the drawer caught. He pushed more vigorously and found it would not stir.

"What is it, Dick?" Betsy cried and dropped to her knees beside him. She, too, bent and peered into the aperture.

"There's a letter there!" she exclaimed.

"I'll get it," Dick offered.

"No, I can reach it. Wait a minute."

An old letter in a stiff and faded envelope had caught between the drawer and the runner and wedged the drawer. Betsy thrust her arm into the opening and drew it gently forth. They bent above it together, Betsy smoothing it flat in her hands.

The envelope was yellow and crumpled and a mouse had nibbled away one end but the inscription on it in ink now brown with age, was clear. It read:

"To be given to Richard when Mary Doncaster is eighteen."

Betsy read the inscription aloud and looked up at Dick with cheeks pale and eyes misty.

"It's Grandmother's writing," Dick whispered. "Let me see it."

He took the old envelope from her hands. In the corner of the envelope was written:

"For Richard Sotheron, Esq."

Dick turned the envelope in his hands. It was sealed and had never been opened. Before Betsy could interfere, he tore open the end of the envelope.

"Don't Dick!" she cried. "It's for your father."

Dick shook his head, scarce hearing her, and unfolded the letter which had dropped from the envelope.

It was written on a single square sheet of paper, so old that at the folds it was worn through; the paper was yellow as a coffee stain, and the ink with which it was written was brown with age. About it clung the scented dusts of old romance.

In a neat round hand was written:

Dear Richard

Having often seen you at meeting and been captivated with the charms of your person, I have ventured to disclose my excessive passion in these few lines. Love must be the only excuse I can offer for such boldness and if your breast is warmed by those tender feelings which are so perceptable in your lovely countenance, I hope this will be sufficient. Oh, do not slight a passion so ardent! Crush not a hope so grateful to my impassioned heart! Consider that the happiness of her who addresses you is in your power and that your decision will confer the greatest felicity or plunge into the deepest despair a heart which beats only with love for you. In anxious expectation, I shall await an answer which if favorable, will drive anxiety from my breast and restore that tranquility which has been destroyed by the tyrant, Love.

Adieu!

Mary Doncaster

They read and even Dick had to gulp down a lump in his throat. "The poor kid!" he exclaimed.

"She was only sixteen!" Betsy told him.

"And he never got the letter!"

Betsy looked up quickly. "No wonder she hated him when she thought he was just keeping it—laughing at her."

Dick touched a little folder paper at the upper corner. "What's that?" he asked. Betsy opened it.

Within the little fold lay a tiny curl of brown hair; beneath it they saw a message written. Betsy gently moved the curl to one side with her finger and read:

If these lines arouse in your bosom the tremors which are tormenting mine, keep this emblem of my affection and send in return a similar pledge; but if my supplication leaves you cold, you need only return this token.

Dick took the little bit of paper from her and Betsy whispered, "It is Aunt Mary's hair!"

Then they both turned quickly at a foot-fall in the doorway behind them and saw Richard Sotheron standing there.

That night, the moon came peering over the treetops again and again found the old Doncaster garden deserted. Miss Mary and Betsy were on the veranda.

Miss Mary waited, trembling and fearful and yet happy for a reason she could not have named; and at last, as the moon's beams found their way down through the trees and illumined the pathway from the gate, Betsy and Miss Mary saw two figures turning in and coming toward them.

They came shoulder to shoulder, tall men, strong and youthful of stride. When they reached the foot of the steps at the top of which Betsy and Miss Mary stood, Betsy ran down and slipped her arm through the arm of one of the two.

Miss Mary, turned to stone, stood in the shadow at the top of the steps. The other of the two men lifted his hat and remained for a moment, bareheaded, looking up at her.

"Miss Doncaster," he said very gently at last, "these two young people found and delivered to me today, that note you wrote more than twenty years ago."

Miss Mary's hand flew to her throat. She could not speak.

"I never received it, Mary," said the man at the foot of the steps. "But I have always loved you."

"You never received it?" Miss Mary echoed, hope ringing in the faltering words.

He took from his pocket a little folded paper packet and held it up to the woman above him. "You asked a pledge," he said huskily. "Here's the last lock of hair I've got to my head!"

Dick and Betsy heard only a low cry, "Richard! Richard!" Then a figure all in white like a woman of dreams fluttered at last into the arms of the man who waited.

Dick and Betsy fled incontinently to the bench beneath the gnarled old apple tree.

(The end.)

Crawling for Penance

A Buddist priest who has been night years on the way to Lhasa expects to arrive there eight years hence. He started from the northeast of Peking, and when met by an English missionary he had completed two thousand miles—about half his journey. He does not walk, but crawls, or rather, he combines both methods. On his hands he wears boards; on his knees he wears pads. He lies full length upon the ground; then gets up and walks to where his fingers had reached; then prostrates himself and measures afresh. He is under a self-imposed vow, and believes that if he crawls in that manner to the Tibetan holy city Buddha will forgive him his sins and bestow boons upon him.

Thrift is the only bridge over the wheat crisis.

WILLIAMS
New Scale PIANOS

THE outward beauty that distinguishes a Williams New Scale Piano is an index of its intrinsic worth. Ideals are built into every one of these famous instruments—ideals of craftsmanship that make for the most enduring quality.

Bungalow Model, $490.00

THE WILLIAMS PIANO CO., LIMITED, OSHAWA, ONT.
Canada's Oldest and Largest Piano Makers

USE LESS SUGAR.

In Canada We Consume Too Much For Health Anyway.

There is no question about it—more sugar must be saved by individuals in their homes.

Candy manufacturers have had their sugar allowances cut by 50 per cent. Bakers and cake and biscuit manufacturers have all had restrictions laid upon them. Limitations have been placed on private holdings of sugar.

These measures have been as effective as was expected. But more is asked of the individual in the way of voluntary denial.

That is to say—let us be sparing in the use if the sugar bowl. We want all we can get for the canning season. It will help if we stop taking sugar in tea and coffee or at least confine ourselves to one level teaspoonful. It will also help if we cut in half our customary allowance on fruit, cereals and desserts. Ordinarily we use far more sugar than we need and therefore much of the flavour of our food—it will not hurt any of us to do with less.

A cut lemon rubbed on fishy knives and forks takes away the smell at once.

It is time we developed a class of young men capable of handling some of the problems that are driving older farmers from the best farms in the country.

Cream Wanted

We are in the market for cream all through the year. We pay the HIGHEST market prices. Our cans (tare) are the best. Instructions and tags sent on a postcard for purchasers.

National Dairy and Creamery Co.
943-5 King St. West, Toronto

Parowax

Goodness Sealed In For Good

Air is the arch-enemy of preserves. Keep it out and you keep the goodness in. Easy enough—if you seal the glasses and jars with melted Parowax.

Preserves so sealed can't lose that delicious, freshly-picked quality.

Parowax imparts no taste or odor to preserves, and completely bars out mold and fermentation. At your grocers or druggists—in inexpensive 1 lb. and ½ lb. cartons.

IMPERIAL OIL, LIMITED
Branches in All Cities.

Ingram's
Milkweed Cream

Two Sizes—50c and $1

You are young but once, but you can be youthful always if you care for your complexion properly. Daily use of Ingram's Milkweed Cream prevents blemishes, overcomes pimples and other eruptions. Since 1885 its distinctive therapeutic quality has been giving health to the skin and youthful color to the complexion. It keeps your skin toned up, soft and clean.

The refined way to banish oiliness and shininess of nose and forehead induced by perspiration, is to apply a light touch of Ingram's Velvola Souveraine Face Powder, 50c. It also conceals the minor blemishes. Included in the complete line of Ingram's toilet products at your druggist's is Ingram's Zodenta for the teeth, 25c.

A Picture with Each Purchase

Each time you buy a package of Ingram's Toilet Aids or Perfume your druggist will give you, without charge, a large portrait of a world-famed motion picture actress. Each time you get a different portrait so you will have a collection for your home. Ask your druggist.

F. F. Ingram Co., Windsor, Ontario

KELLY, OF THE FORT GARRY HORSE, RECOUNTS HIS ADVENTURES IN WAR

Canadian Survivor of a Hundred Battles From Ypres to Vimy Ridge Was Plucked From the Sea When a U-Boat Torpedoed a Hospital Ship.

Edwin J. Kelly enlisted September 1st in the Fort Garry Horse in Winnipeg. At Valcartier, the unit was disbanded as cavalry and sent across as part of the Sixth Battalion of the first Canadian overseas expedition, in all 30,000 men. After a brief training on Salisbury Plain, he was sent across the Channel as part of the Strathcona Horse, and thence to Ypres.

"Fifteen days in the front-line trenches the first time out," he says, recalling the early days over there. "And what a campaign it was! Each piece of our artillery could fire but eight shells a day because of the shortage of ammunition. Think of it, eight shells for each of our guns against the constant rain of German shells!

The First Gas Attack

"You all know the story of the first German gas attack. I shall never forget it. Thick, heavy gas rolling across No Man's Land upon us. We had never seen it before. We had no gas masks—nothing in the way of protection. The odor, a thick, heavy nauseous smell. The first effect was to cause sniffles. Then choking and coughing. Then men began turning green, their eyes rolling and grasping for breath. A terrible dry taste in the mouth. I saved myself by wetting my handkerchief from my canteen and holding it over my face. Fourteen thousand out of twenty thousand of our men lost their lives in that fearful wholesale asphyxiation."

But Kelly forgets all the horrors of Ypres in his glowing account of how the Entente Allies rallied from this terrible blight after having been beaten back more than two miles and losing many guns, only to counter-attack with bayonets and tenaciously avert a rout. It was first around Ypres after the gas attacks that Kelly and his Strathcona Horsemen first saw evidences of the German cruelties inflicted upon women and children and Canadian soldiers crucified.

Soon after Ypres the Fort Garry Horse was reassembled as a separate unit and fought in the line as infantry until the middle of June, 1916. After a fifteen-day hike the dismounted horsemen arrived at the Somme battlefield, where they were brigaded with a division of Indian cavalry and given horses. In the fighting that followed, says Kelly, cavalry was employed by the Allies for the first time since the battle of Mons in 1914, and then ensued the first test for the Allies of the availibility of cavalry in modern trench warfare.

A Disastrous Charge

"On July 13 at Mahalts we moved out for a battle that we called the battle of High Wood. In the attacking party were the Dicken Horse, the Hindu, or Indian, horsemen and the Dragoon Guards. Until 5 in the morning we stood awaiting the signal to attack at Sausage Ravine, so-called because of the sausage-shaped shells the Boche was giving us. At the given signal away we went. We, in the centre went away over three lines of German trenches. Our flanks failed to come up, and, unable to hold the captured German guns, we had to fall back. Out of 175 in our squadron who went in but eighteen came back. I figured then I had a charmed life. We brought back seventeen prisoners at that.

"Our fighting there did not seem to strengthen the hope that cavalry was adaptable for operations against the German trenches. The ground is so uneven because of the thousands of shell holes everywhere in No Man's Land. Horses would stumble and throw their riders. It was hard to keep any kind of a steady formation. Cavalry fit in better in the open country fighting, as, for instance, at Cambrai, after General Byng's tanks had opened the way and started a general German retirement. That is why little has been heard of the operations of cavalry to date. When we get, the Hun going back to Berlin the cavalry will have a conspicuous part in the warfare."

The Battle of Death Valley

In the Somme campaign of 1916, says Kelly, 250,000 casualties were suffered by the Allies in fifteen days. The Mets woods changed hands fifteen times. At Trocons woods the dead lay three deep and trenches were so impeded it was impossible to get over the wall of bodies. Of the style of fighting he gives this graphic description in connection with the capture of "Regina trench" in the fighting around Courcelette:

"There was a sunken road between our front line and the German front. We had orders to take that trench. Seven times our boys went over the top in seven distinct waves. I was with the first wave. We went up to the German line, but lost so many men in that first wave we were compelled to fall back. I met the second wave coming up out of the sunken road and went with them against the Hun stronghold. Every time our boys would jump up out of this sunken road we would be subjected to a deadly machine-gun fire. There seemed to be a million German machine guns in action.

"Six times I went forward with six different waves, only to be repulsed and thrown back against the next wave. On the seventh attempt we took Regina trench. Talk about a charmed life! I wasn't so much as scratched. But 10,000 men went down in two hours in the fighting that day. We called that sunken road 'Death Valley.'"

Another Close Call

Kelly's next close call came after the battle of Arras, when attached to the First Indian Division. The Germans were falling back to the new Hindenburg line and it was while engaged in the capture of the town of Roncourt that Kelly's Canadian unit came in contact with the Crown Prince's Death's Head Hussars.

It was in the fighting that followed that Kelly had three horses shot under him and was himself wounded.

"We had just entered the town when the Death's Head Hussars came up suddenly on our left," he said. "We had to reform hastily and charge them. In a cavalry engagement you seem to single out one man in front of you and go after him. I remember running one fellow through with my sabre so far that as my horse swung ahead my arm was drawn back with the weight of the German impinged on my sabre and I was nearly unseated. But I managed to stay in the fight unharmed. Out of 115 of us who went into that charge but twenty-three came back. The remainder were killed or wounded.

This was the day on which I had three horses shot under me and this day on which I was wounded. Early in the morning we had charged down into the town of Aphey and driven out the Germans. But they came back with reenforcements and our position was untenable unless we got help. The captain called for a volunteer to go for reenforcements. I volunteered as a dispatch rider, but got only a short distance out of Aphey when a German machine gun camouflaged in an old house cut down my horse. I had to make my way back to Aphey on foot, there get another mount and set out again. This time I was successful in bringing up two troops of cavalry.

Waiting For the Red Cross

"My second horse fell under me about 10 o'clock that morning after we had left Aphey and were pressing on after the retiring Germans. A sniper got him under the girth and I went down with him, but escaped injury. I had until now been in action two years and one month without being hurt. It got to be sort of a joke. I remember one night fifteen of us crawled out of our trenches at midnight on a ration party. That meant we were going back from our front line trench to get something to eat at our base. When we got back to the front line trench again there were but four of us. I so reported to my captain and I remember him laughingly remarked: 'And of course, Kelly, you had to be one of the four!'

"But I got mine the afternoon of March 25, after losing two horses in the morning. We were galloping along in the open country in pursuit of the retiring Germans when a shell dropped directly under my horse and exploded. The good old steed was blown to pieces, but, he saved my life. Fragments of shell raked my legs and arms, but not my body, because the bulk of the horse interposed between me and the animal. Down we went in a mass. I remember calling out to my pals as they swept by, 'Are you fellows going to let me die here?' Two of them dropped off their horses and tried to make me comfortable. They thought at first I had been killed outright. They cut off my clothing, bandaged my wounds, gave me a flask of liquor, made me as comfortable as possible and rode on after the Germans.

"For thirteen hours I lay there in the snow until the Red Cross got me. It was snowing hard all the time, and I feel sure I would have died but for that rum. I learned afterward I had suffered twenty-four distinct wounds. My left knee was fractured and the right knee blown away. My legs and arms were perforated with fragments of shell. A piece of shrapnel buried itself under my right eye close to the nose and cut the optic nerve. When I came to I was in the clearing station on my way to Havre."

Torpedoed by the Huns

Kelly's final and miraculous escape from death came while en route from Havre to Southampton, on the steamship La France. Arms and legs strapped in splints, he was carried aboard ship with many other wounded "bound for Blighty." On the same ship were more than a hundred German prisoners.

"Two and a-half hours out we were startled by a sudden sharp impact against the side of La France, followed by a terrific explosion," said Kelly. "It was a torpedo from a U-boat. Immediately the water poured in the hold and the ship began to sink by the bow. We wounded were down on the second deck, as were the German prisoners. I remember falling out of bed into the water. The German prisoners had stampeded and were trampling the wounded.

"Some good fellow got hold of me and tried to help me up the gangway. But we were jostled by the crazed Germans and rolled down the stairs. My bandages and splints were all jostled loose and the salt water poured into my wounds, causing intense pain. Eventually we got on deck and I was literally dragged to the side, where they were launching boats. The German prisoners, however, had seized a number of the boats while the crew was bravely trying to save the wounded, and when we got to the deck but few boats were left. Two fellows picked me up, and counting 'one, two, three' threw me over the starboard side in the direction of a boat well filled with our wounded and German prisoners. Luckily I landed square in the middle of the boat.

"For two and a half hours we float ed around in the net. The U-boat stood by for a time and actually shelled the frail craft, laden with wounded, and incidentally with their own men who had been our prisoners. The La France went down before our eyes within fifteen or twenty minutes, carrying with it many of the brave crew and the brave Red Cross nurses who had stood by until the last minute, supervising the rescue of their charges. Eventually we were picked up by a trawler and taken to Southampton. I spent nine months in a Scottish hospital and was sent home with my discharge.

"And here I am still alive after all my adventures.' My brother predicted when I went away that no German shell ever would get me. I seem to have had a charmed life to have come through it all. My only regret now is that I cannot go back and stick there for the big finish. For some of these days we are going to win the war and whip the Hun."

Half-hour noon-day "sings" in big factories are becoming quite the thing.

A POWERFUL PRESCRIPTION

How An English Doctor "Cured" a Native Insaid

In his interesting volume, "A Soldier's Memories in Peace and War (Methuen), Gen. Sir George Younghusband tells of his varied experiences on a trip through the Salween Shan States during the Burman War. Every white man, he says, and especially an Englishman, is ipso facto a skilled medical practitioner wherever in the byways he wanders. On the present occasion only some quinine, a few pills, a bottle of chlorodyne and a pot of vaseline composed our medical outfit; and yet we could not spare much for stay patients. This little medical store was, however, saved in a curious and effective manner.

At one village there was an old woman sick with fever who asked to see the white wise man. We explained that there were no medicines to spare. But one of the natives said that did not matter. He had himself been ill at Moulmein and went to an English doctor, and the English doctor wrote some charms on a piece of paper, and that made him quite well. In proof whereof he produced a prescription written by the English doctor, which he had put in a little bag and worn ever since round his neck.

At his earnest solicitation, we wrote a charm for the old lady. It read however, "May God make you well soon." Instead of Ac. Ros. ili. T., Cal. prsep. gr. xxx., and the like. To the great surprise of the amateur doctor, but apparently to the surprise of no one else, the old lady "turned up" the next morning before the caravan started and said that she felt quite well.

A good citizen is known by the food he eats.

THE WEEKLY SERMON

Her ways are ways of pleasantness and all her paths are peace.—Proverbs, iii., 17.

Solomon, the wisest of men, is here pointing out the way of happiness. We are all aiming at happiness. But how few know in what happiness consists! And, having a false aim, when, after tireless effort to grasp it, they find but a bauble which leaves them empty and miserable. What then is happiness—true happiness which will not mock the seeker? This question every one should ask deeply at life's threshold or he will be doomed to failure.

Happiness does not consist in mere gratification of sensual desires—that is but the animal's pleasure. Nor is it to be found in riches, knowledge or power. What temptation, anxiety and care in the lives of the rich, what hard questions and dark evils confront the deep thinker, and how, "uneasy lies the head that wears a crown!" All these we may have and be utterly wretched.

Happiness is only found by those who know its secret, who have a true ideal of life and its purpose. To get it we must first attain self mastery. "My mind a kingdom is," says the poet. There is no greater empire than the faculties, the powers, the passions of a human soul. And no one can be happy if his own being is a chaos, if he be the helpless slave of his caprices. It is only when one's myriad desires and impulses are held in the grip of a masterful will that he is safe, that he can walk on a wise path, that he can be happy. Until one has this wise self-control he has not learned the first letter of the alphabet of happiness.

Live to a Purpose

The secret of happiness, again, is found in work. We were not made for idle ease but for activity. Every one should live to a purpose. Work and work for a purpose, fills the speeding hours with joy. When one has health and exerts his mind and muscles he drinks the foam of the brimming cup of existence. A wealthy business man says:—"Show people how to work, and teach them to love it. He found his pleasure not in his money, but in his work. The plain, every day worker, in field, shop, at desk or in the domestic sphere, need envy no courtier, prince or millionnaire on earth.

Happiness, further, comes from unselfishness. To be happy we must try to make others happy. Selfish people can no more have genial hearts than they can have genial faces. Nature has made us social beings. And it is only when we practice brotherhood that we taste true pleasure. Wrote Tolstoy: "I am happy when I can perform an act of kindness, but to fight an injustice is my greatest happiness." Love is the noblest human emotion. And when it moves us to sacrifice for the sinning, the poor, the wretched, the woe-begone, we experience the purest of raptures.

Within Reach of All

Once more, the secret of happiness is found in religion. Man's unhappiness comes from his greatness. This is because his sense of the divine causes an infinite want. This greatest need religion alone can fill. Says the Psalmist:—"My flesh and my heart crieth out for the living God!" To meet the tasks, temptations, evils and sorrows of life we must have infinite help. We must have an Invisible Friend. We must have a Heavenly Father. Having all else, but lacking this eternal solace, no one can but be poor, empty, unhappy and wretched. Simple, genuine piety makes a heaven on earth. Religious souls walking with God by day and overshadowed by His Spirit at night are of all the happiest. Faith and hope irradiate their every phase of life.

The means of happiness, then, are within the reach of every one. Self-mastery, work, unselfishness and piety, all can have. Why, then, so much unrest, dissatisfaction and consuming longings? Says the saintly Fenelon:—"Unhappy man! Not in thy condition but in thyself lies the cause of thy misery!" Do not, then, waste time envying the good fortune of others. Each one carries a paradise or a purgatory in his own bosom.

The Maker meant all his creatures for happiness. And He has given to all the means of happiness. The tragedy of life is that so many fail to find it.

Be not, then, deceived by the lure of false prizes, but see wherein lies true happiness and grasp it now and here.—Rev. J. B. Brown.

Her Whole Wordly Possession a Cow—Old French refugee safe behind the lines after losing her lifelong home to the Huns. Everything was destroyed except the cow and all her family were murdered or carried away captive.

Hilda's Day At Home.

Every morning Hilda went to the garden to take care of the roses on the little trellis at the end of the walk. She cut those that were wide open, trimmed out the withered leaves and trained the climbing vine so that the little buds could be seen when their petals began to unfold.

It was a pleasant morning task, and Hilda sang when she was doing it; but this morning she did not even hum a tune, although an oriole in an elm beyond the garden fence was singing to her with all his might, and in the green meadow, a little farther away, a dozen bobolinks were spink-spank-spinking so happily that melody seemed fairly to be bubbling out of them.

And how cheerfully the morning sun was shining, too! The grass and the leaves so glistened with dew that there were smiles as well as music all around Hilda. Yet she did not smile or sing as usual. She did not even care whether her scissors slipped and cut off a baby bud.

Of course you can guess that something serious had happened—or was going to happen. This is what it was: her brother, Thad, with her father and mother, had gone to the city to be away for the whole day, and Hilda had been left behind, alone. They had driven away soon after the sun was up, and Hilda was sure that the day was going to seem as long as a month. To be sure, there was nothing new—to be seen in the city,—Hilda had gone there several times with her parents,—but there was a camp of soldiers near the city, and all through the spring Hilda and Thad has been looking forward to a visit to it as soon as school closed.

The worst of it was that Hilda as well as Thad had had the promise of the trip that day; but only yesterday Mrs. Hurley, a neighbor, had asked to be taken along, as she had some errands to do in the city. So Hilda had politely stepped aside and had tried not to be cross in doing it. Thad had to go because he needed some new shoes and other things.

It was all simple enough, and of course Hilda could not blame Mrs. Hurley for wanting to go, or her own parents for giving Mrs. Hurley her place in the carriage. Nevertheless, she was not singing as usual as she trimmed the roses.

Hilda's father had called back when they drove out of the yard, "The day won't seem so long if you try to guess what we are going to bring you!" That cheered Hilda at the moment, but it did not take her long to think of the things that she most wanted; and when she had done that, the minutes dragged slowly, instead of hurrying faster.

Hilda carried her roses into the house and selected them in a vase on the dining-room table. Then she watched the road until the R.F.D. man came along and left the mail. But he left nothing for her.

"By this time Thad is seeing all those soldiers!" sighed Hilda, when she felt that it was surely time to eat the luncheon that her mother had left on the pantry shelf.

While she was eating a second piece of cake the wonderful thing happened that changed everything—the thing that showed why the birds had been singing so merrily and the sun shining so brightly upon her early in the morning.

Through the open window she heard a curious sound, faint and distant at first, then clearer and closer. It was the clatter of the hoofs of many horses on the highway.

Hilda ran from the pantry to the front door. A long column of soldiers riding on horses! Hilda could hardly believe her eyes. The soldiers that she had so wanted to see were not at the camp at all, but were really coming where she could see them!

When the head of the long column was near the house an officer gave a sharp command. A bugle blew, and the column came to a halt. Another command, and another thrill of the bugle, and the men leaped from their horses; and in a moment they and the horses were scattered here and there in the shade of the trees that bordered the road. As far down the road as Hilda could see were men and horses, hundreds and hundreds of them—perhaps thousands!

Then a tall officer who saw Hilda standing in the doorway came into the yard and spoke to her very politely, with his hat in his hand.

"May I have a drink of water?" he asked. "It is a hot day for a practice hike, even on horseback."

Hilda hurried in for a dipper, and then went with the officer to the well beneath the elm at the end of the house. Others saw them and came running. Hilda went for more dippers and for glasses. How eagerly the soldiers drank the clear, cold water, and how they laughed and chatted with her! They asked what her name was, and some of them told her of little girls in their own far-off homes. The tall officer even lifted her to the saddle of his horse and led the horse round the yard, while the others clapped their hands and called her "the little colonel."

Hilda ran into the house and brought out the roses that she had cut in the morning. She gave them to the soldiers at the well, but the largest one of all she gave to the tall officer. He held her up and kissed her as she fastened it to his coat.

Then the bugle blew, and all the soldiers left the well and the shade of the trees. The line took form again, four mounted men abreast; and when the bugle blew, the line started on its way. Hilda stood in the yard all the time that it was passing, waving her hand and throwing kisses, and there was not a trooper in all the long line whose eyes did not brighten at the sight of her; and away down the road, as far as she could see, the tall officer rose in his stirrup and looked back and waved his hat.

Finally, the last clattering squad of the long column had disappeared, and Hilda could see only a cloud of dust in the distance.

"My, what a wonderful day!" she exclaimed, when at last she went to gather up the dippers and the glasses, and then to the house to finish her cake. "How glad I am that they left me at home! I should have known that something beautiful would happen! It always does."

When her father and her mother and Thad got home in the early evening, Hilda lost no time in telling her story; nor did she wait even to find out what they had brought her.

"I wish that I had stayed at home, too!" said Thad. "There was nothing much to see at the camp except a lot of tents; but you stayed right here, and a whole regiment of soldiers came riding to make you a visit!"

FIGHTING NAMES

Many Strange Appelations Found in Muster Rolls of the Army

A particularly valorous, gay and resourceful Tommy was private Robbins of a certain famous English regiment. Among his mates he went by the unmilitary nickname of Twitters. His captain, visiting him as he lay wounded in hospital, learned in the course of casual conversation how he came by it.

"If you'd 'appened to notice me 'ole nyme on the roll, sir, you'd not 'ave to ask," Twitters told him with a grin. "Me a hinnercent byby, and never growin' the trick they was playin' on me—a shyme, I calls it. But they says I 'owled proper at parson when he christened me, all the syme."

"I remember your name—classic names aren't so common in the army that I'd be likely to forget it," the captain told him, "but I don't seem to see the connection. Nestor, wasn't it?"

"Yes, sir," assented Twitters. "Boomin' silly nyme, if it was me poor mother's fancy. Got it out of a book she did. Nestor! Put it with Robbins, sir, and you'll see where the Twitters comes from. Nest o'robins, sir. No wonder I 'owled at parson!"

No wonder, indeed. But if the unfortunate Twitter's mother, in jocular or sentimental mood,—it is hard to guess which,—had given him a name to live down, the muster rolls of the army show other instances, some of which have been recently pointed out in a British newspaper, where punishing parents have bestowed on their offspring names to be lived up to. Certainly the two soldier brothers, March, would find it difficult to dilly-dally about their duty or hold back from danger, bearing such incentives to adventurous advance as the names Quick and forward. Bright Steele, Loud Cannon, Noble Bannerman, Nott Faring, Luckie Hazard, Strong Spearman Savage Hope and Goode Schott are in the ranks; they could hardly be elsewhere. So is their comrade, whose first name was propably invented to match his second, in a combination that ought to help him earn a Victoria Cross some day—Private Dussell Dare.

Even in the naming of girls the influence of the great war is felt, although it is not in England, but America, that compliment our historic ally, France, in the christening of little Miss Marseillaise French. And it was doubtless inevitable that, during the great drive for the 1st U.S. loan, there should arrive in some household a young Miss Bond, whose given name should be Liberty.

In all the Allied countries babies are being named for the favorite leaders and generals of the war; but it is perhaps, only in France that the name of the most popular of all its heroes can be gracefully feminized. There are said "to be scarcely more infant Joffres engaged in thoughtfully sucking the fists that may some day clutch the marshal's baton than there are of baby Joffrettes, coeing unconscious of the superwomanly burden of French mothers to-day, which it is to be hoped they may never need to bear when they grow up.

The average annual fire loss in the United States is about two dollars for each inhabitant.

GLAMIS

Mrs. R. Y. McFadyen, of Toronto, has been visiting friends here.

Mrs. E. Francis and Miss Mayme, of Toronto, Miss Margaret Colborne of Buffalo, N. Y., and Mrs. Jas. Cowherd and babe of Toronto, are holiday visitors at Murdoch McKay's.

Mr. S. Stevenson attended the funeral of his brother-in-law at London.

Mrs. John Stocks and sons, of Port Huron, Mich., spent a couple of weeks with Mrs. Nesbitt.

Miss Tuffin, of Toronto, was a visitor at Mrs. A. Carr's.

Rev. J. A. McClung and Jas. G. Purdy attended Free Methodist conference in Ridgeway.

Mrs. Geo. Gilchrist and Miss Janet, of Owen Sound, spent a few days at Joseph Wrightson's. They were accompanied home by Miss Minnie Wrightson.

Mrs. W. Burgess, of Cabri, Sask., and A. B. A. Cunningham, Melville, Sask., were home to attend the funeral of their father. The latter returned to his home in the west.

Mr. Wm. Cunningham has returned to Alliston after a month's visit at the home of his late brother.

Mrs. J. K. McLennan is in Toronto undergoing treatment. We wish her a speedy recovery.

Rev. P. Reith attended the funeral of a friend at North Pelham.

The McIntyre family are all at their cottage at Inverhuron.

Mr. Penshaker and son Charles, of Hespeler, were visitors at John Deeth's.

Mrs. Beaton, of Toronto, was here attending the funeral of her father, Roderick McSween.

Miss May Ferris is visiting in Paisley.

Mr. Angus McLean, who was in Guelph Hospital for the past month, has returned home. All welcome him home and wish for his steady improvement.

Mr. and Mrs. M. E. Peacock and daughters have returned to their home in Meaford.

Mrs. W. J. McKenzie (nee Miss Edith Hutchison) and children have returned to their home near Wilkie, Sask.

Mrs. A. E. Hogarth, of Toronto, spent the past week with her mother, Mrs. Jos. Patterson.

Miss Ella and Masters Melville and Albert Brown, of Paisley, spent part of the holidays at the home of their grandfather, Mr S. Stevenson.

Again death has entered this neighborhood and removed another of the old pioneers in the person of Mr. Roderick McSween, in his 77th year, passing away at the home of his daughter, Mrs. Jas. Thompson, on Con. 2, Bruce, on Sunday morning, Sept. 18th, after several weeks' illness. The deceased was born in Scotland, came to Canada when a young lad of about 12 years, and resided on 2nd con. Bruce, on the farm now owned by his son-in-law, James Thompson, where his death occurred. Mrs. McSween predeceased him years ago, and he has since been residing with his daughters. Mr. McSween has been a cripple for a great many years from severe injuries received and was unable for any active work. He was highly respected by every one and had a distinct trait that was kindly and courteous. The following family survive: one son, Alex. now in Superb, Sask., and three daughters, Mrs. Beaton, of Toronto; Mrs. Dan Cameron, Arkow, and Mrs. Jas. Thompson, 2nd con. Bruce, and two brothers and two sisters, all residing in British Columbia. The funeral took place from the home of his daughter, Mrs. Thompson, on Mon. 20th to Purdy's cemetery. To the bereaved ones we extend heartfelt sympathy.

IMPRESSIVE MEMORIAL SERVICE

The memorial service held at Ebenezer church on Sunday afternoon in honor of the late Richard W. Grant, was attended by a very large gathering of people of the vicinity and from surrounding places. The meeting was held in the skating rink and that commodious building was crowded to the doors. Rev. Mr. Stanton, pastor of the church, conducted the service, and paid high tribute to the departed. Major M. Aikens took part in the service. On the platform was a vacant chair, draped, also some very beautiful floral wreaths. Special music was rendered by the choir of the church. The late Dick Grant was one of the leaders in all the young peoples' circles at Ebenezer. He was an officer in the Epworth League, a teacher in the Sunday school, head of the skating rink management, a member of the choir, a player on the baseball and hockey teams. Physically and mentally he was vigorous and active, morally clean and spiritually alive to his responsibilities, a reader who was acquiring knowledge daily, industrious in his work and a great help to his parents. He was a member of Ingram Lodge, I.O.O.F., and Aldworth Lodge, A.F. & A.M. and about forty members of those orders were in the service. Free and friendly in his manner, Dick was very popular with all friends and acquaintances, and he will indeed be greatly missed in the community in which he was born and spent a short but useful life. His only grown up brother, Jas. Grant, joined the 160th and is overseas. One sister, Miss Lina, and two little brothers are at home with their parents, Mr. and Mrs. George Grant.

FOR FLETCHER'S
CASTORIA

TENTH CON. BRUCE

Miss Stella Sinclair and friend, Mr. Morrison, of Toronto, are visiting at Mr. Alex. Shipley's.

Mrs. Hugh Pritchard, of Lucknow, visited her uncle, Mr. W. H. Brown, a week.

Miss Mary Caldwell is in very poor health at present.

Messrs. W. H. Brown, G. Brown, Edgar Anness and Silas Haney motored to Ashfield Tp. on Sunday and spent a day with friends there.

Mr. McDuff is busy threshing on this line at present.

WALKERTON

A 19-year-old youth was arrested by Chief Ferguson on Tuesday at Eden Grove, where he is said to have been loafing around and beating the anti-lidling law. On being taken in tow, the fellow maintained he couldn't find work, but this caused the chief to laugh so loud that the people of the Grove came rushing out of doors to see what storm of merriment was foaming the trees. The prisoner was brought to Walkerton with all the solemnity of a calathumpian parade, and ushered before Magistrate Tolton, who, as per usual, opened the Revised Statutes, and gazed as serious as Solomon on the printed page. The upshot was that the accused was remanded to the county jail for eight days, during which time it is feared the neighboring agriculturalists may bombard the local citidel in an effort to kidnap the stranger, when the news gets out that he was raised on a farm and is fully conversant with farm work.

Mr. N. C. McKay, B.S.A., who has been District Agricultural Representative of Bruce County, with headquarters at Walkerton, ever since the opening of the office here six years ago, received an offer on Tuesday from an old Bruce boy, Hon. Duncan Marshall, Minister of Agriculture for Alberta, tendering him the position of Instructor in Animal Husbandry in the big agricultural school at Claresholm, Alberta, at a salary of about $2100. As Mr. McKay gets $1900 per year here, the position offered him in Alberta is embellished with a considerable increase in pay. That he has not definitely decided yet to accept the western offer leaves room for hope that arrangements may be made to retain Mr. McKay in Bruce, where he has given most able, satisfactory service, and has made his department such a marked success. He has established rural school fairs in different parts of the county, which have created keen interest and rivalry amongst farmers' children and brought field and garden exhibits from young Canada that would have been a credit to trained adult agriculturalists. The attendance at these fairs rivals the fall shows. The short courses in stock judging, identification of seeds, etc., which he has been conducting in various centres of Bruce have also been of immense interest and value to the farming community. As a citizen of Walkerton he has taken an active interest in practically every public enterprise of the town, and his departure would be a severe loss to Walkerton as well as to the county as a whole.

Over one hundred returned soldiers from all parts of Bruce gathered in Walkerton on Monday last and evinced their interest in the Bruce Soldiers' Colony which Major Moffat proposes to establish for the benefit of returned Bruce veterans in New Ontario, about 50 miles west of the town of Cochrane. The idea is to settle soldiers, who may care to go into the scheme, on a farm of 150 acres each, and the timber, which must be cleared off first, is mostly pulp wood and very marketable, the clearing operations thus selves would be very profitable. Besides this Ontario Govt. gives generous aid to the soldier settlers. Mr. J. S. McEwen, a prominent cattle dealer and ex-farmer of Chesley, who went over the land with Major Moffat, declared it excellent soil. Sergt. Major Carrick, of the 160th, who owns a farm there and spent four years in that country, strongly recommended the scheme to his comrades in speaking in the town hall on Monday. The community idea is alright, as the boys will be near and assist each other, while the Govt. provides the horses and implements and they will have no big outlay to make there. The thing is purely voluntary, and boys who have farms or something else to come back to in Bruce won't, of course, be induced, but the veterans who have nothing particularly inviting when disbanded to fall back on, will welcome such a proposition. The Govt. has no lands to give away in Bruce, and as farms are high the soldiers will not have the means to buy them, the talk of keeping the boys in Bruce sounds better to home ears than it figures out for the pockets of the veterans, whose sole interest the Bruce Preparedness League, which is championing the scheme, is supposed to espouse. Mr. W. D. Cargill, M.P.P., was chairman of the meeting on Monday, and Mr. A. E. McNab secretary, while Messrs. Wm. McDonald, M.P.P., W. D. Bell and J. S. McEwen, of Chesley, were amongst the prominent outsiders present, and all of whom strongly endorsed the scheme. The result of the conference was that the soldiers selected three of their number, Sergt. Garfield Redden of Tara, Sergt. D. Kennedy of Whitechurch, and Pte. Herb Fenton of Port Elgin, to go on a trip this week to the proposed colony known as Shackleton Tp., and after spying out the land, to return and report.—Herald and Times.

CASTORIA.

CARGILL

Mr. Herb Christie, of Guelph, who has been visiting friends here for the past week or so, returned home on Monday.

Miss F. Newman is away on a visit to friends in Toronto.

Miss F. Crawford is visiting in Walkerton.

Misses Warren, of Walkerton, visited Miss McCoy last week.

Miss L. Mahoney, of Walkerton, is visiting at her home.

The stock reducing sale conducted by Hunstein & Wittich has been most successful. They and their staff have been on the jump ever since the sale started.

Miss M. Hood spent a week with friends in Paris.

Miss M. Martin, of Georgetown, is spending vacation at her home here.

Misses Bella and Agnes Keyes spent a few days with their sister, Mrs. Thomson, in Toronto.

CAPT. JOHN DOUGLASS PASSES AWAY AT TARA

Was Officer Commanding Company in Riel Rebellion

In the death of Captain John Douglass, which occurred on August 17th, Tara loses one of its most respected and valuable citizens. Born in Perthshire, Scotland, on the 12th September, 1833, he emigrated to Canada when eighteen years of age, accompanied by his mother and two brothers, Robert and James. He settled and took up land in the township of Arran, on the border of the village of Tara, in 1851, being among its first settlers. Mr. Douglass, besides carrying on his business of farming and the raising of thoroughbred cattle, was an ardent, intelligent and public-spirited citizen. He held the following offices: Reeve of Arran nine years in succession, 1859 to 1869; warden of the county of Bruce, 1869; president and secretary-treasurer of the Agricultural Society of Tara and Arran for twenty-five years; Justice of the Peace and chief magistrate of Tara for many years; charter member of Knox church, Tara, and secretary-treasurer of the same for over thirty years; captain of number six company, 32nd Bruce Regiment, and was in command of this company when the battalion was called out to assist in the suppression of the Riel Rebellion. He was the first to report his company ready for duty on that occasion. Captain Douglass was decorated with the long service and Fenian medals.

In politics he was a Liberal and a reader of the Globe since its first issue, and an ardent supporter and admirer of Sir Wilfrid Laurier. He leaves his wife, one son, Lieut.-Col. W. J. Douglass, of London, Ontario, lately returned from service in France, and two daughters, Mrs. C. W. Jones, of Carlyle, Sask., and Mrs. Arthur Dalgarno, of Tara.

LOVAT

What might have been a serious accident happened last week when Mr. Wm. Johnson of the 18th con. of Greenock was going home from Paisley. While ascending Stark's hill the drawbolt broke in the buggy and Mr. Johnson gave a quick jerk on the reins, breaking the bridle bit. The horse thus being given freedom of action, plunged into the ditch, breaking the shafts and clearing itself from the buggy. It then struck for home at a 2.10 gait. Mr. E. N. Brownscombe caught the steed and kept it in captivity until Mr. Johnson appeared on the scene, in a car driven by Mr. Caldwell of the 10th of Bruce. Outside of the horse getting a few scratches and lapidated, no great loss was sustained.

Miss Lizzie Ross returned home from the Bruce County hospital last week after undergoing an operation for appendicitis. Dr. Houston performed the operation.

Miss Essie Barrie, trained nurse of Toronto, is visiting her parents, Mr. and Mrs. Wm. Barrie.

Mr. Henry Dent, the obliging central operator at Underwood, has been spending holidays at Mr. Jas. Pace's.

ELORA ROAD NORTH

Mr. Jas. Bryce is home from Toronto.

Mr. and Mrs. Harry McTavish spent Sunday at Chatsworth.

Mr. Geo. Daniel has had the Bell phone put in.

Pres. Angus McDougall and Carl Winch are home from Petawawa on a month's leave. Their assistance will be needed for the harvest and threshing.

Mr. Jas. Dudgeon is threshing on the line.

Mr. and Mrs. S. Young and daughter Margaret motored up from Guelph to visit at Mr. A. Ewing's last week.

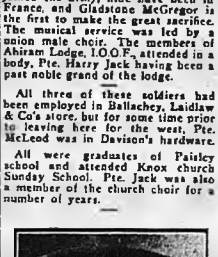
—Rev. and Mrs. A. A. Campbell and family, of York Mills, spent vacation visiting in Paisley and Saugeen. While in town they were guests at the home of Mrs. Campbell's mother, Mrs. Buchanan, Inkerman St.

Our Growing List of Fallen Heroes

PTE. JACK McLEOD, OF CALGARY DIED OF WOUNDS

The first Paisley boy to become a participant in the great struggle at arms is numbered among the dead heroes of his country. Jack McLeod, only son of the late Alex McLeod, of Paisley, and Mrs. McLeod, now of Calgary, enlisted in September, 1914, and went overseas with the original famous Princess Patricia Light Infantry Battalion. He was badly wounded with shrapnel in the back, had a leg broken and was gassed in the first big drive at Hill 70 the following April, and was three months in hospital in France before he was able to be moved to England. When able to travel he was sent to a convalescent hospital in Calgary and in the dark days of reverses when Russia collapsed he worked hard recruiting men in the west. In February, 1916, he returned to England with the American Legion as sergeant, but became so anxious to return to the fighting line that he reverted to private, went over again, and has seen much hard fighting in France. He was wounded on August 10th with gunshot wounds in chest and arm, necessitating amputation of his hand and thigh. On Aug 16th he succumbed to these wounds, after being six days in hospital at Rouen, France. He was 25 years and 11 months old. His sorrowing mother and two sisters survive. His sister (Winnie), Mrs. McPherson of Ellbow, Sask., lost her little daughter who died very suddenly of cholera infantum the day the cable came with the news of her brother's death. Their minister who himself had just lost a son in the Canadian drive was scarcely able to conduct the funeral service for the bereaved family. Many old friends in this locality will extend their deepest sympathy to Mrs. McLeod and her daughters in their great loss.

PTE. HARRY JACK



Reported killed in France, July 10th, son of Mr. and Mrs. Alex Jack, Paisley

MEMORIAL SERVICE

"I shall be missed, because thy seat will be empty"—1 Samuel 20: 18. From these words Rev. G. C. Little, B.A., took his text on Sunday evening and preached a beautiful and touching sermon in memory of three of our soldier boys who now lie peacefully on Flanders fields—Harry Jack, Gladstone McGregor and Jack McLeod—news of the latter's death having reached town after the memorial service had first been arranged for. The large church edifice was crowded, the seats being occupied more fully than at any service for many years past. Revs. Neilson, Walker and Diehl also took part in the service, the latter taking occasion to make a special reference of the boys who formed the Boy Scouts organization here a few years ago, with Mr. Diehl as scoutmaster. Of the sixteen lads eleven joined the army, nine have been in France, and Gladstone McGregor is the first to make the great sacrifice. The musical service was led by a union male choir. The members of Ahiram Lodge, I.O.O.F., attended in a body, Pte. Harry Jack having been a past noble grand of the lodge.

All three of these soldiers had been employed in Ballachey, Laidlaw & Co's store, but for some time prior to leaving here for the west, Pte. McLeod was in Davison's hardware.

All were graduates of Paisley school and attended Knox church Sunday School. Pte. Jack was also a member of the church choir for a number of years.

PTE. GLADSTONE McGREGOR

Killed in action, Aug. 18th, son of Mr. and Mrs. D. McGregor, Paisley

The writer of the following letter of condolence was with the 160th until that battalion was broken up, but received his discharge and returned home from England at the time Pte. Gladstone McGregor went to France:

To Mr. and Mrs. McGregor:

I wish to convey to you my deepest sympathy upon learning of the death of your noble son, Gladstone. I am sure it is a terrible loss to you all. As an intimate friend of his and a member of the bugle band, I feel deeply grieved, as he was such a good friend to all he knew, and I know the sympathy of all the bugle band will be with you as he was so well liked by all who knew him. A better living soldier could never be found, and I feel it very much to think I have lost such a good friend. I know it will have brought a great deal of sorrow to you all, but you must feel proud to think he died fighting for his home, his king and country. So once again I convey my deepest sympathy to all.

Yours sincerely,
S. Crowhurst
Kincardine, Ont.

Among the Wounded

Signaller Val Cottrill, officially reported wounded, is a son of Mr. and Mrs. J. B. Cottrill of Port Elgin, and formerly of Gresham. He was admitted to Rouen hospital on Aug. 12, suffering from gunshot wound in the left arm.

A Successful Shower

The council chamber was a busy scene last Saturday when the following articles were taken in: 19 shirts, 125 pairs socks, 27 suits pyjamas, 214 towels, 32 pillow covers, 3 sheets, 2 feather pillows. Cash donations have been received to the amount of $150.

Quilts for Sailors

All can aid by making one or more blocks, or contributing patches, lining, batting, etc. A supply of patches already cut will be at the town hall, Saturday, Sept. 8th and 15th, afternoons and evenings. Blocks 1 yard or 1 foot square. Announcement of quilting later.

After Defaulters and Evaders

Eligible young men who are trying to evade military service will have a slim chance of escaping the net, as the Dominion police are very active in scouring the country. Mr. Alfred Pegg, D.P.C. 778, is working in this district and was in Paisley last week, looking up a missing man. He will investigate some outstanding exemptions and age claims that seem doubtful. Business places, works shops, factories, as well as farms, or other places employing men are liable to receive a call from him at any time in search of those who should be in khaki.

Runaway Accident

Mr. Wm. J. Craig, of Burgoyne, was the victim of a nasty accident one day last week. While driving a cultivator in the field the tongue of the implement came out of the neck-yoke and his team ran away. Losing control of the animals he attempted to throw himself backwards, but his foot caught in the levers and he was dragged for some distance. His collar bone was broken and he suffered numerous bruises about the head and upper part of the body, but he is now recovering nicely.

Labor Day Sermon

Rev. G. C. Little preached a special sermon on Sunday morning, this being labor Sunday, which has been so observed in the churches for ten years past. The idle man, the speaker said, was often envied, particularly by those who are overworked, but he is not honored by either God or man. There is some misconception as to the definition of a laboring man. It is generally accepted that he with the overalls, who carries a dinner pail and often has a dirty face, is the only laboring man. While many others are as hard worked, there is not so much sympathy for the man who has not a beginning employment. This is the day of the laborer's opportunity. The millionaire has had his time of grabbing and squeezing. The world has to thank the laboring classes for the hearty and ready response to the call to duty at this time. Without the rally of working men there might have been no victory to-day. They have done their duty nobly, not only in coming forward as fighting men but also in supplying the ships and munitions required so urgently. The man who works with hand and brain, and gives not only his strength but his life and soul is worthy of every honor. Some have the idea that Eden was intended to be a place of idleness, but according to the proper reading of the word man was not placed there to do nothing, but to dress and keep it. Labor is the law of God and of wisdom—be diligent in business, fervent in spirit, serving the Lord. Christ was born in a working man's family, his hands became hardened with work as a man, and he was known as the working man's son. It was Carlyle who said that without labor there was no ease nor no rest, and it is quite true that work is a blessing. In disgeise, making rest possible. Labor is the law of the universe, for all nature works. Plant life works at building up its organism, while animal life is ever active. God did not make man to be an idler. While the fall of man did not bring work upon him, it made his work more difficult. One soon becomes tired of idleness. The highest peace of conscience comes to those who have done honest work and given full value for their earnings. Many would be completely overcome by their sorrows and troubles were they not forced by the press of life to forget them. Heaven is a very busy place, where there is something doing all the time. Everyone there is busy with God's work, and it is no place for the sluggard. God is constantly at work on His plans. Happiness depends largely on how we enjoy our labor. Those who leave their tasks unfinished derive no pleasure therefrom. It was not attended by the Almighty that man should suffer by his labor, but through the harshness of our system of industrialism many are only eking out an existence. There are great changes coming in the world and the conviction is growing that no man can make a slave of his fellows.

—Virtue is not to be considered in the light of mere innocence or abstaining from harm, but as the exerstaining from harm, but as the exertion of our faculties in doing good.

Baseball

After a very quiet summer in sporting circles, the baseball fans have come to life in this district. At a tournament held at Tara on Labor Day there were four teams competing—Tara, Salem, Paisley and Port Elgin, the first two playing the final game, which was won by Tara. The attendance was quite large, receipts at the gate and refreshment booth amounting to over $85. Paisley ball players are being coached by Mr. Milless, and with a little practice on the diamond will develop a winning form. On Tuesday evening next it is expected that Port Elgin team will play a return match with the boys here. Arrangements are also being made for a local match on Thursday evening of this week between married and single men.

From the Fuel Administrator

Our coal dealers have received a letter from the Fuel Administrator for Ontario, and a copy of the document is also in the hands of Reeve Steele, in which certain directions are given as to the supply and distribution of coal in the municipality and district. The allotment of anthracite for Paisley is 270 tons, which is considerably less than the average for recent years. One of the most important regulations is that a dealer should not supply coal to anyone who can obtain wood. The 270 tons will go round pretty well if fairly distributed, and the allotment is supplemented by an extra large wood delivery in town. As several parties are preparing for wood cutting operations this fall and winter, there should be a good prospect of a comfortable winter for our householders.

Cruickshank

The Tailor

For the BOYS & GIRLS

The Fight.

It was Bobby's very first day at school, and really he didn't quite know what to do. It seemed to him it was a very important day; the day, in fact, when he had definitely started toward the greatest desire of his heart—being a man.

His curls had been cut short; he'd a full-size handkerchief, exactly like his father's, and a brand new cap that didn't in the least resemble a baby cap. He had, in short, if his own feelings were anything to judge by, stepped clear of babyhood. Even his mother, when she had kissed him at the gate, had said, "Good-bye, little man," and Dad had done even better, calling, with sort of an off-hand nod, "Wish you luck, young man."

At the gate he joined Tom Matthews, and together they marched toward the great brick building which was to mean so much hereafter to both of them.

"Tell you what," said Bob, and he appeared somehow about an inch taller as he spoke, "it makes a fellow feel good when he knows he's going to be a man."

Tom nodded. "Bet yer boots," he agreed. "I 'spect we'll get into 'bout forty-leven fights before night."

"What-t-t!" Bobby's eyes widened.

"Course. If a chap's going to be a man he's got to be one," declared Tom emphatically.

Bobby tucked the thought away in the back part of his mind. He was no coward, but somehow that wasn't quite as he had been taught. Yet, after all, most likely his mother didn't really know, because she was a woman, and maybe women shouldn't be expected to know what men had to do.

As the two lads reached the schoolyard gate the master of the building came briskly from the opposite direction and stepped in just ahead of them. Their eyes followed him up the walk. "I'd like," said Bob, watching the swinging stride, the broad shoulders, the keen, alert face, "to be that sort of a man."

Tom nodded. "Bet yer life," he said, "he can fight."

Next instant the gong sounded, and a moment later school had begun.

As the day wore along Bobby's eyes grew very bright and his cheeks very red. Often he glanced from his work to the bright-eyed teacher who, next to Master Wardwell, seemed the very embodiment of wisdom.

He liked to watch the little glints in her eyes, and he wondered once or twice if he was to fight a great fight some day if she would not be proud of him. He felt quite eager to try, and then and there a sudden resolve came to him that he would make her proud of him some day.

His eyes shone a little brighter at the mere thought, and then, just as Miss Archer turned for a moment to the window Tom caught his eye and twisted his face into such a queer knot that before he knew what was happening he had snickered outright.

Miss Archer turned. The room was very still. "Who was it laughed?" she inquired.

Tick, tick, went the clock. The song of a bird floated in, but otherwise there was not a sound. Bob's eyes were fixed steadily on his book.

Yet again the teacher spoke. "I asked," said she very distinctly, "who it was that laughed."

As the silence continued she turned away. "Very well," said she, and there was no more light in her eyes.

Slowly the hands of the big clock crept around toward four. Bobby's head was bent low over his work. His cheeks were scarlet. He wished there were no such thing as school. "Course," he said to himself, "'twas all right. I didn't tell a lie. I just kept still." And his mother's voice seemed to answer, in the very words he had so often heard her speak, "You can tell a lie, my son, as much by action as by words."

A few minutes before four Master Wardwell came in.

With keen eyes he looked searchingly into the forty boy faces before him. "I've just time to greet you as coming men, boys," he said heartily. "You're headed toward the upgrade, and I hope you'll all make the top without a single break. But not many of us do. Yet if we all stand together and pull together we'll get there in time."

The short hand of the clock lacked just a minute of four, and suddenly Bobby was on his feet.

He didn't understand why, but he knew that unless he told he could never face his mother.

His face was very white; a great lump was in his throat. The teacher's face and the master's tall form seemed to waver in a mist. "Please, Miss Archer, I laughed."

Behind him someone tittered. Then it was very still.

He sat down, thinking drearily that he'd have to give up making that great fight after all; that most probably they'd tell him he couldn't come there to school any more. Then, very clearly, the master's voice went on:

"There are a great many ways," said he, "of winning a fight, and a great many kinds of fight. But the biggest fight of all is the fight a boy has with himself. And when he wins that he proves, beyond a doubt, that he's a man."

Turning, he spoke in low tones with Miss Archer, and the very next moment walked down the aisle and stood, hand outstretched, before Bob. "My lad," said he, "I want to shake hands with a boy who won the good fight of a man. You and I are bound to be chums." And as Bob slipped his hand into the big, firm one his eyes met Miss Archer's, smiling face once more, and full of light.

"THE COCKPIT OF THE WORLD"

WHERE MANY FAMOUS BATTLES WERE FOUGHT.

Belgium and Northern France For Nearly Ten Centuries Battleground of Europe.

France and Belgium have been the battleground of Europe for nearly a thousand years. The course of history has been altered many many times in the centuries past by the struggles that have occurred in the territory that is embraced now in the western front. Our boys literally are fighting in the "cockpit of the world." A glance over the map will show, among hundreds of others, these battles which have had direct influence on the fate of nations and peoples:—

Catalaunian Fields.—A plain near Chalons-sur-Marne, France, famous for the victory of Aetius and the Gothic King Theodoric over Attila and his Huns—451 A. D.

Oudenarde.—The Allies under the Duke of Marlborough and Prince Eugene defeated the French under Vendome and the Duke of Burgundy—July 11, 1708.

Courtrai, West Flanders, the Ancient Cortoriacum.—Twenty thousand Flemings defeated forty-seven thousand French under Robert of Artois in the "Battle of the Spurs," July 11, 1302. The Fleming revolt began on May 19 and was led at Bruges by Philip de Conyac, master of the cloth weavers, and John Deydel, master of the butchers.

Pontenoy, Belgium.—The French under Marshal Saxe defeated the allied English, Dutch, Hanoverians and Austrians under the Duke of Cumberland, losses on both sides being very great—May 11, 1745.

Roulers, 27 miles west-southwest of Ghent.—The French under Pichegru and MacDonald defeated the Austrians under Clerfayt on July 13, 1794.

Amiens.—The Germans under Marshal Von Hutier defeated the French on November 27, 1870.

Battles of St. Quentin.

St. Quentin.—The army of Philip II. under Philibert Emmanuel defeated the French under Constable Montmorency on August 10, 1557. The Germans under Von Goeben defeated the French under Faidherbe in 1871.

Agincourt, a village in Pas de Calais.—The English under Henry V. gained a victory over the French under Constable d'Albert on October 25, 1415. The French were said to have numbered 60,000 and the English only 15,000.

Lille, belonging to the House of Hapsburg, was taken by Louis XIV. in 1667. It was unsuccessfully besieged by the Austrians in 1792.

Bouvigny.—The French under Philip Augustus defeated the army of Otto IV., Germans, Flemings and English, on July 27, 1214. Otto's loss was 30,000.

Landrecies, Department of the Nord —Taken from the French by Charles V. in 1543. It passed from Spain to France and back several times and was besieged and taken by the Allies in 1794 and by the Prussians in 1815.

Crecy, a village on the Somme.—The English under Edward III. defeated the French under Philip VI. on August 26, 1346. The French lost 30,000 in the engagement.

Waterloo.—The Allies under Wellington gained a decisive victory over Napoleon on June 18, 1815.

Lens, Pas-de-Calais.—The French under Conde gained a decisive victor over the Spaniards under Archduke Leopold William on August 20, 1648.

Fortunes of Lorraine.

At Nancy, the ancient capital of Lorraine, Charles the Bold, Duke of Burgundy, was defeated and slain by the Swiss on January 5, 1477. It was taken by the French in 1633, restored in 1631 and passed again to the French in 1766.

Wavre.—The Prussians under Thielmann checked the French under Grouchy, preventing them from interfering with Blucher, who was thus enabled to arrive at Waterloo in time.

Ramillies.—The Allies under Marlborough defeated the French and Bavarians, which led to the capture of nearly all the fortresses held by the French in the low countries.

Quatre-Bras.—The French under Ney met the Allies under Wellington two days before Waterloo. Ney was forced to retreat (June 16, 1815).

Fleurus.—Duke Christian of Brunswick and Count Mansfield defeated the Spaniards August 29, 1622; the French under Luxembourg defeated the Allies under the Prince of Waldeck on July 1, 1690; the French under Jourdan defeated the Austrians under Coburg on June 26, 1794.

Steenkerke.—The French under the Duke of Luxembourg defeated the Allies under William III. of England on August 3, 1692.

Belle Alliance.—A farm occupied by the centre of the French infantry at the battle of Waterloo, June 18, 1815, Napoleon himself being stationed in the vicinity. By this name the Prussians designate the battle of Waterloo.

Ligny.—Napoleon beat the Prussians under Blucher, June 16, 1815.

Turnhout.—The Dutch under Maurice of Nassau defeated the Spaniards, January 22, 1597. The Belgians defeated the Austrians on October 27, 1789.

Rocourt.—The French under Marshal Saxe defeated the Austrians and their allies on October 11, 1746.

Victory Over the Austrians.

Jemmapes.—Famous for the decisive victory of the French under Dumouries over the Austrians under the Duke of Saxe-Teschen on November 6, 1792. It was the first battle won by the Republic and was followed by the occupation of Belgium.

Tirlemont.—Taken by Marlborough in 1705, and near it Dumouries defeated the Austrians on March 16, 1793.

Seneffe.—An indecisive battle fought by the French under Conde and the Dutch under William of Orange on August 11, 1674. The French under Marceau defeated the Austrians in 1794.

Hasselt, capital of Limbourg.—The Dutch under the Prince of Orange defeated the Belgians.

Sedan.—German army under William defeated the French under Napoleon III., Macmahon and Wimpffen. This defeat led to the fall of the French Empire (September 1, 1870).

Rocroi.—The French under the great Conde defeated the Spaniards on May 10, 1643. The town was taken by the Allies in 1536 and by the Germans in 1871.

Mt. Disier.—Charles V. besieged the town in 1544, and it was the scene of several combats between the French and the Allies in 1815.

Arcis-sur-Aube.—Scene of an unsuccessful attempt on part of Napoleon to prevent a juncture of Schwarzenberg and Blucher.

Laon, residence of the early kings, suffered in the English, religious and League wars. Blucher was victorious here over the French in 1814.

Rheims.—The ancient Gallic town Durocortorum, chief town of the Remi. The ancient cathedral was the place of coronation of the kings of France. Clovis was crowned here in 496. Joan of Arc crowned Charles VII. here in 1429. Napoleon defeated the Russians near Rheims on March 13, 1814.

Little Lad

One still September day you ran to me
High up on hill where I was waiting you
And oh, your eyes—so blue, so blue!

How gold your hair gleaned in the sun
Your head held back to breathe the autumn air,
Your arm flung round me and your eager smile—

How precious is this thought of you to keep,
Now that you have left me for awile.

They tell me when you climbed that hither hill—
Was it for one brief month ago?
You held your head thrown back to breathe the air
And your young soldier face was all aglow.

As though you saw, beyond the hill's high crest,
Some joy too deep to tell, a sign
As though there waited for you there
A greater love than mine.

Versatility.

Jones (to Brown, amateur dabbler in chemistry)—Do you do anything with that great invention of yours for annihilating the German army?

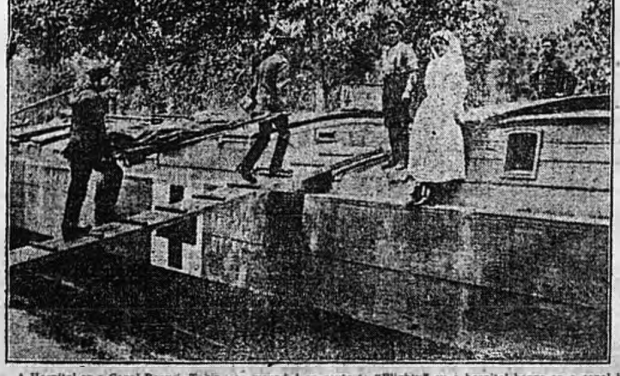
Brown—No. It wasn't quite strong enough; but I'm bringing it out this year as a slug-killer for allotments.

THE WEEKLY SERMON

For I reckon that the sufferings of this present time are not worthy to be compared with the glory which shall be revealed in us.—Romans, 8, 18.

Saint Paul was able to draw this conclusion because his vision was clear enough to enable him to see beyond the here and now. Without vision it is impossible to understand the relations, and inter-relations, of nations and peoples in such perspective that we may appreciate why, it may be necessary that trial and suffering play a part in the struggle, not only for the development but also for the salvation of the soul of a nation. Whenever the destructive forces of selfish and sinful men clash with the constructive forces of a righteous God there follows a conflict in which righteousness is bound to triumph. That righteousness may overcome the resistance of evil it becomes necessary, through a period of conflict, to so adjust and readjust the powers of life as not only to permit but to compel an unfolding and development of the life of the soul.

To Save His Soul



It is a fact, strange as it may seem, that it always has been difficult to make men know and understand themselves. They are slow of heart to believe, and are often as dense and stupid that they will not live in the enjoyment of the heritage which is theirs as the children of God. The problem of human happiness would be solved if men would only relate their lives to the programme of human advancement by a closer walk with God. When they will not do this they become entangled in endless difficulties and are made to suffer. Let us reflect a moment:—The suffering is not sent to crush the soul of man but to rid his soul of that which is destroying his life and to save his soul for the glory of God and his own eternal good.

A New and Better World

It is too awful even to suggest that the titanic struggle now being waged between the nations of the world is to be permitted to fill the earth with nothing but sorrow, sadness and bitterness. Our faith forbids us to accept such a conclusion, but rather makes very clear that the world in this struggle is being led out of that condition of thinking and living which made the conflict possible. The fighting, which is with weapons of steel and which is strewing the earth with the bodies of men, is nothing less than a soul struggle. Mankind had lost itself in the confusion of Egyptian darkness, where as strangers they wore the yoke of bondage. They will find themselves only when they reach the land of promise and stand face to face with God in the recognition that they are His children. The pathway from Egypt to the land of promise lies through the wilderness of testing, of trail, of discipline and, it may even be, of suffering.

It is a long way from slavery to freedom. It is a real and not an imaginary struggle. The battle may be fierce and the price demanded may be high, yet it is a contest from which no self-respecting nation or individual would dare withdraw until victory had crowned its efforts.

God grant to us the faith and consecration of Him "who for the joy that was set before Him endured the cross, despising the shame, and is set down at the right hand of the throne of God." —Rev. H. Percy Silver.

A Hospital on a Canal Barge—Taking on wounded en route to "Blighty" on a hospital barge on a canal in France.

OPINIONS ON WORLD PROBLEMS

By Chas. M. Bice, Attorney-at-Law, Denver, Colorado

ITALY'S NAVAL ACHIEVEMENT.

Early in last June a thrilling story was told of the successful adventure of Lieutenant Commander Rizzo of the Italian navy in a small torpedo boat, attacking in the open sea an Austrian squadron attended by ten destroyers. Protected by a few escorting destroyers Rizzo succeeded in forcing his way through the enemy line and sank the leading battleship, also fired one torpedo into the second battleship. Previously a story was told of a daring entrance by this same Commander into an Austrian harbor at night, where he destroyed a large transport.

It was inferred that these were isolated cases, but according to an article by an Italian writer in the North American Review, not less than eleven successful adventures of this kind have been made by these swift Italian torpedo boats, and much damage done to the Austrian navy.

* * *

The activities of the Italian navy have been confined to the penetration of harbors with torpedo boats which have been given the name, "Mersagglieri of the Sea," bersagglieri being a title that properly belongs to a class of infantry sharp shooters. Perhaps no more brilliant and daring acts than these harbor attacks have been made during the war. It is related of an entrance into the port of Trieste by two small torpedo boats under command of Rizzo, that they went in a dense fog on a very cold night, and the men were obliged to spend two hours cutting eight large wire ropes across the harbor entrance, and to lower the connections of large mines, in order to pass over them safely.

Two big Austrian battleships were at the extreme interior of the harbor, their exact location having been learned through the day by seaplanes. The Italians sank one of these ships and threw torpedoes against another of equal size, but they were unable to learn whether or not the latter sank, because of the necessity of haste in getting away.

* * *

In this quiet manner great damage has been done to the Austrian navy, while the Italian fleet has suffered scarcely any harm. Commander Rizzo is a popular hero in Italy, and has been honored by the government most fittingly for his heroism.

He is not the only officer who has staggered in these raids, but has been the most successful.

Lieutenant-Commander Pellegini entered the port of Pola and torpedoed a large ship, but signalled "We are sinking our boat." He and his crew were taken prisoners.

While we hear but little of Italian raids and accomplishments, as they are seldom spectacular, Italy is justly proud of her navy, and extols these wonderful acts of bravery and daring displayed by her heroic seamen.

LLOYD GEORGE'S WARNING.

The premier's recent review of Great Britain's record in the war is told in his usual felicitous way, and the story of achievements is worthy of the empire's history. He refrains from boastfulness, but is proud of the record, as well he might be.

In the closing words of his memorable speech, are words of warning that the Allies will do well to heed. After four years of bitter struggle, of alternate high hopes and great disappointments, the chosen leader of the British nation sees the tide of battle turning definitely, and we trust permanently, toward allied victory.

He acknowledges, without any reservation, the important part that America has already played in effecting this change of fortune, and pays high tribute to the fighting quality of her soldiers and the superb worth of her officers; he predicts that the American army will soon exceed that of Germany, and these seem to be the chief factors in his confidence of the military defeat of Germany which is not now merely possible, but certain.

* * *

But like we in America he fears about him the voices of those who urge a compromise peace. Lord Lansdowne's piping utterances for peace he disregards and summarily dismisses; but he bears others, too, advocating peace parleys and talking in lowa terms of a so called "league of nations." He wants peace, and believes in a league of nations, but he don't want it till Prussianism is forever crushed. He sees that there is grave danger in seeking peace prematurely and warns against it until we are assured that it will not become the instrument of selfishly ambitious powers.

"The people who made the war," he declares, "are still prosecuting sinister aims. You cannot have peace as long as they are predominant in the councils of our chief enemy."

* * *

We all know it would be folly to accept any peace offer, for it would be dishonest and the motive behind it one of betrayal and assassination.

We expect the enemy will offer peace terms, for they will have to do this to escape defeat, its their last card to play now.

As the premier states "The people who made the war" must be dispossessed of power. The only Germany with which a peace can be made safely, is a Germany freed from Prussia, and this severance is not likely to take place until Prussian Militarism is crushed.

* * *

No league of nations can include Germany until Kaiserism is dethroned and disarmed. A league of nations that excluded Germany would be a league organized for war rather than for establishing peace.

But if Germany should be admitted while Prussia is still the dominant power, as the premier states, "Every time you came to a decision the Prussian sword would clank on the Council table." That sword must be broken, and is the work yet to be done by Foch, Haig and Pershing, and the less we say or do to hinder it, the sooner the hour will come when a real peace may be made and the league of nations formed for keeping it.

EGYPTIAN SCARABS.

Effigies of the Beetle, the Sacred Insect of the Ancient Nile Country.

The ancient Egyptians made the cat a god. They similarly deified a bird, the ibis. Likewise a reptile, the crocodile. And, not to leave out the fourth branch of the animal kingdom, they adopted a beetle as an object of worship.

From our heretic point of view there is scarce any humbler insect than the common dung-beetle, which devotes its most important energies to pushing about a little ball of material that is meant to serve for the housing and incubation of its eggs.

But to the Egyptian of old it was a sacred creature. To his imagination, the ball typified the world, and the beetle that pushed it about was a living emblem of immortality.

The beetle in question is known to the modern naturalist as a "scarabaeus." It is a tribe that has many species, but the one that achieved celebrity before the Pyramids were built is an insect common enough in the Egypt of to-day. It is about an inch long, and has thirty "toes," one for each day in the month.

Ostensibly, the insect was of no account. Viewed with the eye of religious imagination, it signified unspeakable things. The soldier wore it to make him brave; the married woman to bring her children.

Effigies of the beetle were made in all sorts of materials—smethyst, onyx, agate, lapis lazuli, jasper and, in humbler substances, even clay. They were supposed to possess the same miraculous attributes as the veritable insects.

The oldest of such scarabs date back to 3000 B .C., and are of clay, covered with a green glaze. In all the ancient centuries they were worn in finger-rings, in necklaces, and as amulets. They were commonly put into coffins with mummies to express a faith in resurrection. As many as 3000 of them have been found in one tomb.

People nowadays often wear ancient Egyptian scarabs as "charms." But their authenticity is not always beyond doubt. In recent years, to supply the great demand, machine-made scarabs have been turned out by millions in Cairo, for sale to the gullible. In workmanship they are superior to the veritable article.

Women On the Farm

I am now converted to the practical usefulness of women on the farm." Dr. G. C. Creelman, Minister of Agriculture for Ontario and President of the Ontario Agricultural College, Guelph.

Flammenwerfer: (literally "flame hurler") is a device used by the Germans for throwing fire at their foes.

Getting money is not all a man's business; to cultivate kindness is a valuable part of a man's business," was said by Dr. Samuel Johnson.

Vase and flowering plants protected from the early frosts will look well in the fine weather that usually follows. Newspapers spread over the plants and tied or weighted with stones will protect them.

Mourning

Shall I wear mourning for my soldier dead,
I—a believer? Give me red,
Or give me royal purple for the King
At whose high court my love is visiting.
Dress me in green for growth, for life made new;
For skies his dear feet march, dress me in blue
In white for his white soul—robe me in gold
For all the pride that his new rank shall hold.
In earth's dim gardens blooms no hue too bright
To dress me for my love who walks in light!

LEMONS MAKE SKIN WHITE, SOFT, CLEAR

Make this beauty lotion for a few cents and see for yourself.

What girl or woman hasn't heard of lemon juice to remove complexion blemishes: to whiten the skin and to bring out the rosee, the freshness and the hidden beauty? But lemon juice alone is acid, therefore irritating, and should be mixed with orchard white this way. Strain through a fine cloth the juice of two fresh lemons into a bottle containing about three ounces of orchard white, then shake well and you have a whole quarter pint of skin and complexion lotion at about the cost one usually pays for a small jar of ordinary cold cream. Be sure to strain the lemon juice so no pulp gets into the bottle, then this lotion will remain pure and fresh for months. When applied daily to the face, neck, arms and hands it should help to bleach, clear, smoothen and beautify the skin.

Any druggist will supply three ounces of orchard white at very little cost and the grocer has the lemons.

HOW BEES KEEP WARM.

Wonderful Way in Which They Generate Heat in Winter.

The bee upholds his reputation for industry throughout the winter months as during the summer. Being susceptible to cold, the bee must have some means of supplying warmth.

It was found by experiment that only the shell of the cluster made by the bees in cold weather is compact. This is formed by one of several layers of bees all soldily arranged with their heads inward, their hairs interlacing.

This arrangement is perfect for conservation of the heat within. Except for an occasional shift of positions the bees forming the shell are quiet. But within the shell strange things are going on.

It is here that the heat is generated. And the antics are not alike our own when we are cold.

The bees are packed loosely within the shell so that there is plenty of space for many bees to be exercising at a time. Rapid fanning of the wings, shaking the body from side to side, rapid breathing and other movements are all parts of the scheme for raising the temperature.

In one particular instance, when a bee had been rapidly fanning with his wings for seven and a half minutes, the thermometer nearest him rose half a degree Fahrenheit.

The Elastic Globe.

To the layman nothing may seem more rigid than the crust of the earth, but men of science say that it bends and buckles appreciably under the pull of the heavenly bodies.

Observation has shown that the shores on opposite sides of a tidal basin approach each other at high tide. The weight of water in the Irish Sea, for example, is so much greater at that time that the bed sinks a trifle, and in consequence pulls the Irish and English coasts nearer together.

Thus the buildings of Liverpool and Dublin may be fancied as bowing to one another across the Channel, the deflection from the perpendicular being about one inch for every sixteen miles. It has also been shown that ordinary valleys widen under the heat of the sun and contract again at night.

YES! LIFT A CORN OFF WITHOUT PAIN

Cincinnati man tells how to dry up a corn or callus so it lifts off with fingers.

You corn-pestered men and women need suffer no longer. Wear the shoes that nearly killed you before, says this Cincinnati authority, because a few drops of freezone applied directly on a tender, aching corn or callus, stops soreness at once and soon the corn or hardened callus loosens so it can be lifted off, root and all, without pain.

A small bottle of freezone costs very little at any drug store, but will positively take off every hard or soft corn or callus. This should be tried, as it is inexpensive and is said not to irritate the surrounding skin.

If your druggist hasn't any freezone tell him to get a small bottle for you from his wholesale drug house. It is fine stuff and acts like a charm every time.

Feed The Bees.

Now is the time to save out the honey for fall feeding. It is the poorest kind of economy to skimp the bees on their allowance of food. Be sure to take honey for feeding only from healthy colonies. Examine the brood nest carefully and see that there are no dead larvae in the cells. Boiled honey is not fit for winter food for bees.

Lachute, Que., 25th Sept., 1908.
Minard's Liniment Co., Limited.

Gentlemen, Ever since coming home from the Boer war I have been bothered with running fever sores on my legs. I tried many salves and liniments; also doctored continuously for the blood, but got no permanent relief, till last winter when my mother got me to try MINARD'S LINIMENT. The effect of which was almost magical. Two bottles completely cured me and I have worked every working day since.

Yours gratefully,
JOHN WALSH.

Curly Hair a Blemish in Japan.

Curly hair is not admired in Japan. There are many people who have curly hair, but it is difficult to say how many, for Japanese ladies try as hard to straighten their hair as American ladies do to curl theirs. In these modern days various preparations for straightening hair are sold in drug stores, and there are beauty parlors in the principal streets of Tokio which advertise to "straighten hair by new devices for making it lasting straight —and no injury to the hair."

MONEY ORDERS.

Dominion Express Money Orders are on sale in five thousand offices throughout Canada.

Lady Kathleen Scott, widow of Captain R. F. Scott, who lost his life in his effort to discover the South Pole, is doing her bit by acting as secretary to the Ministry of Pensions in England.

Minard's Liniment Cures Distemper.

Concerning Tile Drains.

It is not enough to think that your tile-drain outlets are all performing right. Best go and see. Muskrats, or boys trapping or hunting rabbits, may have plugged up the tiles, thus stopping the free flow of water from the outlet. Maybe a sod from the bank above has dropped down, obstructing the flow. Caving dirt from the creek bank will shut off an otherwise good outlet. In fact, so many things can happen to close these much-needed drains in spring-time freshets, that you can do no better half-day's work than to take a spade over your shoulder and make an entire round of all these outlets. We once found a rabbit wedged tightly into one of our farm drains several yards from the outlet, and we had to dig out a number of tiles in order to remove the obstruction, which would have made the drain useless for many months. See to it that all outlets are kept open.

A basket cradle for babies, which can be suspended from an automobile seat or folded compactly when not in use, has been invented for the use of most youthful motorists.

Scalloped corn can be made in a baking dish, putting the corn on in layers and seasoning with pepper, salt, butter and grated cheese. Bake till the top is brown.

Minard's Liniment Cures Diphtheria.

Two Useful Designs

One of the reasons why the kiddies like parties. And why shouldn't they if they may wear a charming little frock like this? McCall Pattern No. 8440, Child's Dress. In 5 sizes, 2 to 10 years. Price, 15 cents.

Cool and dainty as a nightgown. This design developed in silk or other material makes a charming negligee. McCall Pattern No. 8437, Ladies' and Misses' Negligee or Nightgown. In one size. Price, 20 cents. McCall Transfer Design No. 848. Price, 10 cents.

These patterns may be obtained from your local McCall dealer, or from the McCall Co., 70 Bond St., Toronto, Dept. W.

FOR SALE

FREE!

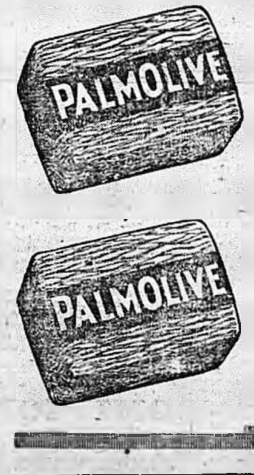
THIS is FREE PALMOLIVE WEEK for every user of this famous soap.

The week in which you buy one cake at the regular price, and secure another full sized cake absolutely free by presenting the coupon which appears below.

Every dealer who sells soap is acting as our agent, in this great free offer. Each will accept the coupon in exchange for a cake of Palmolive provided you buy another cake of Palmolive at the same time.

With all soap selling at war-time prices, this gift will be doubly appreciated—act now, while the supply holds out. Tear out the coupon, sign it and take it to your dealer at once. Don't risk losing your free cake of

PALMOLIVE SOAP



No need to tell you how good Palmolive is. How its smooth, creamy lather is considered the greatest of all toilet luxuries.

Make this your introduction to the luxury you have been missing if you don't already use Palmolive—

—or accept this opportunity to enjoy a cake free if you do.

Palmolive contains Nature's greatest cleansing agents—the Palm and Olive Oils prized since history began as the greatest of all toilet luxuries. Its delicate Oriental perfume adds to the pleasure of its use. Its lasting qualities make it the economy soap.

If You Present This Coupon

FREE SOAP COUPON

This coupon will be accepted (if presented within thirty days) as full payment for one cake of Palmolive Soap when the holder purchases another cake at the regular price of 15c (two for 25¢).

Only one coupon may be presented by each family and the name and address of the party receiving the free Palmolive Soap must be signed in full to the following:

I hereby certify that I have this day purchased one cake of Palmolive Soap from my dealer and received one cake Palmolive Soap Free.

Name .....

Address .....

NOTICE TO DEALER: We will redeem the coupon contained in this advertisement only under the following conditions: Coupon must be returned direct to us by you from customer for whom sale was made. It must bear the full name and address and be signed by the party receiving the goods.

The average daily expenditure of Great Britain for the war is now £34,250,000.

"Truth can be outraged by silence quite as cruelly as by speech."

"Till Harvest or Bust," is the wheat thrift slogan.

In one week in July 4,370 cattle were on Calgary market, as compared with 337 for the same week last year.

Minard's Liniment Cures Colds, Etc.

The Paisley Advocate

PAISLEY, SEPT. 3rd, 1918

—A powerful company of capitalists is making strenuous and persistent efforts to obtain control of the greatest potential water power privilege in this country that is still undeveloped—the Long Sault Rapids on the St. Lawrence river, but are balked in their grasping enterprise by Hon. Hugh Guthrie, Solicitor-General of Canada, who refuses to allow them to put in a dam on the understanding that it would be used only during the war in providing power for war industries. Mr. Guthrie gives the warning that such a company would never relinquish their hold on the privilege after establishing their works, and there is no doubt he is right. Should the Solicitor-General do nothing more in the course of his career in that office than preserve this great natural utility prospect for the people of Canada and the United States, he will confer so great a favor and conserve for them so large an asset that his selection for the portfolio will not have been in vain. With the tremendous benefits to be derived from such a boon, future generations in both countries may well honor the name of Hugh Guthrie as a great benefactor. Long Sault power, if handed over to exploitations by private corporations, would produce quite a crop of millionaires in the next fifty years.

THE DOOM OF PATRONAGE

In all discussions—and they will be numerous and prolonged—on the subject of political patronage, it is well to know and necessary to remember, how the modern system was originated, continued and broken up. It serves no good purpose to affect a hypocritical ignorance in this matter, for the truth will shine out more and more clearly the more thoroughly discussion clears away the fog, and educates the "common mind."

From time immemorial the claim by people near the British King of a sort of right to name their favorites for public offices, has been tacitly admitted and continuously exercised. Theoretically the King is the fountain of his sort of power, as well as of the right to confer honors, and it has not been without many humiliating struggles that British monarchs have let most of this dispensing power pass out of their hands. It would be absurd, human nature being as it is, to expect anything else, or to be indignant because the outcome is what we call "party patronage" to-day.

As responsible government developed in Britain, the maxim that "the King can do no wrong," his Ministers being responsible for all he does, began to be coupled with the complementary idea, that the responsible ministers should have the right to choose members of the civil service. When Canada became a united and responsibly governed Province in the early forties, the then Liberal leaders—Baldwin in Upper and Lafontaine in Lower, Canada—insisted that Governor Metcalfe should appoint civil servants, as he did other public acts, on the advice of his Ministers. This dispute led to, their resignation in 1844, and at the general election thus precipitated the Governor had a narrow majority. Lord Elgin, three years later, recognized the reasonableness of the Liberal contention, and thus established the system that has at last been broken up.

As between an irresponsible Governor and a responsible Ministry there can be no question as to the expediency of the above change, but it was inevitable that it should develop two evils which would make further changes necessary: inefficiency in the service, and a subtle form of political corruption through the right of nomination being surrendered to the members for a constituency or the expectant member or defeated candidate of the party in power. All thoughtful statesmen in Britain, and later in Canada, saw and deprecated this evil, but could do nothing to arrest it. In the United States, President Jackson started the policy of sweeping out of office the whole of the civil servants appointed by his political opponents, and by only slow degrees has the nation got rid of the "spoils" system.

In Canada the war has enabled Sir Robert Borden to continue and extend the policy of civil service reform inaugurated by Sir Wilfrid Laurier a few years ago. Finding himself hampered by the scaly doings of a ministerial colleague too powerful to be "fired," he appointed a commission to enquire into certain matters. One of the members of that Commission was a man noted for brusqueness of manner and vigor of expression. His copy of the report, with marginal comments on certain incidents, went accidentally to the printer, and to the general amazement it appeared in blue book character, marginal notes and all.

Prompted by the fact that never fails him, Sir Wilfrid took advantage of the blunder to do what he would not otherwise have been able to accomplish; he appointed a permanent Commission to recommend appointees after ascertaining their fitness by examinations. Of necessity this system was limited at first to the inside Civil Service, and what the present Government has done is to extend its application to the whole service outside as well as inside. Sir Robert Borden is entitled to credit for what he has done, but the country is not likely to forget that the departure made by Sir Wilfrid Laurier was a far more risky, and, therefore, a more commendable one.—Guelph Mercury.

—When a man has no good reason for doing a thing he has one good reason for letting it alone.

—If you wish success in life, make perseverance your bosom friend, experience your wise counsellor, caution your elder brother, and hope your guardian genius.

—Never hold anybody by the button or the hand in order to be heard out, for if people are not willing to hear you, you had much better hold your tongue than them.

CHILDREN HAVE GREAT RIGHTS

Their Six Prerogatives Defined by Dr. Cody

Watchword of New Era

That the rights of children is the great watchword of the new era was the declaration of Hon. H. J. Cody, Minister of Education, in an address at a luncheon at the Toronto Exhibition. The last century, he said, we had heard of the rights of women, and these were granted because of women's magnificent sacrifices in this war. However, the rights of children were not privileges or gratuities. Dr. Cody said, as he outlined the things to which they are properly entitled and which they had to have if they were to be of greatest service in the future.

Dr. Cody gave a few statistics to show the breadth of the educational system in this Province. The schools are divided into five grades: kindergarten, public, continuation, separate and high. There are 7,146 schools in the province, 13,717 teachers, and ren were not enrolled in the schools. 560,345 pupils. He regretted that the average daily attendance was only 328,846. While he did not know the child population of Ontario, he was inclined to the belief that there was a discrepancy, and that all the children

"If there is any failure either to advise or fulfil on my part, it will not be due to lack of effort, of good-will, and of earnest purpose." The tendency had been in the past to lay emphasis on formation rather than information, he said. To neglect the children to-day was something that was critical, and which was nationally suicidal. The war had emphasized the value of education. Germany had been made a menace to the world because of wrong educational and political ideals. Therefore, it was for us to have our educational and political ideals pursued.

The supreme factor in life, that which exists in education after all, is the spiritual, he said.

Education had been well defined as what maturity owes to youth. The children are the most precious of the duties that Canada has. The first right of children is to be born as one of the great social factors is the decreasing birth rate. If child life is to be conserved, there had first to be the children to conserve. He said that the second right of children was to be well born; to be born physically, mentally and morally sound. The nation that would insure that its children should spend its short and vital years among happy surroundings would in a few years stand out from among the rest of the world as almost superhuman, he declared. The people might say that would cost too much, but nothing of the kind could cost too much.

Thirdly, the children's right was to live, with decent housing, with healthful surroundings, having nourishing food and with good mothering. One of the greatest factors in social life to-day was the large infant mortality, which in Ontario is 9.35 per thousand. The conservation of resources was a great work, but the conservation of human resources is the greatest of all conservation. Dr. Cody added that conservation of children's lives was not merely saving their lives, but it was also developing them. He believed it was most uneconomical to stop the education of children at fourteen, as full value was not being received.

Fourthly children are entitled to protection against drunkenness and neglectful parents. Parents must never try, continued Dr. Cody, to throw on the State their own inherent, God-given responsibility. The fifth right of children is to play. Their last right, he said, is to be given a sound education, and "we to-day construe education in the enlarged sense that the child should be strong in body, cultured in mind, devout in spirit and qualified for his life work."

"As long as I am spared in this office," Dr. Cody said in conclusion, "I want to try and stand for the rights of the children."

GOOD CITIZENSHIP

Has it ever occurred to the majority that those priceless things—ideals of liberty and justice and right living—can be neither bought nor sold? They are not heirlooms and no parent can hand them down ticketed and tied like government bonds or enclosed, like jewels, in a strong box. They may be 'recommended' and even insisted upon but are adopted voluntarily or not at all.

These facts offer food for serious thought on the part of those who are responsible for Canada's future. Whatever ideals it is desirable for the citizens of to-morrow to possess, must be instilled into the consciousness of the children of to-day. The process is a tedious one of "line upon line, precept upon precept, here a little, there a little"—a process at times inspiring but more often than not discouraging. It is a process little realized in the main because its workings are unseen. Not until the generation stands ready for citizenship can it be seen that damage has been done. Only then is one aware of the existence of the harmful influence. Human careers are too precious to be submitted to this exploitation and the most serious duty confronting patriots to-day is the provision of influences that will produce high standards of living for generations to come.

Had this truth been recognized from any other than a largely theoretical standpoint by the men and women of the preceding and the present generation it would not have been possible for the vicious theories promulgated by Frederick the Great (wrongly so called) to be working themselves out to-day in Prussian atrocities. There can not be too vigorous pushing of baby welfare movements or the establishment and maintenance of supervised playgrounds. By Scout movements, national health boards, carefully considered housing schemes, city planning and other movements that centre in the cleanest, finest living. An examination into the things in which all were most keenly concerned a decade ago will not result in a list of these things as national interests. Everyone of them must be absorbing interests if Prussianism is to be stamped out forever.

INTESTINAL PARALYSIS

"Fruit-a-tives" Quickly Relieved This Chronic Trouble

589 CARGILL STREET, MONTREAL.

"In my opinion, no other medicine is so curative for Constipation and Indigestion as 'Fruit-a-tives'.

I was a sufferer from these complaints for five years, and my sedentary occupation, Music, brought about a kind of *Intestinal Paralysis; with nasty Headaches*, belching gas, drowsiness after eating, and pain in the back.

I was induced to try 'Fruit-a-tives' and now (or six months I have been entirely well". A. ROSENBURG.

SHOULD CONGREGATIONS GET A HOLIDAY?

The Kincardine Review makes the following rather original comment:

The church attendance is usually very small during the holiday season and the minister is away on his vacation. Before leaving he usually exhorts his flock to be faithful in their attendance during his absence and announces that Rev. So and So will conduct the services the first Sunday and Rev. So and So the following Sunday. Did it ever occur to the management that the congregation would enjoy a holiday as well as the preacher? They are not much interested in strange preachers, and a great many feel it is their duty to attend when a stranger is holding forth, while in reality they would rather be absent than sit there sweltering in the heat. We certainly think that the pastor, who has had hard work all year, is entitled to a vacation. He comes back rested physically and spiritually, and the congregation are as human as the pastor, and no doubt the same rule would apply to them as well.

The Kincardine Reporter comes back with the following: The editor of The Review suggests that the men managing "give the congregation a holiday." We don't agree with him. Too few are attending church now. Very few there are who do not take from two to six months' holidays during the year. A great many of the congregation are taking holidays six months twice a year. As to not being interested in strange preachers, that is a poor excuse. Every man and woman likes to see how a homely preacher can transform his countenance and appear beautiful. If the preacher is so strange that he frightens you, close your eyes and imagine he's all right.

MORE MEN REQUIRED FOR HARVESTING IN WESTERN CANADA—ADDITIONAL EXCURSION TUESDAY, SEPT. 10.

Thousands of men are still required to help in the work of harvesting the Western crop.

For those going from points in Ontario to Manitoba, Saskatchewan and Alberta extra trains will be operated through to Winnipeg (the distributing point) without change.

Going trip West, $12.00 to Winnipeg.

Returning trip East, $18.00 from Winnipeg.

Consult C.P.R. agents regarding transportation arrangements west of Winnipeg.

Further particulars from any C.P.R. Ticket Agents, or W. B. Howard, District Passenger Agent, Toronto.

DAMAGE BY LIGHTNING

Proper Rodding Would Have Prevented $331,450 Loss.

Caring for Lambs at Weaning—Different Ways Fruits and Vegetables May Be Used as Substitutes for Foods Our Army Requires.

(Contributed by Ontario Department of Agriculture, Toronto.)

As a comprehensive conclusion from our investigations, we have found that if all the buildings in rural Ontario were rodded more than 95 per cent. of the annual damage to buildings by lightning would be prevented. The method by which this conclusion was arrived at was as follows: In 1912 eighteen insurance companies in Ontario kept special records for us; from their reports we learned that out of every 7,000 unrodded buildings insured by them 37 were struck by lightning, while in every 7,000 rodded ones only two were struck by lightning. The rods prevented damage in 35 cases out of an expectancy of 37, showing an efficiency of 94.7 p.c. Since that we have determined the efficiency for the years 1913, 1914 and 1915. The results for the four years are as follows:

Year.	Efficiency of Rods.
1912	94.7
1913	92.0
1914	99.8
1915	85.9
Average for four years	87.2

To apply these figures: The report of the Superintendent of Insurance shows that in 1912 the insurance paid on losses caused by lightning was $262,282. No doubt the actual loss exceeded the insurance by perhaps 1-3 or ¼. If so, the actual loss was $350,000 or over. 94.7 per cent. of this equals $331,450, which represents the saving that would have been effected that year if all the buildings had been rodded.

Investigations along similar lines in Iowa have shown an efficiency of 98.7 p.c. for rods in that state, based on the report of 55 mutual companies each year for eight years. In Michigan the efficiency of lightning rods has been shown to be from 98 to 99 p.c.

These few facts, which are all matters of record in published reports, establish beyond question the conclusion first given, that if all buildings in rural Ontario were rodded 95 p.c. of the annual lightning damage to buildings would be eliminated.—Prof. W. H. Day, Ontario Agriculture College.

Care of the Weanling Lamb.

For best results lambs should be weaned at between four and five months. It has been found that under conditions prevailing during the hot dry months of mid-summer the ewes will drop off considerably in their milk flow. The lambs receive comparatively little nourishment and it is better for both ewe and lamb for them to be separated. When the lambs are removed from the ewes they will miss little the small amount of milk they would receive and will soon learn to depend upon pasture. They should receive the very best pasture available. Nothing fits in better than a patch of rape sown at the proper times so as to be ready for pasture when the lambs are weaned. Care should be exercised in turning the lambs on the fresh rape to avoid bloating and probable death. If no rape is available fresh clover will give satisfactory results. In addition to pasture a feed of grain once a day will push the lambs along to a good finish. At no time should it be necessary to feed over one-half pound of grain per day to each lamb while on pasture.—J. P. Mackwith, B.S.A., Ontario Agricultural College.

Uses of Fruits and Vegetables.

The drastic regulations set forth by the Canada Food Board lately, have caused much anxiety to many people who feel that they must now choose between either being considered unpatriotic, or going without sufficient food to nourish their bodies.

This is a mistaken idea. In their excitement they have forgotten for the moment to recall the long list of available substitutes which can wholly replace the Allies' demands, and to remember that foremost among these stand fruits and vegetables.

Fresh vegetables not only contain a high percentage of water—a necessary requirement of our bodies—but, also, a large amount of mineral salts and acids which act as blood purifiers and body regulators; they also serve to prevent too great concentration of food and thus aid in the digestive process. Dried vegetables on the other hand, are rich in tissue-building material, dried peas and beans containing as much protein as our best cuts of beef, in addition to containing a large percentage of starch.

While fruits are usually noted more for their flavor, mineral matter and water than for anything else, still we must not forget that bananas, dates, figs, raisins and prunes are high in food value, some containing as high as 60 p.c. of sugar. For this reason they are a valuable substitute for cane sugar. They might well be given to children in place of candy, and when served in combination with puddings, or salads, reduce the amount of sugar needed and add much to the value of the dish.

Vegetables and fruits should form a large part of the diet during the winter as well as the summer months, and it is therefore to our advantage to see that they are canned or dried at the proper time for future use. Much valuable information on the canning and drying of fruits and vegetables may be secured from the Women's Institute Branch, Ontario Department of Agriculture.—Geo. A. Putnam, Superintendent of Women's Institutes.

USE A HYDRAULIC RAM

Now Recognized As the Cheapest Power for Pumping.

When and How It Is Used—Complete Information Given — Tuberculer Cows a Menace to Health—How Tuberculer Test Is Made — Why It Pays Farmer to Test Cattle and to Discard Reactors.

(Contributed by Ontario Department of Agriculture, Toronto.)

WHERE conditions are suitable for an hydraulic ram it is without question the cheapest and most satisfactory method of pumping water. It has one drawback—it wastes far more water than it pumps to the buildings, and hence can only be installed where the supply is from five to twenty times as great as required at the buildings. The efficiency of the ram is from 65 to 80 per cent., i.e., it uses 65 to 80 per cent. of the energy of the falling water. Suppose the spring supplies 10 gallons per minute and the fall from the spring to the ram is five feet. Multiply these together and then take 65 per cent. of the product, and we have the energy available for driving water to the buildings.

Energy in this case 65-100 x 10 x 5 foot-gallons—32.5 foot-gallons. Now divide this by the height of the buildings above the ram and we have the number of gallons the ram will deliver per minute at the buildings. If, for example, the height is 32.5 feet then

Number of gallons per minute—32.5 divided by 32.5—1 gallon, which is 1-10 of the water supplied by the supposed spring.

Number of gallons per day—60 x 24 —1,400 gallons (about 28 barrels). Consequently with five feet of head and 32.5 feet of lift the ram will deliver at the buildings 1-10 of the water in the spring. The quantity that will be delivered with other heads, lifts and spring-flows may be calculated in a similar way.

Generally speaking it is found that for each 10 feet of lift there should be one foot of head, but there is a limit—it is seldom advisable to install rams where the head is less than say two feet, although they have been known to work with as little as 18 inches. The length of drive pipe should not be less than three-quarters of the vertical lift to the buildings, nor less than five times the fall from the spring to the ram. It may however, be longer, but seldom exceeds 50 feet, and 75 feet might be taken as an extreme length for sizes of ram suitable for farm conditions. If too long a drive pipe be used, the extra friction in it prevents the water from striking as heavily or as frequently as with a drive pipe just the right length.

The cost of installing a ram is not great. For the smallest size of ram it will run in the neighborhood of $25 to $35 and about $15 extra for each hundred feet between the spring and the ram. Thus if they were 100 feet apart the total cost would be from $40 to $50, but if 200 feet then from $55 to $65, and other distances in proportion. The largest size of standard ram can be installed at about $100 if the ram and pump are 100 feet apart, and $125 if 200 feet apart.—R. R. Graham, B.S.A., O. A. College, Guelph.

Tuberculosis in Cattle.

One reason why farmers should have their cattle tested for tuberculosis is the financial loss which they suffer by having tubercular animals in their herds. As the disease is at first slow in development and does not induce sudden death, like anthrax, black leg or hog cholera, the farmer does not realize the loss that he endures by having tuberculosis in his herd until one or more animals develop the disease in an advanced degree and die or are slaughtered. When they are at once seen to be rotten with the disease. Such animals will have had the disease a long time without it being suspected and will have been giving off in their milk, saliva and droppings, large numbers of tuberculosis bacilli. In this way the bacilli are spread around, the food, water and atmosphere in the stable get contaminated with them and other members of the herd contract the disease from these contaminated materials.

The tuberculin test will indicate whether or not an animal is tubercular long before any clinical symptoms are visible, thus enabling one to deal with such an animal before it becomes a dangerous spreader of the disease.

When an animal is shown to be tubercular it should not be allowed to mix with the rest of the herd. When cattle are purchased to add to the herd it should be only when subject to the tuberculin test, as cattle may have every visible indication of good health and yet be tubercular, the disease not yet having developed to an advanced degree.

It is therefore strongly recommended that farmers

1st. Have their herds tested for tuberculosis with the tuberculin test.

2nd. That they slaughter the animals that have the disease in an advanced degree.

3rd. That they separate the cattle that react to the test from those which do not react.

4th. That they remove the calves from tubercular mothers as soon as dropped, and feed them on milk from healthy cows or on their mother's milk after it has been properly pasteurized, i.e., after it has been heated to 145 deg. F. for half an hour.

5th. That they apply the tuberculin test to every new purchase of cattle that are to be placed in the clean herd.

6th. That the herd be tested with tuberculin annually.

Obtaining Tuberculin For the Test.

The manufacture and supply of tuberculin is kept under the Dominion Government control. It is required that a veterinarian be employed by the farmer to make the test.—Prof. Dan. H. Jones, Ontario Agricultural College, Guelph.

AS BAD A GERMAN AS THE KAISER

Toronto World

We have an anonymous letter from a German resident in Toronto under date August 28, in which words of violence rival the deeds of the Kaiser in Belgium:

"You may bluster and lie to your untaught hordes, but the good God and German steel will keep untouched German soil. You English have run around the world bribing every fool and barbarian to save your skins, but it will take more than you think. Lie on; fool your masses; flatter the States; but you will not win."

A Briton writing in similar terms in Germany would, of course, be interned and if discovered probably shot. The amusing way in which this writer accuses Britain of all the acts of which Germany has been convicted indicates with wonderful accuracy who it is that is being fooled. We imagine this German is as conscientious as a German can be. He is horrified at our suggestion that Berlin should be razed to the ground. Yet his letter is evidence of the necessity of such a course.

THE LATE MRS. JOHN McKINNON

The death of Mrs. John McKinnon, aged 85 years, occurred at the family residence, 10th Kincardine, on Aug. 24th. The late Mrs. McKinnon was born in Tyree, and came to Canada when a girl. For over sixty years she has been a resident of the 10th. As a woman she was highly esteemed for her many christian virtues, and her splendid example and helpfulness in pioneer days will ever keep her memory green. She was a member of the Baptist church, Glamis. Beside the aged husband she leaves four sons and one daughter. They are Finnie, Hugh, George and Miss Margaret, at home, and Charles, who teaches school at Wallaceburg. The funeral took place to Tiverton cemetery on Sunday last, the services being conducted by Rev. Mr. McCauley, of Glamis. Col. Hugh Clark, M.P., is a nephew, deceased being a sister of his father.—Reporter.

WHILE AT WAR
Women Suffer at Home

Toronto, Ont.—"I consider Doctor Pierce's Favorite Prescription the very best of women's tonics. I suffered a severe nervous breakdown. I could not sleep, was weak and tired all the time. I took the 'Prescription' and just a few bottles completely built me up and relieved me of my nervous condition. It is a good medicine and I am glad to recommend it.—MRS. ALFRED SHEPPARD, 259 Seaton St.

Niagara Falls, Ont.—"I can safely say that 'Favorite Prescription' did me a lot of good. I at one time developed woman's trouble; my nerves were completely shattered, and I became weak. I had severe backache and pains in my side, extending down into my limbs. I doctored, but did not get relieved of my ailment and was down and out when I began taking Dr. Pierce's Favorite Prescription, and it completely cured me and restored me to health and strength that I was able to do all my own work and others besides. I do recommend 'Favorite Prescription' to weak and ailing women; they cannot get a better medicine."—MRS. JOHN LOCKHART, 26 Terrace Ave.

Favorite Prescription is an invigorating, restorative tonic, a soothing and strengthening nervine and a positive remedy for the chronic weaknesses peculiar to women.

This old prescription of Dr. Pierce's is extracted from roots and herbs by means of pure glycerine and is a temperance remedy of 50 years' good standing. Send 10c for trial pkg. of tablets to Dr. V. M. Pierce, Invalids' Hotel, Buffalo, N. Y., or Bridgeburg, Ont.

CORISANDE'S GARDEN

She Was an Exasperating Girl. Kelly Made a Strenuous Effort to Dis like Her—but Kelly Failed.

By F. Ratery Weir

Part 1.

As the motor whizzed by, Kelly stepped into the weeds for he was afraid the driver might be Comstock. If it had been, then good bye to dusty roads, to nights alone beneath a starry sky. Kelly decided to seek a less frequented route.

At the bottom of the long grade another car swung into view and Kelly hurried to shelter beyond a screening clump of bushes, experiencing a feeling of exhilaration in that guilty spurt for safety. He watched the car whirl past then looked about approvingly. He had chanced upon a branch road. That it did not run in the same direction as the one he had just left, made no difference, his destination for the present being of less importance than his success in avoiding the motoring public.

The new road was stony and evidently little used save by farm wagons. It wandered sharply about fallen logs and crossed a considerable stream on a corduroy bridge; it was not a route for speeders who measure their good times by the number of miles recorded at the end of the run but a road to be frequent only by those searching for solitude.

Anything might happen on such a road. A man might discover gold or he might be murdered; he might meet a schoolboy or a highwayman, a bear or a feminine motherhuntsman with net and case although it was early in the season as yet for this to happen: or one might starve to death here. This last reflection, together with a steadily increasing midday appetite, made Kelly press on to the top of the hill.

He was startled when a girl arose from a fallen log by the roadside and came to meet him. She was a placid, pink-cheeked girl, with brown eyes and with no hat to conceal the heavy coil of brown hair on the top of her head. Had Kelly not been some few generations removed from the horse of his ancestors, he would have taken her for a fairy or even a witch.

"Squam?" Her voice rose in interrogation and Kelly nodded in a puzzled way. He was not sure whether his name was supposed to be "Squam" or whether the girl was using an incarnation or merely remarking in her native tongue that it was a fine day.

"Galusha sent me to watch for you," she told him next. "He was afraid you might take the wrong way here where the road forks."

She had started up the western track; Kelly, in a pleasant daze, followed. Galusha of Squam expected someone and Galusha of Squam was not going to be disappointed.

Kelly was laughing hugely at the mental picture he conjured up of the look on the face of Galusha of Squam when he beheld what his messenger had brought him. The next remark of his guide rather destroyed his pleasure.

"Your instruments came this morning."

What did she mean? Had she mistaken him for a surgeon and was his mission to cost some innocent life? Then he remembered his coarse shoes, his hat gray with the dust of the road. At least nothing more serious that a veterinary had been summoned by Galusha of Squam. In all probability the cow was sick or the dog had broken its leg. Even this would be bad enough.

He hastily went over all he knew of the broken leg of a dog. Then he took up the strained tendons of a horse; bad teeth; equine obstetrics and was battling with botts and the blind staggers when his companion spoke again. They were now in sight of a loney and dilapidated building, a large house with an uneven roof, falling chimney and badly placed windows.

"You mustn't listen to Galusha nor to Henrietta," cautioned the girl at his side.

"No," promised Kelly. "I shall not mind—what's-his-name nor Henrietta; I shall do as I think best."

"Or rather," said the girl with her slow sweet smile, "as I think best."

She was an exasperating girl. Kelly made a strenuous effort to dislike her. What was her fascination? Kelly stole a sidelong glance. She was sunburned and a little freckled but pretty. She had a lovely neck and the lips of her pink ears were adorable. Her mouth—well, Kelly tried to fix his mind on weightier matters. They were at the door of the disreputable old dwelling now. A sturdy white-bearded man came to meet them. His small eyes gleaming from underneath bristling white brows seemed to Kelly especially penetrating. He muttered a greeting without taking the slightest exception to Kelly's identity.

"I think," he announced brusquely, "that we might as well do the first four or five before dinner."

Kelly gasped.

"Would you mind showing me the—my things?" he asked humbly of the girl. She led him to the door of a shed which stood at the left of the house and he stopped reverently within.

"I'm almost afraid it is too late," she sighed. "Do you think it isn't too late?"

"We shall see," breathed Kelly professionally yet with unmistakable concern.

A bundle of implements, tied together with a withe of hay, lay on the floor, the shortest at least six feet long. With a sigh of relief Kelly recognized their nature.

"He said he wouldn't send his short ones because you had a pair of your own."

"Who said?" questioned Kelly.

"Mr. Higby, of course. You asked him to lend you these things to do our job with, didn't you?"

"Yes—of course. That wasn't—exactly—what I was getting at. What I meant to ask was, what else did he say when he brought the things?"

"He didn't bring them over himself. He sent his hired man with them."

"What did the hired man say?"

The girl put her hands behind her, leaned against the door frame and laughed. Her brown eyes twinkled mockingly.

"I wouldn't dare tell you," she said, "and I don't see how you came to ask. You must understand that if you do your work here satisfactorily, it won't make a bit of difference with me."

"If insist on being told," persisted Kelly.

"Well then ,the man said that Mr. Higby said—oh, I'm not going to tell."

"Please go on."

"He said he didn't think that you knew your business very well or you would have had tools of your own. He said we were not to let you get away with his pruning shears especially the long ones."

Kelly grinned, much relieved.

"Where are your trees?" he asked.

"Never mind until after luncheon."

That word, luncheon, used on the young woman used it, told Kelly a few things. The meal itself told him a few more. Cold boiled potatoes indeed! They were boiled but there were fresh eggs and coffee and a fruit pudding. Henrietta was a middle-aged person with a dimple in chin number three, and a faultfinding disposition. She served the meal first then took her place at the head of the table, grumbling as she ate.

She said it was too late in the season to prune trees; ignored Galusha's preference for a lime-and-sulphur spray and recommended strong soapsuds instead.

After luncheon Kelly would have preferred a book and pipe "underneath the bough." Instead he wrestled with a step-ladder and the tools which belonged to Higby. Alternately Galusha, Henrietta and the young woman whose name, Kelly learned, was Miss Corbande Trask, issued orders, now of one kind and now of another, which Kelly calmly disregarded, trimming to suit himself and in the way he imagined would be best for the trees. Perhaps he purposely prolonged the job. At least suppertime came and he had not finished.

After supper the four sat behind the house gazing across a placard expanse of ground which sloped gently to the river. Kelly was curious about many things: for instance, why the girl did not seem to belong to the place; why Galusha and Henrietta exercised so much authority, said authority never seeming to take effect.

He hoped to be enlightened during the course of the evening but the conversation was confined almost wholly to spray mixtures.

While Galusha went in to fill his pipe and Henrietta to set sponge for morning rolls, Miss Trask turned suddenly to Kelly and as if Henrietta or Galusha had never been born, asked what he intended to spray the trees with to-morrow.

Kelly jumped and hesitated. He would have given his jacket and thrown in his shoes for an hour alone with some book on How to Make the Garden Pay or work of a similar character. Galusha had sprayed with lime and sulphur in the past. At least it would not kill the trees. He pronounced for lime and sulphur.

(To be continued.)

An organ was built in Westminster Abbey expressly for the coronation of King James II.

Russian railroads in the Caucasus have been given locomotives which burn the waste products from the oil refineries of that region.

For furniture cleaning a mixture of three parts linseed oil and one of turpentine is splendid. Use only a small quantity at a time, rubbing well, and polishing with a dry cloth until all the oil is rubbed into the wood or removed. Use a woollen rag.

French engineers have estimated that Italy could secure 5,000,000 electrical horse power from the water powers of her rivers if they were all harnessed.

About the House

COOKING FRESH VEGETABLES.

Vegetables just out of the garden taste best when simply cooked and served with a little salt, butter or cream.

Overcooking of vegetables impairs their flavor. Very delicate flavors are destroyed, while vegetables with strong flavors, such as cabbage or onions, became disagreeably strong if cooked too long. Overcooking also destroys the attractive color of some vegetables.

Cook summer vegetables as soon after they are gathered as you can, in order to preserve the flavor. If they must be kept over, keep in the ice box or some other cool place.

Let wilted vegetables soak in cold water to freshen them. If vegetables must stand after paring, covering with cold water will prevent wilting and discoloration.

Before cooking, put head vegetables and greens in cold water for an hour, with one tablespoon of vinegar, to remove insects, then wash very carefully.

Drain all boiled vegetables as soon as tender—they become soggy if they are allowed to stand undrained after cooking. The water drained off may be saved for soup stock.

Most vegetables should be cooked in a small amount of water, because a part of the mineral salts dissolves out into the water, and is lost if the water is thrown away. Cook whole when possible.

Delicately-flavored vegetables should be cooked slowly in a small amount of boiled water until tender and the water boils away.

Strong-flavored vegetables may be cooked uncovered in a large amount of rapidly-boiling water, and the water changed several times during cooking.

Starchy vegetables should be put on to cook in a sufficiently large amount of boiling water to cover them. Boil gently, and keep kettle covered.

The time required for cooking vegetables depends on the kind, size, and age of the vegetable. You must use your judgment in deciding when they are done, but this time-table may help you.

Time-Table for Cooking Fresh Vegetables in Water

Asparagus	15-20 minutes
Beans, Lima (green)	¾ - 1 hour
Beans, string	1- 2 hours
Beets, old	1- 4 hours
Beets, young	¾ - 1 hour
Cabbage	20-30 minutes
Carrots	20-60 minutes
Cauliflower	20-30 minutes
Corn, green	10-15 minutes
Onions	20-30 minutes
Parsnips	30-40 minutes
Peas, green	20-30 minutes
Potatoes	30-40 minutes
Spinach	15-30 minutes
Squash	20-30 minutes
Turnips	30-45 minutes

Conserve Food.

The necessity for conservation and substitution, for foods needed Overseas, of products which are available in this country, but not suitable for export, will not be over when this year's harvest is gathered. The food resources of the world, except for those comparatively few countries which are practically inaccessible under present shipping conditions are exhausted, and it is a prime military and economic necessity to build up and to maintain these resources. The food situation will not be safe at least until the 1919 crop situation is known. The people of Canada have already done splendidly, both as regards production and conservation. Their efforts must and will be continued, for they are a factor of great importance in feeding our soldiers and those of our Allies who are dependent upon us.

What European Women Are Doing

More and more are we realizing on this continent that the efforts being made by the women of Europe to cope with the conditions in which they find themselves are little short of superhuman. Take the case of Paolina Benedini, an Italian widow, whose five sons are under arms. She has just received an award from the Agricultural Department of Italy. She was left with three grand nephews and ten nephews and nieces ranging from 1 to 12 years of age. Not only did she provide for this large family, but without in addition she cultivated a farm of 10 acres and raised 15 head of cattle without any outside aid.

Surely she was as deserving of decoration as the Red Cross nurses whose bravery and devotion to duty have placed them on the country's honor list.

Bishop's Palace as Hospital.

The current issue of The Nursing Mirror contains a description of Fulham Palace, which the Bishop of London has handed over as a hospital for a hundred convalescent soldiers. A large number of the patients, it is stated, will be nerve or shell-shock cases. For these, in addition to tending the gardens, the piggeries, and the fowl runs, workshops are to be erected so as to provide the healing which comes from suitable occupation. The Bishop's own bedroom has been given up for the use of six patients, and the only portion of the Palace which he has kept for himself is the vestry attached to the chapel.

The Playhouse.

The sweet flag was rustling, the round sun was low;
The shadows to eastward lay slantingly in line;
The rag doll was Patsy, the bisque one was Flo—
And we built our playhouse by the trumpet-creeper vine.

The wind-nodding blossoms were scarlet and gay;
You sewed tiny garments and chatted as you sewed;
Beyond us the grasslands were windrowed with hay;
A white-hooded wagon crept down the dusty road.

You dreamed then, remember? Fell silent a while?
Your brown eyes grew wistful to vision where it went.
My small world was bounded by meadow lane and stile;
I kept no far visions and so I was content.

I walked down the orchard at sunset to-day
And there read your letter that told me the news—
The bright crown of laurel that shines in your way;
The white path of fortune that one could but choose.

The sweet flag was rustling, the round sun was low;
The shadows to eastward lay slantingly in line;
The same world was smiling that we used to know—
But that empty playhouse by the trumpet-creeper vine!

A midsummer Nightmare, or have you got your winter coal in yet?—New York Evening Post.

THE BRITISH NAVY.

How the Overseas Dominions Do Their Bit on the Seven Seas.

[It would take a volume—in fact, it has done so—to give a complete record of the birth and growth of the Imperial British Navy. The task of protecting the far-flung shores of our Empire, while satisfying the particular ideals of each separate community has been full of difficulty and romance and is admirably described by H. C. Yarraby, in "The Imperial British Navy." Below are a few interesting facts taken from this work.—Editor].

Fifty-five years ago New Zealand purchased and thinly armored four small cargo-boats. Their names were the Flint, Midge, Chub, and Ant, and they were the first war fleet ever possessed by a British Overseas Government.

New Zealand was the first of the Dominions to offer naval assistance when war broke out in 1914.

A Maori war-cry—"A-O-TEA-ROA!"—was chosen as the motto of the battle-cruiser New Zealand, which took part in the battles in the Heligoland Bight, at the Dogger Bank, and Jutland.

Australia was first used as a naval base about 1840.

Vice-Admiral, Sir George Tryson, whose name is associated with the tragic collision in the Mediterranean between the Camperdown and the Victoria was the first commander of the Royal Australasian Naval Squadron.

This squadron was a portion of the Imperial Fleet and the different States contributed various sums toward its maintenance.

At the commencement of the present century the contributions were as follows: Victoria, £57,883; New South Wales, £47,207; Queensland, £28,200; South Australia£16,642; Tasmania, £6,085; West Australia, £4,620.

New Zealand added an annual contribution of £20,830.

Tasmania, before coming into the general scheme, made an effort to support a navy of her own. It consisted of one second-class torpedo boat.

In 1909 Australia decided to have a war fleet of her own, and she set aside £3,700,000 for this purpose.

Great Britain offered her a quarter of a million a year towards her expenses, but she declined, preferring to shoulder the whole burden herself.

When war broke out, Canada had no navy.

She never made monetary contributions to the Imperial Navy, but shortly before the war she presented Great Britain with three Dreadnoughts.

The British Columbia sealers were once suggested as the nucleus of a Canadian Naval Reserve Force.

An unfortunate gift made in 1880 by Great Britain to Canada was the steam corvette Charybdis, for training purposes.

It was twenty-one years old the boilers rust Canada £20,000 to repair, it broke from its moorings in St. John's Harbor, and was then returned to Great Britain with thanks.

Great Britain then had her sold for firewood and scrap-iron.

Cape Colony came in twenty years ago, paying £30,000 a year towards the Imperial Navy.

Natal did her bit in coal, to the tune of twelve thousand tons per annum.

Great Britain named two battle-cruisers the Good Hope and the Natal in recognition of these gifts.

The good Hope fought gallantly at the Battle of Coronel on November 1st, 1914, but, was unfortunately lost.

The Natal proved another victim of the war, being destroyed in December, 1915, through an accidental explosion.

Both Canada and South Africa are anxious to emulate Australia and support navies of their own, but the common foe has temporarily set aside any idea other than that of Imperial naval unity.

For the Young:- Bereaved Since 1914

What many we do, when all our splendid dreams,
Fall at our feet, like petals from a flower,
Killed by the heat of noon? What may we do—
But beg they might return for one short hour?

We who have heard the thunder in our hearts,
We who have drown'd our youth in our own tears,
What may we do, but have recourse to prayers?
Raising our hands against the pitiless years,

God of the human heart—when hearts are torn
At this sad harvesting of shattered hope—
What may we do, but flee from Calvary?
Yet as we turn, and in the darkness grope.

Two Days

The longest day is in June, they say;
The shortest in December;
They do not come to me that way;
The shortest I remember:
That happy day you came to stay
And filled my heart with laughter.
The longest day you went away.
The very next day after.

Quit yourselves like men. Quit wheat.

Cream Wanted

We are in the market for cream all through the year. We pay the HIGHEST market price. Our plant is right up-to-date. In business since 1866. Drop us a postcard for particulars.

WILLIAMS PIANOS

New Scale

THE example of the late Queen Victoria in selecting the Williams New Scale Piano has been followed by many of the world's most renowned musicians. This fact has caused it to be known as the Choice of the Great artists.

Louis XV Model, $650.00

THE WILLIAMS PIANO CO., LIMITED, OSHAWA ONT.

Canada's Oldest and Largest Piano Makers

A Picture with Each Purchase

Each time you buy a package of Ingram's Toilet aids or Perfume your druggist will give you, without charge, a large portrait of a world-famed motion picture actress. Each time you get a different portrait so you make a collection for your home. Ask your druggist.

Ingram's Velvola Souveraine Face Powder.

The daintiness of a complexion always free from oiliness and shininess is the desire of every woman. Ingram's Velvola Souveraine Face Powder. It keeps the skin smooth and attractive. Hides minor blemishes, the little wrinkles, and blends so marvellously with the complexion that it is scarcely visible. It adheres even the skin be warm and moist, and it has a refined and gentle fragrance, 50c.

For the sake of youthful charm, use Ingram's Milkweed Cream. Its daily use enables you to retain the charm and color of girlhood. It is curative and healthful to the skin tissues. Two sizes, 50c and $1.00. Your druggist has a complete line of Ingram's toilet products including Zodenta for the teeth, etc.

F. F. Ingram Co., Windsor, Ontario

TEN ACRES AND A LIVING

She Was Young, Popular, and Had Been Reared in the City. Everybody Laughed When She Decided to Farm— But That Was Four Years Ago.

When she decided to be a farmer everybody laughed. She was young, popular, unusually fond of frocks and fun. She had been reared in the city. She didn't know a Jersey from a Hereford, or a Wyandotte from a Plymouth Rock.

"You'll be back in six months," her friends said.

Four years have passed. Mrs. Charles S. Tupper still is "buried" in the country. Moreover, she is supplying eggs, chickens, honey, and home-canned goods to those of her former associates who are willing to pay for quality.

"Farming," said Mrs. Tupper, "is the ideal vocation for the woman who feels the modern desire for a job and the need of marriage and a home.

"I never wanted a job so keenly as when I found myself in a small city apartment without enough to do to keep me busy. After I'd swept and dusted and prepared meals for two, I had hours of time on my hands. The corner bakeshop, the laundry, and modern conveniences had thrust upon me more leisure than I could use. Mr. Tupper is a young engineer whose work takes him to various parts of the Dominion. In his absence I felt strongly the need of filling up my idle hours in some interesting, useful way.

"I didn't quite like the idea of spending all my spare time on cards, calling, women's clubs, and social pleasures. I longed to be a real partner to my husband and to share in making the family income as well as spending it.

"We had a few thousand saved for a home, and were trying to decide where to build. One day it flashed upon me: 'Why invest in city property? Why not a little farm? Then we'll have a home; I'll have a job, and can make our living.'"

The idea materialized into a modern bungalow on a 10-acre farm in Ontario, an hour's drive from a small city. Mr. Tupper's salary furnished working capital for the enterprise and Mrs. Tupper found congenial work as farmer-in-chief.

Poultry, bees, and a vegetable garden are Mrs. Tupper's specialties. Her side lines are a pig and a registered Jersey cow. She looks after the poultry, works in garden and apiary, and milks the cow herself. She employs very little help.

"It wasn't difficult to get a start in learning to farm, Mrs. Tupper explained. "I visited farms and studied the methods of farmers and their wives. I asked lots of questions.

"I didn't have any old fogyisms to unlearn, and I didn't acquire any. I went straight to the agricultural college and to the provincial poultry experimental station for instructions. While I was living in the country supervising the building of the bungalow I read and digested every bulletin I could get. I'm still studying bulletins. I subscribed for several farm papers and a bee journal.

"Of, course, I learned a great deal from the practical experience of the people about me, but I checked up everything to the rules and directions of government provincial agricultural experts, which may be had for the price of a postage stamp. I tried to take orders intelligently. I ignored old rules for poultry and beekeeping."

Mrs. Tupper's chickens are hatched in incubators, hovered in a coal-heated brooder house, fed according to experiment station directions, and reared in poultry houses built from experiment-station designs. From the first they have been practically free from lice and disease. She gets winter eggs. Even in zero weather and fed present costly feed, her spring pullets more than pay their way.

"Bees responded as readily to proper treatment," she said. "My second season I harvested $265 worth of comb honey from twenty working swarms. And I was stung not a half-dozen times at that."

Some of Mrs. Tupper's neighbors were inclined to joke at first at her appetite for bulletins, her belief in experts, and her rigid insistence on pure-bred stock and poultry. They admit now that her faith has been justified.

If Mrs. Tupper had trod in the well worn neighborhood ruts she would have marketed her produce by the country-store-commission-man-retail-consumer route; but again she did not. From the first she planned to plug the leakage of farm profits in middlemen's commissions. When she had anything to sell she put on a good-looking tailored suit, a becoming hat, smart shoes and gloves, and went to the city to talk to ultimate consumers.

The consciousness of being dressed appropriately—not expensively or ornately—is a valuable aid to the farm saleswoman, Mrs. Tupper thinks.

"If a salesman comes to me shabbily dressed or flashily dressed, I can't give him a fair hearing," she said. "I may let him talk on, but I decide against him the instant I look at him. So I reasoned that a trim, pleasing appearance would be as valuable an asset to me as to the men who sell pickles, insurance, or gilt-edged bonds. It would mean a favorable first impression and open the way to show samples and makes a sales talk.

"If I tried to interview a prospective customer handicapped by the consciousness that my skirt hung badly or that my shoes were shabby, not only would I be timid and ill at ease, but my appearance would suggest to the city buyer the very slipshodness and lack of reliability he fears in buying direct from the farm.

"I go strong on attractive samples. It would be useless to try for fancy prices if I brought honey to town in mean-looking cases or rusty cans. A slight drip down the side of a package might not be proof positive of poor quality, but it would frighten away a careful buyer. Likewise, I do not illustrate my egg sales talks with a sample dozen of odd sizes and shapes. It is needless to add that goods delivered to customers must be of the same quality and appearance as the samples, and that one must keep one's promises to the dot. A little well-directed enterprise will land a customer, but only good service can hold him."

When the current wholesale price of honey was $3 a case, Mrs. Tupper's comb honey has been in demand at from 20 to 30 cents a pound. She disposes of every pound to private customers and to one grocery store which caters to "fancy" trade. She sells eggs from her 400 Wyandottes at from 4 to 6 cents more a dozen than the country store is paying its patrons who bring in eggs and "take them out in trade."

Mrs. Tupper figured that if a trade-mark has advertising pull for a manufacturing concern, it would help the farm business. She christened her 10-acres "Graceland Farm," and this name is stamped on everything that leaves her place. She had cards printed bearing the name of the farm, its telephone number, and its products. Graceland Farm is also emphasized on letter heads.

"Prompt attention to correspondence is an easy method of advertising a farm business," she suggested. A typewritten letter on letterhead stationery, mailed promptly, creates a pleasant impression on the man who has written to inquire the price of a setting of eggs or a trio of chickens.

"Suppose I delayed a week and wrote the reply with pen and ink, or, worse, with a pencil on ruled tablet paper? I'd stand a good chance of losing a customer, wouldn't I? If I didn't miss an order outright, I should certainly leave a suggestion of inefficiency and carelessness which could only be charged to the debit side of the business."

She has found that a $50 typewriter and a letter file have helped greatly to create the good-will which is as essential to the farmer-business woman as to the woman who runs a millinery shop or an insurance office.

Mrs. Tupper has encouraged automobile trade. Her apiary is within sight of the road, and a "Honey for Sale" sign brings many a customer. Many of her city patrons have the habit of driving to the farm and returning with a hamper laden with eggs, honey, butter, or canned stuff from the vegetable garden. The garden last summer supplied material for more than 900 cans of vegetables.

The neighbors smile at her zeal for fairs and poultry shows.

"It isn't fun altogether: it's business," she tells them.

It was cold, disagreeable work, for instance, to prepare an exhibit for the National Exhibition at Toronto last fall; but Mrs. Tupper felt repaid. She won first prize on pen, first and second on pullet, and fourth on cockerel. Then she exhibited at the County Fair with even better success.

"These prizes will add to the value of every chicken I have, and to all my poultry products. They give me another advertising point," she said.

"The shows gave me a fine opportunity to meet possible customers and to make friends for my business. I was on the job for days. I met scores of people and distributed hundreds of cards. I learned a lot, too, in talks with judges and experienced breeders."

The Tupper bungalow is neat and attractive. In spite of her duties in the poultry house and apiary, Mrs. Tupper serves appetizing meals. She finds time for church work and neighborhood calls, and gives every Thursday to the Red Cross.

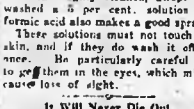
The housework is speeded up with such conveniences as hot and cold water in kitchen and bathroom, and steam heat. The kitchen is an efficient little workshop lined by cupboards and shelves. Mrs. Tupper can sit before her kitchen cabinet and prepare a meal without moving about for ingredients and utensils. A service wagon saves steps between kitchen and dining-room.

The floors of the bungalow are of hard wood. They are waxed a few times each year, and a little work each morning with dust mop and carpet sweeper keeps them in good order. The washing is sent out.

"I couldn't earn an income from the farm if I had a farmhouse without modern improvements," Mrs. Tupper declared. "Reducing drudgery to a minimum is only plain business sense. Laundry work, scrubbing, and dishwashing has a low economic value. Such unskilled labor eats up the time and strength one needs for the more profitable and interesting tasks of farm management, accounting and correspondence, advertising and marketing."

Britain's Revenue.

The total revenue of the United Kingdom for the quarter ending June 30th, shows a net increase of £30,784,034 as compared with the corresponding quarter of last year. Of this amount £21,889,000 was from excess profits and duties. The total revenue amounted to £185,753,320. The total expenditure, chargeable against revenue, was £723,975,677.



You pay the same war tax on a pound of cheap, poor tea that you pay on Red Rose. In other words you pay 10¢ war tax on a cheap tea which will make perhaps 150 cups to the pound and you pay the same 10¢ tax on a pound of Red Rose which easily makes about 250 cups.

You will find today more value, more economy, more real satisfaction in Red Rose Tea than ever before.

It is truly a war time tea.

Hogs

Hogs suffer more from heat than any other class of farm stock. If kept in open yards exposed to the sizzling rays of a hot sun they will do well to keep alive, even though they are consuming sufficient feed to make two pounds of pork a day. Sunshades mean comfort, and comfort brings economy in the use of feed, rapid gains in flesh and increased profits at the season's end.

Hogs do not perspire. Other animals are provided with pores to carry off excretions and remove the heat from the body, but not so with the hog. A few large pores on the legs provide the only means of carrying off excretions, while the thick layers of fat check the radiation of heat from the body. As a rule hogs are fed more heat-producing food than other farm animals and in the work of converting this feed into meat there is a great amount of heat which cannot escape.

It is astonishing to note how many farmers compel their hogs to lay in the sun and suffer during the summer days. If the herd has the run of an orchard or shaded lot they will not need artificial shade. However, if they are confined in pens, lots or sun shades should be built to protect them. A cheap and efficient shade can be erected in a few hours at practically no cost aside from labor. A few posts, some old boards or saplings and a straw or hay roof makes an excellent shade and is preferable to one of boards, as the straw or hay roof is cooler than one of lumber.

Plan the yards so that the sunshades may be erected at the highest point so that the hogs will get the full benefit of every breeze. Losses from overheating can be guarded against only by providing a retreat for the animals during the heat of the day. If the days are extremely hot sprinkle the ground under the shades with water. One barrel of water used to sprinkle the ground under the shades will help keep down the temperature several degrees, during the heat of the day.

Poultry

Few poultrymen realize the importance of fresh water to fowls. It is not only required from the standpoint of health, but it is a big factor in egg production. Keep a liberal supply of fresh water before the fowls every day throughout the year.

In winter usually once a day is sufficient for fresh water, but during warm weather twice a day is imperative and three times will be better.

The drinking receptables must be kept clean. Wash them daily during warm weather and two or three times a week during cold weather. Disease lurks in dirty water.

In cold weather feed first and then water with tepid water. Early hatched chicks should not have cold water, it chills them and sometimes they drop dead soon after drinking. Tepid water, on the contrary, acts like a tonic.

Clover is one of the most valuable feeds, containing shell forming material, and should be a part of every ration. Hens fed clover will lay better than those without it. Clover can be chopped and mixed with meat and with mash. Clover is the cheapest green food that can be grown for poultry.

Clean out the houses thoroughly twice a year,—four times is better. Clean the windows and every part of the house. Keep the floors clean as often as necessary. Use tobacco stems in all nests. Keep the setting hens out of the poultry house. Broody hens are always lousy.

The walls and perches, nests, floors and ceiling can be sprayed with a 5 per cent. solution of cresol. When this has dried spray with 1 part crude carbolic acid or cresol and 3 parts kerosene. Fill or flood every crack, crevice and smooth surface with the spray. After the whole house has been thoroughly cleaned, swept and washed a 5 per cent. solution of formic acid also makes a good spray.

These solutions must not touch the skin, and if they do wash it off at once. Be particularly careful not to get them in the eyes, which might cause loss of sight.

It Will Never Die Out.

If you and I had a farm as big as might be covered by the sheets of paper that have been written over by men and women complaining that this world of ours is growing cold and selfish, we should have more land than any of us ever will own. Let me say all I have to say in reply to this wicked charge against the men and the women of our day in just four words. It is not so!

A neighbor of ours had a nice young horse get sick one day. I know of men with so much of human interest and love in their hearts that they went to the help of that neighbor, sat up with the poor suffering animal night after night for days and days. It was cold in the barn, but they did not mind it. They gave the horse its medicine, rolled up in horse blankets, and warmed their way into the haymow until it was time to care for the animal again. Only a horse, but it was a living thing, with a heart in it; and it belonged to a friend.

No; love will never die out of the human heart. It may seem sometimes as if men are too busy to be good and kind, but let anything happen to the humblest farmer in the community and the grass will be all tramped down about his door by those who come to do him a good turn.—E. L. V.

For lubricating moving parts of machinery an inventor has patented a perforated belt containing a wick to be soaked in oil.

Wool to be reknit should be raveled in a colander and set in the steam over a vessel of boiling water. Cover the colander and let steam until the wool is straight. Dry in the air and then wind.

Dr. Currier will not prescribe for individual cases or make diagnosis. Address Dr. Andrew F. Currier, care of Wilson Publishing Co., 73 Adelaide St. West, Toronto.

Blood Medicines.

Blood medicines are evidently those which are supposed to improve the quality of the blood—to "purify" it, as so many people say who have no very clear idea of what this statement means. The largest portion of the blood is water. In addition it contains the red and white corpuscles, the blood cells; furthermore, it contains, in solution, various mineral salts, albuminoids, and fats.

These various substances are derived from the food, and distributed over the body for its upbuilding; if there is too much or too little of any of them, disease would be the result, and the best way to remedy it would be to supply foods containing the elements which are wanting.

But the wastes of the body are also carried by the blood—chiefly as carbonic acid and urea—the first of which is carried to the lungs for elimination, and the second to the kidneys. The blood may also contain substances which are foreign to it, like sugar, bile, disease-producing bacteria, and animal parasites.

In diabetes, sugar is circulating in the blood. In inflammation of the liver bile, filaria is one of the parasites found in the blood; and there are many kinds of bacteria. A blood medicine is therefore, something which will have some sort of effect on those different substances directly or indirectly, and the number of these is very small. Quine will kill the germ of malarial fever, and is, therefore, a true blood medicine. Mercury and arsenic will destroy the germ of syphilis—sometimes. Iron, in proper organic form, will be taken up by the red corpuscles when their number is too small, or when they are deficient in iron—as is the case in anemia.

Our very common form of patent medicine is preserved beef-blood, which when properly prepared, may be useful, just as anemic and tubercular people sometimes seem to be benefited by drinking freshly drawn blood at a slaughter house. This is equivalent to taking any other albumi-

noid food—beefsteak, for instance But blood decomposes more quickly than other animal tissues, and when you try to preserve it with alcohol or other preservatives, you destroy some of its important constituents, or make them unsuitable for digestion and assimilation; hence, most, if not all, of the preparations made from blood, will not do what they are advertised to do.

I do not say that such preparations may not be harmless; but that is not what people are after, when they pay their good money for them. When you see advertisements of sarsparilla compounds and sure cures, burdock and willow dock syrups, iron and prickly ash strengthening blood vitalizer, and mixtures containing motherwort, dandelion, mandrake, poke root rumex and many other herbs, do not let your imagination cloud your judgment. These are all harmless substances when of good quality but have very little influence on the body or the blood. When they are of poor quality, they are about as useful as dried sticks.

Many people will remember the sulphur and molasses they used to be compelled to take when children. If you want something which will stir up your blood and most of your other internal arrangements, try a few doses of this useful remedy rather than the blood medicines with fancy names with which the market is filled.

QUESTIONS AND ANSWERS

J. L.—1—Am bow-legged and my position requires that I walk seven miles or so, a day. Is such walking desirable for a bow legged person?

2—Is there any way of straightening bow legs?

Answer—1—If you can accomplish your walking without pain or unnecessary effort, I do not see why you may not continue to do so.

2—An operation is possible, but it consists in breaking the bones and reshaping them. Of course this is very much more difficult in an adult than in a child, but it is sometimes done very successfully.

The Dairy

When a cow gives bloody milk, get a separate sample of milk from each quarter of the udder to determine if the blood comes from one or all.

If it comes from all quarters, general congestion of the udder has caused rupture of minute blood vessels in the glandular tissue. This is not uncommon just after calving and soon subsides. When it occurs in the udder of a cow that has been milking for several months, an injury or an attack of garget is the cause.

Bleeding often comes from growths in a teat or teats which are irritated by the act of milking. Such growths sometimes can be removed by operation. If that can not be done the secretion of milk should be dried off in the affected quarter. This also is the best course in a case of chronic garget.

Kindness and gentleness always accomplish more than the application of a milking stool or a number twelve shoe to the back or belly of a nervous or fractious cow that holds up her milk. A gentle, expert, scientific milker may possibly bring back the normal function, but it is certain that brutality will have the opposite effect.

The habit which calves have of sucking each other's ears or udders is a bad one and should be stopped as quickly as possible. The sucking of the udder stimulates an unnatural secretion of milk; when that starts and sucking then is prevented, subacute and usually unnoticed garget results. Where that has happened the udder will be almost certain to go wrong when the heifer has her first calf, and we regard this as one of the very common, but least understood, causes of mammitis (garget).

Horse Sense

An expert stockman says that nothing speaks so well for a farm as a well-mannered, well-groomed horse shown at a fair, even if the animal does not bring home a blue ribbon.

Draft horses are shown at halter, except in case of draft teams. Rope halters are all right to use. Draft stallions should be shown with heavy bridles. Horses should be taught to stand and to lead before they are placed in the ring.

Good condition and good manners in the show ring will not be of much value unless the horses are well groomed. Use the comb and fibre-brush followed by the hair-brush every day. To remove dirt, dampened sawdust should be rubbed into the hair and brushed out with a stiff bristled brush. The mane and tail should be combed daily. Tangled parts should be separated with the fingers, since the comb is likely to pull out the hair. The appearance of the animal is improved by singeing the long hairs about the jaws and ears with a lighted candle.

Some Low-Priced Meats

Certain parts of the butchered carcasses which provide us with meat are comparatively low in price. These parts have not been generally popular in this country, although they are in great demand in Europe and also in the United States. Beef hearts, liver, tripe, ox tails, sheep's heads, calves' heads, pigs' feet and many other parts of the carcasses might well be used more freely in Canada than they are, thus relieving the pressure of the demand upon roasts, steaks and other higher priced cuts. Any good recipe book will tell you how to cook these cheaper meats and make of them delicious, tempting dishes.

AutoStrop SAFETY RAZOR

The Choice of all Ranks

Shaving under trench difficulties at the front will quickly convince "him" that the AutoStrop is the only practical razor. It is the only razor that sharpens its own blades and consequently is always ready for instant service.

Anticipate your boy's request by including an AutoStrop in your next overseas package.

CANTIRE

—Paisley Fair, Sept. 24th and 25th. The harvest is almost finished, and in most cases the yield is expected to be good. The corn crop, which has been suffering ever since it was planted either from frost or drouth, is now making progress, and if favorable weather continues for a couple of weeks more it will be at least a good half crop.

Misses Jean and Laura and Master Peter Reid spent the past three weeks with their grandparents at Glenannan.

Mr. Angus Taylor has gone to help gather in the harvest in the west. This is Angus' first trip to the prairies.

Miss Cora Maxwell, from near Chesley, visited her friend, Miss Margaret McKay, last week.

Miss Greenlees, of Hamilton, spent spent a week at Mrs. W. A. Blue's.

Mr. Archie Taylor, of Owen Sound, is renewing acquaintances here at present.

Miss Mabel Clark, of Chesley, is spending vacation with Miss Sara Eason.

Messrs. D. A. McIntyre, Jos. Stoddart and Elden McGillivray are at the great fair at Toronto this week.

Miss Ellen Wandrow, of Mt. Clemens, Mich., is spending a few weeks with her grandmother, Mrs. John Blackburn.

Mr. and Mrs. Johnston Winch and son Frank, of Galt, were visitors at the home of the former's father, Mr. Henry Winch. Johnston makes big wages in a munition plant in that city, but has a great inclination to come back to farm life again. The many friends of Mrs. Winch, who has been an invalid for some years, will be glad to know she is regaining her health.

Miss Margaret McKay left on Monday to assume her new duties as teacher in a school near Barrow Bay.

Mr. J. J. Bradley delivered a fine span of horses to Geo. Craig recently.

On Thursday last Peter McArthur of the Globe tells how his midnight slumbers were disturbed by the continued howling of his titled cat. In like manner our friend Alex Gowanlock's midnight snooze was broken by the barking of his collie dog, which became so furious as to lead Alex to surmise that as about this time last year some two-legged coons were making raids on the chicken roosts it might be good business to investigate. Following the direction from which the barking came he heard not the cackle of a rooster, but a sort of low growl, and on coming closer found his dog was at grips with some animal which seemed to be putting up a good scrap. It proved to be not a two-legged coon, but one whose pelt was worth something. Whether the battle was for the bridge head we do not exactly know, but as the pair wallowed through the mire under the bridge on the king's highway it was no doubt typical of the famous Flanders mud. On hearing his master's voice Collie, feeling that ample reserves had come up, renewed the offensive with vigor only to find he had underestimated the strength of the enemy, and in a brilliant counter-attack the latter drove his assailant up the bank, and here was where the reserves took a hand. Groping in the dark, General Gowanlock found a cudgel and with unerring aim delivered Major Coon a blow on the point of the snout that proved a knock-out. Collie had got his wind and immediately pounced on to finish the job. The grey streaks of dawn were beginning to break in the east when Alex with a pair of cold feet scrambled back to finish his broken slumbers. Next morning no trace of the midnight marauder could be found. If in his hunting expeditions this fall our sin Geordie succeeds in bagging a coon with a slightly turned up nose he will ken right awa it's ine yin. Alex Gowanlock near kill wi' a cleb.

—The path of success in business is usually the path of common sense.

GLAMIS

Holidays are over. The teachers have left for their different fields of labor. Miss Reta McKinnon, who taught the Glamis school for the last two years, left for Kitchener, where she secured a position in a graded school. Miss Flossie McLennan will teach in Wellesley. Misses Mabel Kirkpatrick and Mary Webb go back to their old schools. Miss Nettie Gunn has the Glamis school.

Mrs. Coward, who has been spending some time with her parents, Mr. and Mrs. Murdoch McKay, left this week for her home in Toronto.

Miss Mary Dewar, of Kincardine, spent a few days with her friends here, Misses Flossie McLennan and Reta McKinnon.

Miss Minnie Howson spent some time with friends in Paisley.

Mrs. Burgess, of Cabri, Sask., who was down attending the funeral of her father, the late Jos. Cunningham, left for her home on Tuesday of last week, accompanied by her daughter Dorothy, who spent the last few years with her grandparents here.

Rev. J. C. McCauley was called to London on Friday to report for military service.

Rev. Jos. Stewart was the preacher in the Baptist church on Sunday, both morning and evening.

Miss Lizzie Cunningham returned to Milton on Tuesday.

Mr. and Mrs. Sargent, of Hamilton, were visitors in our burg on Sunday.

Mrs. Jas. Thomson is spending a few days in Toronto visiting her sister.

Mr. and Mrs. Kirkpatrick are spending some time with their daughter, Mrs. Montgomery of Markdale.

Mr. Chas. McKinnon, of Ripley, came up on Friday to attend the funeral of the late William Gilchrist.

Pte. Allan Fraser, of London, is home on leave.

Mr. and Mrs. Geo. McKennit and Mrs. Love, of Markdale, were week end visitors at Mr. Kirktown's.

Miss M. McIntyre has returned from the lake, accompanied by her nephew and niece, Campbell and Jean McIntyre.

Mrs. Jessie McDougall spent Sunday at the home of her father, Mr. Thos. Yule, in Paisley.

Pte. Edgar Pyke, of Toronto, spent a few days last week at Mrs. Cunningham's.

Mrs. Jackson, of Kincardine, is visiting friends on the 2nd of Bruce.

Mr. and Mrs. McFarlane, of Seaforth, and friends from Lorne visited at Mr. McCormick's on Sunday.

Mrs. Robert McFadyen, who has been visiting her friends around here for the past few weeks, returned on Friday to Toronto.

Death has been busy in our community the past few months. The whole neighborhood was shocked to hear that Mr. William Gilchrist had passed away. He retired in his usual health on Tuesday night. In the morning when he failed to get up at the usual hour his friends found him dead in bed. Mr. Gilchrist was in his 56th year, and was well known and highly respected by all. His death cast a gloom over the whole community. He was a member of the Oddfellows Society. He leaves two sisters, Misses Margaret and Sarah, also a brother who is a doctor in California, also a host of friends to mourn his loss. The funeral took place to Tiverton cemetery. The very large procession showed the high esteem in which he was held. About fifty of the Oddfellows Society took part in the service.

WALKERTON

—Paisley Fair, Sept. 24th and 25th. Mr. Hank Irwin has purchased the 100-acre farm west of Walkerton on which he has been residing from his brother, Mr. Rob. Irwin, and has also taken over from the latter the entire stock of big registered horses which they had imported from the States. As a consequence of these arrangements, Hank, who has purposed moving to the west, will continue to reside in this district, a fact that will be learned with pleasure by his host of friends.

While Mrs. Wm. Winters and Mrs. Lou Anderson were crossing the river above the dam on Sunday afternoon with floaters on, the wind suddenly went out of the former's floaters and left her sinking in midstream like Peter in the sea. With her friend sinking at her side, Mrs. Anderson got mixed up in the sensation and followed Mrs. Winters to the bottom of the stream. Things were shaping lively for a double tragedy when Wes. Russell leapt in and drew Mrs. Winters from the moisture, while Lou Anderson, who was nearly lost no time in lending a helping hand to his wife. Although in an exhausted state the ladies came to shortly after being landed, but their nearness to reaching a celestial instead of a terrestrial shore will serve to keep the incident in their memory for a time.

Finding the bands cut on his stooks of oats, which he had left standing in a field, James B. Dickson, a Carrick farmer residing near Belmore, at once suspected his neighbor, Wm. Hackney, of the deed, there having been it seems, bad blood between the two for some time. After interviewing the authorities at Walkerton about the affair, Dickson went to Hackney and accused him of the deed, and threatened him with proceedings unless the oats were refunded by six o'clock that evening. After supper Mr. Dickson went to the field and found that the stooks had been rebound as instructed. Failing, however, that his spiteful neighbor needed a lesson in gentlemanly etiquette, Dickson laid a complaint against him for trespassing on his premises and damaging his property. The accused, who was scheduled to appear before Magistrate Tolton on Monday for trial, drove into town on Saturday and pleaded guilty to the charge and was ordered to pay Dickson $5 damages for attacking his oats, as well as being mulcted with a fine of $5 and costs for his crime, making a total assessment of $19.50, which the culprit was obliged to liquidate for his conduct. The accused was unable to assign any reason for his vandalism other than a revengeful spirit against his neighbor and the attendant satisfaction of handing him a slam.—Herald-Times.

MACHINES FOR MILKING

Farmers Will Find That They Are Very Profitable.

TO MEET LABOR SHORTAGE

How to Prevent Bees Swarming—Hints for the Gardener and Dairyman in June—Methods by Which to Destroy Troublesome Weeds.

(Contributed by Ontario Department of Agriculture, Toronto.)

THE statement that the milking machine has now become a practical proposition can now be made with considerable confidence. Practically all the standard makes of machines sold in this province, the cheaper ones as well as the more expensive, are giving good satisfaction in the hands of a great many dairymen. But all machines are somewhat complicated, and somewhat delicate of adjustment, so that to be successful the operator must exercise some mechanical ability, and avoid care and attention to the needs of individual cows. Without these the milking machine has always proved a failure. It can hardly be said that the machine will get as much milk from the cows as good hand milking, but properly handled, it will give better results than the average hand-milking, and there is no doubt of its being a great economizer of labor and time. The machine has its place on the farms of dairymen who milk more than ten cows, it being doubtful economy to invest so much money for a smaller herd. It may also be doubtful economy to instal the machine in a herd of pure breds where much special test work, involving milking three or more times per day, is being done.—A. Leitch, B.S.A., Ontario Agricultural College, Guelph.

To Prevent Bees Swarming.

June is the swarming month and time of supering for the main honey flow which begins between the 10th and the 20th of the month, depending on the season and the latitude. Be sure to give supers enough to avoid any crowding which may cause the bees to become discouraged, quit work and swarm excessively. It should be the beekeeper's aim to prevent swarming as much as possible. This is done by keeping young queens, giving plenty of room and a systematic examination of brood-chambers to detect colonies which are preparing to swarm. When queen cells are found far advanced they should all be destroyed and the queen herself removed. After the colony has been queenless one week the combs should again be examined and all cells except one removed. This one will provide them with a queen and if only one is left they will not swarm again. Where an improvement of stock is desired the new queen may be given instead of leaving one queen cell.

Natural swarms should be hived on the old stand after removing the parent colony to one side. The swarms should be given the supers from the old colony. New swarms work with great vigor because they have no brood to care for during the first week. Colonies held together without swarming gather more honey than those which swarm. It is the beekeepers patriotic duty to reduce the cost of honey production and thus increase the quantity be is called to produce as greatly as possible. They also cause the beekeeper less trouble at unexpected times. This may be done more by swarm prevention than in any other way. Bulletin 233 (Ontario Department of Agriculture) takes this matter up thoroughly and should be carefully studied by all beekeepers. — Provincial Apiarist, Ontario Agricultural College, Guelph.

Hints For the Gardener.

Thorough cultivation of the soil must be practised in the garden. The common hoe, wheel hoe and the garden cultivator should be kept going immediately after each rain. The seed sown in the field should be thinned carefully, giving each plant the amount of space required for good growth. Use poison bran mash to kill the cut worm, which will be active at this season. The asparagus bed should have the second application of 100 lbs. per acre of nitrate of soda. All stocks should be carefully cut even if they cannot be used. Early celery, tomatoes and other tender plants should be set out the first of this month, while citrons, cucumbers, pumpkins and melons should be planted. A small amount of nitrate of soda around celery and tomato plants four or five days after setting out, will aid in their growth. The latter part of this month and the beginning of next, late celery, cabbage, cauliflower and kale are transplanted into the field. Sowing of corn and beans should be made every week during this month.

To Eradicate Bad Weeds.

If troubled with mustard in grain crops, spray with the 20 p.c. solution of iron sulphate, (2 lbs. of iron sulphate to each gallon of water). If such spraying is to be effective it must be done early just when the first mustard plants in the field are coming into flower.

Good results followed by rape sown about the middle of June in drills about 26 inches apart at the rate of 1½ pounds per acre, provides a means of eradicating perennial sow thistle and twitch grass.

Dairy Pointers for June.

Cows in clover or good June grass pasture require very little attention. This is the ideal month for dairy operations. If there are any hot days, be careful to cool both milk and cream, by setting in ice water or cold well water. Sour milk and cream are too frequently sent to the factory. Don't forget to wash the cream separator and strainer daily, or after each time of using.

FARM FOR SALE

50 ACRES, being east half Lot 33, Con. 9, Tp. of Bruce. Good clay soil. 30 acres in grass, 10 acres in crop, and 10 acres good hardwood bush. See or write A. McGillivray, owner, Murillo, Ont., or apply to Alex McGillivray, Paisley P. O. R.R. No. 4.

SECOND CON. ELDERSLIE

—Paisley Fair, Sept. 24th and 25th. Threshing is the order of the day.

Andrew Young and daughter Jessie visited Eugenia Falls one day last week.

Miss Jennie Maxwell spent a week with Owen Sound friends.

Misses Lillian and Helen Smellie visited last week at the home of their brother, Mr. Chas. Smellie.

Master Archie McCullough has returned to his home in Saugeen after a month's visit with friends here.

John Robertson intends to drill an artesian well.

Mr. and Mrs. Fred Brown, of Owen Sound, visited recently at the home of the latter's brother, Mr. George Maxwell.

Mr. and Mrs. W. J. Allen, Mrs. Jas. Vanvise, Mr. Jas. Allen and Miss Edna motored to Stayner, Alliston, Toronto and Hamilton and visited friends for a few days.

The well drillers have completed their contract at S. S. No. 12 school and have secured good clear water which stands at a depth of 180 feet. Guess the school kiddies will not need to carry any more water now.

Mrs. D. Allen, Charles, Mary, Mrs. W. J. Allen and Mary autoed to Southampton and spent Sunday at the lake shore.

Pte. Hugh Campbell's many friends here will be pleased to hear that he has landed safe and sound in England.

Wilson Patterson, sr., Wilson Patterson, jr., Mr. and Mrs. John Ward, of this con., spent Sunday at Southampton beach.

Five years ago Smith Thompson came from England to reside at J. B. Allen's. He made his home there for four and a half years. Last spring he thought that more distant fields seemed greener and left, but last week found him back to his former home, sweet home. No place like the 2nd con. for Smith.

Successful Lawn Social

The lawn social given by the Pinkerton Red Cross Society at Mr. H. Hetrick's residence last Thursday evening was a decided success. The weather was all that could be desired and brought forth a large attendance. The baseball game early in the evening proved quite an attraction. The members of the society wish to thank the players for their co-operation. The game was quite close, resulting in the score of 6—5 in favor of the home team. A good program preceded the drawing of tickets for a beautiful cushion donated by Mrs. E. Webb, and the selling by auction of a centre table donated by a member of the society. The cushion brought in the goodly sum of $22.25, and the table after being resold several times realised $42.50. The total proceeds amounted to over $240.

WEEKLY STORE NEWS

Millinery Openings

Tuesday and Wednesday
Sept. 17 and 18

A display of Trimmed Hats and Patterns to choose from. Everybody welcome.

OUR old friend, Mr. Time, has been moving slowly but surely this season, and possibly you have come to realize that your wearing apparel is not sufficient for the season we are entering. With this fact in view, and for your benefit, we are showing:

The Very Latest in Ladies' Coats

Creations of comfort enveloping each wearer in a garment that is proper for special occasions and yet suitable for every day wear. These are shown in **Velour Cloth, Broadcloth and Diagonal Stripes.** The latest in style—we have it. The best you can get it. And as for your neck and hands—we protect them with the choice of our

Furs

These are attractive and are necessary as accessories to your outing dress. If touring in your car you require them. If driving you need them. If on the street they are necessary. Let us show you what we have in sets or individual pieces. We are pleased to show the goods. It delights you as well as us when we sell.

Remember our Grocery Department

8-13,18b

Is never forgotten. It is yours to choose from. It is ours to keep replenished. We do so, often. Remember our **Fruit Jars** for preserving. They are cheap—Imp. Pints at 95c, Imp. Quarts at $1.10, Crown Half Gals. at $1.20.

We appreciate your patronage. We want it. Highest Prices for Produce.

OLIVER CHRISTIE DIED OF WOUNDS MANY OTHER CASUALTIES LISTED

Pte. Oliver Christie, son of Reeve Gilbert Christie, of Saugeen, was among the fatalities of the war last week. He is reported to have died of wounds. The deceased was in the 160th. He was about 24 years of age.

Three Paisley Men Wounded

On Friday last Mrs. D. Sutherland, Ross St., received word that Pte. W. John Devine, infantry, was admitted to No. 7 Canadian General Hospital at Letretort on Aug. 27th. He had been buried by a shell explosion, also wounded. The deceased was in the 160th. He was about 24 years of age.

Mrs. D. Sutherland, Ross St., received word that Pte. W. John Devine, infantry, was admitted to No. 7 Canadian General Hospital at Letretort on Aug. 27th. He had been buried by a shell explosion, also wounded. On the same day Mr. Jas. Daniel received word that his son, Pte. Stewart Daniel, had been admitted to the same hospital suffering from gunshot wound in left shoulder. On Tuesday Mr. Wm. Sparrow received a message advising that his son, Pte. Wilmer J. Sparrow, was admitted on Aug. 31st to No. 83 General Hospital, also at Letretort, having been wounded by a gunshot in the eye.

How Capt. McKechnie Was Wounded

In letters from the front the particulars of Capt. M. A. McKechnie's death are given. At zero on the morning of August 8th the barrage opened with a deafening roar. Soon the infantry went forward, followed by the stretcher bearers and infantry helpers. The medical men and attendants were making their way forward with their equipment when an explosion was heard from a hidden German mine. Soon word came back that Capt. McKechnie's car was blown up, and that he was seriously wounded. He was taken to No. 61 Clearing Station about 8 a.m., and died about 10 a.m. He received every care and attention but was too severely wounded to recover. His remains were buried in a peaceful spot and his grave marked with a cross.

Lt. Horace Parker Died from Loss of Blood

A letter from a doctor in the hospital brings some information to Mr. and Mrs. Chris Parker as to the death of their son, the late Lieut. Horace Parker. He was wounded in the thigh and had become unconscious before reaching the hospital, breathing his last very shortly after, death being due to loss of blood.

Soils and Crops

By Agronomist.

This Department is for the use of our farm readers who want the advice of an expert on any question regarding soil, seed, crops, etc. If your question is of sufficient general interest, it will be answered through this column. If stamped and addressed envelope is enclosed with your letter, a complete answer will be mailed to you. Address Agronomist, care of Wilson Publishing Co., Ltd., 73 Adelaide St., W., Toronto.

Saving the Grain.

Our Government estimates that the farmer loses three per cent. of his grain each year through careless threshing methods, and very often it is the farmer himself who is most to blame. Anxious to speed up a wearisome but very necessary job, he forgets that the big idea is to get as much grain as possible instead of getting the work done in the shortest time.

While the causes of waste are comparatively few, every precaution should be taken for its prevention. Grain threshed when it is tough and damp is sure to represent a loss. It is impossible for the separator to remove all the kernels, and an unbelievable amount of grain goes over with the straw. The value of the time lost in waiting for the bundles to dry will be more than made up by the saving in grain.

A competent separator man will keep his machine adjusted and running at the proper speed, but he often becomes careless and thinks more about the number of bushels going into the feeder than of how much grain gets to the bin. From long association many farmers understand threshing machinery well enough to find out for themselves if everything is working properly, and should not neglect to see that adjustments are made whenever needed.

Where the portable elevator is used the waste in transferring grain from wagon to bin is very slight. However, not every farm is so equipped. Shoveling grain is hardly child's play under the best of circumstances, and if the man with the scoop is compelled to reach a high door or work in a cramped position, not all the grain will reach its intended destination. A blanket on the ground and one from the grain door to the wagon will save considerable.

Careless and fast pitching into the machine is another cause of waste. On a neighborhood run, where help is traded back and forth instead of having a hired crew, more care is taken, as all the men are farmers and remember that their own turn will be next. But even your best neighbors get in a hurry at times, especially if they happen to be on the tail end of the run and it looks like rain. A separator will not stand crowding. The machine is set at what is considered a fair pitching speed, and at that speed is supposed to handle the grain properly. Overcrowding cuts down the speed, which means a proportionate loss in efficiency, with the result that much grain is carried over into the stack.

Who Runs Your Farm?

"The government runs my farm, and I am quite willing to let them do so." Thus spoke a farmer whose financial credit balance is represented by six figures. He has made a practice of reading and adopting the results of the government's experience on the experimental farms, both Dominion and provincial, and has been rewarded handsomely.

This farmer was instrumental in forming a farmers' club in his neighborhood and securing lectures by the travelling representatives of government agricultural departments. He took advantage of these by adopting the good points from each. A government report advocated the installation of lightning rods on farm buildings. He put them on his buildings and advised his neighbors to do likewise. Some of them followed his lead; others ridiculed the idea, one of whom lost his buildings the following season by lightning. Neither was he too proud to make arrangements with the town stork and livery to supply them with straw free that he might haul away the manure from their stables, and thus keep his land up to the highest producing point. He did not consider it too much trouble to no clean his seed that he could demand $3.50 per bushel for his oats as seed, while his neighbor was getting but 65 cents.

Farming means production, just as truly as does manufacturing. The farmer, however, has an advantage over the manufacturer in that the latter must make his own experiments; he must pay for his experience. If the results of his experiments are satisfactory, they may produce financial returns fully warranting the outlay. If they are unsatisfactory, the expenditure upon the investigation is lost, and, in many cases, means ruin. How different is the farmer's position! Canada is making the experiments for the farmer, Canadians—the manufacturer, the mechanic, and every resident of Canada—are paying the cost of securing the experience by which the agriculturist may, personally, be the gainer.

It is only too true, however, many of our farmers neglect to profit by the help thus provided. Innumerable bulletins are left unread, and the information they contain is not utilized.

War times are teaching us that there is no economy in buying the cheapest goods nor the fancy high priced ones. We are depending on the solid values of the good standard brands—the brands that were good in peace time and have doubly proved their worth in war time.

Red Rose Tea—costing today only about ¼ of a cent per cup—is one of the solid war time values that anyone can afford—and that everyone will enjoy.

It is truly a war time tea

MOTHER-WISDOM

All Day Long the Happy Farm Child Learns by Doing.

By Helen Johnson Keyes.

Education has a new slogan: "Learn by doing." That is a way in which farm children always have received much of their education though neither they nor their parents nor their teachers have been in the habit of calling it education. Education has been considered something learned out of very dull books and the "higher" it has been the less practical use it has had.

All this is changing and something very odd is happening at the same time.

You remember that when our little district school began to be not quite what we needed for our new farm life, we turned to the city schools and began to copy them. Soon we found they were not right either, at least not for our country children. So we developed a kind of school all our own, in which arithmetic is taught by working out farm problems, and English themes discuss the operations which occupy us day by day, and chemistry uses the kitchen and the soil for laboratories. The oddity is that suddenly this country idea has taken hold of the city, and the farm school at its best is being imitated in the most modern of the private city schools!

I do not mean that for their arithmetic city children are taught to calculate the shrinkage of hogs, nor to write themes about silos. That would be as absurd although no more so than were the old stock-exchange and banking problems formerly imposed on farm children and the compositions concerning the sewers of Paris. I mean that the principle of bringing knowledge into touch with life and of learning to do things which it is going to be our part in life to do, instead of only learning about things which have fallen to the share of other people to do, is making over the city schools as it has done the farm schools.

There are two very solid reasons for this; one of them is a business reason and the other a scientific one and each vital.

The business reason lies in the increasing difficulty and complexity of life. When you compare the business of farming to-day with the simple occupation which it was in our grandfathers' time, you will understand what I mean.

No one does anything more in a very small way. The whole world is tied together in a network and the threads of your business are knotted into the threads of other people's businesses so that you are obliged to take very good care of your own strand when you knot it into the net and do it very properly or else you will disturb the business of other people, who, in turn, will injure yours. Life having become so complicated, there is not much time left for merely thinking about things. Every man, woman and child must do things and do them well.

A new science has grown up in the last generation which consists of the study of the brain and nervous system. It has a very long name and very delicate and complicated instruments with which to make its discoveries. The truths the learned men establish through this new science, are taken up by educators and put to use in schools, and in this way many changes in methods of teaching have come about.

One of these discoveries is that our muscles play an important part in the growth of our minds. It has been found that those parts of the brain in which are seated the centres which control our muscles lie round those centres which makes us think and that sometimes the centres for muscle control and for thinking are the same.

This scientific revelation must be a comfort to farm mothers. We have realized that our children ought to be taught to be good farmers and housekeepers but we have been afraid that if our schools filled up their time with "nature", and agriculture, manual training and domestic science, our boys and girls would know nothing else. Now we have been shown that, occupied with these studies while they are young, they are not only learning useful occupations but at the same time are developing their brains in the very best possible way so that they will be quick to understand the higher branches of learning at a more mature age.

We know that only a small proportion of farm children continues through high school but the number is rapidly increasing. I believe that there is no stronger reason for this increase than the fact that more and more the elementary schools have been developing children's brains by teaching them through doing. The old dull way of committing to memory facts out of books is discarded in the schools of our more progressive regions and where it is discarded there are found the brightest, most ambitious children and the largest number going on into high school. As a result of mental development through muscular training they are full of energy and ambition when they finish the lower grades and they seize eagerly on the more cultural studies.

A great educator says that probably no city school can equal the good farm as an educator for the mind through the muscles. It offers a splendid variety of employments, demands accuracy and promptness, punishes forgetfulness, neglect and shirking and shows definite results from work done. This is easy to understand.

There are machines in use in some city schools which develop the same muscles which housework on the farm does—one, for instance, which repeats the exercise of scrubbing at the washboard; another which calls into use the muscles which are exercised in mopping up a floor. In some of these schools no arithmetic is taught out of books till the fourth grade. Before that time it is learned indirectly through measuring and collecting of materials for making and doing things. These operations are only what every child on a farm grows up with, sees every one round him do and does himself.

So you will see that the farm is serving as an example, a copy, for those elementary city schools which represent the most scientific ideas and educate toward the most scholarly professions. The basis of brain development is now known to be muscle training and the occupations of farm life, whether learned in school or at home, are being copied artificially in elementary city schools because great educators know them to be the very best means of producing active, efficient and wide capable of making the most of whatever higher culture or business opportunities life may offer in later years. They produce the kind of men and women who act.

Three cheers for the Canadian farm! It is the best place in all the world to raise great citizens.

GOOD HEALTH QUESTION BOX

By Andrew F. Currier, M.D.

Dr. Currier will answer all ailment questions of general interest. If not, it will be answered personally if stamped, addressed envelope is enclosed. Dr. Currier will not prescribe for individual cases or make diagnosis. Address Dr. Andrew F. Currier, care of Wilson Publishing Co., 73 Adelaide St. West, Toronto.

The Meaning of Tonics.

No medicines are used by those who do not consult a doctor for their ailments to such an extent as tonics.

Many of these preparations are not tonics as advertised but simply mixtures in which the principal ingredients is alcohol.

But alcohol is not a tonic. It stimulates at first and then depresses and it the worst kind of a habit-forming drug.

But it is of great value in certain conditions especially when it is necessary to produce heat quickly and stir up a fainting heart.

It cannot possibly be useful when taken for weeks and months in preparations in which it forms 50, 60, or 70 per cent.

Such preparations surely are not medicines in the proper sense of the term.

A tonic is a substance which helps the organs of the body to improve the quality of their work, the heart to beat more slowly and vigorously, the lungs to expand and contract more forcibly, the digestive apparatus to dispose of food more effectively, the brain to think more clearly and persistently.

Perhaps it will not do all these things directly, but if it does one of them successfully this may be followed by a successful action in other directions.

The pure air of the mountains or the forest is a tonic to the lungs, but it also brings more oxygen to the blood and hence means better blood in the digestive organs, heart, liver, brain, and kidneys.

Therefore pure air is one of the best and cheapest tonics to be had, available to almost everybody.

People need tonics sometimes because they really have some kind of disease, and sometimes merely because their machinery is slowing down and needs bracing up.

The tonic in the first instance may not cure the disease, the disease may be incurable and yet it may make the patient feel better for a while and perhaps enable him to do much useful work before he is permanently laid by.

Or it may be the means of putting the patient on his feet and making him well.

This is often seen in the use of tonics after severe sickness or surgical operations or any condition in which there has been great loss of blood.

Tonics are often needed after prolonged exertion which has exhausted the vitality, after intense heat or cold, and after prolonged confinement in an improperly heated and ventilated house or place of business.

The dull and listless feeling which comes in the spring is an indication for a tonic, and it is then that the highways and byways are alive with flaming advertisements of all sorts of patent medicines, presumably tonics, to deceive the unwary.

The tuberculous weakened by sweating, cough, loss of sleep, and absorption of poisonous material need tonics, and those should be selected which will help and not delude and disappoint them.

The anaemic, pale and weak from poverty of blood and impairment of functions require tonics and are often greatly benefited by them.

QUESTIONS AND ANSWERS.

M. V.—1—Please inform me as to the symptoms, cause and curability of pink eye. 2. What is your opinion of one who cannot look out from a great elevation without a desire to leap down, and who starts in her sleep when such a situation is brought before her?

Answer—1—This disease is otherwise known as contagious conjunctivitis, being an infectious condition of the mucous membrane which covers the eyes. Its principal symptoms are swelling, redness, soreness and a free discharge from the eye. This discharge must be removed with great care very frequently, and a solution of boric acid instilled into each eye, as often as the discharge is removed. It usually gets well in the course of a week or ten days. 2.—I should say that such a person should keep away from high places and avoid every opportunity for carrying out the desire to jump.

Poultry

Feed, care and cleanliness this month and next are all important. If any important item is overlooked now that neglect will show in the results next winter, also next spring and summer.

All young stock should now be sorted and culled. Besides those showing very undesirable color and shape defects and serious disqualifications, it is important that any and all slow growing and slow feathering chicks be culled and sent to market. Never breed or attempt to get eggs from such stock. Youngsters showing leg weakness, twisted wing feathers or any inclination whatever to lack of vitality should be sorted out and sent to market as soon as possible.

Standard size and shape, which are obtained through strength, vigor, proper housing, feed and care, are necessary to success. Even strictly egg farmers must select and breed to a standard for size and shape. Pure bred fowls unless carefully culled will degenerate, showing different characteristics, different sizes, shapes, etc., and as a class difficult to handle in large flocks, to house and feed them to insure uniform conditions. There are other reasons also why the young stock should now be culled, thus permitting more house and range room for the more desirable during the autumn months.

Green food in some form, as well as sour milk or buttermilk, should be supplied to both the old and young stock if possible. A good grade of meat meal, beef or fish scraps should also be supplied. These foods will develop better youngsters and will insure the adult stock being in far better condition this winter.

Training to Stand

There is no one thing that shows the amateur quite as much as to bring animals into the ring that are not actually broken to lead. The show animal ought to be taught to lead right up beside the master and not have to be pulled and hauled and tugged. Animals being shown for the first time should be previously led about so that they are accustomed to the noise of automobiles, shouting, etc. In teaching an animal to walk up beside the master, a long buggy whip held around behind one's back will be found quite useful. It is not necessary to mistreat the animal to teach him to lead. Most animals are easily taught if approached in a sensible sort of way.

In dealing with bulls they should, of course, be sufficiently handled so that they are tractable, but the only safe bull is a dead bull and most fairs make it a misdemeanor to bring a bull into the ring without a staff. The one thing to remember about handling bulls with a staff is to keep their heads up. As soon as a bull can get his head down, he can use the huge muscles of his neck, but as long as his head be kept up, he can be handled with considerable ease.

Animals intended for show should be started on feed at once. Showing has always been accounted a means of advertising and it has never been looked upon as a money-making scheme. The young breeder should by all means show at least at his local fairs since a man usually gets his first and often his best advertising right in the home community. There is no "hocus pocus" about showing animals despite the fact that once in a great while a judge can be deceived into putting an inferior animal ahead of a good one. Animals with good individuality, well-fed, well-taught, well-bred and with all exterior appearances in first-rate form cannot help but be a credit to the breeder, even though they do not stand in first place.

Be Cheerful.

It doesn't help the boys out there
To whimper that the foe is strong,
It doesn't lift their load of care
To wail that things are going wrong.
It doesn't keep their spirits high
For us to sit at it home and sigh
And prophesy in manner glum
That grim disaster's sure to come.

Keep cheerful though the task is hard
And hopeful though the days are grim.
Our own morale we now must guard,
We must have faith when hope is dim,
Though hearts grow heavy now and bleed,
This be our cry: "We shall succeed!"
And though disasters round us fall
Let's be courageous through them all.

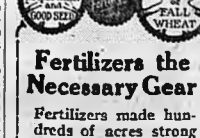
Cleaning Milking Machines.

Placing the rubber tubes and teat cups of a milking machine in an antiseptic solution while not in use will keep them clean with very little trouble. Salt water is often used, and whatever solution is used should contain salt because of its preservative effect on rubber.

Salt water alone is not very effective in keeping the tubes and teat cups sanitary. The addition of a small amount of chloride of lime will make the brine solution germicidal as well as antiseptic. The solution that has been found best is made of eight and one-half gallons of water, ten pounds of salt and one-quarter pound of chloride of lime. Fresh chloride of lime should be added each week to keep the solution at proper strength. The odor of chloride of lime can not be detected in the milk.

This solution has been tested just to determine what results it would give when used under ordinary farm conditions. When it was being tested the tubes and cups were placed in the solution immediately after each milking, being first rinsed in cold water, while the tops were thoroughly washed with hot water and washing-powder and the pails sterilized with steam. Once a week the tubes and cups were thoroughly cleaned with hot water containing soda, and were scrubbed with a tube brush. The milk drawn from the machines contained no more bacteria than is found in certified milk.



Fence The Garden.

Fencing for the farm garden is undoubtedly a necessary investment unless all stock in the neighborhood is maintained under good control. It should be high enough and tight enough to keep out poultry. Some farmers fence their poultry and leave the garden unprotected. Others fence their garden and give the poultry the freedom of the farm. My observation leads me to believe that the farmers with the fenced gardens raise the most and the best vegetables. A confined hen will fly out on occasions but a hen with the freedom of the remainder of the earth will often condescend to remain out of a fenced garden.

In order to do their best, vegetables need a little rain at frequent intervals. Light showers coming often are more conducive to growth than a heavy rain followed by a long dry spell. Some market gardeners install watering systems and they find the investment an insurance against the dry periods which sometimes nearly ruin fine crops of vegetables. Doubtless the installation of systems for supplying water to farm homes will be followed in some cases by an effort to irrigate the garden crops. This will prove an especially valuable asset if vegetable growing is to be depended upon for a part of the farm income.

Vegetable growing means hard work and a large amount of time expended on a small area. However, the effort to produce a fine variety of first-class truck for home use saves expense in keeping up the table and makes the farm a better place to live.

Many a woman has a fine carriage who never owned a horse.

Fertilizers the Necessary Gear

Fertilizers made hundreds of acres strong enough to survive the bad conditions of last winter and spring.

CORISANDE'S GARDEN

She Was an Exasperating Girl. Kelly Made a Strenuous Effort to Dis like Her—but Kelly Failed.

By F. Roney Weir

Part II.

"A pretty slope," he remarked, gazing over the plower expense.

"Isn't it?" She was interested at once. "Galusha is going to plant it to potatoes."

"I have been wondering who owned the place—you or Galusha."

She laughed again, half joyous, half mocking.

"Really," she answered, "I wonder myself." Kelly decided this was a lady-like way of telling him that it was none of his business. He determined that it was the last bit of interest he should show for, when all was said, what cared he whether she owned the place or whether Galusha or even Henrietta owned it. This girl with her sly, sweet, impudent replies; her soft, searching eyes and red-tipped smile, was provokingly aure of herself. Why should he care what she said or did? He wondered if he might not arouse more interest as a landscape gardener, for instance, then he had as a tramp tree-butcher. It was worth trying.

"If I owned that piece of ground," he began slowly, "it should never see a potato."

"What would you plant on it?" Her interest was so sudden and vivid it put Kelly on his metal. He clasped one knee with interlocking fingers, leaned back against the clapboards of the house and gave rein to his fancy:

"Over there I would plant a group of Lombardy poplars to tower up and make a point in the landscape; those alders should be left where they are. To the west, in that low place. I imagine there is a spring. I would dig it out, clear it, build a spring house over it and cut a nice wandering little rustic path down to the river. I should put a cluster of sugar maples; from the house to the spring, a rose garden, at the foot of the garden along the river a white picket fence to serve a double purpose—keep out tramps and support hardly climbing roses, white, red and yellow. Opposite, down the slope to the left, a cement path should lead through a little gate, down stone steps to a boat-landing. On the water would float a little boat, with you in it under a red umbrella. There would be ducks floating near the boat, quack quacking and snapping their pink bills—"

"I have dreamed it! I have dreamed it all a hundred times!" she exclaimed, leaning toward him in her excitement. "But Galusha couldn't do it! I couldn't do it! You must stay and make it! You must! I will pay you well—anything you ask. You will stay, won't you?"

He drew back amazed at the effect of his fanciful maunderings.

"I? Oh, I couldn't make it! It's a long chase from thinking out a garden to really making it. Besides, it would cost a mint of money, and Galusha would shoot me if I started doing things to his potato field. Oh no. I couldn't think of it!"

He said he could not think of it but he did. The natural itch of his fingers to try weaving a reality out of the spun thread of his dream; the pleasure of defying the rampant Galusha, who fairly frothed through his whiskers at each ridiculous expenditure; the brown eyes and teasing smile of the girl, kept him delving and sweating in Galusha's devastated potato field. At first the strongest incentive was love for the task itself; to see with awe and wonder the scheme outstripping even his vivid imaginings. He became so absorbed in land-dressing, lilacs, rhododendrons, rustic gates, garden magazines and cement work that at times he was a savage to Galusha, unbearable to Henrietta and only commonly decent to Corisande herself. Never before had he been happy, wholly absorbed.

From this mood it was an easy transition to something less soothing when the garden became of less importance than the girl; when, if she went away for the day, rhododendrons and Dorothy Perkins, lawn grass and water lilies became as dead sea fruit.

He knew now that Miss Trask had that spring inherited the place from an uncle whom she never had seen; an uncle who had spent the latter part of his life in the far North and whom even Galusha and his wife, Henrietta, trusted tenants of the farm, had not seen for a number of years. To all intents and purposes the place was their own until the change of ownership occurred and this slip of a girl had come from the East to turn things upside down, ruining potato fields, rooting out raspberry bushes and obliterating perfectly good hen yards. The fact that she tried to spare their feelings while carrying out her own plans only made matters worse. Then came Kelly's advent and that useless and costly garden with its walks and spring and gate and clumps of things which bore flowers but nothing to eat! Galusha resented Kelly bitterly.

Neither Galusha nor Henrietta nor Corisande knew any more about Kelly than that Higby insisted that he was not the man who had trimmed his apple trees atrociously and "swiped his patent spray nozzle."

April slipped into May, and May wore to June. Then Kelly awoke.

Galusha, one morning, came stalking up from the public road to where Kelly and Corisande were setting out aster plants for late blooming. Galusha had come from the new henhouse which he had been set to building "down by the road where henhouses didn't belong!"

"A car has busted down in the road," he announced in an accusatory tone as if Kelly or at least Miss Trask had wrecked the car.

"Too bad," commented Corisande, handing another drippy little plant to Kelly, on his knees dibbling them into the earth. "Can't you help them fix it, Galusha?"

"I s'pose I could but I told him we had a handy man round back of the house and he asked me to come and git him."

"Go, Kelly, and give them a hand," commanded Corisande in her lady-of-the-manor tone which she used to Kelly when she did not forget.

Kelly, a smile twitching the corners of his mouth, dropped his trowel and followed Galusha. He hardly knew in which mood he admired Corisande the more; that of chum and fellow-gardener or the high and mighty one of the present.

It had been some time since Kelly had felt the necessity of dodging motors. In that hidden garden of Squam there had been but small chance of discovery.

When he came in sight of the disabled machine the owner of it presented a rear view only, his head being concealed by the hood. Kelly stopped, stared blankly a moment then turned and ran lightly back to where Corisande, trowel in hand, was continuing the work of planting the asters.

"Why don't you go?" she asked over her shoulder.

"If I go where that man in the road sees me, you lose a gardener," he told her quietly. He even smiled down upon her where she crouched. She stood up, her lips compressed and colorless, her cheeks white. The little aster plants in her gloved hands shook. Kelly could see as much plainly. But he was fascinated by the coldly cruel look in her face. She suffered but she was angry. When she spoke, her voice was scarcely more than a whisper.

"I do not care to employ an escaped convict."

"I am not an escaped convict."

"You are not what you pretended to be—a gardener. You are a fugitive!"

"Have I ever denied it?"

"You have never been questioned."

"At least not by my employer. Her interest in me is not great enough for that."

"She questions you now and you must clear yourself or—take yourself off!" He nodded but remained silent.

"Well?"

"I will go."

"And the garden—"

"Will of course, never be finished. Miss Trask—Corisande, have all these weeks in this garden meant nothing—nothing at all to you?"

"Nothing save hard work and some difficulties involved in gardening."

"I don't believe it! Corisande, Corisande, I can't believe it when they have meant so much to me! They have changed my whole life!" He caught her hands and the poor little aster plants fluttered to the ground. She flung off his grasp.

"Don't touch me—you—tramp!"

He, too, trembled.

"It shall be as you say. I have been thinking, fool that I was, that you cared for me a little other than as your gardener!"

"You have no reason for thinking anything of the sort."

"It was rather cheeky, wasn't it? I hope you will find it in your heart to forgive me and forget it as soon as you can. I will go now, I think."

"Without your luncheon or your week's wages?" He looked ruefully at the wilting plants.

"I might finish with these, I suppose." He picked up the trowel and began dibbling the plants into the soil. The chug and roar of a motor car sounded from the direction of the road.

"He is going!" she whispered with relief.

(To be continued.)

There is Beauty in Every Jar

MILK WEED

Ingram's Milkweed Cream

Ingram's Milkweed Cream

Where youth takes flight on the wings of years beauty of complexion goes too, unless you give your skin proper and daily care. Use of Ingram's Milkweed Cream will enable you to appear youthful when you are no longer young. Its distinctive remedial effect upon the tissues of the skin keeps the complexion colorful, soft and free from blemish. It does actually "healthify" and beautify your complexion. Since 1885 there's been nothing else "just as good." Take no other. Two sizes, 50c and $1.00.

Warm days, housework worry, and kitchen heat, all cause perspiration and shiny, oily skin. You can avoid this by using Ingram's Velvola Souveraine Face Powder, 25c. It blends perfectly with the complexion. A light touch hides little blemishes, makes your complexion smooth, soft and flawless. A mill line of Ingram's toilet preparations, including Zodenta for the teeth, 25c, is at your druggist's.

A Picture With Each Purchase

Just Use 1 cent buy a package of Ingram's Toilet Aids or Perfume your Druggist will give you, without charge, a large portrait of a world famous motion picture actress. Each week you get a different picture. See your druggist about this attractive offer for your home. Ask your druggist.

F. F. Ingram Co., Windsor, Ontario.

Cream Wanted

We are in the market for cream all through the year. We pay the HIGHEST market price. Our plant is right up-to-date. In business since 1865. Drop us a postcard for particulars.

Mutual Dairy and Creamery Co.
743-5 King St. West Toronto

A QUEER FLYING MACHINE.

A Chinese Imitation of the Genuine Article.

The extraordinary imitativeness of the Chinese, which aims often at mere superficial likeness without any comprehension at all of the purpose of the form or the function that is copied, is given fresh and amusing illustration in an article in the Century Magazine called Plane Tales from the Skies.

While Marc Pourpe, the famous French trick flyer, with Raoul Lufbery, who died the other day, the "ace of aces" in the American Escadrille, as his mechanic, was performing in China, the two aviators were greatly impressed with the warmth of their welcome and the repeated invitations they received to prolong their stay. They were overwhelmed with gifts as well as with praise and received many marks of royal favor.

Their hosts examined the strange bird again and again, listened to the unintelligible explanation of its flight, made measurements and drawings, and excitedly discussed the problem with one another, while the two foreigners examined the gifts that had been lavished upon them.

Finally, the secret of this prolonged hospitality was out. Pourpe and Lefbery were conducted in state to a neighboring city, where the Chinese experts had been all this time constructing their first aeroplane. It was far more marvellous to the airmen than was the original.

Upon approaching the inclosure, the aviators saw the admiring populace move back, thus disclosing to view a gorgeous spectacle—the first Chinese aeroplane. Stepping nearer to view the magnificent creation, they heard the subdued roar of the engine above the riotous clamor of foreign tongues. Politely examining the framework and multicolored fabric, they found the spars, struts and flooring to be constructed of light bamboo. The beautiful fabric was the lightest of tissue paper.

The roar of the engine continued. Placing an ear against the engine hood, Pourpe tried to fathom the mystery. The propeller stood motionless, a splendid production of highly polished teakwood and mahogany, but undeniably indifferent to the healthy manifestations of engine power within. Several coolies anchored the impatient machine to the earth by holding desperately to its framework with all their might.

The crowd was pressed back and the airmen cordially invited to climb into the seat. He demurred politely, and inquired with gestures as to the character of the motor and fuel. And could he examine the spark plugs?

Reluctantly the Chinese removed the engine hood. A huge swarm of angry bees was buzzing madly within the glass cage, dealing in their fury the noise of Pourpe's own powerful motor. The Chinese has estimated conscientiously the amount of weight that could be carried by one bee; and after carefully weighing the new aeroplane, their mathematical experts had inclosed enough bees to carry the whole weight, adding a few extra bees to give a small margin of extra horse power for emergencies.

But Pourpe was dissatisfied with the soundness of those arithmetical calculations and declined to fly, much to the disappointment of his new friends.

Knew What They'd Catch.

The twins had gone in swimming without mother's permission, and they anticipated trouble.

"Well," said Tommy, philosophically, "we're both in the same boat, anyhow."

"Yes," returned Ray, the humorist of the family, "but I'm afraid it's a whaleboat."

Japanese use star fish for fertilizer, as they contain almost 5 per cent. of nitrogen.

Wisdom is a good investment regardless of the price you have to pay for it.

It is fine for cleaning cans—says the dairyman

Comfort Lye

Then He Woke Up.

"Did you try the simple plan of counting sheep for your insomnia?"

"Yes, doctor, but I made a mess of it. I counted 10,000 sheep, put 'em to market. And when I'd got through counting the wad of money I got for them at present prices, it was time to get up."

Canuck BREAD MIXER

MAKES BREAD IN 3 MINUTES

Eliminates all guess work. Makes light, wholesome bread, rolls, etc., without trouble. Saves flour and helps conserve the Nation's food supply.

Convenient, quick and clean—hands do not touch dough.

Delivered all charges paid to your home, or through your dealer—four loaf size $2.75, eight loaf size $3.25.

About the House

EVAPORATING FOODS TO ELIMINATE WASTE

This year the housekeeper who wishes to prove her thrift is finding another means besides canning to save the surplus of her garden or of the markets. Drying or evaporating of foods has taken on a new importance, owing to the shortage of cans and the expense incurred in some of the usual processes of food conservation.

There is nothing new in this art of dehydrating or evaporating fruits and vegetables; it was well known and practiced by our grandmothers, to whom dried raspberries, dried corn and dried peaches were part of every season's store. The advantage of drying vegetables and fruits is—in addition to saving on cans—the small compass of the food in its dried form, the fact that it can be transported easily and that there is space in the city home for the dried article where often there is no room for a store of either canned or fresh products.

There are two main ways of drying, one by the means of the sun, the other by some form of artificial heat. The sun method requires more space and takes longer. Some form of the simplest drier is preferable. Such consists of a narrow wooden tray fitted with wire netting to be hung over a stove or placed in a slow oven. Several tiers of trays can be hung at the same time.

The Right Drying Temperature

The theory of drying is to remove moisture so that the vegetable or fruit will not mold. A temperature from 140 to 150 degrees F. is an average drying temperature, which should be ascertained by a thermometer. Slow drying is better than quick, hot drying, which may scorch the outside of the product.

Vegetables must be thoroughly washed, pared and sliced into thin shapes or strips. Ordinary kitchen knives may be used, although if much work is to be done a special commercial slicer or an ordinary slaw cutter can be used. Everything about the drying process should be kept clean as dirty portions will spoil a whole batch of clean products.

In most cases the food should be blanched or dropped into boiling water a few minutes before drying. This sets the color, cleans the product and hastens the drying. In many cases also an electric fan may be used by setting it going near the trays so that the air current will gradually absorb the moisture, and leave the products dried and in good condition.

Vegetables like string beans should be strung sliced in half or quarters. Lima beans should be gathered when young and blanched. Spinach may be picked leaf by leaf from the stalk and spread carefully on trays. Beets, carrots, turnips, parsnips and onions should be sliced into one-eighth-inch slices, spread carefully and dried slowly. Potatoes and sweet potatoes are partly cooked before drying.

It is better to peel peaches before drying, cut into halves and lay into trays with pit side up. Plums should not be pared, but should be cut into halves and the pits removed. Very large, fleshy varieties may be blanched. Cherries should be dried whole without removing the pits, which otherwise would cause too much loss of juice.

Sweet apples and the early sorts do not dry well, but the winter greenings and other varieties do excellently. Apples are to be peeled, cored and sliced into rings or cut into eighths. Since they discolor quickly on paring, they may be dipped for a minute into a cold salt bath, using one ounce of salt to a gallon of water. Pears and quinces are dried in the same way.

Herbs need not be blanched, but should be well washed and then dried in the sun or any form of drier. If you have not enough of one kind of vegetable to dry several kinds together after they are dried into a soup mixture, such as carrots, cabbage, celery, etc.

Incubator an Excellent Drier

Some ingenious woman has discovered that her incubator trays could serve as a home-made drier. She took out the muslin trays, cleaned them thoroughly and without any further effort the incubator became at once an excellent and reliable drier and evaporator.

It is important to pack the dried article in a proper clean receptacle. Tin cans, pasteboard boxes or paraffin cartons all make excellent containers. All evaporated or dried foods must be kept in a cool, dry place. It would be very unfortunate to take pains to save products by this means and then allow them to be wasted by careless packing. Any one so fortunate as to possess a dry attic will have an ideal place in which to hang the dried products in paper or muslin bags, but plenty of air must be allowed or the products will get musty and insects be encouraged.

Speaking of insects, it should be said that great care must be taken to prevent the hatching of caterpillars or the various moths which attack dried vegetables and fruits. Several small moths deposit their eggs on the fruit when it is in the drier, and these hatch later, becoming a small, destructive grub which ruins the food. Therefore do not store the products in a damp place or in one with little ventilation. The smaller the quantity stored at one time, the less likelihood of damage there will be.

The drying method should not be over-looked by those who have a surplus of food or organizations having the interest of a special group, like a hospital, orphans' home, etc., at heart. In one town the Red Cross has charge of a dehydrating kitchen to which it is requested persons send the surplus of their gardens. This material is properly prepared by an expert and laid away as a winter store for a hospital and also for a settlement in the city. Also any housekeeper who wishes may go and use the community drier free, thus giving all the benefit of this inexpensive, additional way to practice economy and thrift.

WILLIAMS New Scale PIANOS

THE Pure, rich, mellow tone, and the sensitive responsiveness of this famous instrument combine to lift it high above the commonplace. It is a piano that will maintain its enduring charm for generations.

The Paisley Advocate

PAISLEY, SEPT. 11th, 1918

WHAT ENGLAND IS DOING

Some of the New York, Boston, Philadelphia and Chicago papers have recently expressed, as have leading journals of France and Italy, the most unstinted praise and admiration of the mighty work on land and sea that Great Britain is, and has been doing in this war.

There is evidently need, however, for a good deal more in the American press on the part Britain is taking in the war. In several instances that have been brought to our notice, tourists from the United States visiting Toronto or the lake summer resorts, have shown the most amazing lack of information about what the British have done, and are doing, in the war. It rather puzzles one to figure out where these men have been during the past four years and what they have been reading that they know so little about what has happened.

When an American comes to this city and tells a Canadian that he knows Canada has done wonderful things for a young country, but he doesn't see why Great Britain did not pitch in and help France the way the United States is now doing, the Canadian at first thinks the man is joking and then fears he is crazy.

In the end, of course, it becomes plain that the man knows absolutely nothing about the magnitude of the war, the forces in it, and the many campaigns on many fronts. It becomes apparent that he has accepted without question the talk of hyphenated Americans with pro-German sympathies who slander Great Britain because she is Germany's most formidable antagonist. One of the most earnest aims of German propaganda is to arouse distrust among Allied people and a great deal of money has been spent in seeking to create the impression in the United States that Britain is letting others fight the war while she looks on. The charge is so false that it is farcical. Britain's part in this war is prodigious, as everyone with any knowledge of the war knows. She has in France and Britain an army of two million men and the percentage of casualties in the Canadian and in the Australian troops is less than in the English. No Canadian will thank any tourist for compliments to this country at the expense of Britain in connection with fighting services done in the war. The British people, and foremost among them the English people, rank equal to the French in the valor and sacrifices of the war. They have an immense army in Belgium and France—if the States places equal forces there the Germans will be overwhelmed by numbers—other armies in Italy, Mesopotamia, Russia, Palestine, Africa, opposing Turkey, Bulgaria, they have fought over and subjugated every German colony in the world, and in the British navy and mercantile fleet two million men are enrolled, keeping the seas open and enabling the American army with its vast supplies, to reach France. Not only has Britain financed and equipped herself but she has supplied her Allies with food, munitions, coal, steel, guns, rifles aeroplanes. But, leaving all these out and talking of actual fighting only, Britain, up to the present time, is doing about half the fighting that is being done by the Allies in the war. These facts are in plain view and any intelligent man in any country who cares to examine them.

The United States is swinging into the war on a huge scale, and with a thoroughness that excites the world's admiration, but she has a long way to go before she equals, even on land, the military power Britain is, and long has been, using with full force against the Central powers. But America coming in, additionally, will furnish the preponderating force that will, we all hope, enable the war to be pressed quickly to a successful conclusion. In the meantime no true American should listen to German propaganda against England.—The Toronto Star.

FOLLY AND EXTRAVAGANCE IN WOMEN'S DRESS

Whither are we going? If it costs a young working woman $725 per annum for her board and her dress where is she and the rest of us drifting? These figures were submitted as evidence in arbitration proceedings concerning a dispute between the Canadian General Electric Company and its female employees, and therefore, in a manner, becomes an official document. Aside from the sum of $312, which is set aside for room and board, at $6 per week, which is certainly reasonable enough in these days, the entire $725 with a few and notably small exceptions, goes for adornment of one sort or another. This young woman with the $725 yearly income from her endeavors pays $6 per week for board and $7 per week for her clothes, the remaining dollar of her $14 weekly stipend being represented by church envelopes, car tickets, sick benefits, stationery, stamps and a daily paper. There is nothing for holiday, nothing for candy, chewing gum and all the airy nothings that are commonly attributed as necessary to the fair sex.

The fact that our mother dressed the whole kit of us, including herself and the old man, on a sum probably much less than that placed in this fair estimate has nothing to do with the case. That was then. This is now. Mother did not buy three pairs of shoes at an average of $6 per pair, nor did she pay $10 for a sweater coat for sister or herself. Indeed, in her day I doubt if women wore sweaters, certainly not silk ones. The expenditure for hats for the year is set down at $36. How many "lids" this represents I am, of course, unable to say, but it looks like a lot, compared to man's expenditure of, say, $6 or $9 per annum. For outer adornment in the way of suits, skirts, waists, gloves, etc., the sum of $312 is set aside. This does not seem out of the way in comparison with $36 for boots. But at the same time there are a large number of women who spend less and still look respectable, if not fashionable.

The problem of women's dress is one that only women can solve, and that by a resort to common sense. That working girls, or anybody else, for that matter, should expend fifty per cent of their incomes for adornment is, of course, indefensible, but how are they to be cured of their folly? So long as they allow the modiste to be their master, and not their servant, this extravagance will continue. So long as they are led away by the notion that garments must be of a new fashion, and possibly of a new material, every few months, these people will go on working for the benefit of the dress-designer, the milliner and shoemaker. Men have done better. Their clothes for the most part are standardized. The fedora bought three years ago looks just like the one purchased yesterday. Most men adopt a certain type of shoe and wear it year after year. To the passing fads in dress he pays no attention. He leaves that to the boy in his 'teens. He is content to have his clothes made on the same model year after year. The youth follows what men's fashions there are. The man seldom. The well dressed man, never.—Saturday Night.

—To save gasoline for war purposes by having a gasless Sunday is the latest sacrifice those who remain in civilian life are called upon to make both in Canada and the U.S. The movement is a voluntary one in Canada, no regulations having been issued as yet. In some towns the garages are closing up on Sunday, giving no service whatever for that day. In the U.S. the Administration has requested the people to conserve petrol supplies by the elimination of Sunday pleasure riding and the patriotic citizens are responding loyally. On a recent Sunday some Canadian motorists who ventured on a pleasure trip over the border into New York state were rotten-egged.

LOCAL AND DISTRICT NEWS

—Rev. L. W. Diehl is attending Synod meeting in London this week.

—Mr. T. H. George is attending the London Fair and visiting his daughter at Dresden.

—Mrs. McColl, of Winnipeg, is visiting her sister, Mrs. John Campbell, Victoria St.

—Miss Jessie McKinnon, of Toronto, is visiting her sister-in-law, Mrs. J. McKinnon, Queen St. north.

—Mr. Geo. Craig was taken to Walkerton hospital on Tuesday morning, suffering from typhoid fever.

—The benedict baseball players got considerably the worst of the game in a match with single men on Friday evening.

—Mrs. Gould and children, of Woodstock, were recently visiting at the home of her brother, Mr. W. J. Ross, Lovat.

—Mr. and Mrs. David Bell, Mr. and Mrs. R. Holtom, jr., of Drew, were visitors at Mr. Josh Bell's on Friday, having motored up.

—Mr. and Mrs. W. A. Willson, of Toronto, are visiting at the home of the latter's parents, Mr. and Mrs. David Bell, Cambridge St.

—Mr. Esline Nicholson was in Toronto for a few days lately and purchased from Mr. Geo. H. Thompson the latter's farm on con. 20, Greenock.

—The large Percheron stallion, "Kossuth," that has been in this locality for two seasons, has been sold by the owner, Mr. Hank Irwin, to Mr. Levi Good, of Carrick, who will handle it next season.

—Miss Agnes Irving is a visitor at the home of her neice, Mrs. T. F. Pearce, Victoria St., and is renewing acquaintances here after an absence of a number of years dorig which she has been living in New Ontario.

—Mr. and Mrs. S. F. Ballachey and little daughter Mary motored to Blenheim and spent a few days there, returning at the end of last week accompanied by Mrs. Ballachey's aunt, Mrs. Ferguson, of Blenheim.

—Mrs. A. Colborne, who left Paisley with her late husband and family over 25 years ago and went to Buffalo, has sold her property in that city and intends residing in Toronto. At present Mrs. Colborne is visiting friends in Greenock and Bruce Tps.

—Mrs. A. Sinclair was called to Brantford last week by the death of her sister, Mrs. Cutcliffe, who died after a short illness following an operation for appendicitis. Mrs. Cutcliffe was formerly Miss Julia Ellis, and was well known to many here, as from when she was a child had been frequently visiting at the home of her sister. Charming in manner, and an accomplished musician she had endeared herself to a large circle of friends who deeply sympathize with her relatives in the loss they have sustained. Mrs. Cutcliffe's death is exceptionally sad because of her husband, Lieut.-Col. Cutcliffe, D. S.O., being in France. He went overseas nearly four years ago with the R.V.C. of the original firats, and is now head of the Canadian Veterinary Corps on the western front. Besides her husband Mrs. Cutcliffe is survived by one daughter, Mrs. L. Spence, of Brantford; and two sisters—Mrs. A. Sinclair, Paisley; Mrs. McEwen, California and three brothers—I. D. Ellis, of Mount Pleasant; Wallace and Herbert Ellis, of Toronto.

There are other things than poison that will kill a steer and punch holes in a farmer's profit sheet. At least this is the experience of Mr. John Young, of Bradley, in Greenock Tp. On Friday morning last nine head of his cattle were turned into an alfalfa clover field, and after not more than twenty minutes or half an hour some of them were noticed to be in distress. The whole herd were hunted by the feed, and five of them died. Efforts were made to relieve them of the deadly load of gas by making an opening in the side, Mr. Young is a good farmer, and his stock were in good condition, so the loss will be heavy, upwards of $500.

NO MORE NERVOUS HEADACHES

Since She Tried "FRUIT-A-TIVES", The Famous Fruit Medicine.

MISS ANNIE WARD

112 Hazen St., St. John, N.B.

"It is with pleasure that I write to tell you of the great benefit I received from the use of your medicine, 'Fruit-a-tives'. I was a great sufferer for many years from Nervous Headaches and Constipation. I tried everything, consulted doctors; but nothing seemed to help me until I tried 'Fruit-a-tives'.

After I had taken several boxes, I was completely relieved of these troubles and have been unusually well ever since."

Miss ANNIE WARD.

'Fruit-a-tives' is fresh fruit juices, concentrated and increased in strength, combined with finest tonics, and is a positive and reliable remedy for Headaches and Constipation.

50c. a box, 6 for $2.50, trial size 25c. At all dealers or Fruit-a-tives Limited, Ottawa.

Sept. 24th and 25th

Paisley Fair dates. Don't miss it. Interesting and instructive exhibits in great variety, showing the war products of the district. Everybody else will be there—'tsould be folly for you to stay away. Chesley band in the afternoon. Kenney-Wilson concert at night.

Examined Our Bridge

County Engineer James, of Walkerton, Chairman Jas. Johnson of the Road and Bridge Committee, and Reeve Dan McDonald of Culross, were here on Wednesday viewing the Teeswater bridge, and in a few days it is expected there will be a report as to putting on a new flooring, and whether it shall be plank or cement.

In the U. S. Army

Archie McClure, is another Paisley boy who is leading Scottish-Canadian tone to the army of our Uncle Sam. He writes to his aunt, Mrs. James Beaton, giving some news from Custer Camp, Michigan, where he is in training. Archie says they are sending 40,000 troops every week to France from there every three months, and there are 70,000 in camp now. He expects to go overseas in about three months.

Some Sprinter Yet

Our former townsman, Mr. Wm. J. Scott, barber, now of Toronto, was one of the best all-round athletes of Bruce Co., and still has speed on the cinder path. At the Labor Day sports at the Island Park he won the fat man's race, for which he got a beautiful silver coffee pot worth $10. He was also second in the race for men over fifty years, this prize being a cutglass vase valued at $3.50. Not many young sports can hold down all comers in the speed events.

Lost Five Head of Cattle

Keep Abreast of the Times

You cannot be satisfied with what you have accomplished, you must know also what your neighbors are doing. Our Fair is given for instruction and enjoyment. It is your opportunity to show what you have done and see what others are doing. It is your chance to enjoy yourself, and it is your duty to give it your aid by attending. Come! Don't be a slacker. The Fair promotes Patriotism, Production and Preparedness. The man who cannot learn something at the agricultural fair is either mighty wise or foolish.

A Promising Teaching Staff

The School Board were very fortunate in being able to secure a new principal on such short notice for this term. The lady engaged is Miss Blackstock, of Elora, who has the qualifications, comes highly recommended, and has made an excellent impression in her initial acquaintance and work in the school. Miss Davison, of Chesley, is in charge of the Entrance room, and Miss Hardy, of Harriston, is the new primary teacher, and both are well spoken of by their pupils after being one week in charge. The former teachers, Misses Rogers, Boyle and Neilson, are again on duty. Altogether the School Board feel there is a very competent staff in our school for the ensuing term.

A Flight with a Motor Truck

Two adventurous youths took one of the creamery trucks from its parking place on Saturday night and went on a trip towards Port Elgin. Probably no one would have known of the outing had they not come to a sudden and accidental stop on the road near the mountain south of the lake town. Pushing the old car to a flying gait rendered it erratic, and it took to the ditch, turning turtle and pinning one or both of the occupants beneath. A passerby released them, and they walked home, wiser and more sore-footed than they had anticipated. In fact this was an instance in which anticipations were far from being realized. The wrecked truck was brought in by the owner and assistants on Monday.

Fatal Accident in Elderslie

Wesley Robinson, of 8th Elderslie, was instantly killed on Monday evening, when he was caught in the belt of his ditching machine. He and his brother Irwin were preparing to operate a sawing outfit, and had moved the ditching machine into the yard to use the engine. The deceased was caught by the belt and thrown violently. His head struck a part of the machine with such force as to cause instant death. One leg was broken and the body was otherwise mangled. The accident occurred about 7.30 p.m. Dr. Gage, coroner, was called to view the case, and did not consider an inquest necessary. The deceased was about 32 years of age, an industrious man, and one who was most helpful in the neighborhood as a mechanic and handy man. He was the youngest son of Mr. Jas. Robinson, of Chesley, and lived with his brother and one sister on the home farm. Another sister is in London. His death caused a great shock to the community, and the sympathy of everyone goes out to the bereaved ones.

The Late Mrs. Cheves

By the death of Mrs. Cheves, which occurred on Sept. 2nd, at the home of her daughter, Mrs. (Dr.) Allen, there has passed from our midst a person of rare personality. She was a strong-willed and courageous in facing the difficulties of life, hospitable and friendly in intercourse with her fellows, keen of wit and kindly in disposition. She has had a host of warm friends since becoming a resident of our village in 1893, all of whom sincerely mourn her demise. The maiden name of deceased was Margaret McDonald, and she was a native of Dreldie, Aberdeenshire, Scotland. After her marriage to the late Wm. D. Cheves she came to Canada in 1858, the young couple establishing their home on a farm in the township of Howick, county of Huron, beginning life in true pioneer fashion in the depth of the Queen's bush. In those days when there were no nurses and medical men were located far between, Mrs. Cheves was very helpful in times of sickness and trouble among the neighbors. At the end of twenty-three years labor on their homestead, Mr. and Mrs. Cheves retired from farming, going to live in Clifford. Following the marriage of their only daughter to Dr. Allen, of Paisley, they changed their place of residence to this town in 1893. Mrs. Cheves was predeceased by her husband in 1903. The deceased lady was a devoted Presbyterian, well grounded in her faith. It was one of the delights of her existence to entertain ministers of the gospel of any faith in her home, and to enjoy the privilege of conversing with them. To these men of the cloth a word of disapproval from her was a severity unsought, while her emphatic approval would stir one's best impulses. Many letters she received from young and old of all classes gave expression to their respect and friendship, which brought her keenest pleasure. Mrs. Cheves was a great reader, and well versed in the public affairs of her day, and was a close observer of leading public men and politicians, as well as of the scriptures and church history. Very shortly after her late husband's death Mrs. Cheves became afflicted with inflammatory rheumatism, and at times suffered greatly from the trouble, but her strong constitution, supported by a strong will, staved the hand of death until the ripe old age of 84 years and 9 months. The funeral on Thursday afternoon was largely attended. Services were conducted by Rev. G. C. Little, of Knox church, assisted by Revs. Neilson and Walker. Interment was made in Stark Vale cemetery.

Was An Early Settler in Elderslie

The late Matthew Hammond, who died on Aug. 30th at the home of his daughter, Mrs. Wm. McKinnon, 10th Elderslie, came with his parents to Elderslie in 1857 from Brock Tp. The family took up 200 acres on the 8th con., and brought with them to the settlement a large amount of live stock for those days—a team of horses, a yoke of oxen and ten cows. The team of horses was possibly the first to be owned in the township. The deceased was married in 1861 to Mary Shaw, and they went to Sullivan, where they lived until about eight years ago, when they moved to Chesley, and where Mrs. Hammond died five years ago. Since the latter event he has made his home with Mrs. McKinnon. The family consists of four other daughters and five sons—Mrs. Jas. W. King, San Diego, Cal.; Mrs. Fred Beresford, London, Ont.; Mrs. John Fry, Scone; Mrs. John Thompson, 12th Sullivan; Malcolm and Matthew, of Minneapolis, Minn.; James, of Chesley; William, of Owen Sound; Edward, of Sullivan. Brothers and sisters living are—Mrs. Garner, and Paisley; David Hammond, of Elderslie; John, of Hepworth; Allen, of London. The funeral took place to Chesley cemetery on Sunday, Aug. 31st, Rev. M. Neilson conducting the service.

THE CANADA FOOD BOARD SAYS

Never perhaps since the opening of the war have the Allies had more sound reason for optimism than at the beginning of this last quarter of the year 1918. The enemy has been defeated in a succession of battles on the Western Front. His successes of the spring have been neutralized and his campaign upset. A million and a half men have been added to the Allies' military resources from the United States. The submarine menace has greatly declined. The number of ships for carrying supplies has been greatly augmented. The efforts of this continent to keep the soldiers fed and stave off threatened starvation in Allied Europe until the new harvest became available has been gloriously successful. And further, the harvest of Great Britain, of France, and of Italy have, in some measure, overcome the disadvantages reported earlier in the year by reason of weather conditions, and are being safely garnered by the help of women, boys civilians from the cities, prisoners of war and soldiers released from active duty at the front for short periods. Greater than all these factors of success in "food fighting" will be the magnificent harvest being reaped by farmers of the United States. This year's harvest promises to be the greatest on record.

It cannot be too emphatically urged, however, that the necessity for conservation of food and increased production of food will continue in this country while the war lasts and for some time afterwards. The encouraging news as to the release of the strain which was viewed so seriously earlier in the year should not lead us to relax our efforts now except in so far as the Canada Food Board may revise the food regulations as circumstances warrant from time to time. The results which have been obtained on this continent by the use of substitute foods for those required overseas are the basis of the optimistic outlook of the Allied food situation in Europe to-day. The situation of the immediate future is based on the continuation of these efforts. The food reserves of the world at war have been exhausted. The 1918 crops in Allied countries must be conserved for the future and our efforts to produce foodstuffs in greater abundance must not be relaxed.

There is grave danger always when a crisis is passed; of falling back into the condition from which we have escaped, through the relaxation of our vigilance and our energy. The Food Controllers of the Allies have warned us of this danger. We should be warned also of persons who well meaning, but nevertheless in the interest of the enemy, urge that all such efforts to conserve and produce are now superfluous and that the danger is passed. The danger is not passed. But we have found a way of overcoming it and we must follow that safe path until the war is over.

VILLAGE COUNCIL

Council met 5th Sept., members all present except Mr. Logie. Minutes of last meeting read and adopted.

The clerk informed the council that the Judges' Court of Revision, to hear the appeal of John H. Glover re assessment of 1917, would sit in the council chamber on Tuesday, the 10th of Sept., at 1.30 p.m., and also informed the council that the Royal Bank had a form of by-law in use in all its branches and requested that our by-law No. 677 be re-drafted on one of their forms and again passed by council.

Forrester—Pearce—That the usual grant of $50 be made to the Paisley Agricultural Society.—Carried.

Forrester—Pearce—That by-law No. 677 as re-drafted be now read and passed.—Carried.

By-law No. 688, appointing E. F. Boyle collector of taxes for 1918, was read a first time, and on motion read a second and third time, passed and executed.

By-laws as above read and executed.

Mr. Logie took his seat in council.

Logie—Pearce—That the clerk be instructed to send a requisition for $150 now at the credit of this municipality for 1917 re Good Roads System, to the superintendent of the system.—Carried.

Skinner—Logie—That the clerk be instructed to draft a by-law providing for the licensing and regulating of junk dealers in the village of Paisley.—Carried.

Accounts were ordered to be paid as follows: M. Leitch, $62.50; D. Thomson, $20; Weighmaster, $14.27; J. H. Maurer, $35; Paisley Elec. Light Co., $35; J. R. Laidlaw, $1.45; Firemen's pay list, $14.75; D. McKenzie, $6.60; Phoenix Assurance Co., $10.00; Canada Ingot Co., $30.80; W. Rowand, $10.50; Geo. Heath, $3.50; Howard Pearce, $16; W. Sparrow, $22.50.

NOTICE

TO UNITED STATES CITIZENS IN CANADA.

By the United States Military Service Convention Regulations, approved by the Governor-in-Council on 20th August, 1918, MALE CITIZENS OF THE UNITED STATES IN CANADA, WITHIN THE AGES for the time being SPECIFIED BY THE LAWS OF THE UNITED STATES prescribing compulsory military service, except those who have diplomatic exemption, ARE MADE SUBJECT AND LIABLE TO MILITARY SERVICE IN CANADA, AND BECOME ENTITLED TO EXEMPTION OR DISCHARGE THEREFROM, UNDER THE CANADIAN LAWS AND REGULATIONS. The regulations governing this liability are published in the Canada Gazette (Extra) of 21st August, 1918; copy whereof may be obtained upon application through the post to the Director of the Military Service Branch of the Department of Justice at Ottawa.

UNITED STATES CITIZENS of the description aforesaid who were IN CANADA ON 30th JULY, 1918, HAVE SIXTY DAYS FROM THAT DATE within which TO EXERCISE AN OPTION TO ENLIST or enroll IN THE FORCES OF THE UNITED STATES, or TO RETURN to the United States; and THOSE WHO for any reason SUBSEQUENTLY BECOME LIABLE TO MILITARY SERVICE IN CANADA HAVE THIRTY DAYS FROM THE DATE of the accruing OF SUCH LIABILITY within which to exercise the like option. It is stipulated by the Convention also that certificates of diplomatic exemption may be granted within the optional periods aforesaid. EVERY CITIZEN OF THE UNITED STATES TO WHOM THE REGULATIONS APPLY is required to REPORT TO THE REGISTRAR under the Military Service Act, 1917, FOR THE province or DISTRICT WITHIN WHICH he is, in the manner by the regulations prescribed, WITHIN TEN DAYS AFTER THE EXPIRY OF HIS OPTIONAL PERIOD and will be SUBJECT TO PENALTIES IF without reasonable excuse HE FAIL SO TO REPORT. For the information of those whom it may concern Sections 3 and 4 defining the requirements of registration, with which it will be necessary strictly to comply, are set out substantially as follows:—

REGULATIONS

3. EVERY MALE CITIZEN OF THE UNITED STATES WITHIN THE AGES for the time being SPECIFIED IN THE LAWS of the UNITED STATES prescribing compulsory military service, not including those who have diplomatic exemption, WITHIN TEN DAYS AFTER THE EXPIRY OF THE TIME LIMITED BY THE CONVENTION within which the Government of the United States may issue him a certificate of diplomatic exemption, SHALL TRULY REPORT TO THE REGISTRAR BY REGISTERED POST, and in writing which is plainly legible, his name in full, his occupation and the date of his birth; stating also whether he is single, married or a widower: and if the latter, whether he has a child living; also if married, the date of his marriage; and stating moreover his place of residence and usual post office address in Canada; and, if he reside within a city or place where the streets and dwellings are named and numbered, the name and number of his street and dwelling; or if he reside in another place, the lot and concession number, section, township, range, and meridian, or other definite description whereby his place of residence may be located, having regard to the custom of the locality in which he lives: and IF WITHOUT REASONABLE EXCUSE HE NEGLECT OR FAIL TO REPORT IN THE MANNER and with the particulars aforesaid within the time limited as aforesaid, HE SHALL BE GUILTY OF AN OFFENCE, AND SHALL BE LIABLE UPON SUMMARY CONVICTION to a penalty not EXCEEDING FIVE HUNDRED DOLLARS, AND TO IMPRISONMENT for any term not exceeding six months, and moreover he shall incur A PENALTY OF $10.00 FOR EACH DAY after the time when or within which he should have registered during which he shall continue to be unregistered.

4. EVERY UNITED STATES CITIZEN WHO HAS DIPLOMATIC EXEMPTION, although not otherwise subject to these regulations SHALL WITHIN TEN DAYS after the granting of the same truly REPORT TO THE REGISTRAR, in like manner and with the same particulars as required by the last preceding section; and in addition he shall embody in his report a true and complete statement of the particulars of his certificate of diplomatic exemption. NEGLECT OR FAILURE without reasonable excuse to comply with the requirements of this section SHALL CONSTITUTE AN OFFENCE PUNISHABLE IN THE MANNER AND BY THE PENALTIES provided in the last preceding section.

ISSUED BY THE DEPARTMENT OF JUSTICE, MILITARY SERVICE BRANCH.
